RACHAEL CUBBAGE

VOLUME 88

JANUARY-DECEMBER 1981

U.S. GOVERNMENT PRINTING OFFICE, WASHINGTON: 1981

For sale by the Superintendent of Documents, U.S. Government Printing Office

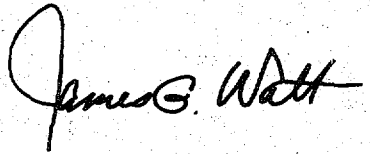

Washington, D.C. 20402

PREFACE

This volume of Decisions of the Department of the Interior covers the period from January 1, 1981 to December 31, 1981. It includes the most important administrative decisions and legal opinions that were rendered by officials of the Department during the period.

The Honorable James G. Watt, served as Secretary of the Interior during the period covered by this volume; Mr. Donald P. Hodel served as Under Secretary; Messrs. G. Ray Arnett, Garrey E. Carruthers, Daniel Miller, Pedro A. Sanjuan, Kenneth L. Smith, J. Robinson West served as Assistant Secretaries of the Interior; Mr. William H. Coldiron, served as Solicitor. Mr. James Limb, served as Director, Office of Hearings and Appeals.

This volume will be cited within the Department of the Interior as "88 I.D."

A handwritten signature in dark ink, reading "James G. Watt". The signature is written in a cursive style with a large, stylized initial "J".

Secretary of the Interior.

CUMULATIVE INDEX TO SUITS FOR JUDICIAL REVIEW OF DEPARTMENTAL DECISIONS PUBLISHED IN INTERIOR DECISIONS

The table below sets out in alphabetical order, arranged according to the last name of the first party named in the Department's decision, all the departmental decisions published in the Interior Decisions, beginning with volume 61, judicial review of which was sought by one of the parties concerned. The name of the action is listed as it appears on the court docket in each court. Where the decision of the court has been published, the citation is given, if not, the docket number and date of final action taken by the court is set out. If the court issued an opinion in a nonreported case, that fact is indicated; otherwise no opinion was written. Unless otherwise indicated, all suits were commenced in the United States District Court for the District of Columbia and, if appealed, were appealed to the United States Court of Appeals for the District of Columbia Circuit. Finally, if judicial review resulted in a further departmental decision, the departmental decision is cited. Actions shown are those taken prior to the end of the year covered by this volume.

Adler Construction Co., 67 I.D. 21 (1960) (Reconsideration)

Adler Construction Co. v. U.S., Cong., 10-60. Dismissed, 423 F.2d 1362 (1970); *rehearing denied*, July 15, 1970; *cert. denied*, 400 U.S. 993 (1970); *rehearing denied*, 401 U.S. 949 (1971).

Adler Construction Co. v. U.S., Cong. 5-70. Trial Commissioner's report accepting and approving the stipulated agreement filed Sept. 11, 1972.

Estate of John J. Akers, 1 IBIA 8; 77 I.D. 268 (1970)

Dolly Cusker Akers v. The Dept. of the Interior, Civil No. 907, D. Mont. Judgment for defendant, Sept. 17, 1971; order staying execution of judgment for 30 days issued Oct. 15, 1971; appeal dismissed for lack of prosecution, May 3, 1972; appeal reinstated, June 29, 1972; *aff'd*, 499 F.2d 44 (9th Cir. 1974).

State of Alaska, Andrew Kalerak, Jr., 73 I.D. 1 (1966)

Andrew J. Kalerak, Jr. et al. v. Stewart L. Udall, Civil No. A-35-66; D. Alaska. Judgment for plaintiff, Oct. 20, 1966; *rev'd*, 396 F.2d 746 (9th Cir. 1968); *cert. denied*, 393 U.S. 1118 (1969).

Appeals of the State of Alaska & Seldovia Native Ass'n, Inc., 2 ANCAB 1, 84 I.D. 349 (1977)

Theodore A. Richards & Judith Miller v. The Secretary of the Interior & Seldovia Native Ass'n, Inc., Civil No. A78-170-CIV, D. Alaska. Suit pending.

George S. Rhyneer, Walter M. Johnson, David Vanderbrink, Vivian MacInnes, Bruce McAllister & Alan V. Hanson v. Cecil Andrus, Secretary of the Interior, Seldovia Native Assoc., Inc., Cook Inlet Region, Inc., Robert Leresche, Comm'r of Natural Resources of the State of Alaska, Civil No. A78-240 CIV, D. Alaska. Suit pending.

Allied Contractors, Inc., 68 I.D. 145 (1961)

Allied Contractors, Inc. v. U.S., Ct. Cl. No. 163-63. Stipulation of settlement filed Mar. 3, 1967; compromised.

American Coal Co., 84 I.D. 394 (1977)

American Coal Co. v. Department of the Interior, No. 77-1604, United States Ct. of Appeals, 10th Cir. Dismissed on motion of Petitioner, Nov. 23, 1977.

TABLE OF OVERRULED AND MODIFIED CASES FOR THE DEPARTMENT OF THE INTERIOR ¹

Volumes 1 to 88, Inclusive

- Administrative Ruling (43 L.D. 293); modified, 48 L.D. 97 (1921).
- Administrative Ruling (46 L.D. 32); vacated, 51 L.D. 287 (1925).
- Administrative Ruling (52 L.D. 359); distinguished, 59 I.D. 4, 5 (1945).
- Administrative Ruling, Mar. 13, 1935; overruled, 58 I.D. 65, 81 (See 59 I.D. 69, 76 (1945)).
- Affinity Mining Co., 5 IBMA 126, 82 I.D. 439, 1975-1976 OSHD par. 19,992 (1975); set aside. Order of dismissal below vacated and case remanded; 6 IBMA 193, 83 I.D. 236 (1976).
- Ahvakana, Lucy S., 3 IBLA 341 (1971), overruled to extent inconsistent, U.S. v. Flynn, 53 IBLA 208, 88 I.D. 373 (1981).
- Alabama By-Products Corp., 6 IBMA 168, 1975-1976 OSHD par. 20,756 (1976); set aside, 7 IBMA 85, 83 I.D. 574 (1976).
- Alaska Commercial Co. (39 L.D. 597); vacated, 41 L.D. 75 (1912).
- Alaska Copper Co. (32 L.D. 128); modified in part, 37 L.D. 674; 42 L.D. 255 (1913).
- Alaska-Dano Mines Co. (52 L.D. 550); overruled so far as in conflict, 57 I.D. 244 (1941).
- Alaska Railroad, 3 ANCAB 273, 86 I.D. 397 (1979); affirmed in part, vacated in part, 3 ANCAB 351, 86 I.D. 452 (1979).
- Alaska, State of & Seldovia Native Ass'n., 2 ANCAB 1, 84 I.D. 349 (1977), modified, Valid Existing Rights Under the Alaska Native Claims Settlement Act, Sec. Order No. 3016, 85 I.D. 1 (1978).
- Aldrich v. Anderson (2 L.D. 71); overruled, 15 L.D. 201 (1892).
- Alheit, Rosa (40 L.D. 145); overruled so far as in conflict, 43 L.D. 342 (1914).
- Alien Heirs (2 L.D. 98); overruled, 16 L.D. 463, 464 (1893).
- Allen, Henry J. (37 L.D. 596); modified, 54 I.D. 4 (1932).
- Allen, Sarah E. (40 L.D. 586); modified, 44 L.D. 331 (1915).
- Americus v. Hall (29 L.D. 677); vacated, 30 L.D. 388 (1900).
- Amidon v. Hegdale (39 L.D. 131); overruled, 40 L.D. 259 (1911) (See 42 L.D. 557).
- Anderson, Andrew (1 L.D. 1); overruled, 34 L.D. 606 (1906) (See 36 L.D. 14).
- Anderson v. Tannehill (10 L.D. 388); overruled, 18 L.D. 586 (1894).
- Applicability of Montana Tax to Oil and Gas Leases of Ft. Peck Lands—Opinions of Assistant Secretary (Oct. 27, 1966), is *superseded* to the extent that it is *inconsistent* with Solicitor's Opinion—Tax Status of the Production of Oil and Gas From Leases of the Ft. Peck Tribal Lands Under the 1938 Mineral Leasing Act, M-36896, 84 I.D. 905 (1977).
- Archer, J. D., A-30750 (May 31, 1967); overruled, 79 I.D. 416 (1972).
- Armstrong v. Matthews (40 L.D. 496); overruled so far as in conflict, 44 L.D. 156 (1915).
- Arnold v. Burger (45 L.D. 453); modified, 46 L.D. 320 (1918).
- Arundell, Thomas F. (33 L.D. 76); overruled so far as in conflict, 51 L.D. 51 (1925).
- Ashton, Fred W. (31 L.D. 356); overruled, 42 L.D. 215 (1913).
- Atlantic and Pacific R.R. Co. (5 L.D. 209); overruled, 27 L.D. 241 (1898).
- Auerbach, Samuel H. (29 L.D. 208); overruled, 36 L.D. 36 (1907) (See 37 L.D. 715).
- Baca Float No. 3 (5 L.D. 705; 12 L.D. 676; 13 L.D. 624); vacated so far as in conflict, 29 L.D. 44 (1899).

¹ For judicial modification and reversals see the Table of Suits for Judicial Review on page XIII. Abbreviations used in this table are explained in the note on page XCIII.

- Bailey, John W. (3 L.D. 386); modified, 5 L.D. 513 (1887).
- Baker v. Hurst (7 L.D. 457); overruled, 8 L.D. 110 (1889) (See 9 L.D. 360).
- Barash, Max, 63 I.D. 51 (1956); was overruled in part by Solicitor's Opinion—Issuance of Noncompetitive Oil & Gas Leases on Lands within the Geologic Structures of Producing Oil or Gas Fields, M-36686, 74 I.D. 285 (1967); overruled, Permian Mud Service, Inc., 31 IBLA 150, 84 I.D. 342 (1977).
- Barbour v. Wilson (23 L.D. 462); vacated, 28 L.D. 62 (1899).
- Barbut, James (9 L.D. 514); overruled so far as in conflict, 29 L.D. 698 (1900).
- Barlow, S. L. M. (5 L.D. 695); *contra*, 6 L.D. 648 (1888).
- Barnhurst v. State of Utah (30 L.D. 314); modified, 47 L.D. 359 (1920).
- Bartch v. Kennedy (3 L.D. 437); overruled, 6 L.D. 217 (1887).
- Beery v. Northern Pacific Ry. Co. (41 L.D. 121); overruled, 43 L.D. 536 (1914).
- Bennet, Peter W. (6 L.D. 672); overruled, 29 L.D. 565 (1900).
- Bernardini, Eugene J. (62 I.D. 231); distinguished, 63 I.D. 102 (1956).
- Big Lark (48 L.D. 479); distinguished, 58 I.D. 680, 682 (1944).
- Birkholz, John (27 L.D. 59); overruled so far as in conflict, 43 L.D. 221 (1914).
- Birkland, Bertha M. (45 L.D. 104); overruled, 46 L.D. 110 (1917).
- Bivins v. Shelly (2 L.D. 282); modified, 4 L.D. 583 (1886).
- Black, L. C. (3 L.D. 101); overruled, 34 L.D. 606 (1906) (See 36 L.D. 14).
- Blenkner v. Sloggy (2 L.D. 267); overruled, 6 L.D. 217 (1887).
- Boeschen, Conrad William (41 L.D. 309); vacated, 42 L.D. 244 (1913).
- Bosch, Gottlieb (8 L.D. 45); overruled, 13 L.D. 42 (1891).
- Box v. Ulstein (3 L.D. 143); overruled, 6 L.D. 217 (1887).
- Boyle, William (38 L.D. 603); overruled so far as in conflict, 44 L.D. 331 (1915).
- Braasch, William C. and Christ C. Prange (48 L.D. 448); overruled so far as in conflict, 60 I.D. 417, 419.
- Bradford, J. L. (31 L.D. 132); overruled, 35 L.D. 399 (1907).
- Bradstreet v. Rehm (21 L.D. 30); reversed, 21 L.D. 544 (1895).
- Brady v. Southern Pacific R.R. Co. (5 L.D. 407 and 658); overruled, 20 L.D. 259 (1895).
- Brandt, William W. (31 L.D. 277); overruled, 50 L.D. 161 (1923).
- Braucht v. Northern Pacific Ry. Co. (43 L.D. 536, 538); modified, 44 L.D. 225 (1915).
- Brayton, Homer E. (31 L.D. 364); overruled so far as in conflict, 51 L.D. 305 (1925).
- Brick Pomeroy Mill Site (34 L.D. 320); overruled, 37 L.D. 674 (1909).
- Brown v. Cagle (30 L.D. 8); vacated, 30 L.D. 148 (1900) (See 47 L.D. 406).
- Brown, Joseph T. (21 L.D. 47); overruled so far as in conflict, 31 L.D. 222 (1902) (See 35 L.D. 399).
- Browning, John W. (42 L.D. 1); overruled so far as in conflict, 43 L.D. 342 (1914).
- Bruns, Henry A. (15 L.D. 170); overruled so far as in conflict, 51 L.D. 454 (1926).
- Bundy v. Livingston (1 L.D. 152); overruled, 6 L.D. 280, 284 (1887).
- Burdick, Charles W. (34 L.D. 345); modified, 42 L.D. 472 (1913).
- Burgess, Allen L. (24 L.D. 11); overruled so far as in conflict, 42 L.D. 321 (1913).
- Burkholder v. Skagen (4 L.D. 166); overruled, 9 L.D. 153 (1889).
- Burnham Chemical Co. v. United States Borax Co. (54 I.D. 183); overruled in substance, 58 I.D. 426, 429 (1944).
- Burns, Frank (10 L.D. 365); overruled so far as in conflict, 51 L.D. 454 (1926).
- Burns v. Bergh's Heirs (37 L.D. 161); vacated, 51 L.D. 268 (1925).
- Buttery v. Sprout (2 L.D. 293); overruled, 5 L.D. 591 (1887).
- Cagle v. Mendenhall (20 L.D. 447); overruled, 23 L.D. 533 (1896).
- Cain v. Addenda Mining Co. (24 L.D. 18); vacated, 29 L.D. 62 (1899).
- California and Oregon Land Co. (21 L.D. 344); overruled, 26 L.D. 453 (1898).
- California, State of (14 L.D. 253); vacated, 23 L.D. 230 (1896).
- California, State of (15 L.D. 10); overruled, 23 L.D. 423, 31 L.D. 335 (1902).
- California, State of (19 L.D. 585); vacated, 28 L.D. 57 (1899).
- California, State of (22 L.D. 428); overruled, 32 L.D. 34 (1903).

- California, State of (32 L.D. 346); vacated, 50 L.D. 628 (1924) (See 37 L.D. 499 and 46 L.D. 396).
- California, State of (44 L.D. 118); overruled, 48 L.D. 97, 98 (1921).
- California, State of (44 L.D. 468); overruled, 48 L.D. 97, 98 (1921).
- California, State of *v. Moccettini* (19 L.D. 359); overruled, 31 L.D. 335 (1902).
- California, State of *v. Pierce* (9 C.L.O. 118); modified, 2 L.D. 854.
- California, State of *v. Smith* (5 L.D. 543); overruled, 18 L.D. 343 (1894).
- Call *v. Swain* (3 L.D. 46); overruled, 18 L.D. 373 (1894).
- Cameron Lode (13 L.D. 369); overruled so far as in conflict, 25 L.D. 518 (1897).
- Camplan *v. Northern Pacific R.R. Co.* (28 L.D. 118); overruled so far as in conflict, 29 L.D. 550 (1900).
- Case *v. Church* (17 L.D. 578); overruled, 26 L.D. 453 (1898).
- Case *v. Kupferschmidt* (30 L.D. 9); overruled so far as in conflict, 47 L.D. 406 (1920).
- Castello *v. Bonnie* (20 L.D. 311); overruled, 22 L.D. 174 (1896).
- Cate *v. Northern Pacific Ry. Co.* (41 L.D. 316); overruled so far as in conflict, 43 L.D. 60 (1914).
- Cawood *v. Dumas* (22 L.D. 585); vacated, 25 L.D. 526 (1897).
- Centerville Mining and Milling Co. (39 L.D. 80); no longer controlling, 48 L.D. 17 (1921).
- Central Pacific R.R. Co. (29 L.D. 589); modified, 48 L.D. 58 (1921).
- Central Pacific R.R. Co. *v. Orr* (2 L.D. 525); overruled, 11 L.D. 445 (1890).
- Chapman *v. Willamette Valley and Cascade Mountain Wagon Road Co.* (13 L.D. 61); overruled, 20 L.D. 259 (1895).
- Chappell *v. Clark* (27 L.D. 334); modified, 27 L.D. 532 (1898).
- Chicago Placer Mining Claim (34 L.D. 9); overruled, 42 L.D. 453 (1913).
- Childress *v. Smith* (15 L.D. 89); overruled, 26 L.D. 453 (1898).
- Christofferson, Peter (3 L.D. 329); modified, 6 L.D. 284, 624.
- Clafin *v. Thompson* (28 L.D. 279); overruled, 29 L.D. 693 (1900).
- Claney *v. Ragland* (38 L.D. 550) (See 43 L.D. 485).
- Clark, Yulu S. (A-22852) Feb. 20, 1941, unreported; overruled so far as in conflict, 59 I.D. 258, 260 (1946).
- Clarke, C. W. (32 L.D. 233); overruled so far as in conflict, 51 L.D. 51 (1925).
- Cline *v. Urban* (29 L.D. 96); overruled, 46 L.D. 492 (1918).
- Clipper Mining Co. (22 L.D. 527); no longer followed in part, 67 I.D. 417 (1960).
- Clipper Mining Co. *v. Eli Mining and Land Co.* (33 L.D. 660); no longer followed in part, 67 I.D. 417 (1960).
- Cochran *v. Dwyer* (9 L.D. 478) (See 39 L.D. 162, 225) (1910)).
- Coffin, Edgar A. (33 L.D. 245); overruled so far as in conflict, 52 L.D. 153 (1927).
- Coffin, Mary E. (34 L.D. 564); overruled so far as in conflict, 51 L.D. 51 (1925).
- Colorado, State of (7 L.D. 490); overruled, 9 L.D. 408 (1889).
- Computation of Royalty Under Sec. 15, 51 L.D. 283 (1925), overruled, Solicitor's Opinion—Response to Feb. 17, 1976, Request from the General Accounting Office: Interpretation of Mineral Leasing Act of 1920, and Outer Continental Shelf Lands Act Royalty Clause, M—36888 (Oct. 4, 1976), 84 I.D. 54 (1977).
- Condict, W. C. (A-23366) June 24, 1942, unreported; overruled so far as in conflict, 59 I.D. 258-260 (1946).
- Continental Oil Co., 68 I.D. 186 (1961); overruled in pertinent part by Solicitor's Opinion, M-36921, 87 I.D. 291 (1980).
- Continental Oil Co., 74 I.D. 229 (1967), distinguished by Solicitor's Opinion, M-36927, 87 I.D. 616 (1980).
- Cook, Thomas C. (10 L.D. 324) (See 39 L.D. 162, 227 (1910)).
- Cooke *v. Villa* (17 L.D. 210); vacated, 19 L.D. 442 (1894).
- Cooper, John W. (15 L.D. 285); overruled, 25 L.D. 113 (1897).
- Copper Bullion and Morning Star Lode Mining Claims (35 L.D. 27); distinguished insofar as it applies to *ex parte* cases, 39 L.D. 574 (1911).
- Copper Glance Lode (29 L.D. 542); modified so far as in conflict, 55 I.D. 348 (1925).
- Corlis *v. Northern Pacific R.R. Co.* (23 L.D. 265); vacated, 26 L.D. 652 (1898).
- Cornell *v. Chilton* (1 L.D. 153); overruled, 6 L.D. 483 (1888).

- Cowles *v.* Huff (24 L.D. 81); modified, 28 L.D. 515 (1899).
- Cox, Allen H. (30 L.D. 90, 468); vacated, 31 L.D. 114 (1901).
- Crowston *v.* Seal (5 L.D. 213); overruled, 18 L.D. 586 (1894).
- Culligan *v.* State of Minnesota (34 L.D. 22); modified, 34 L.D. 151 (1905).
- Cunningham, John (32 L.D. 207); modified, 32 L.D. 456 (1904).
- Dailey Clay Products Co. (48 L.D. 429, 431); overruled so far as in conflict, 50 L.D. 656 (1924).
- Dakota Central R.R. Co. *v.* Downey (8 L.D. 115); modified, 20 L.D. 131 (1895).
- Davidson, Robert A., 13 IBLA 368 (1973); overruled to the extent inconsistent, J. Burton Tuttle, 49 IBLA 278, 87 I.D. 350 (1980).
- Davis, E. W., A-29889 (Mar. 25, 1964), no longer followed in part; 80 I.D. 698 (1973).
- Davis, Heirs of (40 L.D. 573); overruled, 46 L.D. 110 (1917).
- Debord, Wayne E., 50 IBLA 216, 87 I.D. 465 (1980); modified, 54 IBLA 61 (1981).
- DeLong *v.* Clarke (41 L.D. 278); modified so far as in conflict, 45 L.D. 54 (1916).
- Dempsey, Charles H. (42 L.D. 215); modified, 43 L.D. 300 (1914).
- Dennison and Willits (11 C.L.O. 261); overruled so far as in conflict, 26 L.D. 122 (1898).
- Deseret Irrigation Co. *v.* Sevier River Land and Water Co. (40 L.D. 463); overruled, 51 L.D. 27 (1925).
- Devoe, Lizzie A. (5 L.D. 4); modified, 5 L.D. 429 (1887).
- Dierks, Herbert (36 L.D. 367); overruled by the unreported case of Thomas J. Guigham, Mar. 11, 1909.
- Dixon *v.* Dry Gulch Irrigation Co. (45 L.D. 4); overruled, 51 L.D. 27 (1925).
- Douglas and Other Lodes (34 L.D. 556); modified, 43 L.D. 128 (1914).
- Dowman *v.* Moss (19 L.D. 526); overruled, 25 L.D. 82 (1897).
- Dudymott *v.* Kansas Pacific R.R. Co. (5 C.L.O. 69); overruled so far as in conflict, 1 L.D. 345.
- Dunphy, Elijah M. (8 L.D. 102); overruled so far as in conflict, 36 L.D. 561 (1908).
- Dyche *v.* Beleele (24 L.D. 494); modified, 43 L.D. 56 (1914).
- Dysart, Francis J. (23 L.D. 282); modified, 25 L.D. 188 (1897).
- Eastern Associated Coal Corp., 3 IBMA 331, 81 I.D. 567, 1974-75 OSHD par. 18,706 (1974); overruled in part by Alabama By-Products Corp. (On Recon.), 7 IBMA 85, 83 I.D. 574 (1976); overruled in part by Zeigler Coal Co., 7 IBMA 280, 84 I.D. 127 (1977).
- Eastern Associated Coal Corp., 5 IBMA 185, 82 I.D. 506, 1975-76 OSHD par. 20,041 (1975); set aside in part on reconsideration, 7 IBMA 14, 83 I.D. 425 (1976).
- Easton, Francis E. (27 L.D. 600); overruled, 30 L.D. 355 (1900).
- East Tintic Consolidated Mining Co. (On Re-hearing) (41 L.D. 255); vacated, 43 L.D. 80 (1914).
- Elliot *v.* Ryan (7 L.D. 322); overruled, 8 L.D. 10 (1889) (See 9 L.D. 360).
- El Paso Brick Co. (37 L.D. 155); overruled so far as in conflict, 40 L.D. 199 (1911).
- Elson, William C. (6 L.D. 797); overruled, 37 L.D. 330.

- U.S. *v.* Bush (13 L.D. 529); overruled, 18 L.D. 441 (1894).
- U.S. *v.* Central Pacific Ry. Co. (52 L.D. 81); modified, 52 L.D. 235 (1927).
- U.S. *v.* Dana (18 L.D. 161); modified, 28 L.D. 45 (1899).
- U.S. *v.* Kosanke Sand Corp., 3 IBLA 189, 78 I.D. 285 (1971); set aside and case remanded, 12 IBLA 282, 80 I.D. 538 (1973).
- U.S. *v.* McClarty, Kenneth, 71 I.D. 331 (1964); vacated and case remanded, 76 I.D. 193 (1969).
- U.S. *v.* Melluzzo, Frank & Wanita, A-31042, 76 I.D. 181 (1969); reconsideration, 1 IBLA 37, 77 I.D. 172 (1970).
- U.S. *v.* Mouat, M. W. (60 I.D. 473); modified, 61 I.D. 289 (1954).
- U.S. *v.* O'Leary, Keith V. (63 I.D. 341); distinguished, 64 I.D. 210 & 369 (1957).
- Utah, State of (45 L.D. 551); overruled, 48 L.D. 97 (1921).
- Veach, Heir of Natter (46 L.D. 496); overruled so far as in conflict, 49 L.D. 461, 464 (1923) (See 49 L.D. 492 for adherence in part).
- Vine, James (14 L.D. 527); modified, 14 L.D. 622 (1892).
- Virginia-Colorado Development Corp. (53 I.D. 666); overruled so far as in conflict, 55 I.D. 287, 289 (1935).
- Vradenburg's Heirs *v.* Orr (25 L.D. 323); overruled, 38 L.D. 253 (1909).
- Wagoner *v.* Hanson (50 L.D. 355); overruled, 56 I.D. 325, 328 (1938).
- Wahe, John (41 L.D. 127); modified, 41 L.D. 636, 637 (1913).
- Walker *v.* Prosser (17 L.D. 85); reversed, 18 L.D. 425 (1894).
- Walker *v.* Southern Pacific R.R. Co. (24 L.D. 172); overruled, 28 L.D. 174 (1899).
- Wallis, Floyd A. (65 I.D. 369); overruled to the extent that it is inconsistent, 71 I.D. 22 (1963).
- Walters, David (15 L.D. 136); revoked, 24 L.D. 58 (1897).
- Warren *v.* Northern Pacific R.R. Co. (22 L.D. 568); overruled so far as in conflict, 49 L.D. 391 (1922).
- Wasmund *v.* Northern Pacific R.R. Co. (23 L.D. 445); vacated, 29 L.D. 224 (1899).
- Wass *v.* Milward (5 L.D. 349); no longer followed (See 44 L.D. 72 and unreported case of Ebersold *v.* Dickson, Sept. 25, 1918, D-36502).
- Wasserman, Jacob N., A-30275 (Sept. 22, 1964); overruled, 79 I.D. 416 (1972).
- Waterhouse, William W. (9 L.D. 131); overruled, 18 L.D. 586 (1894).
- Watson, Thomas E. (4 L.D. 169); recalled, 6 L.D. 71 (1887).
- Weathers, Allen E., Frank N. Hartley (A-25128), May 27, 1949, unreported; overruled in part, 62 I.D. 62 (1955).
- Weaver, Francis D. (53 I.D. 179); overruled so far as in conflict, 55 I.D. 287, 290 (1935).
- Weber, Peter (7 L.D. 476); overruled, 9 L.D. 150 (1889).
- Weisenborn, Ernest (42 L.D. 533); overruled, 43 L.D. 395 (1914).
- Werden *v.* Schlecht (20 L.D. 523); overruled so far as in conflict, 24 L.D. 45 (1897).
- Western Pacific Ry. Co. (40 L.D. 411; 41 L.D. 599); overruled, 43 L.D. 410 (1914).
- Western Slope Gas Co., 40 IBLA 280, reconsideration denied, 48 IBLA 259 (1979); overruled in pertinent part, M-36917, 87 I.D. 27 (1980).
- Wheaton *v.* Wallace (24 L.D. 100); modified, 34 L.D. 383 (1906).
- Wheeler, William D. (30 L.D. 355); distinguished, and to the extent of any possible inconsistency overruled, 56 I.D. 73 (1937).
- White, Anderson (Probate 13570-35); overruled, 58 I.D. 149, 157 (1942).

- White, Sarah V. (40 L.D. 630); overruled in part, 46 L.D. 55, 56 (1917).
- Whitten v. Read (49 L.D. 253, 260; 50 L.D. 10); vacated, 53 I.D. 447 (1928).
- Wickstrom v. Calkins (20 L.D. 459); modified, 21 L.D. 553; overruled, 22 L.D. 392 (1896).
- Widow of Emanuel Prue (6 L.D. 436); vacated, 33 L.D. 409 (1905).
- Wiley, George P. (36 L.D. 305); modified so far as in conflict, 36 L.D. 417 (1908).
- Wilkerson, Jasper N. (41 L.D. 138); overruled, 50 L.D. 614 (1924) (See 42 L.D. 313).
- Wilkens, Benjamin C. (2 L.D. 129); modified, 6 L.D. 797.
- Williamette Valley and Cascade Mountain Wagon Road Co. v. Bruner (22 L.D. 654); vacated, 26 L.D. 357 (1898).
- Williams, John B., Richard & Gertrude Lamb (61 I.D. 31); overruled so far as in conflict, 61 I.D. 185 (1953).
- Willingbeck, Christian P. (3 L.D. 383); modified, 5 L.D. 409.
- Willis, Cornelius (47 L.D. 135); overruled, 49 L.D. 461 (1923).
- Willis, Eliza (22 L.D. 426); overruled, 26 L.D. 436 (1898).
- Wilson v. Heirs of Smith (37 L.D. 519); overruled so far as in conflict, 41 L.D. 119 (1912) (See 43 L.D. 196).
- Winchester Land & Cattle Co., 65 I.D. 148 (1958); no longer followed in part, 80 I.D. 698 (1973).
- Witbeck v. Hardeman (50 L.D. 413); overruled so far as in conflict, 51 L.D. 36 (1925).
- Wolf Joint Ventures, 75 I.D. 137 (1968); distinguished, U.S. v. Union Carbide Corp., 31 IBLA 72, 84 I.D. 309 (1977).
- Wostenberg, William, A-26450 (Sept. 5, 1952); distinguished in dictum, 6 IBLA 318, 79 I.D. 439 (1972).
- Wright v. Smith (44 L.D. 226); overruled, 49 L.D. 374 (1922).
- Young Bear, Victor, Estate of, 8 IBIA 130, 87 I.D. 311 (1980); reversed by Supp., 8 IBIA 254, 88 I.D. 410 (1981).
- Zeigler Coal Co., 4 IBMA 139, 82 I.D. 221, 1974-1975 OSHD par. 19,638 (1975); overruled in part, Alabama By-Products Corp. (on Reconsideration), 7 IBMA 85, 83 I.D. 574 (1976).
- Zimmerman v. Brunson (39 L.D. 310); overruled, 52 L.D. 714 (1929).

NOTE.—The abbreviations used in this title refer to the following publications: "B.L.P." to Brainard's Legal Precedents in Land and Mining Cases, vols. 1 and 2. "C.L.L." to Copp's Public Land Laws edition of 1875, 1 volume; edition of 1882, 2 volumes; edition of 1890, 2 volumes. "C.L.O." to Copp's Land Owner, vols. 1-18. "L. and R." to records of the former Division of Lands and Railroads; "L.D." to the Land Decisions of the Department of the Interior, vols. 1-52. "I.D." to Decisions of the Department of the Interior, beginning with vol. 53.—EDITOR.

DECISIONS OF THE DEPARTMENT OF THE INTERIOR

SHELL OIL CO.

52 IBLA 15

Decided January 5, 1981

Appeal from a decision of the Acting Director, Geological Survey, upholding the transportation allowance deducted to establish the reasonable value of production from various offshore oil leases for royalty purposes. GS-105-0&G.

Affirmed.

1. Oil and Gas Leases: Royalties—Outer Continental Shelf Lands Act: Oil and Gas Leases

The Secretary of the Interior has discretionary authority to determine the factors to be considered in computing transportation allowances for royalty valuation purposes. Where the Geological Survey applies a formula developed after appropriate research and consultation with affected oil companies and where the appellant does not provide convincing evidence that the 6 percent rate of return used in the formula is unreasonable as applied to appellant's production from 1968 to 1973, the transportation allowance will be upheld.

APPEARANCES: Vernon L. Terrell, Jr., Esq., Shell Oil Co., for appellant.

*OPINION BY
ADMINISTRATIVE JUDGE
BURSKI*

INTERIOR BOARD OF LAND APPEALS

Shell Oil Co. (Shell) has appealed the decision of the Acting Director, Geological Survey (GS), dated July 13, 1978, affirming an order of the Acting Oil and Gas Supervisor for the Gulf of Mexico area setting the transportation allowance to be deducted in determining the reasonable value of production from Shell's offshore oil leases for computing royalties for the period 1968-1973.

Inasmuch as no market price is available for offshore oil at the wellhead in the Gulf of Mexico, GS uses the market price at the first onshore market location less a transportation allowance to determine the value of production for the purpose of computing royalty. Shell built the Pompano and Cobia pipelines (GS Systems 51 and 51.1) to transport oil to shore from its various Outer Continental Shelf (OCS) leases in the Gulf of

88 I.D. No. 1

Mexico.¹ When production began in 1968, GS and Shell agreed to a tentative transportation allowance of 15 cents a barrel with the understanding that the allowance would be readjusted based upon a more sophisticated computation at a later date.

On Feb. 6, 1975, following submission of pertinent data by Shell, the Acting Oil and Gas Supervisor revised the transportation allowance applied to production transported through the Pompano and Cobia pipelines for the years 1968 through 1973. The revised allowance was \$1,312,325 less than the amount Shell had deducted based on the 15 cents-a-barrel rate, resulting in an increase in value for royalty computation by that amount.

Both in its appeal to the GS Director and its appeal to this Board following the Acting Director's decision, Shell has argued that the determination setting the transportation allowance was arbitrary and unreasonable. Shell urges that the formula used by GS is unreasonable and discriminatory because the 6 percent rate of return on investment allowed is unrealistically low and does not reflect a realistic return on its pipeline investment. Shell asserts a more realistic allowance would be based on the transportation charge of 10 cents per barrel that Shell negotiated with

two other oil companies for use of its pipelines.²

In its statement of reasons, Shell also suggests to the Board three standards against which the Board should compare GS's transportation cost allowance for reasonableness. First, Shell notes again that the transportation cost allowance negotiated by Shell with third parties would be more reasonable than the GS formula. Second, Shell urges that the tariff that it would have to pay a common carrier operating the two pipelines by order of the Interstate Commerce Commission (ICC) would be more reasonable. Shell alleges that the ICC considers an after-tax 8 percent annual return on investment as fair and reasonable. Third, Shell urges that the GS allowance be measured against GS's own decisions allowing a 10 percent return on depreciated investment when prescribing royalties to be paid on liquids extracted in onshore gasoline plants operated by lessee operators.

In his decision the Acting Director indicated that the value of production was computed by using a formula that has been consistently applied by the Oil and Gas Super-

¹ The Pompano pipeline services leases OCS-G 1294, 1610, 1614, 1901, 1966, and 1967. The Cobia pipeline services leases OCS-G 1666 and 1667.

² When Shell first brought its appeal these oil companies apparently were paying royalties to the Federal Government based on a value for their oil determined by deducting a transportation allowance equal to the cost for transportation paid by the companies to Shell. Thus, Shell charged that it was being discriminated against since a different formula was being applied to it for its use of the same pipeline. Since then, however, GS has recomputed the allowances of the two other companies using the same formula as is disputed by Shell in this case. We shall not address the charge of discrimination further as it is moot.

visor for 10 years. The formula was described as an "objective rule" which "takes into consideration the pipeline operating costs, an allowance for depreciation, and a fair rate of return on the lessee's investment in the pipeline." The Acting Director indicated that the issue of the appropriate rate of return was researched, that affected oil companies were consulted, and that 6 percent was used based on a reasonable analysis of the issue at the time and would change as required by the economy of the pipeline business. He also stated that GS was unable to confirm the alleged 8 percent ICC rate and nevertheless would not be bound by it if it existed.

[1] The Outer Continental Shelf Lands Act, *as amended*, 43 U.S.C. §§ 1331-1343 (1976), requires the payment of a royalty based on a specified percentage in amount or value of production from oil and gas leases on submerged lands of the OCS. Departmental regulation, 30 CFR 250.64, defines value of production as follows:

The value of production, for the purpose of computing royalty, shall be the estimated reasonable value of the product as determined by the supervisor, due consideration being given to the highest price paid for a part or for a majority of production of like quality in the same field or area, to the price received by the lessee, to posted prices, and to other relevant matters. Under no circumstances shall the value of production of any of said substances for the purposes of computing royalty be deemed to be less than the gross proceeds accruing to the lessee

from the sale thereof or less than the value computed on such reasonable unit value as shall have been determined by the Secretary. In the absence of good reason to the contrary, value computed on the basis of the highest price paid or offered at the time of production in a fair and open market for the major portion of like-quality products produced and sold from the field or area where the leased lands are situated will be considered to be a reasonable value.

In addition, the leases signed by Shell state that the lessee, Shell, expressly agreed that the Secretary may establish reasonable minimum values for purposes of computing royalty * * * due consideration being given to the highest price paid for a part or for a majority of production of like quality in the same field, or area, to the price received by the Lessee, to posted prices, and to other relevant matters.

One such relevant matter is the cost of transportation for royalty oil to an onshore market where there is no market at the offshore point of production. It has long been considered reasonable with respect to oil produced onshore or offshore to deduct a transportation allowance from the market value of the oil at the nearest open market to determine value at the wellhead where no market exists at the wellhead, the point where the oil would ordinarily be sold and valued. *United States v. General Petroleum Corp.*, 73 F. Supp. 225, 262-63 (S.D. Cal. 1947), *aff'd Continental Oil Co. v. United States*, 184 F.2d 802 (9th Cir. 1950); *C & K Petroleum, Inc.*, 27 IBLA 15 (1976); *Kerr-McGee Corp.*, 22 IBLA 124 (1975); *Shell Oil Co.*, 70 I.D. 393 (1963). The Secretary of

the Interior has discretionary authority to determine the factors to be used in computing such a transportation allowance for royalty purposes. *Superior Oil Co.*, 12 IBLA 212 (1973); *Shell Oil Co.*, *supra*.

There is no dispute in this case as to whether a transportation allowance will be permitted; rather, the dispute concerns the reasonableness of the allowance approved by GS in this instance. Shell contends that the amount allowed does not permit it a reasonable return on its investment. We have examined Shell's arguments and do not find that they provide any basis for holding that GS's 6 percent rate is unreasonable as applied to the years 1968 through 1973.

First, we cannot accept Shell's assertion that the transportation cost negotiated by it with two other oil companies as part of the purchase price of their oil necessarily represents a fair rate of return on investment for royalty valuation purposes. Shell has not indicated what rate of return it actually receives from the transportation cost element of the contracts and, while the rate of return reflected may well be fair with respect to its dealings with the two companies, it may represent more than a minimal fair rate of return generally.

We note that the oil companies had to choose between selling their oil to Shell in the field or selling the oil onshore after obtaining some alternative mode of transporting it to the onshore market. This could have entailed barging the oil or pos-

sibly construction of additional pipelines. So as long as the price charged by Shell was competitive with these alternative transportation options it would be in these oil companies' economic self-interest to pay the Shell price. The ceiling price would not relate to Shell's rate of return. Rather, it would be dependent upon the cost of the alternate methods of transportation. If the alternative transportation costs were significantly more expensive, Shell could calculate a transportation charge with a high rate of return on its investment yet with a cheaper and therefore agreeable result for the other oil companies. Such rate may well result from a fair arm's-length transaction in the market place but not necessarily represent a fair rate of return with respect to the valuation of Shell's own oil for royalty purposes.

Second, Shell urges that the rate of return allowed in computing the transportation allowance be comparable to that allowed in establishing common carrier rates for pipelines. Shell claims that the ICC "has long since determined that an eight percent annual return on investment in such cases is fair and reasonable" and cites an ICC decision entitled, *Reduced Pipe Line Rates and Gathering Charges*, 243 I.C.C. 115 (1940) (hereinafter *Reduced Rates*). Shell also notes that, unlike the GS determination, a fair rate for ICC purposes is an after-tax rate since the ICC has held that Federal corporate income taxes are a part of the cost of operation insofar as calculating a fair rate of re-

turn. *Minnelusa Oil Corp. v. Continental Pipe Line Co.*, 258 I.C.C. 41 (1944).

We have examined the above-noted cases and disagree with Shell as to their applicability to the case before us. It is true that in the *Reduced Rates* case ICC set 8 percent as a fair rate of return on investment for the various pipeline carriers examined in that case and that the 8 percent rate was reapplied in the second case. It is also quite evident, however, that the choice of 8 percent was arrived at after examining all of the circumstances relevant to the pipeline carrier business at the time and that the ICC rates were determined on a case-by-case basis. We find that the determination of the fair rate of return for common carriers in 1940 has little direct applicability to the case at issue.

This view is sustained by the findings of the United States Court of Appeals for the District of Columbia in *Farmers Union Central Exchange v. Federal Energy Regulatory Comm.*, 584 F.2d 408 (1978). In this case the court concluded that there was a lack of viable precedents in the area of pipeline ratemaking and a lack of an established ratemaking theory on which to base a present determination of reasonable rates for pipeline common carriers. With respect to past ICC pipeline rate cases, including the two cited by Shell to support its argument, the court stated:

Second, based on rather detailed analyses of economic conditions facing the industry in the 1940's, the Commission's

1940's decisions determined that oil pipeline rates should allow carriers to recover operating expenses plus no more than either an 8 percent return on value for transmission of crude oil or crude oil plus refined petroleum products * * * or a 10 percent return on value for transmission of gasoline. * * * The ICC pointed out that by 1940's standards these rates of returns were "somewhat larger . . . than . . . would be reasonable to expect would be applied in industries of a more stable character, where the volume of traffic is more accurately predictable." * * *

In the Commission's estimation, these "somewhat larger" rates of return were justified on the one hand by the need to attract capital to the oil pipeline industry despite the higher-than-normal risks faced by carriers of petroleum products, and especially of gasoline, and on the other hand, by the need to keep rates low enough to forestall the dangers of oligopolistic control of the oil pipeline industry by the big producers. Other factors considered by the ICC were the possibility of price fixing and a history of "enormous" profits, the cost-effects of greatly increased taxation during the 1930's, the increased demand for oil products, the improved technology of pipeline transmission precipitated by World War II, and the prediction that economic forces would cause rates to drop regardless of ICC action. Notably, aside from brief discussions of increased labor costs, the ICC's decisions make clear that operating costs other than taxes were relatively free from inflationary (or deflationary) influences from 1937 to 1947.

To the extent that economic conditions facing the oil pipeline industry have changed since 1948—and, in light of the modern onslaught of inflation, petroleum shortages, and reliance on imports, as well as the maturing of the industry itself, we may readily assume they have—the conclusions of the ICC in its earlier cases as to appropriate rates of return are equally as much artifacts of a bygone

era as is its reliance then on a valuation rate base.

* * * * *

We find the ICC's discussion of rate of return equally problematical. Here the total emphasis is on the 1940's precedents: because 8-10 percent was a viable return for carriers of petroleum products from 1940 to 1948; it is said, so must it be today. Even more so than the choice of a reasonable rate base methodology, a "reasonable rate of return" determination must be the product of the economic moment. As noted earlier, the ICC's choice in the 1940's of the 8 and 10 percent figures turned on such "hazards" as the infancy of the gasoline industry, the likelihood of disruptive discoveries of new oil fields and the unidimensional nature of the product market served by pipeline carriers, as well as on such factors as unduly high profits in the past, high taxes, and a rapidly expanding economy relatively free of inflation. * * * Absent some accompanying assessment of how this complex of relevant factors has changed in thirty years, the ICC's reliance on its antiquated precedents in determining a reasonable rate of return differs little from a rule that would require modern automobile accident damages to conform to those awarded by juries in 1940. [Italics added.]

584 F.2d at 415-16, 419-20 (citations and footnotes omitted). In addition, we note that the ICC reopened the *Reduced Rates* case in 1948 and upheld only a 7.6 percent rate of return rather than the original 8 percent rate. 272 I.C.C. 375 (1948).

Shell's third argument is based on a comparison of the 10 percent return on depreciated investment allowed in the calculation of royalty to be paid on natural gas liquids extracted at onshore gasoline plants. This rate is set forth in notices issued by GS on June 1, 1978, with an

effective date of July 1, 1978. Shell urges that since a 10 percent rate is allowed onshore, a higher rate should be allowed for an offshore investment "where the risk should be higher." We do not agree that these notices represent a reasonable basis for determining the fair rate of return on Shell's investment. There is more to such a comparison than the single issue of greater risk. Other factors must necessarily be considered in making such a comparison. The most obvious is that we are examining a rate for the period 1968-1973, whereas the GS notices apply to circumstances after July 1, 1978. Obviously, the fairness of any rate of return varies directly with subsisting general inflation rates. The economic situation which obtained in the period examined herein was vastly different from that which was extant in 1978.

It is evident from our investigation that a fair rate of return depends greatly on the economic conditions and other circumstances of the case at the time involved. GS apparently developed the transportation allowance formula after appropriate research and with input from affected oil companies. Shell has challenged the GS transportation allowance as unreasonable. However, Shell has not disputed the methodology used by GS, nor provided any specific factual basis which would support a finding that the 6 percent rate was unreasonable or that a different rate would be more reasonable for the period from

1968 to 1973. Therefore, we must affirm the GS determination.³

Accordingly, pursuant to the authority delegated to the Board of Land Appeals by the Secretary of the Interior, 43 CFR 4.1, the decision of the Acting Director, Geological Survey, is affirmed.

HOOVER & BRACKEN
ENERGIES, INC.

52 IBLA 27

Decided January 5, 1981

Appeal from decision GS 148-0 & G of the Director, Geological Survey and IND 20-0 & G of the Acting Deputy Commissioner of the Bureau of Indian Affairs affirming the order of an oil and gas supervisor setting a different basis for computation of the Government's royalty from an oil and gas lease and demanding payment of additional royalty.

Affirmed.

³ We do not wish to intimate that the rate of return, which we sustain for the period from 1968 to 1973, is an inflexible standard to be applied in all time frames without reference to exogenous economic factors. On the contrary, we reject such a viewpoint. Our holding herein is expressly limited to the period from 1968 to 1973.

1. Oil and Gas Leases: Royalties

In determining the amount of royalty due to the United States from an oil and gas lease, it is proper for the Geological Survey to use a base value which includes both the purchase price paid for the natural gas and the amount of severance taxes paid by the purchaser directly to the State where, under Oklahoma law, the purchaser is authorized to deduct the amount of taxes paid from the amount paid to the producer. Decision in *Wheless Drilling Co.*, 13 IBLA 21, 80 I.D. 599 (1973), cited and applied.

APPEARANCES: C. David Stinson, Esq., Bill W. Logsdon, Esq., McAfee, Taft, Mark, Bond, Rucks & Woodruff, Oklahoma City, Oklahoma, for appellant.

OPINION BY
ADMINISTRATIVE JUDGE
BURSKI

INTERIOR BOARD OF LAND APPEALS

Hoover & Bracken Energies, Inc., has appealed the decision of the Director of the Geological Survey (Survey), and the Acting Deputy Commissioner of the Bureau of Indian Affairs, dated Nov. 29, 1979, affirming an order of the Survey's Area Oil and Gas Supervisor for Tulsa, Oklahoma. The order required that the value of certain state tax payments be included in the gross value of natural gas sold from appellant's leasehold unit for the purpose of computing Federal royalty payments. Appellant has been basing its royalty payments on the gross proceeds received from

the sale of such gas excluding the amount of state taxes.

As authority, the decision cites Departmental regulation, 30 CFR 221.47, which defines the value basis for computing royalties as follows:

The value of production, for the purpose of computing royalty shall be the estimated reasonable value of the product as determined by the supervisor, due consideration being given to the highest price paid for a part or for a majority of production of like quality in the same field, to the price received by the lessee, to posted prices and to other relevant matters. Under no circumstances shall the value of production of any of said substances for the purposes of computing royalty be deemed to be less than the gross proceeds accruing to the lessee from the sale thereof or less than the value computed on such reasonable unit value as shall have been determined by the Secretary. In the absence of good reason to the contrary, value computed on the basis of the highest price per barrel, thousand cubic feet, or gallon paid or offered at the time of production in a fair and open market for the major portion of like-quality oil, gas, or other products produced and sold from the field or area where the leased lands are situated will be considered to be a reasonable value.

In addition, the decision quotes the royalty provision of the standard form, Oil and Gas Mining Lease for Allotted Indian Lands (Form 5-154h), used by the Bureau of Indian Affairs of the United States Department of the Interior. That provision reads in pertinent part as follows:

During the period of supervision, "value" for the purposes hereof may, in the discretion of the Secretary, be calculated on the basis of the highest price paid or offered (whether calculated on the basis of short or actual volume) at the time of

production for the major portion of the oil of the same gravity, and gas, and/or natural gasoline, and/or all other hydrocarbon substances produced and sold from the field where the leased lands are situated, and the actual volume of the marketable product less the content of foreign substances as determined by the oil and gas supervisor. The actual amount realized by the lessee from the sale of said products may, in the discretion of the Secretary, be deemed mere evidence of or conclusive evidence of such value.

The language of the royalty provision in the lease tracks the language in the regulations in 25 CFR 172.16.

In reaching its decision, Survey relied on the principle enunciated in *Whelless Drilling Co.*, 13 IBLA 21, 80 I.D. 599 (1973), that the value of production for royalty purposes and the term "gross proceeds" includes the amount of severance tax paid by the buyer to the seller of the gas. Survey then concluded that the fact that the buyer in this case paid the tax directly to the State did not change the principle: payment still inured to the benefit of the seller and thus should be considered in computing Federal royalty.

Appellant's leases cover lands which have been communitized with privately owned lands in the same governmental section for the purpose of drilling for and producing oil and gas. Under the communitization agreement, costs are borne by each lessee in the proportion that acreage covered by each lease bears to the total acreage in the unit. Where production occurs, each lessee and royalty owner shares

January 5, 1981

in such production in accordance with the terms of the lease.

The State of Oklahoma has levied "a tax * * * equal to seven percent (7%) of the gross value of the production of natural gas." 68 Okla. Stat. Ann. § 1001 (West). By statute, the gross production tax "shall be paid by the purchaser of such products and such purchaser shall * * * deduct in making settlements with the producer and/or royalty owner, the amount of tax so paid." 68 Okla. Stat. Ann. § 1009(d) (West). The State has also levied an excise tax equal to 0.085 of 1 percent of the "gross value of all natural gas and/or casinghead gas produced in the State of Oklahoma which is subject to gross production tax." The excise tax is also paid by the purchaser who is authorized to deduct the amount of the tax when making settlement with the producer. 68 Okla. Stat. Ann. § 1102 (West). Production derived from restricted Indian lands and lands owned by the United States, to the extent the interest in the production is owned by the restricted Indians or United States, is exempt from taxation. See 68 Okla. Stat. Ann. § 1008 (West).

Pursuant to the Natural Gas Policy Act of 1978 (NGPA), 15 U.S.C. § § 3301-3432 (Supp. II 1978), the sale of all natural gas produced in the United States is subject to ceiling price limitations. However, sec. 110(a) of NGPA, 15 U.S.C. § 3320 (a) (Supp. II 1978), states that

a price for the first sale of natural gas shall not be considered to exceed the maximum lawful price applicable to the first sale of such natural gas * * * if such first sale price exceeds the maximum lawful price to the extent necessary to recover—

(1) State severance taxes attributable to the production of such natural gas and borne by the seller * * *.¹

Appellant informs the Board that it has executed gas purchase contracts covering sale of its interest in production from the unit including the leased lands. Under each contract, the purchaser is required to pay to appellant the maximum lawful price applicable to the gas under NGPA and to pay all state severance taxes levied on the gas prior to delivery. Appellant notes that payment of the tax by the purchaser, although not to the lessee, is commonly referred to as "tax reimbursement."

In its statement of reasons, appellant charges that Survey's method for computing royalties is arbitrary, capricious, and an abuse of discretion. Appellant argues that Survey has given no consideration to the "actual value" of the royalty gas. It contends not only that the Board erred in *Wheless, supra*, by focusing only on the concept of gross proceeds, but also that the present case is distinguishable from *Wheless* because of the ceiling price limitations set by the NGPA: it argues that reasonable value cannot

¹ The definition of "State severance tax" includes "any severance, production, or similar tax, fee, or other levy imposed on the production of natural gas" by any State. 15 U.S.C. § 3320(c) (Supp. II 1978).

exceed the ceiling price in a regulated market.

Appellant argues further that the *Wheless* case also stands for the "patently unfair proposition" that the Federal Government may exempt itself from paying state severance taxes on minerals produced from Federal lands and then benefit from such taxes paid by its lessee and all other parties sharing in production from the unit. Appellant suggests that such an outcome is not mandated by any specific statutory authority and such is not a reasonable interpretation of existing regulations.

Finally, appellant suggests that Survey's method for determining royalty is unreasonable because it leads to incongruous results when making certain other comparisons. First, it notes that were the Federal Government to take its royalty share of the gas in kind and then sell it, the value received could be no greater than the ceiling price with no tax reimbursement. Then appellant argues that Survey's method is arbitrary because the identity of the seller of the gas is determinative of its value. Second, appellant points out that Survey's method results in the value of the gas produced from the unit varying according to the size of the acreage in the unit owned by the Federal Government.

[1] It is well recognized that the Secretary of the Interior has considerable latitude in determining what is the "value" of production from a lease on which royalty payments are made. *Amoco Production Co.*, 29

IBLA 234, 236 (1977); *Wheless Drilling Co.*, *supra* at 31; 30 U.S.C. § 226(c) (1976) and 30 U.S.C. § 189 (1976). The Secretary has exercised that discretion by promulgating 30 CFR 221.47 which defines the value basis for computing royalty. In *California Co. v. Udall*, 296 F.2d 384 (D.C. Cir. 1961), the Secretary's authority to establish reasonable values for royalty purposes under the Mineral Leasing Act and Departmental regulations was affirmed.

Appellant urges that the Board reconsider its interpretation of 30 CFR 221.47 as set forth in *Wheless, supra*. We decline to do so. In that case we said that the term gross proceeds as used in the regulation "means the established field price for the natural gas plus any additional sums paid by the purchaser of the gas to the unit operator as consideration for the purchase of gas from the unit of which the federal lease is a part." 13 IBLA at 30-31. We held that reimbursement by a purchaser of state severance taxes paid by the seller was an "additional sum" properly included in determining value of production for the purpose of computing royalty under 30 CFR 221.47. *Accord, Amoco Production Co., supra*.

Contrary to appellant's argument, we find that appellant's case, where the price has been set by the NGPA, is no different from that of *Wheless*, where the price was set by the Federal Power Commission (FPC). Appellant attempts to distinguish the two by noting that *Wheless* Company could elect to sell in the regulated interstate market or

January 5, 1981

the unregulated intrastate market and by arguing that in an unregulated market the fair value *would* be the price paid by the purchaser plus tax reimbursement but in the regulated market the value could never be more than the maximum lawful price for which it may be sold. This is a distinction without substance as applied to this case. Appellant itself recognizes that the NGPA expressly allows a *price* for the gas to be set *above* the maximum lawful amount to the extent that it reflects state severance taxes paid. 15 U.S.C. § 3320 (Supp. II 1978). Thus regardless of whether we consider the regulated or unregulated market, the amount of tax payments reimbursed does not affect the amount which a producer can receive for its gas under the NGPA. It still may rise to the ceiling. We find that the *Wheless* principle applies equally in either case.

However, the facts of appellant's case are not exactly the same as in *Wheless*, and we feel that further discussion of the regulation as applied to appellant's leases is warranted. We focus particularly on the fact that the applicable Oklahoma statutes provide that the *purchaser* pay the severance taxes and deduct them from the amount paid to the seller. Thus, the amount of the taxes does not result in "proceeds" as that term was used in *Wheless* and is ordinarily understood. We find, however, that appellant has the same ultimate responsibility for the taxes and receives the same benefit under Oklahoma's method of tax

collection as it would in a state where the seller is obligated to pay the taxes directly and benefits from reimbursement by the purchaser. Here appellant still receives the benefit of "tax reimbursement" and consequently the value of that benefit may be added to the amount appellant receives to determine the value of production to appellant for the purpose of computing the royalty. As reported by appellant, the amount it receives under its contracts is the NGPA ceiling amount. Since under Oklahoma law a purchaser must deduct the amount of taxes paid to reach the purchase price, we assume that such price reflects the deduction of that amount and therefore the value to appellant of the gas in this case is the ceiling amount plus the tax paid by the purchaser.

If we turn to the question of what is a reasonable value, as appellant argues, and examine the regulation in that context rather than in terms of the *Wheless* principle of "gross proceeds" and benefit to the producer, we reach the same result. First we note that the regulation, when it refers to gross proceeds, simply sets the minimum value of production and we find that the focus of the regulation in setting the value of production is price. However, Survey may consider "other relevant matters." On this, the relevant portions of the regulation bear repeating:

The value of production, for the purpose of computing royalty shall be the estimated reasonable value of the product

as determined by the supervisor, due consideration being given to the highest price paid for a part or for a majority of production of like quality in the same field, to the price received by the lessee, to posted prices and to other relevant matters. * * * In the absence of good reason to the contrary, value computed on the basis of the highest price per barrel, thousand cubic feet, or gallon paid or offered at the time of production in a fair and open market for the major portion of like-quality oil, gas, or other products produced and sold from the field or area where the leased lands are situated will be considered to be a reasonable value.

Thus the value of production as defined by the regulation is not necessarily gross proceeds; *i.e.*, the amount the producer receives from the purchaser for the gas. If that were true, then appellant arguably would be correct that its royalty should be based solely on the NGPA ceiling because that is the amount it receives under its purchase contracts. Under the regulation, however, all of the circumstances of the pricing of the gas may be considered. One such relevant consideration is that, as we have noted, under the NGPA a producer may set a price for gas exceeding the lawful ceiling to the extent of the amount of taxes it must pay. In Oklahoma, appellant's purchaser pays the taxes and technically deducts them from its payment to appellant. As we have already concluded, since appellant receives the ceiling amount, the actual price to the purchaser is the ceiling amount plus the amount of taxes paid. Thus the value of production is more than the gross proceeds in this case.

Appellant's argument that the value to the United States of the

gas produced changes according to whether the producer sells it and pays royalty, or the United States takes it in kind and sells it, is a misleading over simplification of the situation. Appellant presumes that the value to the United States of in kind gas is only what it could then be sold for. If, however, the Government were to take its royalty interest in kind, the implicit assumption would be that it had a use for the gas. The value of this gas is, therefore, properly computed as the price which the United States would pay on the open market if it were purchasing the gas as an ordinary purchaser. The fact that the United States cannot be assessed state severance tax does not depreciate the *value* of the gas to it. Immunity from state taxation is a function of the Federal Government's sovereignty, which prevents the state from assessing a severance tax. This benefit flows to the Government, not the lessor.

The essential fallacy of appellant's argument is made clear if we reverse the instant situation and assume that the seller pays the severance tax. Under sec. 110(a)(1) of the NGPA, *supra*, the seller would be permitted to obtain reimbursement of the severance tax *above* the established ceiling price. This reimbursement is clearly part of the gross proceeds obtained. The fact that a state may make the purchaser liable for payment of the severance tax does not alter the economic results. In both cases it is the seller who makes the severance and who receives the ceiling

price as a net proceed (excluding, of course, other costs of production, which would remain the same no matter how the tax was assessed).

Finally, appellant's argument that the basis of the royalty decreases as the amount of leased Federal or Indian land within a unit increases is merely a mathematical reflection of the fact that as the extent of the Federal royalty interest within a unit rises, an increasing proportion of unit production is not subject to state taxation. We would point out that appellant's argument would support a finding that the proper mode of determination would not consider any of the lands within a unit as Federally owned.

Using appellant's hypothesis that the NGPA price is \$2 per Mcf (such gas having a Btu content of 1,000 Btu/cf), and that the State of Oklahoma imposes a state severance tax equal to 10 percent of the value of all gas produced, one could argue that the value for royalty purposes should be \$2.20 per Mcf regardless of the percentage of Federal or Indian lands within the unit. Admittedly, this would not represent "gross proceeds" inasmuch as there would be no severance tax assessed on the Federal or Indian royalty interests, and thus no reimbursement. But such a figure might, nevertheless, arguably represent the real value of an Mcf of gas. "Gross proceeds" is a floor, not a ceiling, concept. Thus, the regulation provides that "[u]nder no circumstances shall the value of production of any of said substances for the purposes of comput-

ing royalty be deemed to be *less* than the gross proceeds accruing to the lessee from the sale thereof" (*italics supplied*). 30 CFR 221.47. To the extent that the Government has elected to utilize actual gross proceeds in order to determine value, rather than merely applying the percentage severance tax imposed by the State to *all* production had within a unit, the lessees are the beneficiaries.

We agree that the degree of benefit, under the system of value ascertainment adopted by the Geological Survey, will, in fact, vary according to the percentage of Federal and Indian lands within a unit. But inasmuch as the regulation clearly requires that "gross proceeds" serve as the minimum basis for the royalty assessment, the only alternative method would be to ignore "gross proceeds" and proceed on the assumption that all production was subject to severance taxation to determine the value of the gas produced. This would, necessarily, work to the detriment of every Federal oil and gas lessee.

Accordingly, pursuant to the authority delegated to the Board of Land Appeals by the Secretary of the Interior, 43 CFR 4.1, the decision appealed from is affirmed.

JAMES L. BURSKI,
Administrative Judge

WE CONCUR:

BERNARD V. PARRETTE
Chief Administrative Judge

DOUGLAS E. HENRIQUES
Administrative Judge

NORTHWAY NATIVES, INC.**5 ANCAB 147***Decided January 5, 1981*

Appeal from the Decision of the Alaska State Director, Bureau of Land Management F-14912-A and F-14912-B.

Partial remand.

1. Alaska Native Claims Settlement Act: Alaska Native Claims Appeal Board: Appeals: Generally

Where the Federal Government grants a right-of-way for a Federal aid material site, that right-of-way, if valid, is a valid existing right within the meaning of § 14(g) of ANCSA, and as such a patent issued pursuant to ANCSA must contain provisions making it subject to the right-of-way.

2. Alaska Native Claims Settlement Act: Alaska Native Claims Appeal Board: Appeals: Generally

If the terms of the right-of-way grants were violated, the rights-of-way would not be automatically terminated but would be subject to cancellation within the discretion of the Bureau of Land Management.

3. Alaska Native Claims Settlement Act: Alaska Native Claims Appeal Board: Appeals: Generally

When the record before the Bureau of Land Management raises questions which may affect the validity of Federally created third-party interests, Secretary's Order No. 3029 requires the Bureau of Land Management to determine through adjudication, the validity of such interests.

4. Alaska Native Claims Settlement Act: Alaska Native Claims Appeal Board: Appeals: Remand

When the record on appeal raises questions which may affect the validity of Federally created third-party interests, and when there is no evidence that a determination of validity has been made pursuant to Secretary's Order No. 3029, the Board will remand to the Bureau of Land Management for such determination.

APPEARANCES: Peter J. Aschenbrenner, Esq., Aschenbrenner and Savell, and David Wolf, Esq., Keane, Harper, Pearlman and Copeland, for appellant; Elizabeth S. Ingraham, Esq., for Doyon, Limited; M. Francis Neville, Esq., Office of the Regional Solicitor, for Bureau of Land Management; Shelley J. Higgins, Esq., and Martha T. Mills, Esq., Department of Law, for State of Alaska.

**OPINION BY ALASKA
NATIVE CLAIMS APPEAL
BOARD**

In 1960, the State of Alaska (State) made application with Bureau of Land Management (BLM) to obtain various material site rights-of-way on Federal lands in the vicinity of the Village of Northway. The State asserts that the material sites were needed in connection with the construction and maintenance of the State's highway projects in the area. In 1964, a further material site was applied for in the same locality. Specifically, the material sites here referred to are described as follows:

1. A right-of-way, F-025907, for a Federal aid material site, located in the W½, of Section 18, T. 14 N., R. 20 E., C.R.M. Act of August 27, 1958, as amended, 23 USC 317.

2. A right-of-way, F-025905, for a Federal aid material site located in the E½ of Section 29, T. 15 N., R. 19 E., C.R.M. Act of August 27, 1958, as amended, 23 USC 317.

3. A right-of-way, F-025926, for a Federal aid material site, located in the NW¼ of Section 4, T. 15 N., R. 18 E., C.R.M. Act of August 27, 1958, as amended, 23 USC 317.

4. A right-of-way, F-025909, for a Federal aid material site, located on the W½ of Section 28, T. 14 N., R. 20 E., C.R.M. Act of August 27, 1958, as amended, 23 USC 317.

5. A right-of-way, F-025923, for a Federal aid material site, located in the N½ of Section 11, T. 14 N., R. 19 E., C.R.M. Act of August 27, 1958, as amended, 23 USC 317.

6. A right-of-way, F-025900, for a Federal aid material site, located in the W½ of Section 12, T. 13 N., R. 20 E., C.R.M. Act of August 27, 1958, as amended, 23 USC 317.

7. A right-of-way, F-025791, for a Federal aid material site, located in the NW¼ of Section 10, T. 14 N., R. 19 E., C.R.M. Act of August 27, 1958, as amended, 23 USC 317.

8. A right-of-way, F-033056, for a Federal aid material site, located in the SW¼ of Section 32, T. 16 N., R. 18 E., C.R.M. Act of August 27, 1958, as amended, 23 USC 317.

Appellant's Memo in Support of Statement of Reasons, at 18.

The BLM granted these rights-of-way to the State pursuant to 23 U.S.C. § 317 (1976) which provides:

(a) If the Secretary determines that any part of the lands or interests in lands owned by the United States is reasonably necessary for the right-of-way of any highway, or as a source of materials for the construction or maintenance of any such highway adjacent to such lands or interests in lands, the Secretary shall file with the Secretary of the Department su-

pervising the administration of such lands or interests in lands a map showing the portion of such lands or interests in lands which it is desired to appropriate.

(b) If within a period of four months after such filing, the Secretary of such Department shall not have certified to the Secretary that the proposed appropriation of such land or material is contrary to the public interest or inconsistent with the purposes for which such land or materials have been reserved, or shall have agreed to the appropriation and transfer under conditions which he deems necessary for the adequate protection and utilization of the reserve, then such land and materials may be appropriated and transferred to the State highway department, or its nominee, for such purposes and subject to the conditions so specified.

(c) If at any time the need for any such lands or materials for such purposes shall no longer exist, notice of the fact shall be given by the State highway department to the Secretary and such lands or materials shall immediately revert to the control of the Secretary of the Department from which they had been appropriated.

(d) The provisions of this section shall apply only to projects constructed on a Federal-aid system or under the provisions of chapter 2 of this title.

While the terms and conditions of these material site rights-of-way varied, they basically provided that an unspecified amount of material was to be taken from each site for the purpose of road building (in some rights-of-way "maintenance" was included) and that proof of construction be filed within 5 years (in the case of F-025923 and F-033056, the period was extended to 7 years).

Northway Natives, Inc. (Northway) filed village selection applications F-14912-A, as amended, on

Oct. 22, 1974, and F-14912-B, as amended, on Dec. 12, 1974, for lands located near the Village of Northway, including the lands comprising the material site rights-of-way discussed above. The applications were filed under the provisions of § 12(a) of the Alaska Native Claims Settlement Act (ANCSA), Dec. 18, 1971 (85 Stat. 688, 701; 43 U.S.C. § 1601, 1611(a) (Supp. V, 1975)).

The BLM published, in 43 FR 28051 (June 28, 1978), its Decision to Issue Conveyance (DIC) of land to Northway, in response to village selection applications F-14912-A, as amended, and F-14912-B, as amended. In this DIC the lands comprising the rights-of-way were not conveyed to Northway, but instead reserved to the United States. On July 26, 1978, Northway filed an appeal received by the Alaska Native Claims Appeal Board (AN-CAB) on July 28, 1978.

In its Statement of Reasons, Northway asserts that the rights-of-way were rendered invalid because the State violated the terms of the grants, and further, that BLM failed to follow its own procedures in not terminating the rights-of-way when their terms were violated by the State. Under this theory the right-of-way sites would be "public lands" as defined in § 3(e) of ANCSA and thus withdrawn for Native selection under § 11(a)(1) of ANCSA. Northway asserts that (1) proof of construction was not filed, or not filed timely, by the State as required by the right-of-way grants; (2) amounts of mate-

rial removed were not determined and may have been excessive in which case cancellation of the grants would be required; and (3) material may have been used for unauthorized purposes, requiring cancellation of the grants. On the basis of these allegations, Northway seeks a remand to the Secretary for determination of these matters.

Doyon, Limited (Doyon), filed Motion to Intervene in this appeal on Jan. 11, 1979, and the Board named it a party on Jan. 15, 1979. In its Statement of Reasons, Doyon also asserts that the rights-of-way in question are no longer valid under the law and regulations and should therefore be cancelled. Doyon further argues that the rights-of-way are third-party interests created by Federal law and as such the Department of the Interior is required to determine their validity. Second, to the extent, if any, that these rights-of-way are valid and are not cancelled by the Department, they should be identified in the DIC as existing rights of the State, which the conveyance is "subject to," not as reservations to the United States.

The various questions raised by both Northway and Doyon can be categorized into three basic issues. First, are the State's interests, if valid, third-party interests protected by § 14(g) of ANCSA? Second, if the State violated the terms of the right-of-way grants, were the rights-of-way rendered invalid? Third, did BLM adjudicate the State's right-of-way interest as re-

quired within the meaning of Secretary's Order No. 3029, 43 FR 55287 (Nov. 27, 1978)?

The first question arises because § 14(g) of ANCSA recognized that certain property interests granted by the Federal Government to third parties had to be protected when a land conveyance was made to a Native corporation under ANCSA. Specifically, § 14(g) provides in pertinent part:

All conveyances made pursuant to this Act shall be subject to valid existing rights. Where, prior to patent of any land or minerals under this Act, a lease, contract, permit, right-of-way, or easement (including a lease issued under section 6(g) of the Alaska Statehood Act) has been issued for the surface or minerals covered under such patent, the patent shall contain provisions making it subject to the lease, contract, permit, right-of-way, or easement, and the right of the lessee, contractee, permittee, or grantee to the complete enjoyment of all rights, privileges, and benefits thereby granted to him. [Italics added.]

As noted above, the Federal Government, through BLM, granted the rights-of-way in question to the State pursuant to 23 U.S.C. § 317 (1976), and such grants were made in 1960 and 1964. Applying these facts to the language of § 14(g), we have a situation "[w]here, prior to patent * * * a lease, contract, permit, right-of-way * * * has been issued for the surface or minerals covered under such patent."

[1] The Board concludes that where the Federal Government grants a right-of-way for a Federal aid material site, that right-of-way, if valid, is a valid existing right within the meaning of § 14(g) of

ANCSA, and as such a patent issued pursuant to ANCSA must contain provisions making it subject to the right-of-way.

Having established that a Federal grant right-of-way for a material site can be a valid existing right within the meaning of § 14(g) of ANCSA, the second question is whether the right-of-way grants would be rendered invalid if the State violated the terms of the grants?

While the appellants argue that certain actions and inactions by both the State and BLM did in fact terminate the grants, the Department regulations as interpreted by the Interior Board of Land Appeals lead to a contrary conclusion. The pertinent regulations are 43 CFR 2802.2-3 and 43 CFR 2802.3-1.

43 CFR 2802.2-3 provides:

Unless otherwise provided by law, rights-of-way are *subject to cancellation* by the authorized officer for failure to construct within the period allowed and for abandonment or nonuse. [Italics added.]

43 CFR 2802.3-1 provides:

All rights-of-way approved pursuant to this part * * * shall be *subject to cancellation* for the violation of any of the provisions of this part applicable thereto or for the violation of the terms or conditions of the right-of-way. *No right-of-way shall be deemed to be canceled except on the issuance of a specific order of cancellation.* [Italics added.]

The "subject to cancellation" language in the above regulations allows the person administering the grants to cancel them when a violation has occurred but it does not

mandate that such action be taken. What action, if any, the administrator is to take when the terms of a grant have been violated, is left to his discretion. Violation of the terms of a grant only subject the grant to possible cancellation.

The last sentence of 43 CFR 2802.3-1: "No right-of-way shall be deemed to be canceled except on the issuance of a specific order of cancellation," refutes the argument that the grants automatically terminate when the terms of the grants are violated.

The "subject to cancellation" language in the above-quoted regulations has been interpreted by the Interior Board of Land Appeals in *State of Alaska Department of Highways*, 20 IBLA 261, 82 I.D. 242, 245 (1975) as follows:

Quite clearly, then, the regulations make such rights-of-way *subject to* cancellation by the authorized officer for non-construction, nonuse, abandonment, violations of the regulations, or of the terms and conditions of the grant. See *Southern Idaho Conf. of 7th Day Adventists v. United States*, 418 F.2d 411 (9th Cir. 1969). [Italics in original.]

* * * *The fact that a right-of-way is subject to cancellation under these circumstances does not mean that it must be canceled.* The employment of the words "subject to" [an action] in a regulation has been held to invest the administrative officer with the discretion to determine whether noncompliance in a given instance should be excused or whether the prescribed penalty should be imposed. *Tagala v. Gorsuch*, 411 F.2d 539 (9th Cir. 1969); *Pressentin v. Seaton*, 284 F.2d 195 (D.C. Cir. 1960). Use of the term "subject to" said the Court in *Pressentin*, "left the door wide open to a consideration of circumstances." At 199. [Italics added.]

[2] The Board concurs that if the terms of the right-of-way grants were violated, the rights-of-ways would not be automatically terminated but would be subject to cancellation within the discretion of BLM.

The final question is whether the Department adjudicated the validity of State's third-party rights within the meaning of Order No. 3029, *supra*? As to third-party interests created by Federal law, Order No. 3029 (43 FR at 55291) states:

Another issue for resolution is to what extent the law and regulations require the Department to identify and determine the validity of (adjudicate) third party valid existing rights.

* * * [I]t is appropriate for BLM to determine in the first instance the validity of those interests which are created by federal law since BLM is in most cases the agency charged with the administration of those laws.

As to third-party interests created by the State of Alaska, Order No. 3029 (43 FR at 55291), *supra*, states:

Neither the Department's regulations nor ANCSA require the Department to determine whether third party interests created by the State are valid under the applicable State law and regulations. The Department is not an appropriate forum to adjudicate these interests. *If the State created interest is valid on its face* it should be deemed valid for purposes of the conveyance document. [Italics added.]

To ascertain whether BLM had determined and adjudicated the validity of the Federally created interest in this case, the Board issued

January 5, 1981

an Order for Further Information on Aug. 8, 1980. This order stated in pertinent part: "Therefore, the Board hereby Orders BLM to furnish it with a concise statement as to whether BLM ever determined the validity of the rights here in question."

In BLM's Response to Order of Aug. 8, 1980, filed Aug. 20, 1980, it made the following declaration:

It is the position of the BLM that it had complied with the requirement of S.O. 3029 "to determine in the first instance the validity of those interests created by federal laws . . ." at the time the DIC was issued.

The BLM maintains a casefile on each of the material site rights-of-way. These casefiles were examined by the ANCSA adjudicator prior to the issuance of the DIC. If a file reveals that a grant had been issued by BLM for the right-of-way on lands to be approved for conveyance, and if no final action has been taken by BLM to cancel the granted right-of-way, the interest is listed in the DIC as a valid existing right. It is the position of BLM that this process meets the mandate of S.O. 3029.

Order No. 3029, *supra*, distinguishes between third-party interests created by Federal law, such as the rights-of-way subject of this appeal, and third-party interests created by the State of Alaska. BLM is directed "to determine * * * the validity" of Federally created interests, while specifically precluded from adjudicating State-created interests other than noting, "[i]f the State-created interest is valid on its face."

The contrast between the treatment of the two types of interest

clearly indicates Secretarial intent to impose upon BLM a requirement to adjudicate Federally created interests at some level beyond simply noting if they are valid on their face.

Order No. 3029, *supra*, does not expressly require BLM to adjudicate the validity of Federally created third-party interests; it merely provides that such adjudication is "appropriate." However, it is apparent from subsequent clarifications of Order No. 3029, that this language was construed by the Secretary as a requirement for adjudication. A Memorandum dated Nov. 20, 1979, from the Solicitor to the Secretary, discusses the Solicitor's concern that the above language would be interpreted to include mining claims and rights-of-way claimed under RS 2477 as interests whose validity BLM was required to adjudicate. The conclusion was that they were not.

This sentence was not intended to require the adjudication of unpatented mining claims * * *. The Department's position that it may convey land which contains unpatented claims, the validity of which has not been determined, was recently upheld in *Alaska Miners v. Andrus*, A 76-263, (D. Alaska) * * *.

Neither was this sentence intended to require the adjudication of rights claimed under RS 2477.

Solicitor's Memorandum, dated Nov. 20, 1979.

Based on these conclusions, Order No. 3029, *supra*, was amended to read:

Nevertheless, it is appropriate for BLM to determine in the first instance the

validity of those interests created by federal laws, which are administered by BLM, other than unpatented mining claims under the Mining Law of 1872, 30 U.S.C. 22 *et seq.*, and rights-of-way under RS 2477 (repealed in 1976 by 90 Stat. 2793).

45 FR 1692, 1693 (Jan. 8, 1980).

Had Order No. 3029, *supra*, not been intended to require adjudication of Federally created third-party interests, the above modification would not have been necessary. The fact that the modification was made underscores the point that with regard to Federally created interests other than the exceptions, BLM is required to undertake some form of adjudicative process to determine validity before conveyance.

BLM has stated its determination in this case was limited to examining the case files to see if the rights-of-way had been issued and had not been cancelled. While this type of review may be sufficient when the record shows no reason for a full adjudication, the record of this appeal raises questions which may affect the validity of the material sites rights-of-way, *i.e.*, whether proof of construction was timely filed; whether the amounts of material removed were permissible; and whether material was used for unauthorized purposes.

[3] The Board finds that when the record before BLM raises questions which may affect the validity of Federally created third-party interests, Order No. 3029, *supra*, requires BLM to determine through adjudication, the validity of such interests.

[4] The Board further finds that when the record on appeal raises questions which may affect the validity of Federally created third-party interests, and when there is no evidence that a determination of validity has been made pursuant to Order No. 3029, *supra*, the Board will remand that portion of the appeal to BLM for such determination.

Therefore, the Board hereby remands this portion of the appeal to BLM so that it may determine the validity of the State's third-party interests in accordance with Order No. 3029, *supra*. It should be noted that BLM's decision on remand will be based upon an interpretation of 23 U.S.C. § 317 (1976), and not ANCSA, and therefore any appeal from that decision must be taken before the Interior Board of Land Appeals, and not ANCAB.

This represents a unanimous decision of the Board.

ANNUAL REVIEW, REVISION AND REAPPROVAL OF 5-YEAR OCS OIL AND GAS LEASING PRO- GRAMS

M-36932

January 5, 1981

Outer Continental Shelf Lands Act: Generally

Use of consultation procedures of sec. 18
of the Outer Continental Shelf Lands Act,

43 U.S.C. § 1344 (Supp. II 1978), are not required for annual review of an approved 5-year OCS leasing program under sec. 18(e) of the Act.

**Outer Continental Shelf Lands Act:
Generally**

Under sec. 18 of the Outer Continental Shelf Lands Act, 43 U.S.C. § 1344 (Supp. II 1978), a reapproval must include a schedule of proposed lease sales for the full 5-year period following reapproval but may not include sales beyond the 5-year period. A revision permits changes within an existing approved schedule without requiring an extension of that schedule to include a full five years after revision.

**Outer Continental Shelf Lands Act:
Generally**

Under sec. 18 of the Outer Continental Shelf Lands Act, 43 U.S.C. § 1344 (Supp. II 1978), a revision may add, delete, delay or advance sales and planning milestones within an approved 5-year program. A revision cannot be used to tack additional sales or milestones onto the end of an approved 5-year program. Only a reapproval can add sales beyond an existing approved program.

**Outer Continental Shelf Lands Act:
Generally**

Sec. 18(e) of the Outer Continental Shelf Lands Act, 43 U.S.C. § 1344(e) (Supp. II 1978), states in discussing revisions and reapprovals that only a revision which is not significant may escape the requirement of sec. 18 consultation procedures. A fortiori, all reapprovals require use of these procedures. Therefore, the procedures must be followed to schedule any sales or milestones beyond the existing 5-year program.

**Outer Continental Shelf Lands Act:
Generally**

Under sec. 18 of the Outer Continental Shelf Lands Act, 43 U.S.C. § 1344 (Supp.

II 1978), the Secretary has considerable discretion to determine whether or not the deletion, delay or advancement of sales or milestones within an approved 5-year program is a significant revision.

**Outer Continental Shelf Lands Act:
Generally**

Planning milestones and sale dates beyond the 5-year horizon can be made available as a matter of information, but final approval of a schedule containing such sales cannot occur until the procedures of sec. 18 have been followed. Those milestones occurring within the 5-year period that apply to sales expected beyond five years may be included in a reapproved schedule.

TO: ASSISTANT SECRETARY, POLICY,
BUDGET AND ADMINISTRATION

FROM: SOLICITOR

SUBJECT: ANNUAL REVIEW, REVISION
AND REAPPROVAL OF 5-YEAR
OCS OIL AND GAS LEASING
PROGRAM

This memorandum is in response to your request dated Nov. 14, 1980, concerning the development of a strategy for the review, revision and reapproval of the 5-year OCS leasing program.

Your first question concerned annual review. Annual review is required by sec. 18(e) of the OCS Lands Act which reads as follows:

The Secretary shall review the leasing program approved under this section at least once each year. He may revise and reapprove such program, at any time, and such revision and reapproval, except in the case of a revision which is not significant, shall be in the same manner as originally developed. 43 U.S.C. § 1344(e) (Supp. II 1978).

A plain reading of this language makes clear that use of the consultation procedures found elsewhere in sec. 18 are not required for the annual review. These procedures are only required for revisions, if significant, and reapprovals. The legislative history of the section supports plain reading. S. Rep. No. 1091, 95th Cong., 2d Sess. 106 (1978); H.R. Rep. No. 590, 95th Cong., 2d Sess. 151 (1978); S. Rep. No. 284, 95th Cong., 2d Sess. 77 (1978). Therefore, a decision not to revise the schedule can be reached without formal consultation.

You have proposed two alternatives when a decision is made to revise or reapprove. The first is to revise and extend the program for one or two years using practices employed by the Department for schedule development prior to 1978. For reasons stated below, this is not a legal approach. The second alternative is to revise and extend the program using sec. 18 consultation procedures.

At this point, it is necessary to distinguish carefully revisions from reapprovals. Reapprovals are discussed in both secs. 18(a) and 18(e) of the OCS Lands Act. Revisions are only discussed in sec. 18(e). Sec. 18(a) reads, in part, as follows:

The leasing program shall consist of a schedule of proposed lease sales indicating, as precisely as possible, the size, timing, and location of leasing activity which he determines will best meet national energy needs *for the five-year period following its approval or reapproval.* 43 U.S.C. § 1344(a) (Supp. II 1978) (italics added).

Accordingly, a reapproval must include a schedule of proposed lease sales for the 5-year period following reapproval. This is to be distinguished from a revision which would permit changes in an existing approved schedule without requiring an extension of that schedule to include a full five years after revision. See 43 U.S.C. § 1344(e) (Supp. II 1978).

If revision and reapproval are not distinguished and are considered one process, a reapproval always following a revision, it would be extremely difficult for the Secretary to advance even one sale on an approved schedule by one month since a reapproval would require the additional task of adding sales at the end of the existing approved schedule so that the reapproval includes a full five years. In our view, a revision may add, delete, delay or advance sales and planning milestones within an approved 5-year program. A revision cannot be used to tack additional sales or milestones onto the end of an approved 5-year program. Only a reapproval can add sales beyond an existing program. Distinguishing between revisions and reapprovals in this fashion also gives meaning to the distinction in sec. 18(e) between revisions which may be significant or insignificant and reapprovals which are not subdivided by significance.

Concerning consultation requirements, sec. 18(e) states that only "a revision which is not significant" may escape the requirement of sec.

18 consultation procedures. A fortiori, all reapprovals require use of these procedures. Therefore, the procedures must be followed to schedule any sales or milestones beyond the existing 5-year program. Regarding revisions, we believe the Secretary has considerable discretion to determine whether the deletion, delay or advancement of sales or milestones within an approved 5-year program is significant or not. An abuse of this discretion would be judicially reviewable; therefore, determination of insignificance should be supported by an administrative record demonstrating the appropriateness of the determination. Furthermore, the Secretary has discretion to add new milestones to an approved program for sales beyond that program. These, in our view, would not affect the substance of an approved program. *See H.R. Rep. No. 1474, 95th Cong., 2d Sess. 106 (1978).*

You have suggested including in future reapprovals all sale dates for which any planning milestone falls within the 5-year period, and if possible, formally approving sales beyond the 5-year horizon. This practice would not be in accordance with sec. 18(a) which clearly limits the approval of a lease sale schedule to five years. This limitation is entirely consistent with other provisions of sec. 18 providing for comment from designated federal agencies, affected state and local governments

and others. The statutory scheme reflects the difficulty that such commenters would have in giving Departmental decisionmakers effective advice to balance statutory considerations for sales more than five years in the future, particularly given a climate of advancing technology, growing energy needs and environmental sensitivity.

We do not mean to suggest, however, that planning milestones and sale dates beyond the 5-year horizon could not be made available as a matter of information. We only mean that final approval of a schedule containing such sales cannot occur until the procedures of sec. 18 have been followed. Finally, we see no prohibition for including in a reapproved schedule those milestones occurring within the 5-year period that apply to sales expected beyond five years. This would result in prospective lessees being fully aware of planned calls for nomination, for example, thus enabling them to better schedule their planning activities. This would also enable the Department to wait longer within any given approved program before finding it necessary to go through a new reapproval process.

If you have any further questions on this subject, please do not hesitate to contact this office.

CLYDE O. MARTZ
SOLICITOR

GARLAND COAL & MINING CO.

52 IBLA 60

Decided *January 9, 1981*

Appeal from decisions of the New Mexico State Office of the Bureau of Land Management accepting relinquishment of several coal leases and advising of rental amounts due. NM 029179 Okla., NM 029180 Okla., BLM-C 030765 Okla., and NM 033508 Okla.

Reversed.

1. Coal Leases and Permits: Cancellation—Coal Leases and Permits: Rentals—Regulations: Applicability—Regulations: Interpretation

An ambiguous regulation relating to "the proper office" in which to file a relinquishment of a coal lease should not be interpreted to the detriment of a coal lessee who sought to comply with its provisions.

2. Coal Leases and Permits: Cancellation—Regulations: Generally—Regulations: Validity

The Boards of Appeal of the Department of the Interior have no authority to declare invalid a duly promulgated regulation of this Department. Where, however, the regulation was not properly promulgated, is lacking in statutory basis, and has been consistently ignored in actual practice, that regulation will be accorded no force or effect.

3. Coal Leases and Permits: Generally—Coal Leases and Permits: Cancellation

Under the provisions of 30 U.S.C. § 188a (1976) accrued rentals on mineral leases are to be prorated on a monthly basis where the failure to file a timely surrender was not due to a lack of reasonable diligence on the part of the lessee.

APPEARANCES: Jeffrey J. Kahn, Esq., Skelton, Oviatt, and O'Dell, Wheat Ridge, Colorado, for appellant.

OPINION BY
ADMINISTRATIVE
JUDGE BURSKI

INTERIOR BOARD OF
LAND APPEALS

Garland Coal & Mining Co. (Garland) appeals decisions of the New Mexico Office, Bureau of Land Management (BLM), dated June 20, 1979, accepting relinquishment of appellant's coal leases and advising of rental amounts due and payable 30 days after receipt of the decisions. The leases, BLM-C 030765 Okla., NM 029179 Okla., NM 029180 Okla., and NM 033508 Okla. are situate in Haskell and LeFlore Counties in Oklahoma. The leases had been in producing status, and were, therefore, administered by Geological Survey (Survey).

By letters dated Dec. 27, 1976, and addressed to the Area Mining Supervisor of Survey, appellant stated its intent to relinquish the leases "upon the next anniversary date" of the leases, *i.e.*, Feb. 1, 1977. The letters requested information regarding "any questions or formal requirements concerning such relinquishment." The letters indicate that appellant did not send copies to BLM, and Survey did not undertake to do so. Eventually, appellant learned that BLM and not Survey was the proper office in which to file relinquishments of coal leases. By letter dated Feb. 1, 1977, addressed to BLM, appellant purported to confirm its previous letters to Sur-

January 9, 1981

vey dated Dec. 27, 1976. BLM considered the relinquishment as filed on Feb. 4, 1977, the date it received appellant's letter. 43 CFR 3523.1-2 (1976).

In March 1977, BLM requested the report and recommendation of Survey regarding the relinquishment. Survey replied by memorandum dated Mar. 10, 1977, that annual rentals for each of the subject leases had not been remitted on or before the February 1 anniversary date, and on that ground declined to "concur in any relinquishment."

By decision dated Aug. 19, 1977, the relinquishments were accepted as affective Feb. 4, 1977, and appellant was advised of its obligation to pay accrued rentals and royalties for the year commencing Feb. 1, 1977,¹ citing 43 CFR 3523.1-2 (1976). Appellant was allowed 30 days from receipt of that decision in which to remit payment. That decision was timely appealed.

In January 1979, appellant withdrew its appeal on the ground that the United States had withdrawn its claim for the rental amounts. BLM subsequently requested additional information concerning the purported release of the claim for rental, in response to which Garland submitted photocopies of statements of account prepared and issued by Survey. Those statements showed a zero balance in each lease account, the notation, "BALANCE ADJUSTMENT 06/01/78 BAL TRF

TO BLM," and the statement, "NOTICE: LEASE ACCOUNT CANCELED OR TERMINATED. BALANCE SHOWN PAYABLE TO ISSUING OFFICE UPON RECEIPT OF THIS STATEMENT." Appellant construed these notations to mean that the United States had withdrawn the additional charges. By memorandum dated Apr. 27, 1979, from Survey to BLM, it was explained that the above remarks were intended to show only that the account and outstanding balance had been transferred to BLM. Survey stated that the issue of whether rent is owed depends on which of Garland's letters of relinquishment—the December 1976 letters to Survey or the February 1977 letter to BLM—effected the intended action. As noted, BLM accepted the latter and, accordingly, reissued its earlier decision under date of June 20, 1979. An appeal was timely noted.

[1] Appellant argues, *inter alia*, that Survey should have either notified the BLM State Office of appellant's intent to relinquish or informed Garland that the proper office in which to file a relinquishment was the BLM State Office. Given the specific wording of appellant's submittal, however, we do not feel that Survey's actions, alone, would justify reversal of the decision below.

The letters of Dec. 27, 1976, which Garland sent to Survey merely recited the following:

Garland Coal and Mining Co. intends to relinquish its leases from the United

¹ The rental amounts are as follows: \$2,554 (NM 029179); \$1,924 (NM 029180); \$2,098 (BLM-C 030765); and \$634 (NM 033508).

States numbered NM-033508, NM-029-179, and NM-029180 in LeFlore and Latimer counties, Oklahoma upon the next anniversary date of said leases. If you have any questions or formal requirements concerning such relinquishment, please let me know.²

In response to a subsequent inquiry from Garland, dated Oct. 17, 1977, seeking an explanation for the failure of Survey to either forward the letters to BLM or inform appellant of the necessity of filing relinquishment of the leases with BLM, Alex M. Dinsmore, the addressee of the December 27 letters, responded, in relevant part, as follows:

Reference is made to your letter of October 17, 1977, regarding the above referenced appeal.

Please be advised that the two Garland letters of December 27, 1976, were received in this office on December 28, 1976, and copies were not forwarded to any other office as they were addressed to this office. At that time we had no particular questions nor requirements concerning the intended relinquishments.

This explanation, particularly when viewed in conjunction with the specific wording of the December 27 letters, can easily be accepted. By the December 27 letters, Garland informed Survey of its future intent to relinquish the leases; only the subsequent events would have indicated to the employees of Survey that Garland intended *by these documents* to relinquish the leases, with an effective date of Feb. 1, 1977. While someone in Survey

might have been induced by this letter to either forward a copy to BLM or inform Garland that relinquishments of leases should be filed in the State Office, we cannot say that the failure to so act, given the specific wording of the letters, can give rise to any estoppel.

On the other hand, a review of the regulations, which were in force at the time of appellant's actions, indicates that appellant's actions were not unreasonable. The regulation on relinquishment of coal leases presently provides that "[a] relinquishment shall be filed in triplicate by the lessee in the Bureau of Land Management State Office having jurisdiction over the lands involved (43 CFR Subpart 1821)." 43 CFR 3452.1-2. While this regulation explicitly notes that relinquishments are filed with BLM, the regulation which was applicable in 1976, 43 CFR 3523.1-1 (which now relates only to relinquishments of leases for minerals other than coal or oil and gas), provides that the relinquishment be filed "in the proper office." Though there are a number of other references in these regulations to "the proper office" (*see* 43 CFR 3503.1-2(a)), the term "proper office" is never really defined in the regulations as referring to BLM. We feel that the ambiguity in this regulation, particularly in light of the fact that appellant would be dealing with Survey on a number of matters for which it was "the proper office," would justify appellant's actions, herein, particularly in the absence of any third party rights.

² There were actually two letters involved herein. The only difference between the two was that the second letter referred to coal lease BLM-C-030765 in Haskell County, Oklahoma.

Cf. A. M. Shaffer, 73 I.D. 293 (1966).

[2] We also note that BLM made no reference to 43 CFR 3523.3 (1976). While this regulation is still codified, it no longer applies to coal leasing. The regulation presently provides, as it did in 1976 when it was applicable to coal leasing, that:

Any lease shall terminate automatically if the lessee fails to pay the rental on or before the anniversary date of the lease. However if time for payment falls upon any day on which the proper office to receive payment is not open, payment received on the next official working day shall be deemed to be timely. The termination of the lease for failure to pay the rental must be noted on the official records of the proper office. Until such notation is made, the lands included in such lease are not subject to issuance of any other lease.

This provision, with a few exceptions, tracks 43 CFR 3108.2-1(a) which relates to termination of oil and gas leases for nonpayment of rentals. This latter regulation was issued under the provisions of the Act of July 29, 1954, 68 Stat. 585, 30 U.S.C. § 188(b) (1976), which provides for the automatic termination of oil and gas leases for the nonpayment of annual rental. The problem, however, is that the Act of July 29, 1954, *supra*, applied *only* to oil and gas leases. There is not now, nor has there ever been, any statutory provision terminating mineral leases, other than those issued for oil and gas, for nonpayment of annual rentals.

An analysis both of the promulgation of 43 CFR 3523.3, and the

adoption of the Act of July 29, 1954, as well as the actions of the Department subsequent to the enactment of the provision for the automatic termination of oil and gas leases, clearly indicates that no termination occurs for failure to timely file annual rental on mineral leases other than those issued for oil and gas.

There is a certain degree of difficulty surrounding an analysis of the promulgation of 43 CFR 3523.3. This arises from the fact that the regulation was apparently *never* properly promulgated. It first appears in the 1970 recodification of regulations. *See* 35 FR 9716 (June 13, 1970). A review of the pre-1970 regulations discloses no antecedent for this regulation. Inasmuch as the recodification expressly stated that "it is the Department's intent in this revision to make no substantive changes in the regulations" (35 FR 9502 (June 13, 1970)), it is open to doubt whether we may give this regulation any regard whatsoever.

The only regulations which arguably come close to 43 CFR 3523.3, are those provisions providing for the termination of mineral *permits* for nonpayment of annual rentals. No rentals were required for any mineral permits until Oct. 6, 1959, when regulations were adopted relating to potassium permits requiring an annual rental of 25 cents an acre or fraction thereof, but not less than \$20 per year. *See* 24 FR 8067 (Oct. 6, 1959). Two years later, regulations were adopted relating to sodium permits which provided for

annual rental payments and also provided for the automatic termination of sodium permits for nonpayment thereof. *See* 26 FR 775 (Aug. 19, 1961). Finally, in 1963, the Department adopted regulations extending the permit rental requirements to coal and phosphate, and providing the automatic termination of coal, phosphate, and potassium permits for nonpayment of the annual rental. *See* 28 FR 1474 (Feb. 15, 1963). These regulations, though no longer applicable to coal exploration licenses, are presently codified at 43 CFR 3511.4-2(b) (1).

As noted above, however, the first appearance of an automatic termination provision relating to issued leases occurred in the 1970 recodification. The applicability of an automatic termination provision to mineral permits is fundamentally different than the application of the same provision to leases. Thus, the regulations relating to automatic termination of mineral permits were issued under the general rule-making authority of 30 U.S.C. § 189 (1976), as well as the specific authority of sec. 261 (sodium) and sec. 281 (potash), which concern the adoption of rules for the issuance of prospecting permits for those substances. Sec. 26 of the Mineral Leasing Act, 30 U.S.C. § 183 (1976), provides that:

The Secretary of the Interior shall reserve and may exercise the authority to cancel any prospecting permit upon failure by the permittee to exercise due diligence in the prosecution of the prospecting work in accordance with the terms and conditions stated in the per-

mit, and shall insert in every such permit issued under the provisions of this chapter appropriate provisions for its cancellation *by him*. [Italics supplied.]

Sec. 31 of the Mineral Leasing Act, 30 U.S.C. § 188(a) (1976), however, which relates to the cancellation of mineral leases, provides a totally different method of cancellation. Thus, that section provides:

Except as otherwise herein provided, any lease issued under the provisions of this chapter may be forfeited and canceled *by an appropriate proceeding in the United States district court* for the district in which the property, or some part thereof, is located whenever the lessee fails to comply with any of the provisions of this chapter, of the lease, or of the general regulations promulgated under this chapter and in force at the date of the lease; and the lease may provide for resort to appropriate methods for the settlement of disputes or for remedies for breach of specified conditions thereof.³ [Italics supplied.]

The opening proviso of sec. 188 (a), "Except as otherwise herein provided" was not part of the original Mineral Leasing Act. It was added by the Act of Aug. 8, 1946, 60 Stat. 956, which consolidated, within sec. 188, the provisions relating to cancellation of oil and gas leases, enacted by the Act of Aug. 21, 1935, 49 Stat. 674, 676, and which had formerly been located in sec. 17 of the Mineral Leasing Act, 30 U.S.C. § 226 (1976). The 1935

³ We recognize that regardless of the specific wording of this section, the Supreme Court has ruled that the Secretary of the Interior has the authority to administratively cancel leases for prelease violation of regulations or invalidity at their inception. *See Boesche v. Udall*, 373 U.S. 472 (1963). Failure to pay annual rentals in advance, however, is clearly not a prelease event.

January 9, 1981

Act provided for cancellation *by the Secretary of the Interior* of oil and gas leases for noncompliance with any of the provisions of the lease, *after 30 days' notice to the lessees*, provided such leases were not known to contain valuable deposits of oil or gas. This provision presently appears as the first part of 30 U.S.C. § 188(b).

Under these provisions, the Department took the consistent position that failure to pay the advance rental did not constitute a relinquishment of the lease. On the contrary, the rental was properly deemed to have accrued and to have become a debt due and owing the Government. This proved to be a particular problem in oil and gas leasing where the normal practice in private and state leases was that a failure to pay annual rental worked an automatic termination of the lease. While the failure of a lessee to pay the annual rental would constitute a default under sec. 188, and lead to cancellation of a lease if the default continued for a period of 30 days after notification, the lessee was, nevertheless, still liable for the unpaid rentals. *Robert E. O'Keefe (On Rehearing)*, 57 I.D. 216 (1940). Moreover, any relinquishment must have been received prior to the anniversary date to avoid accrual of the rentals. *Thomas H. Fee*, 58 I.D. 125 (1942). In order to alleviate some of the hardships that resulted from the accrual of rentals, Congress enacted first, the Act of Nov. 28, 1943, 57 Stat. 593, 30 U.S.C.

§ 188a (1976), which allowed the proration of rentals on a monthly basis from the date of the accrual of the rentals to the filing of the surrender, and subsequently, the Act of Aug. 8, 1946, 60 Stat. 956, 30 U.S.C. § 187b (1976), which provided that the relinquishment of an oil and gas lease was effective upon its filing "subject to the continued obligation of the lessee and his surety to make payment of all accrued rentals."

Problems, however, particularly involving oil and gas leasing, continued. Finally, in 1954, Congress amended sec. 188 to provide for the automatic termination of oil and gas leases for failure to file the annual rental on or prior to the anniversary date of the lease. *See Act of July 29, 1954, supra*. The legislative history of this amendment makes it clear that it was directed solely to oil and gas leases.

Under existing law, a noncompetitive oil and gas lease is issued without the necessity of filing a bond, unless a bond is required by law, on the agreement of the lessee, which is a provision in the lease, that he will pay rental or file a bond 90 days prior to the rental due date. * * * Administratively, it often has occurred where a lease in which rental was not paid for the fourth year, the 30 days' notice was not received by him in time so that cancellation could be effected prior to the anniversary date of the lease. Consequently, a lessee who no longer desired a lease was required to pay a full year's rental for the fourth year and in many cases also for the fifth year. This was entirely inequitable to the lessee who followed the practice of State leases and leases on private lands, which have an

automatic default clause on nonpayment of rental, and who felt that by not paying the rental when due his lease automatically would terminate.

H.R. Rep. No. 2238, 83rd Cong., 2nd Sess., reprinted in [1954] U.S. Code Cong. & Adm. News 2699.

Not only do both the language of the 1954 amendment and the legislative history make clear that automatic termination applied only to oil and gas leases, subsequent actions of the Department have never proceeded on any other basis. Thus, in *Relinquishment of a Coal Lease*, M-36511 (June 17, 1958), the Associate Solicitor noted that acceptance of a relinquishment related back to date of filing. The Associate Solicitor noted that "[t]he general practice has been to accept a relinquishment upon payment of rentals accrued prior to the filing date." See also *Southwest Salt Co.*, 2 IBLA 81, 78 I.D. 82 (1971); *Walter Scott*, A-28148 (Dec. 16, 1960); *Michael L. Moaro*, A-27576 (May 29, 1958). If, however, a coal lease terminated for failure to pay the annual rentals, there could never be accrued rentals.

Not only is it clear that the statute did not effectuate an automatic termination, it must also be pointed out that this Board has, on at least one occasion since the appearance of 43 CFR 3523.3, ignored the existence of that regulation. Thus, the Board affirmed the accrual of rentals on a phosphate lease in *Cuyama Phosphate Corp.*, 12 IBLA 367 (1973). It is equally obvious that

BLM did not apply this regulation in the instant appeal.

Thus, we are faced with a codified regulation which: (1) was improperly promulgated; (2) lacks any statutory support; and (3) has been consistently ignored by the Department in actual practice. It is, in fact, a derelict on the sea of the law. We hold, therefore, that this regulation can be accorded no validity whatsoever.

[3] Finally, we would note that the above discussion also illustrates that, quite apart from our ruling on the ambiguity of the "proper office" for purposes of relinquishment, the State Office should have prorated the rentals under 30 U.S.C. § 188a (1976), rather than assessed the full annual rental, since it was clear that the failure to timely relinquish in the BLM office was not due to a lack of reasonable diligence. Inasmuch as we have determined that no rental is due here, it is unnecessary to prorate the rentals in the instant case.

Accordingly, pursuant to the authority delegated to the Board of Land Appeals by the Secretary of the Interior, 43 CFR 4.1, the decision appealed from is reversed.

Administrative Judge

BRUCE R. HARRIS
Acting Administrative Judge

*January 12, 1981***NORTHWEST EXPLORATIONS, INC.****52 IBLA 87***Decided January 12, 1981*

Appeal from the decision of the Alaska State Office, Bureau of Land Management, declaring various placer mining claims null and void in their entirety and two placer mining claims null and void in part.

Affirmed.

1. Act of June 25, 1910—Mining Claims: Lands Subject to—Mining Claims: Withdrawn Land—Withdrawals and Reservations: Authority to Make—Withdrawals and Reservations: Effect of

The President had nonstatutory authority to withdraw public land in addition to authority conferred upon him by the Pickett Act, 43 U.S.C. §§ 141, 142 (1970). Such nonstatutory authority was not limited by the terms of 43 U.S.C. § 142 (1970) which provided that withdrawn lands shall remain open to location for metalliferous minerals.

2. Act of June 25, 1910—Mining Claims: Lands Subject to—Mining Claims: Withdrawn Land—Segregation—Withdrawals and Reservations: Generally—Withdrawals and Reservations: Temporary Withdrawals

Where BLM filed an application for a protective withdrawal pursuant to Exec. Order No. 10355 which would reserve the subject land from all forms of appropriation including location and entry under the mining laws and the application was duly noted on the official status plats, the lands were segregated from the date of notation to the extent that the withdrawal, if effected, would prevent such

forms of appropriation. A protective withdrawal is not a temporary withdrawal under the Pickett Act, 43 U.S.C. § 141 (1970), and is not limited by the terms of 43 U.S.C. § 142 (1970) which provides that temporarily withdrawn lands shall remain open to location for metalliferous minerals.

3. Mining Claims: Lands Subject to—Mining Claims: Withdrawn Land—Withdrawals and Reservations: Effect of

A mining claim located on land which was segregated and closed to mineral entry is properly declared null and void ab initio.

4. Administrative Procedure: Hearings—Constitutional Law: Due Process—Rules of Practice: Appeals: Effect of—Rules of Practice: Hearings

Due process does not require notice and a prior right to be heard in every case where an individual may be deprived of property so long as the individual is given notice and an opportunity to be heard before the deprivation becomes final.

APPEARANCES: Carl Winner, Esq., Robertson, Monagle, Eastaugh & Bradley, Anchorage, Alaska, for appellant; Robert Charles Babson, Esq., Regional Solicitor's Office, Department of the Interior, for the Bureau of Land Management.

*OPINION BY
ADMINISTRATIVE JUDGE
HENRIQUES*

*INTERIOR BOARD OF
LAND APPEALS*

Northwest Explorations, Inc., has appealed the decision of the Alaska State Office, Bureau of Land

Management (BLM), dated June 13, 1980, declaring 28 Liberty and Chinook placer mining claims null and void ab initio and the Liberty #9 and #29 claims null and void ab initio in part.

On Sept. 25, 1979, BLM received copies of location notices for 30 placer mining claims¹ which appellant filed in compliance with section 314 of the Federal Land Policy and Management Act of 1976 (FLPMA), 43 U.S.C. § 1744 (1976), and Departmental regulations 43 CFR Part 3833. The claims are located in secs. 19, 20, and 21, T. 16 S., R. 17 W., and secs. 10, 11, 13, 14, 23, and 24, T. 16 S., R. 18 W., Fairbanks meridian, Alaska. The Liberty #1 and Liberty #2 claims were originally located in May 1966 but amended locations were filed in June 1969 to reduce the acreage of the claims. The remaining claims were either originally located or amended in 1969. The amended locations also reduced the acreage of previous association claims in compliance with Alaska State law.²

On Apr. 9, 1965, the Director, National Park Service (NPS), requested that BLM "take such steps as may be necessary to withdraw [certain lands in T. 16 S., Rs. 16 and 18 W., Fairbanks meridian] from all forms of disposition under the public land laws—including withdrawal from prospecting, location,

entry and purchase under the mining laws." The request explained a need for a withdrawal pending a study by NPS of requirements for additional public accommodations and services related to Mt. McKinley National Park. NPS wanted to ensure that lands would be available to meet those requirements determined necessary by the study. The lands identified by NPS were on the northern boundary of the park in the Kantishna area.

Following approval of the request by Under Secretary of the Interior Carver on Apr. 22, 1965, BLM filed withdrawal application F 034575 to establish a BLM protective area under authority of Exec. Order No. 10355 (43 U.S.C. § 141 note (1976)). BLM also published a Notice of Proposed Withdrawal and Reservation of Lands dated May 7, 1965, in the *Federal Register* on May 13, 1965 (30 FR 6593). The notice stated that the application was for withdrawal of the lands from all forms of appropriation under the public land laws, including the mining laws.

The BLM decision appealed herein indicates that the withdrawal application was noted on the official status plats in the Fairbanks Land Office on May 4, 1965. It explains that pursuant to 43 CFR 2311.1-2 (a) (1965) the noting of receipt of the application temporarily segregated the identified lands "from settlement, location, sale, selection, entry, lease, and other forms of disposal under the public land laws, including the mining and the mineral leasing laws, to the extent that

¹ See Appendix A.

² Although Federal mining law allows location of association placer claims up to 160 acres, the Alaskan law enacted in 1949 specifies that no association placer claim for previous metals in Alaska may exceed 40 acres in size or 2,640 feet in length. Alaska Statutes § 27.10.110.

January 12, 1981

the withdrawal or reservation applied for, if effected, would prevent such forms of disposal." The decision concluded that appellant's claims must be declared null and void because they were located on land segregated from the operation of the mining laws at the time of the locations.

In its statement of reasons, appellant argues that the Kantishna area was improperly withdrawn from mineral entry in 1965. Appellant urges that BLM lacked the authority to withdraw the lands because under the Constitution, Congress holds the power to dispose of the public lands and the only express delegation of that power to the President appeared in the Pickett Act of June 25, 1910, 43 U.S.C. §§ 141-143 (1970) (hereinafter the Pickett Act).³ Appellant also argues

³ Relevant portions of the Pickett Act read as follows:

"§ 141. Withdrawal and reservation of lands for water-power sites or other purposes.

"The President may, at any time in his discretion, temporarily withdraw from settlement, location, sale, or entry any of the public lands of the United States, including Alaska, and reserve the same for water-power sites, irrigation, classification of lands, or other public purposes to be specified in the orders of withdrawals, and such withdrawals or reservations shall remain in force until revoked by him or by an Act of Congress. (June 25, 1910, ch. 421, § 1, 36 Stat. 847.)

"§ 142. Lands withdrawn open to exploration under mining laws; rights of occupants or claimants of oil- or gas-bearing lands; national forests.

"All lands withdrawn under the provisions of this section and section 141 of this title shall at all times be open to exploration, discovery, occupation, and purchase under the mining laws of the United States, so far as the same apply to metalliferous minerals: * * *. (June 25, 1910, ch. 421, § 2, 36 Stat. 847; Aug. 24, 1912, ch. 369, 37 Stat. 497.)"

Sec. 141 was repealed and sec. 142 amended by the Federal Land Policy and Management Act of 1976, 90 Stat. 2792.

that *United States v. Midwest Oil Co.*, 236 U.S. 459 (1915), in which the Supreme Court recognized a broad Presidential withdrawal authority by virtue of congressional acquiescence to a long continuing practice of withdrawals by the President, is of questionable validity because of *Youngstown Sheet & Tube Co. v. Sawyer*, 343 U.S. 579 (1952), or, at the least, is circumscribed by the Pickett Act.

Appellant also focuses on the distinction between temporary and permanent withdrawals described in *Withdrawals of Public Lands*, 40 Op. Atty Gen. 73 (1941). The Attorney General had concluded that the Pickett Act applied only to temporary withdrawals for public purposes and did not affect the President's authority to make permanent withdrawals for public uses. 40 Op. Atty Gen. at 76. Appellant contends that the Kantishna area withdrawal was "beyond question" a temporary withdrawal because the Attorney General had characterized such withdrawals as those made pending the enactment of legislation designed to conserve the lands or authorize development of their natural resources. 40 Op. Atty Gen. at 76-77. Appellant alleges that the BLM Kantishna withdrawal application was aimed at conserving the area for later inclusion in Mt. McKinley National Park which could only be enlarged by specific legislation. Appellant concludes that the lands identified in the application should have been left open to mineral entry because the withdrawal

would be temporary and therefore limited by the Pickett Act. Appellant also points out that 43 CFR 2311.1-2 (1965) only segregated land "to the extent that the withdrawal * * * if effected, would prevent such forms of disposal." Since mining was allowed in the park, appellant urges, mining should have been allowed in this withdrawal.⁴

Appellant ends its statement of reasons by asserting that BLM, in issuing the decision, violated its due process rights since BLM did not afford it notice that the decision would be forthcoming and an opportunity to submit written argument on its own behalf.

In response, BLM argues that (1) the withdrawal application herein was filed to establish a BLM protective area and was not a temporary withdrawal pending legislation to add the Kantishna area to Mt. McKinley National Park, (2) the proposed withdrawal of the area was permanent in nature and not subject to the Pickett Act, and (3) even if the proposal were considered to be temporary, the limitations of the Pickett Act are no longer applicable by virtue of continuing congressional acquiescence and ratification of temporary withdrawals from mineral entry. BLM contends that appellant's due process rights have been protected by appeal to this Board.

[1, 2, 3] The question of the authority of the President to make

withdrawals and reservations has been addressed by this Board before. We have recognized that, until Oct. 21, 1976, the President held and exercised over a long period of time an implied nonstatutory withdrawal power in addition to that authority which Congress has expressly delegated by statute. *Glen H. Brooks*, 45 IBLA 51 (1980); *Alaska Pipeline Co.*, 38 IBLA 1 (1978); *Harry H. Wilson*, 35 IBLA 349 (1978); *Sally Lester (On Reconsideration)*, 35 IBLA 61 (1978). In *United States v. Midwest Oil Co.*, *supra*, the Supreme Court first upheld the exercise of nonstatutorily-based withdrawal authority by the President after examining congressional acquiescence in more than 250 instances of exercise of the power by various Presidents over a period of 80 years. 236 U.S. at 469-71. That decision was never overruled by the Court and the implied authority recognized therein was repeatedly exercised by the President or his delegate. See *Mason v. United States*, 260 U.S. 545, 553 (1922); *Portland General Electric Co. v. Kleppe*, 441 F. Supp. 859 (D. Wyo. 1977); *Denver R. Williams*, 67 I.D. 315 (1960); *P & G Mining Co.*, 67 I.D. 217 (1960); *Glen H. Brooks*, *supra*; *Harry H. Wilson*, *supra*; *Sally Lester (On Reconsideration)*, *supra*. In 1952, by Exec. Order No. 10355 (17 FR 4831 (May 28, 1952)), President Truman expressly distinguished between his statutory and nonstatutory authority when he delegated to the Secretary of the Interior both the temporary withdrawal authority

⁴ Although mining activities had been permitted within Mt. McKinley National Park, 16 U.S.C. §§ 350, 350a (1970), sec. 3 of the Act of Sept. 28, 1976, 90 Stat. 1342, repealed that authority.

January 12, 1981

set forth in sec. 1 of the Pickett Act "and the authority otherwise vested in him to withdraw or reserve lands of the public domain * * * for public purposes." Finally, and significantly with respect to this case, Congress repealed "the implied authority of the President to make withdrawals and reservations resulting from the acquiescence of Congress (U.S. v. Midwest Oil Co., 236 U.S. 459)" as well as various statutory withdrawal authorities by sec. 704(a), FLPMA, 90 Stat. 2792. We may infer from the language in sec. 704(a) that Congress continued to recognize the existence of the President's implied withdrawal authority, in addition to statutorily delegated authority, until Oct. 21, 1976.

Given sec. 704(a) of FLPMA, it does not appear that Congress perceived that *United States v. Midwest Oil Co.*, *supra*, lost its vitality following *Youngstown Sheet & Tube Co. v. Sawyer*, *supra*, as appellant suggests. Furthermore, that case dealt with circumstances entirely different from the case before us: the physical seizure of private property by order of the President. Here we are dealing with the withdrawal authority of the President, both statutory and nonstatutory, related to management of existing public lands. The Pickett Act only limited the President's implied authority as to those temporary withdrawals addressed in 43 U.S.C. § 141 (1970). The President still held a recognized permanent withdrawal authority at the time of the Kan-

tishna withdrawal. *Harry H. Wilson*, *supra*.

The question raised by appellant which remains is whether the withdrawal application at issue was or should have been made pursuant to the Pickett Act. Appellant urges that it was intended to be an application for a temporary withdrawal under the Pickett Act and that BLM has unconstitutionally nullified an act of Congress by the withdrawal application herein because the application does not conform to the Pickett Act. We do not agree. The withdrawal notice on its face makes it clear that the proposed withdrawal was not intended to be a Pickett Act withdrawal. First, it states expressly that the land identified would be withdrawn from "all forms of appropriation under the public land laws, including the mining laws," directly inconsistent with Pickett Act limitations. *See Alaska Pipeline Co.*, *supra* at 13. Second, it states that the purpose of the withdrawal is to establish a BLM protective area under Exec. Order No. 10355. (*See* 30 FR 6593 (May 13, 1965).)

The BLM Manual at sec. 2321.6 explains that the objective of the protective withdrawal program was "to prevent inadvertent disposal of or the allowance of rights in lands having significant public values which require continued Federal or other public ownership for their preservation." A protective withdrawal is defined as

a withdrawal of lands, for the purpose of withdrawing such lands from disposition

under the public land laws to the extent necessary to protect the public values in the lands until a determination is made as to the use or disposition of the lands. "Bureau of Land Management protective withdrawal" is not a determination that the lands will necessarily continue under BLM administration. "*Bureau of Land Management protective withdrawals*" generally include withdrawal of the lands from disposition under the general mining laws, and in Alaska, the settlement laws, but usually do not include withdrawal of the lands from the mineral leasing laws, the Recreation and Public Purposes Act, or State selection laws. A "BLM protective withdrawal" may embrace lands used or to be used for various public purposes, including:

- a. Administrative sites
- b. Natural areas
- c. Recreation areas and sites

Appellant's argument that the Kantishna area withdrawal application was made in anticipation of eventual inclusion of the land in Mt. McKinley National Park is not persuasive. We have no doubt from examining the record of this case that at the time in question NPS may have been studying lands surrounding the park, including those at issue, for recommended expansion of the park.⁵ Nevertheless, in

1965, NPS did *not* request that the Kantishna area be withdrawn pending passage of legislation to include it in the park; rather, they requested that the land be set aside so that it would be available if NPS determined that public lands *adjacent* to the park were needed to support additional public accommodations and services because of increasing demands placed on park facilities. NPS was not suggesting that the lands be *included* in the park for this reason. The administrative vehicle which BLM chose for setting aside the area was the protective withdrawal, not a temporary withdrawal pending legislation to expand the park. If after evaluation, the application for the protective withdrawal had been approved as to some or all of the lands identified, those lands would have been permanently set aside for such public use as BLM determined was necessary. Pursuant to 43 CFR 2311.1-2(a) (1965), the application when noted on the records had the effect of segregating the lands to the same extent that the eventual withdrawal would have segregated them. In this case the application notice expressly prohibited appropriation under the mining laws. Since appellant's mining claims were located after the segregative date, BLM has properly declared them null and void.

[4] Appellant's argument that the failure by BLM to notify it of

⁵ On Mar. 9, 1972, pursuant to Exec. Order No. 10355 and sec. 17(d)(2)(A) of the Alaska Native Claims Settlement Act, 85 Stat. 688, 709, the Secretary of the Interior withdrew various lands in Alaska from all forms of appropriation including entry and location under the mining laws and reserved them "for study and possible recommendations to the Congress as additions to or creation as units of the National Park, Forest, Wildlife Refuge, and

Wild and Scenic Rivers Systems." Included in the lands withdrawn were fractional parts of T. 16 S., Rs. 15 through 18 W., Fairbanks meridian. (Public Land Order No. 5179, 37 FR 5579, 5582 (Mar. 16, 1972).)

the BLM decision before issuance and provide it an opportunity to present written arguments on its behalf violates its due process rights is without merit. Due process does not require notice and a right to be heard in every case where a person is deprived of an asserted property right so long as the individual is given notice and an opportunity to be heard before the initial BLM decision, adverse to him, becomes final. Appeal to this Board satisfies the due process requirements. *George H. Fennimore*, 50 IBLA 280 (1980); *Dorothy Smith*, 44 IBLA 25 (1979); *H. B. Webb*, 34 IBLA 362 (1978). Furthermore, status of the public lands is a matter reflected on the public records of this Department and may be officially noticed. No property rights are created by the location of a min-

ing claim on land not subject to location. Appellant's arguments as to the status of the lands in question involved the interpretation of law, not a dispute as to the facts involved, and thus a hearing was not required. *United States v. Consolidated Mines & Smelting Co., Ltd.*, 455 F.2d 432 (9th Cir. 1971).

Therefore, pursuant to the authority delegated to the Board of Land Appeals by the Secretary of the Interior, 43 CFR 4.1, the decision appealed from is affirmed.

OVERTHRUST OIL AND GAS CORP.**52 IBLA 119***Decided January 13, 1981.*

Appeal from decision of the Utah State Office, Bureau of Land Management, denying petition for reinstatement of oil and gas lease U 29872.

Affirmed.

1. Oil and Gas Leases: Reinstatement—Oil and Gas Leases: Rentals—Oil and Gas Leases: Termination

Failure to pay the annual rental for an oil and gas lease on or before the anniversary date results in the automatic termination of the lease by operation of law. The date of receipt of the rental and not the date of mailing is controlling in determining whether rental on an oil and gas lease was timely paid. A lease may be reinstated if the failure to pay the rental was either justifiable or not due to a lack of reasonable diligence on the part of the lessee. 30 U.S.C. § 188(c) (1976).

2. Oil and Gas Leases: Reinstatement—Oil and Gas Leases: Rentals

Reasonable diligence normally requires sending the payment sufficiently in advance of the due date to account for normal delays in the collection, transmittal, and delivery of the payment. Mailing rental payments the afternoon of the day due does not constitute reasonable diligence.

3. Oil and Gas Leases: Reinstatement—Oil and Gas Leases: Rentals

In order for the failure to pay oil and gas lease rental timely to be considered justifiable, generally it must be caused by factors outside the lessee's control, which were the proximate cause of the failure. A lessee's ignorance of the law and regulations and reliance on the business practices of other Governmental agencies accepting a postmark as the date of delivery is not a justifiable excuse.

4. Regulations: Generally

All persons dealing with the Government are presumed to have knowledge of duly promulgated rules and regulations, re-

January 13, 1981

gardless of their actual knowledge of what is contained in such regulations.

APPEARANCES: Robert G. Pruitt, Jr., Esq., Pruitt and Gushee, for appellant.

*OPINION BY
ADMINISTRATIVE JUDGE
LEWIS*

*INTERIOR BOARD OF
LAND APPEALS*

The Overthrust Oil and Gas Corp. appeals from the Sept. 11, 1980, decision of the Utah State Office, Bureau of Land Management (BLM), denying reinstatement of oil and gas lease U 29872. Appellant's was terminated by operation of law for failure to pay the annual rental on or before the anniversary date.

The anniversary date of the lease was Aug. 1, 1980. Appellant's rental was not received by BLM in Salt Lake City, Utah, until Aug. 4, 1980. BLM notified appellant that the lease had terminated by operation of law for failure to pay the rental in a timely manner.

Appellant, through its president and sole officer, Shirley Thorup, petitioned BLM for reinstatement of the lease, asserting that the rental payment had been mailed on the last day of July within Salt Lake City, and that, due to the death of a friend and the circumstances of the marriage of her daughter, she (Mrs. Thorup) was not emotionally able to conduct the appellant's business affairs. Mrs. Thorup also stated it was her belief that depositing a payment in the mails constituted timely

payment if received by the addressee within a reasonable time.

BLM issued its decision denying reinstatement because it found that appellant had not shown the failure to pay the rental timely was justifiable or not due to a lack of reasonable diligence, a showing required by 43 CFR 3108.2-1(c).

In its statement of reasons on appeal appellant essentially agrees with the facts as found by BLM but hopes the Board will render a less harsh decision and will approve the reinstatement.

[1] An oil and gas lease on which there is no well capable of producing oil and gas in paying quantities automatically terminates if the lessee fails to pay the annual rental on or before the anniversary date of the lease. 30 U.S.C. § 188(b) (1976); 43 CFR 3108.2-1(a). The date of receipt of the rental and not the date of mailing is controlling in determining whether rental on an oil and gas lease was timely paid. 43 CFR 1821.2-2(d), (f); *Gretchen Capital, Ltd.*, 37 IBLA 392 (1978). A terminated lease can be reinstated only if, among other requirements, the lessee shows his failure to pay on time was either justifiable or not due to lack of reasonable diligence. 30 U.S.C. § 188(c) (1976); 43 CFR 3108.2-1(c).

[2] Reasonable diligence normally requires mailing the rental payment sufficiently in advance of the due date to account for normal delays in the collection, transmittal, and delivery of the mail. 43 CFR 3108.2-1(c) (2). Appellant's

rental payment was due on Aug. 1, 1980. The payment is claimed to have been mailed July 31 but the postmark was August 1. Assuming the postmarked date as the date of mailing, we find that mailing the rental payment on the afternoon it was due, even within the same city, does not constitute reasonable diligence. *Constitution Petroleum Company, Inc.*, 25 IBLA 319 (1976). Reasonable diligence has not been exercised where a rental payment is posted at a time that one could not assume delivery before the statutory terminal date of the lease. *Ronald C. and Mary A. Hill*, 38 IBLA 315 (1978); *J. R. Oil Corp.*, 36 IBLA 81 (1978); *Adolph F. Muratori*, 31 IBLA 39 (1977). The postmark date on a letter bearing payments of annual rental for an oil and gas lease will be deemed to be the date of mailing, in the absence of satisfactory evidence corroborating the lessee's assertion that the payment was mailed before the postmark date. *Annie Mae Buckley*, 44 IBLA 99 (1979); *Daniel Ashley Jenks*, 36 IBLA 268 (1978); *David R. Smith*, 33 IBLA 63 (1977).

[3] In order for the failure to pay rental timely to be justifiable, generally, the failure must be caused by factors outside the lessee's control, which were the proximate cause of failure. *John J. O'Loughlin*, 50 IBLA 50 (1980); *James E. Kordosky*, 43 IBLA 63 (1979); *Emma Pace*, 35 IBLA 143 (1978); *Richard C. Corbyn*, 32 IBLA 296 (1977); *Louis Samuel*, 8 IBLA 268 (1972). Neither lessee's

ignorance of the law and regulations nor reliance on the business practices of other Governmental agencies in accepting a postmark as the day of delivery is a "justifiable" excuse within the meaning of the reinstatement provisions.¹

[4] It is well settled that all who deal with the Government are presumed to have knowledge of the pertinent statutes and duly promulgated regulations, regardless of their actual knowledge of what is therein contained. 44 U.S.C. §§ 1507, 1510 (1976); *Federal Crop Insurance Corp. v. Merrill*, 332 U.S. 380 (1947); *Robert W. Hansen*, 46 IBLA 93 (1980); *Willene Minnier*, 45 IBLA 1 (1980).

The burden of showing that the failure to pay the rent when due was justifiable or not due to a lack of reasonable diligence is on the appellant. 43 CFR 3108.2-1(c) (2). It has failed to meet this burden.

Therefore, pursuant to the authority delegated to the Board of Land Appeals by the Secretary of the Interior, 43 CFR 4.1, the decision appealed from is affirmed.

¹ Appellant contends that BLM denied reinstatement due to its misconception of the value of the lease. The value of any lease, however, has no bearing on the question of reinstatement.

APPEAL OF FLUOR UTAH, INC.**IBCA-1068-4-75***Decided January 15, 1981***Contract No. 14-06-D-7054, Specifications No. DS-6849, Bureau of Reclamation.****Sustained in part.****1. Rules of Practice: Appeals: Hearings—Rules of Practice: Evidence—Rules of Practice: Witnesses**

The Board refuses to draw inferences adverse to the Government by reason of its failure to have its project engineer testify in important areas and by reason of its failure to call as witnesses two of its employees who attended the hearing where the Board finds that the action of the Government is consistent with the principal defenses made to the differing site conditions claims asserted and where under long-established Board practice, the appellant could have called any or all of the Government's employees concerned as witnesses without making them appellant's witnesses for the purposes of impeachment.

2. Contracts: Construction and Operation: Drawings and Specifications—Contracts: Construction and Operation: Action of the Parties—Contracts: Construction and Operation: Construction Against Drafter—Contracts: Construction and Operation: Differing Site Conditions (Changed Conditions)

Where a contractor alleged that differing site conditions were encountered in constructing bored tunnels for the Navajo Indian Irrigation Project and

resolution of the question as to what the contract indicated turned on the construction to be placed on the specifications and drawings relating to the nature of the support required to support the tunnels, as well as upon a Government estimate that approximately 80 percent of the tunnels would require support other than rockbolts, the Board found the contract to have indicated that the deterioration and disintegration encountered in driving the tunnels would be primarily of a surficial nature. In so finding the Board noted that in the disputed area the contract appears to be susceptible of more than one reasonable interpretation and that within the zones of reasonableness the Government as the author has to share the major responsibility for communicating its intentions as well as the main risk of failure to carry out that responsibility. Heavily weighted by the Board in reaching its decision was the fact that all four of the lowest bidders appeared to have construed the contract to indicate that the tunnels could be supported virtually entirely with rockbolts and that that construction was apparently known to the project construction engineer at the time of bid opening based upon his analysis of the bids received.

3. Contracts: Construction and Operation: Differing Site Conditions (Changed Conditions)—Contracts: Disputes and Remedies: Burden of Proof—Contracts: Disputes and Remedies: Substantial Evidence—Rules of Practice: Appeals: Burden of Proofs—Rules of Practice: Evidence

In a case involving the assertion of a differing site conditions claim under a contract for the construction of concrete lined tunnels for the Navajo Indian Irrigation Project, the Board follows the Court of Claims in holding that it is not necessary for the "indications" in the

contract to be explicit or specific, it being sufficient for there to be an indication on the face of the contract documents causing a bidder reasonably to expect that there were no "subsurface or latent" physical conditions at the site differing materially from those indicated in the contract.

4. Contracts: Construction and Operation: Changed Conditions (Differing Site Conditions)—Contracts: Construction and Operation: Differing Site Conditions (Changed Conditions)

Under a contract for the construction of two concrete lined tunnels for the Navajo Indian Irrigation Project (Tunnel Nos. 3 and 3A) the Board finds a first category differing site conditions claim to have been established with respect to constructing Tunnel No. 3 where the conditions encountered by the contractor in that tunnel were shown to be materially different from those indicated in the contract.

5. Contracts: Construction and Operation: Changed Conditions (Differing Site Conditions)—Contracts: Construction and Operation: Differing Site Conditions (Changed Conditions)

In a case involving the assertion of first and second category differing site conditions claims under a contract for the construction of two concrete lined tunnels (Tunnel Nos. 3 and 3A), a first category differing site conditions claim was not established with respect to Tunnel No. 3A where the Board found the contract to have indicated that the deterioration and disintegration to be anticipated in constructing the two tunnels would be primarily surficial in nature but the evidence offered failed to show that the rock failures and fallout encountered in Tunnel No. 3A were due to overstressing and therefore nonsurficial in nature.

6. Contracts: Construction and Operation: Changed Conditions (Differing Site Conditions)—Contracts: Con-

struction and Operation: Differing Site Conditions (Changed Conditions)

A second category differing site conditions claim, asserted under a contract for the construction of two concrete lined tunnels for the Navajo Indian Irrigation Project (Tunnel Nos. 3 and 3A), is denied where the basis for the claim is that the rock failures and fallout encountered in constructing Tunnel No. 3A were due to overstressing (shear type failures) but the evidence of record failed to show that overstressing was the cause of such rock failures and fallout as occurred in that tunnel.

7. Rules of Practice: Appeals: Generally—Rules of Practice: Evidence

Outlining the treatment to be accorded voluminous exhibits, the Board states that in the event counsel for either side considers that information contained in a voluminous exhibit either proves or may be of material assistance in proving a particular point, it is incumbent upon counsel to specifically cite the portions of the voluminous exhibit relied upon by page number, by date, or by other appropriate references. Absent specific citations to a voluminous exhibit or to an appropriate summary thereof in evidence, the Board will not undertake to determine the content of this type of exhibit in particular areas before reaching its decision.

8. Rules of Practice: Appeals: Hearings—Rules of Practice: Evidence—Rules of Practice: Witnesses

The Board sustains the action of the hearing member in refusing to receive in evidence documents not identified by a witness through whose testimony their admission is being sought.

9. Rules of Practice: Appeals: Generally—Rules of Practice: Evidence—Rules of Practice: Hearings—Rules of Practice: Witnesses

The Board seriously questions the wisdom of the Government in not arranging for

the audit of multi-million dollar claims apparently advanced in good faith by reputable contractors, noting that securing audits will not only facilitate the examination of witnesses with respect to quantum but are also likely to prove to be useful in establishing a basis for agreeing upon stipulations narrowing the issues in quantum areas or affording a basis for arriving at a settlement prior to the hearing, while it is in progress or after it has been concluded.

10. Contracts: Construction and Operation: Differing Site Conditions (Changed Conditions)—Contracts: Disputes and Remedies: Equitable Adjustments

Where neither what is described as the "reference reach/claim reach" approach nor the total cost method are found acceptable as a proper basis for an equitable adjustment, the Board resorts to the so-called jury verdict method for determining the amount of the equitable adjustment to which the contractor is entitled by reason of the differing site conditions found to have been encountered by the contractor in construction of Tunnel No. 3, a bored and concrete lined tunnel of the Navajo Indian Irrigation Project.

APPEARANCES: Mr. Robert M. McLeod, Attorney at Law, Thelen, Marrin, Johnson & Bridges, San Francisco, California, for Appellant; Messrs. John P. Lange & William A. Perry, Department Counsel, Denver, Colorado, for the Government.

**OPINION BY
CHIEF ADMINISTRATIVE
JUDGE McGRAW**

**INTERIOR BOARD OF
CONTRACT APPEALS**

The instant appeal involves claims of differing site conditions

(first and second category) under a contract for the construction and completion of Main Canal, Station 712+50 to Station 884+50, Station 978+00 to Station 1028+50, Tunnel Nos. 3 and 3A, appurtenant structures and concrete canal lining, under Schedules Nos. 2, 2A, and 3 (Specifications No. DC-6849), of the Navajo Indian Irrigation Project, for which the appellant seeks an equitable adjustment in the amount of \$3,849,560.¹ The Government has denied liability and the case is before us with respect to both entitlement and quantum.

Part I—Background

Contract No. 14-06-D-7054 was entered into under date of Oct. 23, 1970.² Prepared on the standard forms for construction contracts, the contracts includes General Provisions (Standard Form 23-A,

¹ This is the final figure shown in Appendix A entitled *Navajo Project Claim* which accompanied Appellant's Opening Brief (hereafter AOB). After noting that the cost of labor in the Reference Reach for Tunnel Excavation had been inadvertently understated by a total of \$17,791, appellant's counsel states: "Carrying this correction all the way through Exhibit 84 results in a claim amount of \$3,849,560 and a corrected Exhibit 84 is attached as Appendix A" (AOB 56, 57).

In at least one important respect, however, corrected Exhibit 84 appears to be in need of further correction. For example, the aggregate total for the figures listed for the various categories of claimed costs in corrected Exhibit 84 is \$4,004,341, and not the final figure shown in the exhibit of \$3,849,560. A substantial part of the differences of \$154,781 appears to be attributable to the overstatement in corrected Exhibit 84 of "Bond Premium on Increased Contract Amount at .4%" opposite Roman Numeral XII. The original Exhibit 84 shows the amount claimed for this category of cost to be \$15,235, while in corrected Exhibit 84 the claimed amount for this item is shown as \$147,470.

² Appeal File 1 (hereafter AF).

June 1964 Edition), Labor Standard Provisions (Standard Form 19-A), Supplement to General Provisions and Labor Standard Provisions, as well as numerous detailed specification provisions.

As advertised for bids, Tunnel No. 3 and Tunnel No. 3A could be constructed by employing conventional tunneling techniques (drill and blast) or on the basis of machine-bored sections. Fluor Utah submitted a bid of \$6,783,456 on Bidding Schedule No. 2 (all work between Stations 721+81.33 and 874+29.90 for Tunnel No. 3 with machine-bored sections). On Bidding Schedule No. 2A (all work between Stations 985+32.33 and 1018+44.67 for Tunnel No. 3A with machine-bored sections), the company submitted a bid of \$1,136,003. On Bidding Schedule No. 3 (all work except for tunnels), the contractor bid the total sum of \$761,729. In the aggregate, Fluor Utah's bid on all three schedules totalled \$8,681,188. This was the lowest bid received and award of the contract was made to the company in that amount.³

In a meeting between representa-

³ Government Exhibit Y (hereafter GX). In the telegram of Oct. 8, 1970, recommending award to Fluor Utah, the Director, Design and Construction, Bureau of Reclamation, stated: "Although low bid is 33 percent below Engineer's Estimate, it is only 8 percent and 11 percent below second and third bids, respectively. Our estimate apparently assumed a poorer quality of rock than did most of the eight lower bidders. Fluor Utah is experienced and well qualified" (Appellant's Exhibit 75 (hereafter AX)).

At the time of award no final decision on the mole to be used had been made. A lease agreement with Purchase Option was entered into with Dresser Industries, Inc., under date of Nov. 20, 1970 (GX 0).

tives of the contractor and the Bureau of Reclamation (hereafter BOR) on Nov. 5, 1970, the Bureau was advised (i) that the contractor still had not decided on which mechanical excavator to use; (ii) that the excavation would be by mechanical mole excavating to a diameter of 20 feet 6 inches which is 6 inches larger than the A-line⁴ diameter; (iii) that alignment and grade will be indicated by a laser beam reflected on a target in front of the operator; (iv) that the contractor plans to use rockbolts exclusively for support; (v) that the rockbolts will be installed immediately behind the cutter head; (vi) that a special long-shield type anchor will be used on 5/8-inch high strength steel bolts; and (vii) that gunite protective coating will be applied over shale and other unstable formations (GX Z).

At the preconstruction conference on Dec. 2, 1970 (GX AA), the contractor submitted a preliminary construction program for review by the

⁴ "b. Definitions of 'A' and 'B' lines.—The 'A' lines shown on the typical sections of the drawings are lines within which no unexcavated material of any kind, no timbering, and no metallic or other supports shall be permitted to remain; Provided, That in machine-bored tunnels the structural-steel ribs and shotcrete support or steel reinforcement sheets and shotcrete support may extend within the 'A' lines in accordance with minimum concrete lining thickness limitations as shown on Drawing No. 11 (809-D-330). The 'B' lines shown on the typical sections are the outside limits to which measurement, for payment, of excavation will be made and measurement for payment will in all cases be made to the 'B' lines regardless of whether the limits of the actual excavation fall inside or outside of the 'B' lines, and regardless of the size of steel supporters used." (AF 1, Contract, Paragraph 53, Tunnel Excavation, as amended by supplemental notice No. 3, Sept. 11, 1970).

BOR.⁵ The contractor also agreed to review his construction program and attend another meeting to discuss the program the following week. The nature of the tunnel support to be provided continued to be a matter of prime concern to both parties, as is evidenced by the following excerpts from the memorandum:

Mr. Sperry stated that they did not intend to use shotcrete, steel reinforcement sheets or steel sets for tunnel support. They intend to use rock bolts in a pattern placed approximately four feet behind the cutter head. Holes are to be drilled dry. Guniting protective coating will be applied over shale and unstable formations.

Mr. Levine stated that he would like to have the Bureau of Mines perform a pull test on a test section of rock bolting * * *. It was agreed Mr. Levine would make the arrangements with the Bureau of Mines for January.

(GX AA, p. 3).

By letter dated Dec. 7, 1970 (AF 11), the contractor submitted what was described as its anticipated excavation and rock support methods⁶ for BOR approval. The plan was modified in several respects by the contractor's letter of Jan. 19, 1971

(AF 12), to reflect the finding of several products superior to those originally proposed.⁷ Both the suitability of rockbolt support and excavation by the mole to a diameter of 20 feet 6 inches⁸ were questions addressed by the BOR in its letter of Feb. 2, 1971 (AF 13), in which the Project Construction Engineer states:

Whether conditions in Tunnels No. 3 and No. 3A are suitable for an extensive use of rock bolt supports must be determined during and following the excavating process. The spacing of bolts, lengths of bolts, use of corrugated strips, anchorage required for bolts, and other factors related to performance of the rock bolts will be evaluated under actual field conditions. Where ground conditions in the tunnels are indicated to be unsuitable for the use of rock bolt supports, other support types will be required as indicated under Paragraph 50 of the specifications.

Schedule No. 2 in the specifications indicates that approximately 80 percent of the tunnel length was estimated to require a type of support other than rock

⁷ In the letter the contractor confirmed what it had advised the BOR at the Nov. 5, 1970, meeting (GX Z), namely, its plan to mole a 20-foot 6-inch diameter. The letter states: "We still believe that this size is adequate for the support that will be required."

The Dresser Mole covered by the lease agreement then in effect (n. 3, *supra*), had a 20 foot-6 inch bore diameter. In the agreement, Dresser represented that the machine would have (i) the capacity of boring at the rate of at least 12 feet per hour in rock having an unconfined compressive strength of up to 6,000 psi and (ii) a sufficient excavated material handling capacity to bore at a sustained rate of 20 feet per hour.

⁸ "The proposed excavated diameter appears to be adequate for meeting minimum dimensions for 'A' line thickness for rock bolt supported sections. The use of steel rib supports would require excavating to a larger diameter if normal tolerance is provided" (AF 13, BOR letter (2-2-71), p. 2).

⁵ "Mr. Levine stated that we feel the program, specifically the tunnel excavation, is quite optimistic. The six month period for completing the tunnel excavation would require an average of approximately 120 feet per day. The four month period showing 19 percent accomplished per month would require an average of 132 linear feet of excavation per day." (GX AA, memorandum of preconstruction conference (12-8-70), p. 3.)

⁶ "Rock support will be installed about 4 ft. behind the dust shroud of the mole. A shield, about 7 ft. long, will support the excavated back between the cutterhead and the support installation area" (AF 11, Contractor's letter (12-7-70), p. 1).

bolts,⁹ such as shotcrete or structural steel supports. However there is no objection to the use of rock bolts in any portion of the tunnel where conditions are suitable for their use.

The relationship between the method of support employed and the safety of workmen was stressed in BOR's letter of May 14, 1971 (AF 16), in which the contractor was reminded that it might be necessary to require that the tunnels be supported by other than rockbolts if the ground conditions encountered were unsuitable for their use.¹⁰ In BOR letter dated June 25, 1971 (AF 17), the contractor was advised that rockbolt anchorage tests conducted by a Bureau of Mines

geologist had shown that the anchorage obtained through use of the Pattin D-5 shell was inadequate.

Developing Adequate Rock Support for the Tunnels

By mid-July of 1971, problems of roof control and fallout had become so severe that the contractor engaged A. A. Mathews, Inc., a construction engineering consulting firm, to analyze the ground conditions likely to be encountered in Navajo Tunnel Nos. 3 and 3A, and make recommendations (i) for means of supporting the tunnel excavation and (ii) for modification of existing tunneling equipment.

In Construction Report No. 743 dated Sept. 17, 1971 (AX 5), the consulting firm: (i) summarizes the status of the work from the commencement of moling (use of the boring machine) in mid-May until Aug. 20, 1971; (ii) analyzes the ground conditions likely to be encountered in Navajo Tunnels Nos. 3 and 3A; (iii) recommends means of supporting the tunnel excavation; (iv) recommends modifications to the existing tunneling equipment; and (v) submits conclusions and recommendations.¹¹

As the report notes Tunnel Nos. 3 and 3A were to be machine bored

⁹ Bidding Schedule No. 2 shows Tunnel No. 3 to be approximately 15,250 feet in length. The 80 percent figure quoted in the text is based on the relationship between the 12,220 linear feet of support called for in Item 16 of the Bidding Schedule to the 15,250 feet length of the entire tunnel. This relationship was acknowledged by appellant's witness Sperry (Tr. 111-12). In the course of comparing the support requirements for Navajo Tunnel No. 1 with those for Navajo Tunnel No. 3, however, Government witness Rogert testified that in both cases the contractor concerned had the option to choose rockbolts or other means of support with the approval of the contracting officer (Tr. 880).

¹⁰ In commenting upon the method of payment for tunnel supports to be provided in the specifications for Tunnel No. 4, Mr. Bert Levine, Project Construction Engineer, stated:

"[T]he bid schedule for Specifications No. DC-6849 for Tunnels No. 3 and 3A, our most recent specifications, provides for furnishing and installing tunnel support system on a linear foot basis. These specifications also include a predetermined price for rock bolts, bearing plates, and structural shapes for rock bolts. The four low bidders made only token bids for the tunnel support system, which indicates that they planned to use rock bolts. This type of bidding results in an unfair competitive situation, and if a tunnel support system other than rock bolts is required, considerable argument with the contractor will be necessary to obtain this installation." (AX 73, memorandum to Director, Design and Construction (4/09/71), p. 1.)

¹¹ The information on which the report is based includes visits to the job site by the consulting firm personnel on July 16, July 20, July 27, Aug. 2 through Aug. 5, Aug. 11, Aug. 19 and 20, 1971; review of contract plans and specifications; review of BOR report on Construction and Foundation Materials Test Data for the project; examination at the Farmington Office of BOR of cores from exploratory bore holes along the tunnel alignment; and reconnaissance study of surface outcrops along the alignment of Tunnel No. 3 (AX 5, I-1, Introduction).

with an excavated diameter of 20 feet 6 inches. In March 1971, excavation of Tunnel No. 3 began, progressing upstream from the outlet portal at Station 874+29.90. Conventional drill and blast techniques were used to drive the first 50' feet of the tunnel. After this, the boring machine (mole) was installed, and the machine boring began on May 13. By July 14, the tunnel had been excavated for a distance of approximately 1,785 feet to Station 856+15. Between July 14 and Aug. 20, 1971, the tunnel was not advanced. The report (AX 5) describes conditions which existed prior to the resumption of tunnel advance on Aug. 20, 1971.¹²

The tunnel excavation was dry until groundwater was encountered at Station 856+15. In the first 280 feet of machine boring in from the portal (Station 873+80 to Station 871+00), a triangular wedge of rock fell from the crown immediately behind the mole's dust shield before the crown bolts could be placed. These wedges resulted from fractures through intact rock propagating to a shale parting at an estimated height of 2 feet above the crown. Cracks and spalling in the crown occurred in the 150 feet of tunnel between Station 871+00 and Station 869+50.

Beginning at approximately 860+30, a significant shale zone was

encountered in the tunnel sidewalls, developing first in the left sidewall (facing toward heading). The shale zone in the left wall widened from less than 1 foot thick at Station 860+30 to nearly 10 feet thick at Station 859+70. At approximately Station 859+40, fallouts began to develop in the crown before the crown bolts could be placed. The fallouts were essentially the same as those which had occurred near the portal, and were associated with a shale lens dipping down into the tunnel from above. As the tunnel heading was advanced past Station 859+40, the shale dipped further down into the tunnel until at Station 856+15 the shale is approximately 22 feet thick and extends from approximately 5 feet above the crown to within approximately 3 feet of the invert.

Concluding the summary of the status of the work, the report states:

As the tunnel was advanced into this thickening shale lens, spalling and falls in the crown grew more severe and more difficult to control. By the time the heading had been advanced to its present position (Sta. 856+15), rock bolt holes being drilled in the crown were tapping ground-water in a sandstone bed above the shale lens. Roof control became so difficult that the heading advance was halted at the end of day shift on July 14. During the following days the roof at the heading continued to deteriorate, and distress began to develop in the sidewalls. Falls and raveling from the roof over the mole cutterhead worked up through the shale to the sandstone approximately 5 ft. above the crown, and worked out 8 to 10 ft. ahead of the dust shield. On the weekend of July 23 to

¹² "Of the, approximately 1,735 ft. of machine bored tunnel which has been driven to date, some form of fracturing or rock fall is present in all except an approximately 900 ft. length between Sta. 869+50 (580 ft. from portal) and Sta. 860+50 (1,480 ft. from portal)." (AX5, II-1.)

26, a large roof fall occurred near the trailing end of the mole, some 30 to 40 ft. behind the face. Shale over the crown fell out up to the overlying sandstone and formed a void approximately 6 to 8 ft. high by 25 ft. long. The void which formed was slightly wider than the tunnel bore. During this time the sidewalls spalled and slabbed badly along the full length of the mole, both ahead and behind the mole gripper plates. Side-wall spalling did not begin to develop until approximately one day after excavation.

(AX 5, II-3, 4).

The report states that the first step in estimating rock conditions in the tunnel¹³ is to assign a relationship between the rock types shown in the drill hole logs and the anticipated behavior in the tunnel. Based upon analysis of the rock involved and the attempt to classify the rock into categories of good, fair, and poor, the report develops recommendations as to the type of support that will be required to support the ground.¹⁴

¹³ The difficulties involved in estimating the groundwater conditions are recognized in the report which states:

"The drill hole data indicate that most of Navajo Tunnel No. 3 and 3A will be at or below the groundwater table. All four portal areas appear to be above the water table and there appears to be a few hundred feet to several thousand feet of dry ground adjacent to the portals. The longest reach of dry ground is near the east portal of Tunnel No. 3. However, in a sedimentary sequence such as the Nacimiento Formation which contains alternating pervious and impervious strata, it is often difficult to define the groundwater table accurately because of perched water bodies. Perched water is indicated in some of the drill hole information and it is possible that all of the water levels shown above the tunnel are actually perched waters and that the tunnel will encounter only small wet zones when it penetrates the main shale horizons * * *"

(AX 5, III-15, 16).

¹⁴ See AX 5, IV-3.

After noting the type of ground through which Navajo Tunnel Nos. 3 and 3A are to be driven and the absence of any direct correlation between ground support problems and geologic classification, the report states:

The major support problems which have developed to date have been associated with the occurrence of low strength shale partings and lenses, and with the occurrence of water at the present heading. Almost without exception, cracking, spalling, and falls which have been observed in the tunnel have formed through intact rock,^[15] and do not represent simple loosening of the ground along pre-existing joints or bedding planes. It is the writer's opinion that the failures observed to date result primarily from the fact that the in-situ stresses in the ground are high with respect to the average strength of the ground, and that the stress concentrations which tend to develop about the tunnel exceed the load-carrying capacity of the ground.^[16] It is the writer's opinion that the presence of water has had a great influence on support problems at the present heading because the shale material present is very susceptible to softening and disintegration in the presence of water.

(AX 5, IV-1).

The report clearly anticipates problems arising attributable to the presence of water in the excavation

¹⁵ In Appendix A under Fundamental Considerations, the report states: "[A]ttention is directed to a circular, machine bored tunnel in relatively massive, intact ground, that is, ground which is not intensely fractured, jointed, or closely bedded. This condition is closely approximated by the ground in which Navajo Tunnels No. 3 and 3A are to be driven" (AX 5, A 3).

¹⁶ The report emphasizes the special care that should be taken with respect to the weaker ground (e.g., shale, weaker sandstone) (AX 5, IV-4-6).

and recommended the application of shotcrete¹⁷ to exposed surfaces of material when wet. The presence or absence of water was also an important factor for consideration¹⁸ in determining the type of anchorage to be provided for the rockbolts installed in the tunnels.

Modification of the equipment was considered to be of vital importance to solving the problems related to tunnel support. This is clear from the attention given to this subject in the report from which the following is quoted:

In a substantial length of tunnel driven to date, the initial failure of the wedge of rock in the tunnel crown occurred before the rock bolts and their accessories could be installed. The present configuration of the boring machine is such that rock bolts cannot be installed in the area, extending for about 8 ft. behind the dust shield. Allowing another 4 ft. for the actual rock bolting operation, there is about 12 ft. of crown behind the dust shield which must stand unsupported.

Since the standup time for much of ground is insufficient, fallouts have been occurring in this 12 ft. of tunnel. The obvious solution is to provide a means

¹⁷ With respect to surficial deterioration in the better ground, the report recommended that a protective surface coating should be applied. Noting that the latex compound might prove to be sufficient in dry areas, the report states that "shotcrete should be applied in wet areas" (AX 5, IV-15).

See also letter to the contractor dated July 24, 1971 (GX S), in which Mr. A. A. Mathews had stated that shotcrete was the logical medium to prevent shale from raveling between rockbolts since it would adhere to wet surfaces.

¹⁸ "[W]ater is indirectly involved in the extent to which water affects the strength of the ground, and thus the anchorage capability and support requirements of the ground. The presence of water is a direct consideration in the selection of bolt anchors where rock bolts are used, and in determining the need for surface protection between bolts." (AX 5, IV-6.)

for temporarily supporting the crown in this 12 ft. whenever necessary.^[19]

Since the failures are reported to have initiated in about a 3-ft. wide area in the crown, it is felt that if this loosened material can be retained in position until after suitable support is installed, extension or propagation of the failures can be prevented and the stability of the entire tunnel can be maintained.^[20]

(AX 5, V-1).

Notice of a differing site condition was given to the BOR by a letter dated July 29, 1971 (AF 19), in which the contractor stated that the subsurface latent conditions encountered in the vicinity of Station 857 of Tunnel No. 3 differed materially from those indicated by the contract. According to the contractor's letter of Sept. 1, 1971 (AF 23), the conditions so encountered included a quantity of groundwater and thick shale layers

¹⁹ This section of the report concludes with the statement: "Although effective operating procedures will have to be developed in the field, it is our opinion that the use of the partial shield will permit steady, if retarded, progress through areas having weak rock in the tunnel arch" (AX 5, V-4).

Even earlier Mr. A. A. Mathews had stated: "For the remainder of the tunnel, the desirability of the certain modifications to the mole are evident. In more than 50% of the tunnel excavation to date, fallouts have started in the tunnel crown before rock bolts and appurtenances could be installed. In my opinion, it is absolutely essential that the mole be modified to cope with this situation. A shield or some other device which will support the crown between the dust shield and the rock bolt installation area must be designed and installed" (GX S, letter to contractor (7-24-71), p. 3).

²⁰ The difficulty of maintaining stability when water was encountered was adverted to in the Conclusions and Recommendations section of the report from which the following is quoted: "The presence of water can be expected from time to time. Where it is encountered along with heavy shale zones, it can multiply the driving problems" (AX 5, VI-2).

not shown on the log of test boring DH 116. Writing to the BOR on Sept. 9, 1971 (AF 24), the contractor proposed that the BOR take action to correct potential water problems caused by the exploratory drill holes along the tunnel alignment.²¹

In a letter to the contractor dated Sept. 28, 1971 (AF 26), the BOR stated that the exploratory drill holes along the tunnel alignment had been drilled prior to the issuance of the specifications and that they did not constitute a different condition than had been indicated in the specifications. In the same letter the contractor was granted permission to fill the drill holes at no cost to the Government by a method subject to BOR approval. Expressly preserving its right to make claim for the costs involved, the contractor proceeded with the work of draining and sealing the exploratory drill holes ahead of the tunnel excavation (AF 31-33).

Malcolm Logan, Chief Geologist, Bureau of Reclamation, visited the site²² and examined conditions in Tunnel No. 3 on Sept. 14 and 15,

1971. In a memorandum addressed to the Director of Design and Construction under date of Oct. 4, 1971, Mr. Logan states:

The examination was directed toward outlining programs which the project geologic personnel should pursue in compiling data on the contractor's allegations of changed conditions. The proposed programs of data collection are based on the findings developed during the field examination, namely: (1) squeezing ground is not present in the tunnel and the localized linear cracking of the rock near spring line is related to machine operation,^[23] (2) falout in the tunnel arch is primarily related to the stratigraphic sequence in which lenses and relatively thin beds of shale, micaceous sandstone, etc. are present at or near the tunnel arch and do not have sufficient tensile strength to attain natural arching in the 20.5-foot-diameter tunnel, (3) machine operation and associated rock failure in the spring line area is contributing—in a "ripple" effect—to localized failure conditions extending from tunnel arch to spring line, (4) the presence of water and the related disintegration of the fine-grained sedimentary rock are clearly evident in the tunnel, but were as clearly indicated in the specifications document, and (5) the slow rate of progress, due primarily to mechanical failures, is promoting excessive rock failure through delays in establishing artificial arch support and in allowing the accumulation of water at the cutterhead to become a problem of

²¹ In a letter dated Jan. 28, 1972 (AF 42), the contractor suggested realignment of the tunnel as a means of alleviating the problem. In its response letter of Feb. 11, 1972 (AF 43), the BOR said that drill holes along the alignment of Tunnel No. 3 were having a negligible effect on water in the tunnel strata and that realignment of the tunnel was not being considered.

²² The stated purpose of the visit was to conduct geologic examination of tunnel conditions relating to slow progress. Project Geologist Kenneth Cooper accompanied Mr. Logan on all examinations. The results of Mr. Logan's observations were discussed with Project Construction Engineer Bert Levine on Sept. 15, 1971, prior to Mr. Logan's return to Denver (AX 82, Travel Report (10-04-71), p. 1).

²³ By a memorandum dated Oct. 10, 1972, the Chief, Earth Sciences Branch, transmitted to the Chief, Geology and Geotechnology Branch, the results of laboratory tests performed on rock core samples from Tunnel No. 3. Under the caption Summary and Conclusions, the memorandum states: "4. Laboratory tests performed on NX-core samples obtained to correlate changes in density and unconfined compressive strength tests in areas where the 'mole' exerted pressure on the tunnel walls were generally inconclusive because of the highly fractured nature of the samples" (AX 83, memorandum (10-10-72), p. 4).

January 15, 1981

machine operation, and (6) geologic conditions encountered in the tunnel to date do not differ from that portrayed by the specifications document.

(AX 82, pp. 1, 2).

By letter dated Dec. 3, 1971, the contractor advised the Bureau that it was continuing to encounter differing site conditions. In its response the BOR noted that as of Dec. 15, 1971, the contractor had failed to furnish any information clarifying in what way the conditions differed materially from those indicated in the contract (AF 34, 35).

The problem of securing adequate anchorage for rockbolts installed in some of the ground through which Tunnel No. 3 was being driven was a matter of concern to both parties (AF 25, 27). Grouted rockbolt anchorage tests conducted by a Bureau of Mines geologist on Aug. 28, 1971, had caused the geologist to conclude that the grouted, tandem expansion shell anchorage system did not provide a safe roof support because of the excessive time required for the grout to cure. By letter dated Nov. 12, 1971 (AF 30),²⁴ the BOR advised the contractor of the results of such tests and that the grouted,

tandem expansion shell anchor was not approved.

At the request of the Government the parties met in Denver, Colorado, on Dec. 6, 1971, to discuss the tunnel support program. Since the parties were meeting over 6½ months after excavation with the moling machine had commenced in Tunnel No. 3 and over 4 months after the contractor had given its first notice of changed condition, the representatives of both sides could point to a considerable amount of experience in Tunnel No. 3 and in other tunnels as the basis for the opinions expressed. The memorandum of the conference (AX 74)²⁵ shows the parties were apart principally on the measures that should be taken to overcome the difficulties encountered with the contractor favoring the continued use of rockbolts²⁶ and the Government representatives generally speaking favoring

²⁵ Immediately after summarizing Mr. Arthur's opening remarks, the memorandum states on page 1: "Mr. Stewart observed that they were having a hard time justifying Mr. McCreight's bid."

The list of conferees attached to the memorandum shows Mr. Stewart to be a Vice President of Fluor Utah with Mr. McCreight being described as "Mgr. Estimating" (AX 74, memorandum to file (12-14-71), attachment).

²⁶ "Mr. Mathews said that * * * by rock bolting very closely after excavation, movement of the rock and therefore loosening of the rock, can be prevented. The action of the rock bolts is to reinforce the rock immediately around the opening, and this reinforcement then prevents loosening of the rock, movement and failure." (AX 74, n. 25, *supra*, pp. 2, 3).

Dr. Heuer stated that more support capacity can be developed with rock bolts than with steel supports provided the rock bolts can be installed very close (8 to 10 feet) to the heading (AX 74, p. 3).

²⁴ Accompanying the BOR letter was a memorandum from the geologist in which he states at page 3:

"Safe roof control in this tunnel-driving operation requires that some type of roof support be implemented directly behind the cutter head of the mole machine. This machine has advanced the tunnel face as much as 60 feet in one 8-hour shift. Therefore, roof support would have to be effective within minutes after the tunnel roof is exposed behind the cutter head." (AF 30).

the use of full circle steel ribs²⁷ at least in shale. There were representatives on both sides who agreed (i) that it is normal for stress redistribution to occur whenever you drive a tunnel,²⁸ and (ii) that there appears to be a correlation between the depth of cover and the degree of stress exerted upon the rock.²⁹ The parties were completely apart, however, on the extent to which the action of the grippers may have been responsible for fallouts in the sidewalls, as is illustrated by the following passage from the memorandum:

[I]t was the Government's position that the action of the grippers was largely responsible for the sidewall fall-out,^[30]

²⁷ Mr. Arthur said he finds it difficult to understand why the contractor believes that steel ribs will not work, since they worked well at Azotea. Mr. Mathews said that at Azotea some 7,000 feet had substantial fallouts in the sides and arch. Mr. Gullet said that some people who were there felt that the fallouts were due to the grippers damaging the walls." (AF 74, n. 25, *supra*, p. 5).

With respect to Tunnel No. 3, however, Mr. Gullet stated that the fact the contractor had been able to bolt 3,000 feet of tunnel showed that the rock was better than the BOR had estimated (AF 74, p. 2).

²⁸ "Mr. Logan stated that it is normal for stress redistribution to occur whenever you drive any tunnel, and Mr. Matthews agreed. Mr. McCreight said this phenomena may have been known to some of the more sophisticated people, but it was not known to this contractor" (AX 74, n. 25, *supra*, p. 4).

²⁹ "[M]r. Logan asked if the contractor expected to encounter less problems of support when they passed out of the area of very high cover, and Mr. Mathews replied that as long as the same formations are encountered they certainly would expect less trouble with less cover. * * * Mr. Levine said that the major problem appears to be high cover inducing high stresses. But what about areas where dampness exists. Even with the stress relief problem, dry shale seems to hold up reasonably well, whereas damp shale falls out." (AX 74, n. 25, *supra*, p. 4).

³⁰ In a report transmitted to the BOR some 3 weeks after the December meeting, Dr. Heuer

and the contractor took the position that the sidewall fallouts were almost entirely due to stress relief. The Government also took the position that the decrease in tunnel diameter, if there was any, which we doubt, was due to recovery of the shale when the grippers were relaxed. * * * [I]t was pointed out, and agreed to by all that precise surveys^[31] are necessary to determine just what is happening to the sidewalls* * *

(AX 74, p. 4).

The contractor's delegation included not only company personnel but also representatives of the firm of A. A. Mathews, Inc., who actively participated in the discussion in their capacity of rock mechanics consultants to the contractor. Dr. Ronald Heuer stated that the problems arise because the stresses in the ground, as a result of removing the tunnel area, are greater than the strength of the rock (AX 74, p. 2). Both Dr. Heuer and Mr. A. A. Mathews of the consulting firm gave as their opinion that the contractor should continue to rely upon rockbolts for tunnel support rather than resort to full circle steel ribs.³² Developing the rationale for continued use of rockbolts, Dr. Heuer stated that by bolting, the ring of rock around the tunnel is reinforced so

states: "Distress of the sidewalls can not be attributed to the influence of the mole gripper plates, because in many locations, falls from the sidewalls have begun to develop in front of the gripper plates" (AF 36, III-13).

³¹ In a letter dated Mar. 27, 1972 (AF 49), the project construction engineer advised the contractor that checks of the elevations of the excavated invert of Tunnel No. 3 from Station 795+00 to Station 811+00 (3-15-72) and the arch from Station 789+00 to Station 795+00 (3-23-72) had been made and that the preliminary results indicate that the tunnel was bored consistently high.

³² AX 74, n. 25, *supra*, p. 3.

that the strength of this cross section is improved so as to be equal to or greater than the stresses tending to cause failure. He pointed out that if such reinforcement is not done, the stresses cause fractures and fallouts (AX 74, p. 2).

After consulting with the other Government representatives, Mr. Harold Arthur, Deputy Director, Design and Construction, indicated that the BOR considered steel ribs were the proper support for the shale and that where difficulty was experienced in developing anchorage, full circle steel ribs should be used³³ placed as closely as possible behind the excavation. The contractor was given permission to proceed with its program of rock bolting, however, subject to later review (AF 74, pp. 5, 6).³⁴

Under date of Dec. 27, 1971 (AF 36), the contractor transmitted to the BOR a report by Dr. R. E. Heuer of A. A. Mathews, Inc., entitled "Construction Report No. 743-3, Ground Support, Navajo Tunnels Nos. 3 and 3A," which was described as constituting the contractor's complete support proposal as requested by the BOR and as

discussed by the parties at their Dec. 6, 1971, meeting in Denver. The report is dated Dec. 23, 1971,³⁵ and is based in part upon information obtained on visits to the jobsite at approximately 2- to 4-week intervals from July 16 to Dec. 9, 1971 (AF 36, I-1). In a number of areas the discussion contained in the report is identical or quite similar to that involved in Construction Report No. 743 dated Sept. 17, 1971 (AX 5), discussed *supra*. The reports cover different time periods, however, and each report includes material not found in the other report.³⁶

The report (AF 36) refers to what the logs of exploration show with respect to: (i) the type of ground to be expected at tunnel level;³⁷ (ii) where perched water had been encountered;³⁸ and (iii)

³⁵ With respect to progress as of Dec. 9, 1971, the report states:

"[A] majority of the tunnel excavated has shown distress in the form of fracturing of, or rock fall from, the smooth tunnel bore. The support problems which have developed have been associated with the occurrence of low strength shale and siltstone partings, lenses, and beds; and with the occurrence of water." (AF 36, VI-1).

³⁶ "[A]ttention is directed to a circular, machine bored tunnel in relatively massive, homogeneous, intact ground; that is, ground which is not intensely fractured, jointed, or closely bedded. This condition is approximated by the ground in which Navajo Tunnels No. 3 and 3A are to be driven" (AF 36, III-3). *Cf.* description at n. 15, *supra*.

³⁷ "[T]he logs of exploratory borings along the tunnel alignment indicate the ground at tunnel level will be mostly sandstone, with a relatively small percentage of shale, generally occurring in thicknesses of less than 5 feet" (AF 36, II-1).

³⁸ "The boring logs indicate that the tunnel excavation may encounter local perched groundwater, such as near DH 114 and DH 51" (AF 36, II-1).

³³ The contractor was advised of a moled tunnel in Utah where the contractor had stood iron from end to end to avoid the fallout problems. It was stated, however, that the Government understood the contractor's problem of installing full circle ribs with the mole the company had put on the job (AX 74, n. 25, *supra*, p. 6).

³⁴ "4. We will again review the rock bolting problem at a later date, say after another 1,000 feet of tunnel has been driven. If it does not prove to be satisfactory support by that time we would like to see ribs tried" (AX 74, n. 25, *supra*, p. 6).

indications in the specifications respecting the use of steel ribs.³⁹

The amount of cover over the tunnel was shown to be a significant factor for consideration in determining the support necessary and how soon it was likely to be required. According to the report support problems may be expected when the depth of cover (expressed in feet) approaches one-half of the unconfined strength of the ground (expressed in psi). The report notes, however, that this concept is quite in conflict with conventional ideas which hold that loads on rock tunnels are independent of the depth of cover over the tunnel. The reason for the conflict is said to be that at normal tunneling depths the in situ stresses are normally low with respect to the intact ground strength (AF 36, III-6).

Commenting upon the extent of the cover involved in Tunnel Nos. 3 and 3A, the report states:

As the excavation of Tunnel No. 3 advances upstream from the outlet portal, it will pass under Harris Mesa with a maximum depth of cover of 1,070 feet. After Navajo Tunnel No. 3 emerges from under the full height of Harris Mesa, the depth of cover will decrease and vary from approximately 150 feet to 600 feet, typically on the order of 350 feet, as the tunnel alignment parallels an edge of the

mesa. Approximately 2700 ft (18%) of Tunnel No. 3 between Stations 823+00 and 850+00 [40] will be under more than 600 ft. of cover. The maximum depth of cover over Navajo Tunnel No. 3A will be only 275 feet.

(AF 36, II-2).

Any plan of support necessarily had to take into account not only the depth of cover but the wide range of strength of the ground through which the tunnels were to be driven. Addressing this question, the report states:

Laboratory test results indicate that cores of rock which have been classified as sandstone exhibit a wide range of unconfined compressive strengths ranging from 300 psi to 9700 psi, with the weakest 60% of the samples averaging 770 psi. Core samples visually classified as shale on the boring logs, but reclassified clayey siltstone after petrographic examination, exhibited unconfined compressive strengths ranging from 1,310 psi to 6,610 psi. Observations in the tunnel suggest that the strength of some of the "shale" materials may be as low as a few hundred psi. Test results on cores described as siltstone or mudstone ranged from 640 psi to 6,610 psi. The average strength of these materials, not counting the one high value of 6,610 psi, was 1,470 psi. [41]

⁴⁰ The report identifies the area between Station 823+00 and Station 850+00 as the most probable locations where supplementary rockbolts will be required as involving the greatest depth of cover (AF 36, VI-2, 3).

⁴¹ "[T]he cracking, spalling, and falls which have been observed in the tunnel result primarily from the fact that the in situ stresses in the ground are high with respect to the average strength of the ground * * *. Although some of the overbreak areas are bounded in part by natural bedding planes, the bedding planes have only localized overbreak and falls, and are not the primary cause of distress. Support problems are aggravated by the presence of water which weakens the ground, thereby intensifying and hastening the effects of overstraining." (AF 36, VI-1, 2).

³⁹ "The contract boring logs indicate the possibility of encountering some ground in which it will not be possible to readily develop adequate rock bolt anchorage. If any significant quantity of such ground is encountered, it may be necessary to install steel ribs supplemented with shotcrete" (AF 36, VI-2).

The report also indicates that full circle support of steel ribs might be required in Class IV ground which was assumed to be ground having a strength similar to cohesionless sand (AF 36, V-17).

(AF 36, II-1).

One of the central concerns of the report was the extent to which and the manner in which the tunnels could be properly supported by rockbolts.⁴² Based upon a rock mechanics analysis and the observations of the actual ground behavior in the tunnel, a recommended rock bolting program was developed by Dr. Heuer which is summarized in a table to the report and illustrated in drawings accompanying the report. The program was based upon the installation of a six or eight bolt pattern in the arch throughout the length of the tunnels. The report contemplates that the basic arch bolt pattern will be supplemented with bolts in the sidewalls and invert whenever necessary. In general the supplementary bolts would only be installed at locations behind the heading where and when significant distress develops in the sidewalls and invert (AF 36, VI-2).

The author states that based upon the ground loads and load carrying capacity of steel ribs used in the report's calculations, it appears that the weaker sandstone and shale under the higher cover could not be supported by steel ribs of reasonable size and spacing (AF 36, IV-

⁴² "Calculations of possible ground loads and of the load carrying capability of steel rib and rock bolt support systems have indicated that (1) adequate rock bolt support may be developed for most of the length of Tunnels No. 3 and 3A, and (2) a rock bolt system is capable of supporting the tunnel where steel ribs of reasonable size and spacing may be inadequate." (AF 36, VI-2).

1).⁴³ The report emphasizes that in some circumstances support must be provided immediately.⁴⁴ It denies that fallouts in the sidewalls are attributable to the mole's gripper plates (n.30, *supra*). The use of shotcrete to prevent surficial deterioration, particularly in wet areas, is again stressed.⁴⁵

The report classifies rockbolt anchors as type A1 or type A2. Designated as type A1 anchors are mechanical expansion shell anchors which can develop adequate anchorage in Class I and Class II mate-

⁴³ Comparing these two methods of support, the report states: "[R]ock bolt support is much more efficient than steel rib support because the rib support does not preserve, develop, and utilize the natural strength of the ground. With rock bolts, the main support comes from the compressive strength of the reinforced, prestressed ground arch." (AF 36, IV-3).

In an earlier report to the contractor in which he considered the question of slabbing, Dr. Heuer states:

"The rock through which the tunnel is being driven is relatively weak and massive, and is overstressed due to stresses in the ground at tunnel depth. * * * The slabbing represents a desirable stress relief and will not result in overall instability of the tunnel if proper support is installed to prevent unchecked progressive deterioration of the tunnel excavation. To prevent the initial formation of these slabs would physically be a near impossibility regardless of the type of support installed (rock bolts vs. steel ribs vs. shotcrete, for example) and would certainly be most uneconomical." (GX R, letter (11-02-71), p. 1).

⁴⁴ "[F]ailures tend to develop most rapidly in the crown, where gravity body forces are most efficient in causing slabs and wedges to fall" (AF 36, III-12). "[T]he basic arch support should be installed immediately behind the face concurrent with excavation, throughout the tunnel. (AF 36, V-15).

⁴⁵ "[T]o prevent raveling and spalling between the bolts where water is present, medium and thick (i.e., greater than 3 ft. thick) beds and lenses of Class III material may be given a protective coating of shotcrete. Shotcrete protective coatings may be applied to thin and very thin lenses and beds whenever required by local conditions." (AF 36, V-14).

rial,⁴⁶ such as the sandstone through which Tunnel No. 3 had been driven in the first 1,300 feet from the outlet portal. Designated as type A2 anchors are epoxy resin anchors which are needed to develop adequate anchorage in Class II and Class III material. The report notes that the bolts with resin anchors should contain a section of reinforcing bar for embedment in the resin anchor (AF 36, V-4, 13).

By early March of 1972 the contractor had satisfactorily answered many of the questions raised by the BOR at the conference of Dec. 6, 1971, with respect to rockbolts. In a memorandum to the Director, Design and Construction, dated Mar. 9, 1972 (AX 71), the project construction engineer stated:

In accordance with our discussions during the December 6, 1971, meeting, we observed and reviewed the rock bolting program from December 6 to January 1. During that time, approximately 1,000 feet of tunnel was satisfactorily supported by rock bolts. During the period of January 2 through March 7 an additional 4,344 feet of tunnel has been satisfactorily supported by rock bolts.⁴⁷

We have found that the use of rock bolts for support has been satisfactory since the epoxy anchor has been in use.

⁴⁶ "Class I ground is ground which does not develop major distress in the sidewalls and, thus, requires only the basic arch support * * *. Class II ground is ground which does develop enough distress of the sidewalls to require support of the walls in addition to the basic arch support." (AF 36, V-2).

⁴⁷ Some 8,334 feet of Tunnel No. 3 (approximately 55 percent) appears to have been bolted to the satisfaction of the BOR by early March of 1972. The footage figure given is derived from the 3,000 feet mentioned in the Dec. 6, 1971, conference (n. 27, *supra*) and the 5,334 feet referred to in the Mar. 9, 1972, memorandum (AX 71).

Periodic pull tests show that the bolts will support in excess of 17,000 pounds.

On several occasions during 1972, the contractor gave written notice to the BOR with respect to differing site conditions. By letter of Feb. 16, 1972 (AF 44), the Bureau was notified that the contractor was encountering differing site conditions in the vicinity of DH 115 similar to those encountered in the vicinity of DH 116.

The DH 116 Claim

In a letter to the BOR under date of Apr. 22, 1972 (AF 50),⁴⁸ the contractor presented a claim for additional costs in the amount of \$511,670 and a claim for time extension of 88 calendar days,⁴⁹ attributed to the subsurface site conditions encountered in the vicinity of DH 116 and said to differ materially from those indicated in the contract. More specifically, the letter states:

[T]his claim includes the additional costs of excavation and tunnel support required through December 31, 1971, between Stations 856+63 and 854+06 (herein referred to as "Claim Reach I") and between Stations 848+48 and 845+80 (herein referred to as Claim Reach II).⁵⁰ In each instance, Contractor en-

⁴⁸ The letter made reference to prior notifications concerning differing site conditions in the vicinity of DH 116, as set forth in the contractor's letters dated July 29, Sept. 1, Sept. 9, and Dec. 3, 1971, and Jan. 5, 1972.

⁴⁹ By letter dated July 12, 1972 (AF 52), the DH 116 claim was increased to \$515,465 as a result of the \$3,795 additional costs incurred after Dec. 31, 1971.

⁵⁰ Under the caption "Reference Reach" the letter states:

"From Sta. 854+06 to Sta. 851+49, tunnel conditions permitted resumption of a moderate rate of advance. This section of the tunnel, herein called the reference reach, is identical in length to and has similar rock conditions as Claim Reach I * * *. [T]he reference reach

—Continued

January 15, 1981

countered extensive shale and ground-water seepage resulting in excessive over-break controlled only with special rock bolt patterns and extensive protective coatings of shotcrete. * * * The information presented in the log of DH-116 indicates that the rock at tunnel level in the vicinity of DH-116 at the time of drilling was essentially dry.

(AF 50, pp. 1, 5).

Concerning the manner in which the claim had been computed, the letter also states:

[C]ontractor is hereby claiming reimbursement for the increased costs of driving and supporting the tunnel attributable to the changed conditions encountered. The increase was calculated by a comparison of all costs incurred with respect to the reference reach and all costs incurred with respect to each claim reach. In that the length of Claim Reach II is greater than that to the reference reach, a cost per foot was calculated and multiplied by the total footage of Claim Reach II to arrive at the proper comparison figure.

To the computed difference in excavation and support costs are added the estimated additional mole rental for the extra work days that the mole will be required on the project, costs of mobilizing and constructing a shotcrete plant, costs related to remedial work on existing drill holes including DH-116, consultant fees, overhead,⁵¹ profit, increased bond premium and applicable gross receipts tax.

was completed in 10 working days as compared to the 66 working days required to progress from Sta. 856+63 to Sta. 854+06. The reference reach is also used for purposes of evaluating Claim Reach II." (AF 50, p. 4).

⁵¹The Summary of Additional Costs which accompanied the letter includes an item described as "[a]dditional project site indirect cost attributable to prolongation of the contract period (88 calendar days @ \$1,190/day)" in the amount of \$104,720. Fluor Utah Home Office Overhead at the rate of 2.3 percent of the listed direct and indirect costs amounts to \$9,991 (AF 50, contractor's letter (4-22-72), attachment).

(AF 50, p. 6).

Additional information pertaining to the claim was furnished by the contractor's letter of Nov. 10, 1972 (AF 54). Speaking of the rate of progress achieved in the vicinity of six other drill holes which are along the alignments of Tunnel Nos. 3 and 3A and noting that the average progress in the vicinity of these other drill holes (approximately 250 feet on either side of the drill hole location) varied from a high of 197.3 feet per day to a low of 78.3 feet per day with an average progress while traversing past the entire six drill holes of 104.7 feet per day, the letter states: "The rate of progress attained in the vicinity of these drill holes indicates that the 257 feet and 268 feet involved in Claim Reaches I and II should have been excavated in approximately 2.5 days rather than in the 61 day and 22 day time periods actually required to excavate and support the two claim reaches."⁵²

The Bureau's response to the contractor's letters of Apr. 22, 1972 (AF 50), July 12, 1972 (AF 52),

⁵²The Nov. 10, 1972, letter also states:

"The excavation phase of the project was completed on October 16, 1972, with the hole-through of Tunnel 3A and we have now been able to compare the rate of progress achieved in the vicinity of the six other drill holes which are along the alignment of Tunnels 3 and 3A. Our records show that these drill holes occurred at locations having rock conditions which varied from wet sandstone with shale lenses to dry shale with lenses of siltstone and sandstone. However, in no case was the ground saturated with water which had percolated through the strata at tunnel level from an overlying water source." (AF 54, p. 1).

and Nov. 10, 1972 (AF 54), is contained in a letter dated Dec. 26, 1972 (AF 55), in which it registered its grave doubts as to the merits of the claim, noting (i) that the amount of shale encountered during excavation of the tunnel was not appreciably different than was shown by the logs of exploration; (ii) that a study had failed to indicate a relationship between the water sources for Claim Reach I and Claim Reach II which were approximately 560 feet apart; (iii) that when the contractor bid the job, it had known that the water levels reported for DH 116 were well above tunnel level only shortly before the bid opening; and (iv) that if the contractor had been adequately prepared,⁵³ many of the excavation problems in Claim Reach I would have been materially reduced.

The Bureau's letter referred to the fact that in the letter of Apr. 22, 1972 (AF 50), the contractor had

mentioned groundwater seepage as one cause of the alleged excessive overbreak and elsewhere in the letter had stated that the information presented in the log of DH 116 indicates that the rock at tunnel level in the vicinity of DH 116 at the time of drilling was essentially dry. Concerning these matters and the contractor's assertion that great reliance had been placed on the log of DH 116, the BOR letter states:

It * * * seems that the continuous statements as to the wet and moist condition of the core between 359.2 feet and 432.0 feet would have been an indicator that the rock to be excavated would be wet and that free water could be expected in the tunnel. We, therefore, feel that your interpretation of dry tunneling conditions in the area of DH-116 appears to be erroneous.

(AF 55, p. 1).

Additional information pertaining to the DH 116 claim was furnished to the BOR in a letter dated Jan. 30, 1973 (AF 57), in which the contractor offered its observations concerning the discharge from a drain pipe which had been grouted into the drill hole and with respect to the moisture conditions generally in Claim Reaches I and II. It also advised the BOR that the samples of rock had been taken from Claim Reach I and that two of the rock samples tested, which the contractor described as dry, had moisture content of 5.4 percent and 7.1 percent, respectively. The letter concluded by requesting the Bureau (i) to observe and confirm its findings that the source of water encountered during excavation was at or above ele-

⁵³ "[D]uring our meeting (Dec. 6, 1972), I pointed out instances of your lack of preparation for handling the problems encountered. Although shotcrete was contemplated by the specifications as a means of tunnel support, as well as your submission of proposed support details, considerable delay occurred because shotcrete equipment was not available. The mole would not excavate a bore of sufficient diameter to permit the use of structural steel supports as contemplated in the specifications. You did not install a shield for the mole until October 5, 1972, when the excavation of Claim Reach I was completed. The beginning of the continuous use of epoxy-anchored rock bolts was at this same time. It appears that had you been adequately prepared, your excavation problems in Claim Reach I would have been materially reduced." (AF 55, BOR letter (12-26-72), p. 2).

The reference to Oct. 5, 1972, as the date the shield was installed appears to be in error. The Government's inspection reports indicate the shield was installed on Oct. 5, 1971 (GX AAA(11)).

vation 6019 and (ii) to participate in a joint program of controlled tests of rock in the vicinity of DH 116 prior to the placement of the concrete lining in order to determine its moisture content. It was said that the present moisture content of the rock may be of significant importance to the claim. In a followup letter dated Feb. 15, 1973 (AF 61), the contractor requested that it be advised of the Bureau's intentions respecting a joint program of controlled tests, noting that the arch concrete placement was then in progress. In its reply letter of Feb. 23, 1973 (AF 63), the BOR advised that the Jan. 30 letter contained no new information to show site conditions differed materially from those indicated in the contract documents.⁵⁴ It also questioned whether additional rock testing as suggested by the contractor would be of value in view of the time that had elapsed since excavation of the tunnel through Claim Reach I was completed.⁵⁵

⁵⁴ "The contract documents (logs of drill holes) show that water could be expected within strata in the tunnel section at any point throughout much of the tunnel length, including Claim Reaches I and II. Your observation of moisture content of the rock from Claim Reach I (5.4 percent to 7.1 percent) compares favorably with the 5.9 percent to 6.8 percent moisture in samples tested from DH 116 cores. These data were available to all prospective bidders under Paragraph 42 of the specifications." (AF 63, BOR letter (2-23-73)).

⁵⁵ "It has been almost 17 months (Oct. 1971-Feb. 1973), since the tunnel was excavated through Claim Reach I. Changes induced by the excavation itself render interpretation of moisture and water data somewhat questionable if collected at this time. We, therefore, question whether additional rock testing of the area would be of benefit. However, we have no objection to your performing additional testing if you so desire." (AF 63, n. 54, *supra*).

In a letter to the Bureau dated Apr. 3, 1973 (AF 73), the contractor asserted that the DH 116 claim was based upon the combination of water and shale/siltstone encountered in the vicinity of the drill hole. Among the points made in the letter were the following: (i) the qualitative drill log comments respecting moisture on Drawings D-317, D-318, and D-323 did not agree with the results of laboratory tests of core samples furnished to bidders;⁵⁶ (ii) that the laboratory determined moisture for the cores of clayey siltstone (petrographic classification) and for the cores of sandstone, coarse (petrographic classification) obtained from DH 116 were 6.8 percent⁵⁷ and 5.9 percent, respectively; (iii) that the tests conducted by the contractor, in which the BOR had had an opportunity to participate,⁵⁸ had disclosed that the clayey siltstone is

⁵⁶ "In the Clayey Siltstone the driest sample recorded was called 'moist to wet' while a sample with nearly twice the moisture content was only called 'moist', and there was no moisture comment on a sample with the highest moisture content. In the Coarse Sandstone the sample with the greatest moisture content was called 'moist' while one containing 40 percent less moisture was noted as wet." (AF 73, p. 3.)

⁵⁷ "The Contract Documents indicated a moisture content of the rock in this vicinity of 6.8% and the Contractor based his bid on this knowledge, contemplating that a Clayey Siltstone bearing this moisture would present no particularly adverse problems to an efficient excavation program. This reasoning was fully substantiated when material of the same petrographic classification but considerably higher moisture content was encountered in Tunnel 3A in the vicinity of DH 117 and 118 with no adverse effects on our rate of progress." (AF 73, p. 8.)

⁵⁸ The BOR was invited to participate in such tests by letter dated Jan. 30, 1973 (AF 57). The Bureau declined the invitation for the reasons stated in its letter of Feb. 23, 1973 (n. 54 and n. 55, *supra*).

stable at moisture content up to 10 percent; and (iv) that failure of the Bureau to grout off DH 116 indicated that it did not consider the higher source of water⁵⁹ shown in the drill hole logs would be draining into the lower tunnel formations.

Responding to an inquiry from the contractor concerning the DH 116 claim (AF 83), the Bureau stated: "We were prepared to answer your claim based on conditions encountered in the vicinity of DH 116 until a review of your claims for changed conditions (in situ stress relief) submitted with your letter dated May 18, 1973, indicated there may be an overlapping of claims" (AF 85).

In the "Summary of Additional Costs Associated With Conditions Differing Materially From Those Indicated In The Contract In The Vicinity of DH-116," which accompanied a letter dated Feb. 6, 1974 (AF 112), the contractor submitted a claim for this item in the amount of \$623,748. The same figure is shown in the summary of additional costs which accompanied the contractor's letter of July 22, 1974 (AF 115), in which the direct costs to excavate and support Claim Reach I in excess of the direct costs required to excavate and support the Reference Reach is shown in the amount of \$260,828. The comparable figure for the difference between the

direct costs for Claim Reach II and those for the Reference Reach is shown in the amount of \$53,742.⁶⁰

In the Findings of Fact and Decision dated Dec. 31, 1974, the contracting officer denied the DH 116 claim,⁶¹ stating in part:

[T]he contractor does not contend that more shale and/or siltstone was encountered than was anticipated. He does contend that the shale and siltstone which were encountered contained more water than was indicated by the log of drill hole 116, and he further contends that this situation was the result of the drill hole allowing water to drain down from a perched water table located above elevation 6016 * * *.

* * * * *

16. Accordingly, it is my decision that the conditions which the contractor encountered in constructing the tunnel between stations 856+63 and 854+06 (claim reach I) and between station 848+48 and 845+85 (claim reach II) did not constitute subsurface or latent physical conditions at the site differing materially from those indicated in the contract.

(AF 10, pp. 4, 6).

Invert Heave and Removal of Water From Tunnel

Meanwhile, problems had developed with respect to the invert. By

⁵⁹ "b. No data was presented in the Contract Documents to show that the perched water indications were any more than minor phenomena having little significance for tunnel excavation. The 1969 and 1970 water level readings in DH-116 were obviously related to strata above the tunnel and not to strata at the tunnel level." (AF 73, p. 7.)

⁶⁰ Claim Reach I is between Stations 856+63 and 854+06. Claim Reach II is between Stations 848+48 and 845+80. The Reference Reach used as the basis for determining additional costs with respect to both claim reaches involves the section of Tunnel No. 3 between Stations 854+06 and 851+49 (AF 10, p. 3).

⁶¹ The Government Posthearing Brief (hereafter GPB) states at page 2:

"[F]or reasons undisclosed to the Government, the contractor has abandoned his claim relating to Drill Hole 116 as a separate claim. The alleged additional costs associated with the Drill Hole 116 claim, however, have apparently been incorporated in the claim as it was presented to the Board at the hearing."

letter dated Jan. 31, 1973 (AF 58), the contractor noted that the invert concrete was virtually complete after which it states: "We are concerned that this movement of rock continues even after concrete invert placement as is evidenced by some apparent concrete invert heaving in the area between stations 823+50 and 814+50." On Feb. 15, 1973, the contractor advised the Bureau that "similar invert deterioration has now progressed at least as far as station 834+60" (AF 62). In a letter dated Feb. 23, 1973 (AF 64), the contractor notified the BOR that surveys completed that date had revealed vertical displacement as great as 16 inches at Station 834+65. In the same letter it observed that the heaving problems exists sporadically and in varying degrees between Stations 812+00 and 844+00.

Following an exchange of correspondence pertaining to the heaving invert and the collection and removal of drainage and construction water from the tunnel by means other than free flow in the tunnel invert (AF 65 and 66), the Bureau wrote the contractor on Mar. 15, 1973 (AF 68), to say (i) that a study of the conditions present had shown it would be necessary to remove invert concrete from approximately Stations 812+50 to 824+00 and from Stations 833+00 to 844+50, and (ii) that a meeting would be held in the near future to discuss construction procedures and to negotiate payment for the work.

In a letter to the BOR dated Mar.

27, 1973 (AF 72), the contractor stated that its studies had caused it to conclude that the work required to remedy the concrete invert heave would "because of its necessary sequential nature as well as its magnitude," constitute a change order of such broad consequence so as to change the manner of performance for the whole of the remaining work on this project. The Bureau disagreed with this assessment in a letter dated Apr. 27, 1973 (AF 75), in which it states that the original prices are applicable to almost all of the remaining work. This view of the matter was disputed by the contractor (AF 78). The disputed questions were partially resolved by the contractor's qualified acceptance⁶² of Order For Changes No. 1 (Part 1 of a 2-Part Order) dated Aug. 16, 1973.⁶³ Amendment No. 1 to Part I of Order For Changes No. 1 dated Apr. 1, 1974, provided for a net increase in the sum due under the contract for performing the changed work in the amount of \$613,518 (AF 8). Part 2 of the Order For Changes No. 1 dated July 18, 1974, provided for a net adjust-

⁶² By letter dated Sept. 27, 1973 (AF 100) the contractor returned executed copies of the change order but noted that it had been accepted subject to the conditions stated one of which was that "[t]he work covered by this Order is not unrelated to our claims submitted by our letter to the Project Construction Engineer dated May 18, 1973."

In letter dated Oct. 16, 1973 (AF 103), the BOR stated that the change made in the acceptance of Order For Changes No. 1 was noted as being in dispute.

⁶³ Under the terms of the Change Order the contractor was "directed to remove the concrete invert between Stations 812+42 and 824+00 and between Stations 833+00 and 844+46 of Tunnel No. 3" (AF 4, p. 1).

ment in the sum due under the contract for increased costs of performing original contract work in the amount of \$235,071, noting that the total adjustment for Order For Changes No. 1 represents an increase of \$848,589 (AF 9).

Claim for Overexcavation of the Main Canal Downstream of Tunnel 3A Portal

A changes claim for the costs incurred at the outlet portal of Tunnel No. 3A for the 2 feet of overexcavation required for shale was submitted to the BOR by the contractor's letter of Aug. 17, 1973 (AF 94). In its letter of Aug. 28, 1973, the Bureau took the position that the work in question had been performed in accordance with the specifications and that no change was involved (AF 95). The parties continued to maintain their opposing positions in the ensuing correspondence (AF 111, 112, and 113). As shown in the summary of costs attached to the contractor's letter dated July 22, 1974 (AF 115), the claim as submitted was in the amount of \$73,303. Giving effect to the \$26,370 paid to the contractor at unit prices under schedule items 54 and 55, the net claim was in the amount of \$46,933. The claim in that amount was denied by the contracting officer in the decision from which the instant appeal was taken (AF 10). At the request of the appellant the portion of the appeal represented by this claim item was dismissed with prejudice by order dated Oct. 3, 1975.

Claim For In Situ Rock Failures in Tunnels 3 and 3A

By letter dated Jan. 31, 1973 (AF 58), the contractor submitted a claim for a differing site condition for rock failures in Tunnel Nos. 3 and 3A attributed to the relief of in situ stresses⁶⁴ as manifested in excessive rock displacement in the arch, sidewall and invert sections.⁶⁵ According to the letter an initial survey had indicated that the contractor would encounter extensive tightness in the arch and sidewalls during placement of the tunnel lining. The letter advised the BOR of the contractor's intention to embark upon an extensive program to chart these displacements in Tunnel Nos. 3 and 3A and invited the Bureau's participation in the undertaking.

In a letter dated Feb. 2, 1973 (AF 60), the contractor advised the BOR (i) that it would have a survey crew working in Tunnel No. 3 on Saturday, Feb. 3, 1973, with a view to confirming elevations of the existing moled arch through various reaches of the tunnel and also the extent of the rib squeeze or heave at various reaches; (ii) that a representative

⁶⁴ "Our study of the contract documents, including information on the geology of the site and the required initial tunnel support system did not indicate that rock displacements of the magnitude encountered as a result of stress relief could be anticipated" (AF 58, contractor's letter (1-31-73), p. 2).

⁶⁵ "We believe evidence of a supporting nature is typified at stations 858+00 to 854+00; 824+00 to 811+00; 777+40 and 741+50. We are concerned that this movement of rock continues even after concrete invert placement as is evidenced by some apparent concrete invert heaving in the area between Stations 823+50 and 814+50." (n. 64, *supra*).

January 15, 1981

of A. A. Mathews would be present to confirm and concur with the contractor's methods and applications; and (iii) that the BOR was invited to observe the contractor's methods for correlation with the information to be derived. In a follow-up to its Feb. 2 letter and subsequent letters, the contractor wrote on Mar. 22, 1973, to say that survey measurements had revealed displacement up to 6 inches or more in simultaneous occurrences on both sides of the tunnel⁶⁶ and that such displacements are generally of a continuous nature (AF 71).

By letter dated May 18, 1973 (AF 77), the contractor transmitted its claim for in situ rock stresses in the amount of \$2,701,300. The claimed amount included an estimate of the costs attributable to the removal and replacement of damaged invert.⁶⁷ Included with the

⁶⁶ "Our arch concrete placing plant has now reached Tunnel Station 777+50. While we have encountered some tight areas of tunnel during the past two weeks of arch placement, there has been a noticeable increase in the scope of this problem since passing Station 770+40." (AF 71, date shown on letter, 3/22/72, is incorrect, the intended date appears to have been 3/22/73).

⁶⁷ "It is clear that the changed conditions of concrete invert heave between Station 812+50 and 844+50 * * * is an integral part of this claim of differing site conditions. We therefore have included in our cost assessment an estimate of the costs attributable to the removal and replacement of this damaged invert." (AF 77, letter transmitting claim, p. 2).

The claimed amount of \$2,701,300 includes an estimated cost to repair invert heave in the amount of \$526,700 (AF 77, Summary of Additional Costs, Part IV).

Amendment No. 1 to Part 1 of Order For Changes No. 1 dated Apr. 1, 1974, provides in especially pertinent part:

"b. As an adjustment for the increased

claim letter were: (i) an "In Situ Rock Stress Cost Evaluation," (ii) "Navajo 3 and 3A Progress Tabulation," (iii) "Summary of Additional Costs," and (iv) "Construction Report No. 1856." As was true with respect to the DH 116 claim, the contractor predicates its claim on differences between the conditions encountered in what it terms "Claim Reaches" and "Reference Reaches" and the relationship between such reaches to the costs claimed. The following is excerpted from the In Situ Rock Stress Cost Evaluation:

A. TUNNEL EXCAVATION

* * * * *

Claim Reach Tunnel No. 3

On July 1, 1971, at Sta 859+72 incompetent rock was encountered. Rock conditions continued to be materially worse than indicated until May 30, 1972 at Sta 761+90.

From Sta 761+90 until completion of Tunnel 3, rock conditions were as anticipated, although the Contractor's progress was delayed repairing equipment damage caused by the earlier encountered adverse rock conditions until approximately Sta 752+41. The 10,731 ft. section of tunnel, from Sta 859+72 to 752+41, comprises the Claim Reach. It was excavated in 241 working days, an average of 44½ ft. per day.

Reference Reach

The 3,057 ft. section from the end of the Claim Reach to hole-through comprises the Reference Reach. This was excavated

costs incurred to remove and replace the concrete invert between Stations 812+42 and 824+00 and Stations 833+00 and 844+46 of Tunnel No. 3, in accordance with Item 2 of Part 1 of Order for Changes No. 1, the amount due under the contract will be increased by the lump sum of—\$565,838." (AF 8, p. 6).

in 16½ working days, an average of 185 ft. per day.^[88]

Claim Reach Tunnel No. 3A

Ground conditions, at variance to those indicated by the contract were encountered in Tunnel 3A. The startup section of this tunnel comprised 236 ft. to Sta 987+68. From this Station to hole-through comprises the Claim Reach. This 3,053 ft. was excavated in 29 working days, an average of 105 ft. per day.

* * * * *

B. INVERT CONCRETE

Major delays during the placing of the invert concrete were caused by the rock in the invert of the tunnel rising and encroaching inside 'A' line. This rock had to be removed by spading, ripping and blasting. Additional delay was caused by failure of the rock footings at the invert brackets.

* * * * *

Claim Reach

The work in the Claim Reach starts on December 11, 1972 at Sta 769+35, the first day of removal of stress induced invert encroachment, and continued 8,593 ft. through Sta 855+28 on January 12, 1973, the last day of removal of invert encroachment.

⁸⁸ "Reference Reach Rate of Progress"

"The 185 ft. per day advance achieved in the competent rock of the Reference Reach was clearly demonstrated to be a reasonable base figure.

"Shortly after initial crew training and immediately prior to encountering adverse ground conditions, the Contractor achieved a sustained driving rate of 160 ft. per day. After passing through the area of incompetent ground he was able to achieve an average of 194 ft. per day during the final eleven days of operation in Tunnel No. 3; compile an average of 213 ft. of advance in the last calendar week of operation in this tunnel and reach a peak advance of 260 ft. in a one twenty-four hour period of this week.

"To further substantiate his claim that this 185 ft. figure is not only reasonable but conservative, the Contractor notes that:

* * * * *

"2. The excavation equipment had sustained extensive damage from rockfalls in the Claim Reach and, therefore, did not operate at full capacity in the Reference Reach." (AF 77, In Situ Rock Stress Cost Evaluation, pp. 1, 2).

Reference Reach

January 15, and 16, 1973, were the only days of full operation, after the startup period, without invert encroachment.

These two days then must be considered the Reference Reach. While its overall length is relatively short, and the distance to the batch plant considerably less than average, the Contractors records, as summarized below,^[89] show that haulage and equipment delays were actually higher in this reach than in the remaining invert work, thereby establishing the validity of this length of tunnel as the Reference Reach.

It will be noted that the Claim Reach includes one day in which 848 ft. of invert was placed even though there was some delay in removing tights. This clearly demonstrates that the 676 ft. per day of progress for the Reference Reach provides a conservative basis for cost evaluation.^[90]

"The duration of the delay to the invert concrete was ten working days, as can be seen on line 10 of the Progress Tabulation" (AF 77, n.68, *supra*, p. 3).

⁹⁰ "The anticipated delay for replacing the invert is 73 working days * * *.

"Strikes in the Fall of 1971 and the Spring of 1973 would not have occurred if changed conditions had not been encountered. Consequently, the 24 working days lost as a result of these strikes is included in this evaluation." (AF 77, n.68, *supra*, p. 4).

C. ARCH CONCRETE

Delays encountered during arch concreting of Tunnel 3 were caused by removal of stress induced encroachment of the tunnel ribs and arch, by placing of additional concrete in fallout voids caused by the high in situ rock stress, and by replacing heaved invert concrete.

Lines 12 through 19 of the Progress Tabulation show actual and projected details of this operation. These figures will be revised upon completion of arch concreting.

(AF 77, In Situ Rock Stress Cost Evaluation, pp. 1-4).

The technical basis for the In Situ Rock Stress Claim is set forth in Construction Report No. 1856 dated May, 1973, and transmitted to the BOR by the contractor's letter of May 18, 1973 (AF 77). The comprehensive report of 70 pages, two appendices, some 35 figures and three large drawings was forwarded to the contractor by letter dated May 3, 1973, from Dr. Ronald E. Heuer of A. A. Mathews, Inc. (AF 77). Much of the material in the report covers ground already discussed in earlier reports of A. A. Mathews, Inc., pertaining to the differing site conditions claims (AX 20; AX 5 and AF 36).

Emphasis is placed upon (i) failures observed at Navajo Tunnel No. 3 generally representing shear failures in overstressed rock adjacent to the tunnel perimeter (p. 51); (ii) the strength and water sensitivity of siltstone/shale materials reported in the Construction And Foundation Materials Data Report (GX U) made available to bidders not being representative of the more troublesome siltstone/shale mate-

rials encountered in the tunnels, i.e., the nature of these materials was not known prior to tunnel excavation (p. 65); ⁷¹ (iii) fracturing in the arch and subsequent rock falls typically developing immediately behind the mole cutter head before the rockbolt support could be installed (pp. 1, 53); ⁷² (iv) the fact that some of the worst rock fallouts cannot be explained as simply a reaction to the presence of free wa-

⁷¹ In a memorandum written to J. F. McCreight under date of Aug. 31, 1970, Mr. J. J. Hayes (the company geologist who had actively participated in the pre-bid site inspection of the area involving Tunnel Nos. 3 and 3A) states under the caption "Mole Operation: [M]inor amounts of perched ground water may occur on top of certain impermeable shale beds. However, no permanent flows are expected. The shale (siltstone) is very water reactive, so all possible precautions must be taken to maintain a dry operation" (AF 110, Attachment, p. 3).

The same language is contained in Mr. Hayes' handwritten report (AX 1, p. 4).

⁷² In an article entitled "Mole Versus Conventional: A Comparison of Two Tunnel Driving Techniques," Mr. Newcomb B. Bennett III, U.S. Bureau of Reclamation, makes a comparison between Tunnel No. 1 (a mole driven tunnel) and Tunnel No. 2 (a conventionally driven tunnel), both of which tunnels were also part of the Navajo Indian Irrigation Project but which were completed prior to Tunnel Nos. 3 and 3A. In the course of the article Mr. Bennett states:

"[W]hen a shale in a tunnel starts lying on a 1:1 $\frac{1}{2}$ -slope, the overlying rock will no longer be stable. When a sandstone is undercut by a rapidly retreating shale, it will fall. It is the large sandstone blocks which cause damage when they fall, but their falling is generally the fault of the shale.

"The shales reacted the same in both tunnels in that they tried to reach stability. The difference appears in the amount of time it takes the shale to begin air slaking. In either tunnel it would generally take 1 to 2 days to begin falling, even after its initial exposure. However, once exposed, differences occurred. In Tunnel 1 the shale would begin dropping immediately after a new reach was exposed. It was believed that this was due to the compressive effects of the cutterhead. After the mole passed, the shale would almost spring into the tunnel and, unless immediately supported, would continue falling." (GX A, p. 2).

ter; ⁷³ (v) the superiority of rock-bolts over other indicated means of support including full steel ribs; ⁷⁴ and (vi) the reference in Paragraph 50 of the specifications to Government testing indicating that "many of the sandstones, shales, and siltstones to be excavated will deteriorate or disintegrate rapidly when exposed to air or water or when stress relieved or a combination of the three" refers only to surficial phenomena.

With respect to Item vi above, the report states:

[T]he problems being considered in this report resulted from overstressing of the intact rock material about the tunnel excavation due to concentration of in

situ rock stresses about the excavation * * *. This overstressing caused fractures to form in the intact rock about the tunnel. Such overstressed rock in the upper part of the excavation typically fractured and fell into the tunnel before support could be installed. In the lower portion of the excavation, the overstressed, fractured rock moved into the tunnel over a period of time following excavation. These large scale failures of overstressed rock are not simple surficial deterioration, [⁷⁵] disintegration and loosening in the presence of air or water. Much of this failure occurred in portions of the tunnel in which water was not present. The nature of these failures indicates they are of a mechanical and stress-induced origin, and are not simple air slaking or water slaking phenomena causing surface deterioration, disintegration, and loosening.

The phrase "deterioration of disintegration when stress relieved" [⁷⁶] applied

⁷³ "[G]round behavior observed in the tunnel indicates that water in contact with the siltstone/shale surface causes the surface to swell and disintegrate. Such water does not cause the formation of fractures penetrating deep into the rock. Rapid and severe failure such as illustrated by Figs. 18 and 19 can be explained, however, by the formation first of cracks in the rock due to overstressing and resultant rock fracturing. Such cracks provide free water with access to deep within the siltstone/shale material. The presence of free water in such cracks can cause softening and swelling of material along the crack surfaces, leading to the severe and rapid failures which occurred." (AF 77, p. 57).

⁷⁴ "Full circle steel ribs of adequate size could probably have supported the tunnel; although, as shown in A. A. Mathews, Inc. Report 1743-3, submitted to the Owner by the Contractor by letter No. 243 of December 27, 1971, the W5 x 18.5 or M5 x 18.9 ribs required by the Contract would not provide as much support capacity as the reinforced ground arch provided by the rock bolt support system actually used. Steel ribs could not have been installed early enough to prevent fracturing and fallout in the arch and would have experienced the same (or worse) delays as were experienced with rock bolts. Steel ribs and wood blocking are a passive support which do not actively strengthen and restrain the rock, and as such would allow more fracture development and rock failure than the pretensioned rock bolt system used by the Contractor. Thus, the use of steel rib supports would have resulted in a poorer quality of the rock mass about the tunnel." (AF 77, p. 64).

⁷⁵ The report had previously stated: "[T]he degree of failure of the tunnel perimeter depends upon the relative magnitude of the in situ pressure and the ground strength, and upon the support system installed" (AF 77, p. 49).

An earlier draft of the report (3-5-73) had stated: "[T]he degree of deterioration of the tunnel perimeter depends upon the relative magnitude of the in situ pressure and the ground strength, and upon the support system installed" (GX P, p. 49).

⁷⁶ In a letter dated Apr. 6, 1973, addressed to Mr. Sperry then with A. A. Mathews, Inc., "Subj.: Stress Relief Planning for Navajo No. 3," Mr. R. Hungett, Vice President—Construction, Fluor Utah, Inc., offers his comments upon an earlier draft of what later became Construction Report No. 1856. In especially pertinent part the letter states:

"[T]he words 'stress relieved' bother me in view of what we are trying to accomplish but inasmuch as these are quoted from the specifications I guess there is nothing else we can do. * * *

"* * * [I] do not feel that the final sentence on this page should be part of this report. It will be difficult enough to present the Mathews report as an independent consultant's report without it's [sic] stating an opinion about the contractor's entitlement to additional cost. All matters such as this I feel should be covered in our claim letter.

"I am bothered continually with the semantics which we may be dealing in when we are
—Continued

to rock about a tunnel excavation implies a shallow seated or surface spalling of rock, such as extension failure which may occur when rock under stress "expands" in response to release of the stress. The behavior which would be associated with "deterioration or disintegration when stress relieved" would be spalling or ravelling of small pieces of rock from the excavated surface. The term "disintegration or deterioration" does not imply large scale shear fractures which have opened several inches wide, into which an arm can be thrust up to the elbow; shearing displacements of several inches on continuous fractures extending tens of feet along the tunnel; slabs six to eight inches thick and several feet in lateral dimension forming in intact rock and falling from the crown within a few feet behind the mole cutter-head; or slabs of hard rock moving several inches into the excavation below springline.

(AF 77, pp. 61, 62).

After referring to other language from Paragraph 50 of the specifications dealing with the contractor's obligation to provide a clean, undisturbed surface for placement of the lining and the fact that he might accomplish this by "applying protective coatings * * * installing subinvert tunnel protection * * * by dewatering * * * or by removing any deteriorated or disintegrated material back to clean, undisturbed surfaces," the report continues:

These statements are further representation that the deterioration and disintegration referred to in the Contract Specifications was anticipated to be a

banking heavily on the fact that * * * 'deteriorate and/or disintegrate' are in fact different from what we see as displaced material in the tunnel." (GX B, pp. 1, 2.)

surface phenomenon. It is stated that unless protective coating or subinvert concrete are installed, substantial amounts of deteriorated or disintegrated material is expected. This is a representation that the nature of the process forming the deteriorated and disintegrated material would be such that the process could be prevented by installation of protective coatings or subinvert concrete. The massive failures of the intact rock in response to overstressing such as actually occurred, would not be prevented by such simple measures.

(AF 77, p. 62).

According to the May 1973 report (AF 77),⁷⁷ the major impact of the rock failures experienced in Tunnel No. 3 in increasing the contractor's costs was the fact that rock failures occurred in the crown directly over the mole concurrent with the advance of the mole, and before the rockbolts could be installed, interfering with rockbolt installation and heading advance (pp. 69, 70). Stressed in the report were the following factors: (i) fracturing and subsequent fallout in the walls occurred ahead of the mole gripper plates at times, requiring the use of cribbing behind the plates to provide bearing for the gripper plates and thus the reaction needed for the mole advance (p. 60);⁷⁸ (ii) the major support problems and disruption of tunnel advance which developed during construction could not

⁷⁷ Included among the items of information on which the report was based were (1) the contractor's logs of geology and rock support along the tunnels, and (ii) contractor's shift reports and weekly reports (AF 77, p. 2).

⁷⁸ Problems with the gripper plates is mentioned elsewhere in the report (AF 77, pp. 35, 38 and 53).

have been predicted prior to bidding; ⁷⁹ (iii) included in the representations and inferences which could reasonably be drawn from the contract documents and related information were the Bureau's expectation that approximately 80 percent of the tunnels would require some type of support other than rockbolts; ⁸⁰ (iv) the deterioration and the disintegration to be expected would be mainly of a surficial nature; ⁸¹ and (v) all four of the low bidders contemplated using rockbolts as the support for the tunnel.

With respect to item v, *supra*, the report states at page 66:

[N]one of the support prices listed by the four low bidders is adequate to cover the cost of installing a support system such as steel ribs, shotcrete, or the Bernold system. Nor are the excavation unit prices submitted by these contractors high enough to cover this support installation. * * *

⁷⁹ "[R]ock mechanics analyses * * * prior to bidding would not have predicted the severity of failures which actually occurred, because the low strength and sensitivity to water of the siltstone/shale materials encountered in the tunnel were not known prior to bidding. In addition, these theoretical analyses would not predict the time rate of failure, i.e., they would not predict how soon and how close to the excavation face the failures would occur." (AF 77, p. 68).

⁸⁰ "[T]he Owner expected that approximately 12,220 lineal feet of the 15,249 ft. length of Tunnel No. 3 and approximately 2,680 lineal feet of the 3,312 ft. length of Tunnel No. 3A, i.e., approximately 80% of the tunnels, would require some type of support other than rock bolts." (AF 77, p. 24).

⁸¹ "[T]his deterioration, disintegration, and loosening was expected to be mainly a surficial process, such as softening due to absorption of water, and could be prevented by such means as applying a surficial protective coating such as non-structural shotcrete, by installing a concrete subinvert to protect the invert from water and construction traffic, or by draining the tunnel by collecting seepage in sumps and pumping it from the tunnel in pipes." (AF 77, p. 26)

* * * [O]f the twelve bids submitted, the four low bidders, representing some of the most experienced tunnel contractors in the country, did not anticipate the rock behavior which was actually encountered. These contractors anticipated, as did Fluor Utah, Inc., that the full tunnel length could be supported with rock bolts.^[82]

Experience in the tunnel is said to have indicated that none of the support systems contemplated by the contract plans and specifications would have adequately solved the problem which resulted from overstressing of the rock. After noting that none of the supports could have been installed earlier or faster than were the rockbolts actually used, the report concludes that each would have been subject to the same or more extensive delays resulting from large scale failures forming before the supports could be installed. This was said to be so irrespective of whether the support system chosen was shotcrete, the Bernold system,⁸³ half circle steel ribs⁸⁴ or full circle steel ribs.⁸⁵

⁸² See n.10, *supra*.

⁸³ "Even with accelerators, shotcrete requires some time to attain strength. The Specifications require that shotcrete be placed within 10 ft. of the mole dust shield or support shield. However, fractures were forming in the rock about the tunnel before the shotcrete could have been applied. Furthermore, experience in the tunnel showed that adequate shotcrete bond to the siltstone/shale materials could not be developed, particularly in the presence of free groundwater. Therefore, if used alone, neither shotcrete nor the Bernold system would have provided adequate support for a circular excavation unless they were placed over the full 360° of the tunnel perimeter, thus forming a closed structural ring. The Specifications, however, restrict the shotcrete and Bernold system supports to the upper 290° of the tunnel perimeter." (AF 77, p. 63).

⁸⁴ "Half circle steel ribs anchored with short pins at springline would not have provided adequate tunnel support. In the areas of most

Concerning the adequacy of the rockbolt system actually employed,⁸⁶ the report states:

[V]ery little serious progressive failure after excavation has occurred in the arch where resin anchored rock bolts were installed. Only in one short section near Sta 811+50, in an area of water seepage, were steel ribs installed at some time after excavation to supplement the original rock bolt system. The satisfactory behavior of the rock bolted arch indicates that progressive failure of the walls and invert could have been prevented by more extensive bolting of the walls, if such bolts had been approved by the Owner. * * * [T]he Owner refused to pay for rock bolts placed below tunnel springline. As a result, few bolts were placed below springline, and significant progressive failure and inward movement of the side walls and invert occurred following excavation.

(AF 77, pp. 64, 65).

Apropos the siltstone/shale materials encountered, the report states that where such material was encountered in the presence of free water, rock failures were particularly severe. It goes on to note, however, that failures which developed in these materials were not entirely

due to the presence of water, as was shown by the fact that failures developed where shale and siltstone were encountered in dry conditions. Cited as examples of such cases are the materials encountered at Stations 860 to 857 and at Stations 834 to 820, as illustrated in Figures 6 and 20 (AF 77, pp. 56, 57).⁸⁷

A failure in the crown occurring in the first 440 feet of moling in Tunnel No. 3 involved a fallout as much as 5 to 7 feet wide, breaking up to a thin shale seam some 2 feet above the crown, and tapering off to nothing by approximately Station 869+50. On July 1, 1971, a thick shale lens was encountered in the north (left) wall of the tunnel. On July 2, fallout began to develop in the crown as the sandstone broke to a siltstone or shale layer about 2 feet above the excavated crown. By approximately Station 857+20, at the beginning of the day on Friday, July 9, the overlying siltstone/shale dipped down into the tunnel. By the end of that day (at Station 856+75), the siltstone/shale formed the entire tunnel face except for the

severe rock failures, fallouts several feet deep occurred at the springline. Half circle steel ribs in such cases either could not be supported initially, or would have collapsed after installation." (AF 77, pp. 63, 64).

⁸⁶ See n. 74, *supra*, for a discussion of the use of full steel ribs as support.

⁸⁷ "The Contract Specifications represent that where rock bolt support of the tunnel was appropriate, adequate bolt anchorage would be attainable with either mechanical expansion anchors or slot and wedge anchors. Rock bolt pull tests and experience in the tunnel have shown that adequate anchorage could not be developed with such anchors, although rock bolts did provide adequate support. Adequate rock bolt anchorage was attained with resin anchors, an anchor not provided in the Specifications." (AF 77, p. 65).

⁸⁷ Immediately thereafter the report states:

"Major failures and fallout in the arch occurred throughout the interval from Sta 812 to 854 (Fig. 21), all in dry siltstone except from Sta. 846 to 849. Furthermore, surveys by the Contractor, the USBR, and by Brewer show that inward movements of the lower sidewalls and invert occurred in dry siltstone and shale materials after excavation, and necessitated subsequent re-mining to enlarge the excavation and provide the required thickness of final concrete lining. These movements can not be explained as a reaction to water, but must be considered as caused by rock failure and subsequent movements due to overstraining" (AF 77, p. 57).

lower few feet in the invert. Because of the continued failure of the ground at the heading, tunnel advance was halted at Station 856+16 on July 14, 1971.⁸⁸ A large rock fall (estimated 80 to 100 cubic yards volume occurred on Friday and Saturday, July 23 and 24, 1971, pulling out rockbolts anchored to the siltstone/shale. The siltstone/shale material forming the arch and walls fell out to a height of 8 feet over the tunnel, extending to the overlying sandstone (AF 77, pp. 32-34).

On November 1, sandstone bearing free water was encountered in the crown at Station 848+60. Water dripped from the sandstone. Large fallouts from the tunnel walls occurred in the siltstone/shale below the sandstone. During the night of Sunday, November 7, a large fallout in the south wall of the tunnel occurred at Stations 855+37 to 855+60, 770 feet behind the heading and blocked the rail. Heading advance was halted for 4 of the next 6 days while cleaning up and installing rockbolts and shotcrete in the fallout area. Heading advance was resumed on Tuesday, November 16 and continued to Friday,

November 19, but the progress was slow. Progressive failure in the walls was severe. Heading advance was halted at Station 846+04 on Friday, November 19, and the next week was devoted to installing additional rockbolts and shotcrete in the walls of the 200-foot length of tunnel behind the heading and in the vicinity of the November 7 fall-out near Station 855+50. Heading advance was resumed on Monday, November 29. During 19 working days from November 1 through November 30, the heading advanced only 285 feet from Station 848+63 to Station 845+78 for an average of 15.0 feet per working day (AF 77, p. 36).⁸⁹

The Bureau surveyed Tunnel No. 3 at various times during excavation to check on the alignment to which the tunnel was being excavated. In September 1972, prior to constructing the tunnel concrete lining, the contractor had the firm of Lawrence A. Brewer and Associates, Inc., Consulting Engineers of Farmington, New Mexico, to independently check the tunnel profile. The results of these surveys are shown on drawings R2093 and R2094. Both the BOR and the

⁸⁸ "[F]rom Sta. 856 to Sta. 845, when the severe rock failures were first encountered, the average rate of advance was only 11 ft. per working day. For 27 days of this time, from July 14 to August 20, 1971, tunnel advance was halted at Sta. 856+16 because of severe conditions encountered in the vicinity of drill hole DH 116. Excluding this shutdown period, i.e., during the time in which heading advance was being attempted, an average advance rate of 15 ft. per working day was achieved from Sta. 856 to Sta. 845." (AF 77, pp. 59, 60).

⁸⁹ After noting that progress had improved during the next several months, the report states:

"[A] narrow shale seam developed at springline in the vicinity of Sta 782+00 in late March. As the tunnel advanced, this shale seam continued and large wedge shaped failures and fallout occurred behind the mole. These failures extended as much as 5 ft. deep, and developed around this narrow shale seam, principally in the siltstone and fine sandstone below the shale." (AF 77, p. 37).

Brewer surveys⁹⁰ indicated that the invert of Tunnel No. 3 was high and within the 'A' line throughout most of a 10,800-foot tunnel length from Station 747 to Station 855. In general, the invert elevation measured by the later Brewer survey was higher than that measured by the earlier BOR surveys.

To determine whether or not the tunnel had been excavated above grade, or whether the high invert was a result of ground movements which occurred at some time after excavation,⁹¹ the contractor made an additional survey of Tunnel No. 3 on Feb. 3 and 8, 1973. This survey was made using a spider device developed by the contractor (AF 77, pp. 42, 43).⁹²

Respecting the movement of the invert, the report states:

[T]hroughout most of the length of Tunnel No. 3 between Sta 747 and Sta 855, the invert has moved into excavation at some

⁹⁰ "The Brewer survey indicated the invert was as much as 2 ft. high in the interval between Sta 844 and Sta 853 * * *. In other portions of the tunnel between Sta 747 and Sta 855, the Brewer survey indicated the tunnel invert was as much as 0.8 ft. above 'A' line, with substantial lengths more than 0.5 ft. above 'A' line." (AF 77, pp. 42, 43).

⁹¹ "[F]rom approximately Sta 848+50 to Sta 845+50 water from the vicinity of exploratory hole DH 116 was present on the tunnel invert during excavation. The siltstone/shale invert in this area heaved as much as 2 ft." (AF 77, p. 56).

⁹² "[T]his survey showed that the tunnel had been excavated to grade (excavation surface outside of 'A' line), except for a section from Sta 768 to 753, and a few isolated instances where the boring machine apparently was 0.1 to 0.2 ft. high for short distances. Even in most of these areas excavated high, the Brewer survey indicated the invert to be higher than the elevation at which it was excavated." (AF 77, p. 43).

time following excavation. Visual inspection of the tunnel shows a high degree of fracturing in the lower walls throughout the tunnel length with high invert, confirming the conclusion drawn from the survey data (Figs. 24, 25, and 26 are examples of such areas). Drawings R2093, R2094, and R2095⁹³ show the locations where additional material had to be removed from the invert to provide the specified thickness of concrete lining. The locations of these "tights" and descriptions of the amount of material removed and the method of excavation (chipping, spading, etc.) are shown, as recorded by both the Owner and the Contractor.

(AF 77, pp. 43, 44).

Soft invert was a problem confronting the contractor in some reaches of the tunnel. Soft invert was encountered on Apr. 21, 1972, causing the mole to sink about 6 inches. Manipulation of the mole cutterhead for repairs on April 22, caused the mole to settle further and it was 24 inches low when advance was resumed on April 24. By steering the mole upward grade was attained by the end of the day shift on April 25. It was found that a siltstone/shale lens was present immediately below the invert where the mole had been stopped for the weekend. Apparently, a bearing capacity failure developed under the mole shoe allowing the mole to settle. The upper siltstone/shale contact climbed up into the tunnel,

⁹³ "Drawings R2093, R2094, and R2095 also show the relative degree of progressive failure which has developed since excavation at different locations along the tunnels in February 1973. Figs. 34 and 35 show cases where pans in the arch have buckled after installation, due to rock movement and failure." (AF 77, p. 44).

and the invert was in siltstone/shale from approximately Station 771 to Station 769. The mole was maintained on grade until it began to settle again on graveyard shift on April 26. It continued to sink until it reached 34 inches below grade on April 29.⁹⁴ By May 4, the thickness of the siltstone/shale below the invert had begun to decrease and the mole was steered back up to grade (AF 77, pp. 37, 38).

We have previously referred to the large drawings (R2093, R2094, and R2095) which accompanied the May 1973 report (AF 77). Among the items shown on the drawings are: (i) the locations and depths of seven exploratory drill holes along the alignment of Tunnel No. 3 and of five exploratory drill holes along the alignment of Tunnel No. 3A;⁹⁵ (ii) graphs of progress in the tunnel (p. 32); (iii) the results of BOR and Brewer surveys previously discussed; (iv) a summary of geologic conditions in the tunnels;⁹⁶ (v) the correlation existing between the maximum depth of cover and the area of major fallout in the arch

during excavation⁹⁷ on the one hand and the area of significant progressive failure over a period of months⁹⁸ on the other (pp. 52, 54, 55); (vi) the fact that the rate of tunnel advance varied inversely with the number of rockbolts required to be used;⁹⁹ and (vii) the influence of ground condition encountered along the tunnel alignment upon tunnel advance.

As to item (vii), *supra*, the report states at page 39:

Ground conditions encountered along the tunnel alignment are given on drawings R2093, R2094, and R2095. These drawings show the approximate number of rock bolts installed in each 50 ft. length of tunnel, the average advance per month, and the number of days re-

⁹⁷ "As shown in drawings R2093, R2094, and R2095, the areas of continuous and most disruptive fracture and fallout in the arch during excavation, and of most extensive progressive failure after excavation, correlate closely with the area of maximum depth (of cover) over the tunnel, and presumed maximum rock stresses." (AF 77, p. 52).

⁹⁸ "As shown on drawings R2093, R2094, and R2095, observations in Tunnels Nos. 3 and 3A show that areas of significant progressive failure over a period of months correlate closely with that portion of the tunnel under the highest cover. Conversely, tunnel sections under the lower depths of cover generally exhibited little to no progressive failure following excavation. Wet areas in Tunnel No. 3A under low cover (and presumed low stress) exhibited less progressive failure than did similar wet areas under higher cover (and presumed higher stress) in Tunnel No. 3." (AF 77, pp. 54, 55).

⁹⁹ "[T]he graphs on drawings R2093, R2094, and R2095 show clearly that areas of large and continuous rock failure and fallout about the tunnel required the greatest concentration of rock bolts and resulted in the slowest heading advance. Where no rock failure and fallout occurred, as in the vicinity of 860 to 865 or in the upstream 3000 ft. of Tunnel No. 3 (Sta. 750 to Inlet Portal), rock bolt support was a minimum and progress was very rapid." (AF 77, p. 59).

⁹⁴ "[D]uring this time, as the tunnel was slowly advanced, the weak siltstone/shale material in the tunnel invert did not provide adequate bearing capacity to support the mole and allow for corrective steering measures to get the mole back up to grade." (AF 77, pp. 37, 38).

⁹⁵ "[T]he locations and logs of these drill holes were included in the Contract Documents on drawings 809-D-403, -317, -318, and -323." (AF 77, p. 7).

⁹⁶ "Detailed logs of the geologic conditions encountered in the tunnels were made by the Contractor. This information is generalized on drawings R2093, R2094, and R2095 enclosed with this report." (AF 77, p. 45).

January 15, 1981

quired to excavate each 500 ft. length of tunnel. By comparing the description of ground conditions encountered, the number of rock bolts installed, the graphs of excavation progress, and the average advance rates, it is possible to see the influence of ground conditions upon tunnel advance.^{100]}

Developments Following May 18, 1973 Claim Submission

Following the May 18, 1973 claim submission (AF 77), the contractor continued to encounter what it considered to be differing site conditions. It notified the BOR of its intention to file claims for reimbursement and for time extensions for these conditions in due course. By letter dated June 7, 1973 (AF 82), the contractor advised the Bureau of a rock fall from the crown¹⁰¹ in Tunnel No. 3A. Six weeks later the contractor wrote the BOR about heaving of the arch in several areas of Tunnel No. 3 between Stations 812+50 and 844+50.¹⁰²

¹⁰⁰ In referring to Tunnel No. 3 almost a year before in what was described at the hearing as the Sperry/Heuer report, the authors state: "Most of the mole downtime could have been expected from a prototype piece of equipment operating in such unexpectedly adverse conditions * * *" (AX 4, p. 543).

An earlier draft of the report dealing with the same subject had stated: "Most of the mole downtime could be expected of a prototype piece of equipment" (GX YYY, III-2).

¹⁰¹ "[O]n Monday, June 4, 1973, Tunnel 3A experienced a rock fall from the tunnel crown within the reinforced section near the outlet portal. We estimate that 40 to 50 cubic yards of rock have fallen out pulling out or breaking off the rock bolts within the fallout area. A major portion of the reinforcing steel already in place was severely damaged.

"Your representative examined the damaged area immediately after the fallout happened." (AF 82, p. 1).

¹⁰² "Since Tuesday, July 10, 1973, we have concentrated on the repair of the area having

By letter dated Sept. 5, 1973 (AF 96), the BOR transmitted to the contractor two copies of Part 1 of Order for Changes No. 1. The contractor requested, however, that certain additions and deletions¹⁰³ be made to the document as submitted. The document was revised as requested¹⁰⁴ after which it was resubmitted to the contractor who accepted it subject to two stated conditions.¹⁰⁵

The Bureau responded to an inquiry concerning the status of the contractor's claims by its letter of Sept. 13, 1973 (AF 99), in which it noted: (i) that it appeared the work under the contract would be completed in November of 1973; and

the greatest displacement. The integrity of the tunnel arch was deteriorating rapidly and it was obvious that the safety of the work was in jeopardy. The section of tunnel between Station 819± and 826± is considered to require immediate repair and its repair is being undertaken prior to the removal of additional tunnel invert concrete as a safety measure." (AF 88, contractor's letter (7-18-73), p. 1).

Final placement of the arch and sidewall concrete between Stations 812+42 and 844+66 was completed on Sept. 21, 1973 (AF 101, contractor's letter of Sept. 28, 1973).

¹⁰³ The contractor requested that the reference to placing of tunnel arch and sidewall lining between Stations 812+42 and 844+46 of Tunnel No. 3 be deleted (AF 97, contractor's letter of Sept. 13, 1973).

¹⁰⁴ Order For Changes No. 1 (Part 1 of 2-Part Order) was revised as requested. The letter transmitting the revised document states:

"[T]he placing of arch and sidewall lining between Stations 812+42 and 844+46 of Tunnel No. 3 has been deleted from the items for which payment is to be made on a cost basis under this order. Payment for the concrete lining in the arch and sidewalls will be made at unit prices under Schedule No. 2 of Specifications No. DC-6849" (AF 98, BOR letter (9-13-73), p. 1)).

¹⁰⁵ See n. 62, 63, *supra*, and accompanying text.

(ii) that since a large part of the additional costs included in the May 18, 1973, claim were estimated because the work had not yet been performed, the contractor might wish to update its claim and furnish additional data for the Bureau's consideration. The letter also noted that it did not appear that the Bureau would be in a position to meet with the contractor to discuss the claim until early in December. In its letter of Oct. 2, 1973 (AF 102), the contractor noted that it was in the process of assembling and finalizing the claim material submitted with its letter of May 18, 1973, but that it was looking forward to meeting with the BOR in early December, as suggested.

Another Consultant's View of the In Situ Rock Stress Claim

Meanwhile, the contractor had engaged the firm of Don U. Deere and Andrew H. Merritt, Inc., Consultants Engineering Geology & Applied Rock Mechanics to visit Navajo Tunnel No. 3¹⁰⁶ and to evaluate¹⁰⁷ the contractor's claim of differing subsurface conditions as

set forth in its letter of May 18, 1973 (AF 77). The purpose of the visit was to inspect the cracking, slabbing and heaving of the exposed rock and buckling of some of the rock-bolted steel support pans. Also noted was the concrete invert which had been cracked by the heaving of the floor.¹⁰⁸

In a letter to the contractor dated Oct. 2, 1973 (GX Q), the consulting firm states that part of the construction and support problems encountered at Navajo Tunnel No. 3 were inherent with the use of the tunnel boring machine¹⁰⁹ and rock-bolt support method because of the weak nature and the horizontal bedding of the sandstone/siltstone,

¹⁰⁸ "Our assignment was to visit the site, to become acquainted with the geological conditions and the construction problems, to study the Contract Document and Specifications, and to evaluate the Contractor's claim of differing subsurface conditions as set forth in his letter of May 18, 1973, to the Bureau of Reclamation. This would also entail a study of the above-mentioned Matthews' report as it formed the technical basis for the claim." (GX Q, n.106, *supra*, pp. 2, 3).

¹⁰⁹ The report notes that by including the tunnel boring machine as an acceptable alternative to excavating the tunnel by drilling and blasting, the owner was obviously contemplating a potentially faster tunnelling method and an overall lower cost, as were the bidders who contemplated using that method. Thereafter, the report states:

"The geology is such that a tunnel boring machine could be expected to cut the weak rock at the site (low strength sandstone, siltstone, and shale) quite rapidly. The only question would be the other attendant problems of (1) thrust of the jacks against weak shales, (2) sinking of the machine in zones of soft and wet shale, (3) fallout of roof slabs at the heading to overlying shale bedding planes, (4) water inflows of perched water from sandstone beds resting on more impervious shales with the possibility of piping of the occasional uncemented to slightly cemented sandstone zones, and (5) difficulties in providing rapid support to the weak horizontally bedded rocks." (GX Q, n.106, *supra*, p. 4).

¹⁰⁶ Dr. Don U. Deere visited Tunnel No. 3 on Aug. 16, 1973 in the company of his colleague, Dr. Andrew H. Merritt, representatives of the contractor and Dr. R. E. Heuer of A. A. Mathews, Inc. (GX Q, letter from Don U. Deere and Andrew H. Merritt, Inc. (10-02-73), p. 1).

¹⁰⁷ "[C]onstruction problems were discussed with Mr. J. D. Davenport, Project Manager, and a variety of construction photographs, heave measurements, and daily logs of tunnel support and tunnel geology were examined. Discussions were also held with Dr. Heuer regarding his previous site visits and observations, and the A. A. Mathews, Inc., Construction Report No. 1856 of May, 1973 entitled 'Navajo Tunnels No. 3 and 3A, Tunneling Conditions.'" (GX Q, n.106, *supra*, p. 1).

shale sequence.¹¹⁰ Following this observation, the report states:

2. Over and above these problems the Contractor encountered, *deep slabbing, very rapid rock shear failure, progressive failure*, and an inordinate amount of *invert heave* of six inches to over 2 feet. These were many degrees greater than what reasonably could have been expected and were, likewise, apparently not recognized by the designers who anticipated only shallow surface disintegration and deterioration due to air, water and stress relief.^[111] The failures were caused by oversteering—i.e. large in-situ stresses and peaked-up tangential stresses in the tunnel walls with respect to the strength of the rocks involved, as explained in the A. A. Mathews, Inc. report.^[112]

¹¹⁰ "It would appear, then, that many of the problems associated with the shale and mudstone in terms of fall-out, slabbing, overbreak, jack thrust, and some invert heaving should have been anticipated by the Contractor as being inherent in the site conditions and the tunneling method selected. Thus, a part of his slower advance rate and increased cost as well as some of his concrete lining overrun set forth in his claim letter could be considered as being inherent to his tunneling method and simply an acceptable cost of doing business." (GX Q, n.106, *supra*, p. 8).

¹¹¹ "The aforementioned deep, rapid slabbing and shear failures as well as the progressive failures and intense invert heaving is certainly over and above what could reasonably have been anticipated by the bidding contractor. From the requirements of the Specifications it is also indicated to me that its nature was not recognized by the Owner's design engineers (mechanical rock bolt anchors, rock bolts above spring-line only, no shotcrete or Bernold sheet in bottom 70", no shotcrete-rock bolt combination, no steel rib-rock bolt combination, etc., protective coating, etc.)." (GX Q, n. 106, *supra*, p. 8).

¹¹² "The A. A. Mathews' report clearly and concisely brings out these points and dwells on the representations in the Contract Plans and Specifications. I am in complete agreement with their report in all aspects including the explanation of the observed behavior in terms of the oversteering effect (i.e. the ratio of the tangential stresses in the tunnel wall to the inherent strength of the rock)." (GX Q, n. 106, *supra* p. 9).

(GX Q, p. 2).

Noting that the greatest amount of problems could be anticipated and actually occurred in the shale/siltstone area¹¹³ the report undertakes to assess the extent to which the amount of such materials¹¹⁴ actually encountered in Tunnel No. 3 was equal to,¹¹⁵ or greater, than reasonably could have been anticipated from the bidding information. Concerning the portion of the tunnel where the subsurface information furnished by the Bureau was not considered to adequately indicate the conditions actually encountered, the report states:

[I]n the stretch from Sta 857-814 where the main problems were encountered the

¹¹³ "While some failure took place in the weaker sandstones at Navajo No. 3, the greatest amount of trouble was in the shale/siltstone reaches from Sta. 857-814 and Sta. 786 to 769+30. These *large reaches of shale/siltstone* are *greater* than reasonably could have been foreseen." (GX Q, n.106, *supra*, pp. 9, 10).

¹¹⁴ Concerning the anticipated ground conditions in Tunnel Nos. 3 and 3A the contractor's geologist stated in the handwritten report submitted to the contractor prior to bidding:

"Any estimate of the relative amounts of sandstone and siltstone-shale must be based largely on conjecture. However it is felt that Tunnel No. 3 will be predominantly sandstone while Tunnel No. 3A will be mostly siltstone and shale." (AX 1, p. 2). See also n.71, *supra*.

¹¹⁵ "The subsurface information available for the stretch from Sta. 786 to 769+30 is only that which can be gleaned from Drill Holes No. 51 within the reach and No. 114 about 800 feet upstream of the u/s reach and No. 115 about 1860 feet downstream of the d/s end of the reach. Within the reach the fine-grained materials were encountered primarily in the lower half of the tunnel, and these caused large problems. An interpretation and extrapolation of the data indicates that perhaps 1700 feet or 40% of the tunnel length from D.H. No. 114 to D.H. No. 115 would be in shale/siltstone rock. Actually, approximately 1670 feet were encountered. The check is obviously quite good." (GX Q, n.106, *supra*, p. 10).

check is not so good. No borings were made in the main part of this sketch, although D.H. No. 116 was just inside the downstream limit where the shale/siltstone thickness was only 5 feet. D.H. No. 115 is located about 1000 feet upstream of this reach. Thus, the distance between drill holes was 5109 feet and within this mile exists 4100 feet of bad tunneling rock consisting of siltstone, shale, and very silty-very fine sandstone.

* * * Even considering the lens-like character of the siltstone/shales etc., there is no reasonable way that the 4.7 feet of shale encountered at D.H. No. 115 and the 5.0 feet of total shale lenses in the very fine sandstone (very silty) sequence at D.H. No. 116 can be interpreted and extrapolated to give 4300 feet of poor tunneling material,¹¹⁶ susceptible to *overstress stabbing, heaving, and swelling* right under the highest part of the mesa.

(GX Q, pp. 10, 11).

In the report from which we have quoted extensively, Dr. Deere refers to the fact that he had served as a pre-bid engineering geology and tunneling consultant to one of the unsuccessful bidders on the project in question. A number of excerpts from Dr. Deere's report to the unsuccessful bidders on the 31, 1970, as contained in the consulting firm's Oct. 2, 1973, letter to the contractor. Of particular interest are the excerpts from the report to the unsuccessful bidder concerning (i) the amount of water anticipated;¹¹⁷ (ii) the level of difficulty

expected in Navajo Tunnel Nos. 3 and 3A compared to that experienced in Navajo Tunnel Nos. 1 and 2;¹¹⁸ and (iii) the relative advantages and disadvantages of using a hard rock mole. Concerning the last item the report states:

[H]ardrock Mole The Jarva, Robbins, Lawrence, etc. hardrock moles are expensive. They have the potential for 100-150 ft/day however. They also have the potential for getting stuck if a little running sand or very slabby shale falls in and envelopes [sic] them. If the bottom is soft, or the sidewalls are composed of slabby shale and/or very weakly cemented sandstone, difficulties in thrusting the machine could occur. Also, fall-out of shale from the roof will occur in certain reaches.

* * * * *

* * * [W]hen the invert is in mudstone, shale, or very poorly cemented sandstone, slush concrete or shotcrete should be placed in the invert immediately after muck and before laying haulage track. When rock in invert is clayey (mudstone or shale) and has a swell potential, rock bolts in the invert may also be desirable. The possibility of encountering such conditions in Tunnel 3 are low (est. 14%), where a substantial portion

Sloughing may occur in a few zones of very poorly cemented sandstone.

"[O]ccasional perched water may be encountered in sandstone lying over shale" (GX Q, n. 106, *supra*, pp. 4, 5).

¹¹⁸ "[C]onditions at both tunnels are expected to be more severe than that encountered in the previously completed tunnels, Navajo 1 and 2. Tunnels 3 and 3A will not only encounter more siltstone and mudstone but the cementation of the sandstones will be much weaker. The mudstone will slake and require protection and support immediately while the weak sandstones will also require immediate support. Although more easy to excavate by a machine, the weakly cemented rock gives more trouble with ground support." (GX Q, p. 5).

¹¹⁶ "[T]he bad materials occur in the roof and upper portion for 1770 feet, over the full section for 1850 feet, and in the floor only for 680 feet." (GX Q, n. 106, *supra*, p. 11).

¹¹⁷ "[I]t is expected most of the tunnel will encounter moist to dripping conditions with occasional small inflows. Total flows out the portals are not expected to exceed 100 gpm.

January 15, 1981

of Tunnel 3A may require such treatment.¹¹⁹

(GX Q, pp. 6, 7).

*Events Surrounding February
1974 Meeting*

The parties did not meet in early December of 1973 as had been planned at one time but instead met in Denver on Feb. 7, 1974 (AF 109). In anticipation of the meeting both parties took a number of actions. By letter dated Nov. 1, 1973, (AF 104), the BOR submitted five questions to the contractor related to (i) the reasons why the tunnel boring machine used on the contract was limited to a 20-foot 6-inch diameter bore;¹²⁰ (ii) details concerning the Brewer survey;¹²¹ (iii) how the rapid and severe rock fail-

ures which occurred could be considered to be of a nature unusual in the tunneling industry in view of the statements by N. B. Bennett III in a report referred to by the contractor in the claim letter of Apr. 22, 1972 (AF 50);¹²² (iv) the conclusion by the contractor's consultant, A. A. Mathews, Inc., that the contract documents did not indicate the rock failures which occurred; and (v) the statement by the same consultants that the contract documents did not provide means for the control of the rock failures which developed.¹²³

A detailed response to the questions raised by the BOR is contained in an 11-page document which accompanied the contractor's letter of Jan. 14, 1974 (AF 110). With respect to having excavated the tunnel to a 20-foot 6-inch diameter, the contractor states:

Our evaluation of the bid documents indicated that we could excavate the tunnels within the tolerances provided by a 20-foot 6-inch diameter tunnel boring machine. Molding in this fashion

¹¹⁹ "The purpose of quoting the above fragments from a pre-bid engineering geology report is to illustrate the play-off in advantages and disadvantages of the various available tunneling and support methods for the differing geological conditions at the site. It is apparent, I believe, that many of the anticipated problems for a hard rock mole did, indeed, develop to a lesser or greater extent." (GX Q, p. 8.)

¹²⁰ "[W]hy was a tunnel boring machine purchased for this contract which was limited to excavating a 20-foot 6-inch diameter bore? Using new gage cutters, this only provided a total of 6 inches clearance to the 'A' line which was reduced appreciably when the gage cutters were badly worn" (AF 104, BOR letter to contractor (Nov. 1, 1973), p. 1).

¹²¹ "[Y]our consultant's report No. 1856 * * * refers to your survey made by Brewer in September of 1972. Our surveyors noted that in some reaches it was impossible to locate the invert of the original bore due to the muck buildup in the tunnel invert. We note that the Brewer survey of the arch is very irregular. * * * [A]dvise us how the Brewer surveys were made, and how your surveyors were sure the shots were taken on the original bored invert surface. Also, were the shots in the arch taken on the original bored surface?" (AF 104, n. 120, *supra*.)

¹²² "[I]n Mr. Bennett's paper, under Geologic Comparisons, he states that in Tunnel 1 the shale would begin dropping immediately after a new reach was exposed. He refers to the compressive effects of the cutterhead and states that after passing of the mole, the shale would almost spring into the tunnel and would continue falling unless immediately supported. In view of this and other tunneling publications, how do you support the conclusion of your consultant as stated above?" (AF 104, n. 120, *supra*, p. 2.)

¹²³ "[T]he specifications contemplated that support other than rock bolts would be required for approximately 80 percent of Tunnels 3 and 3A as shown by the bid schedules. Although the small diameter bore of the mole you selected for these tunnels precluded the use of steel supports, it appears that the contract documents are not at fault." (AF 104, n. 120, *supra*, p. 2.)

which was comparable to our performance on the Rivers Mountain Tunnel resulted in our lowering our bid by in excess of \$600,000, and provided an additional savings to the USBR on cement costs. [124]

As to the question involving the Brewer survey, the contractor stated: (i) Fluor Utah furnished a laborer to the survey party who removed muck from the tunnel to enable a reading on the bored invert; (ii) in some reaches of the tunnel where the invert had deteriorated and raveled the bored invert could not be located; (iii) with respect to such reaches a best estimate was made and used for the tunnel profile drawings; and (iv) muck build-up in the invert did not prevent finding the bored invert.¹²⁵

Some three pages of the contractor's reply addressed the ques-

tion raised by the Bureau with respect to the report of N.B. Bennett III (GX A). After noting the differences in the strength of the ground and the amount of low strength shale in the two formations involved in the comparison,¹²⁶ the reply points to some apparent contradictions in the Bennett paper from which it quotes the following:

In a tunnel driven in shaley conditions, the question is how did the shale react. The shales in both tunnels were of the compaction type and air slaked rapidly after exposure to air. Whether the shale is above or below the surface, the process of air slaking is an attempt on the part of the shale to assume stability. When a shale in a tunnel starts lying on a 1:1½-slope, the overlying rock will no longer be stable. When a sandstone is undercut by a rapidly retreating shale, it will fall. It is the large sandstone blocks which cause damage when they fall, but their falling is generally the fault of the shale.

The shales reacted the same in both tunnels in that they tried to reach stability. The difference appears in the amount of time it takes the shale to begin air slaking. In either tunnel it would generally take 1 to 2 days to begin falling, even after its initial exposure. However, once exposed, differences occurred. In Tunnel 1 the shale would begin dropping immediately after a new reach was

¹²⁴ Amplifying this view of the matter and emphasizing the Bureau's role, the document states:

"[E]nclosure 1, Fluor Utah letter to USBR dated December 7, 1970, presented our excavation and rock support methods for approval. Enclosure 2 is the USBR answer dated February 2, 1971, stating that the proposed excavated diameter appears to be adequate for meeting minimum dimensions for 'A' line thickness for rock bolt supported sections. Furthermore USBR states, 'The use of steel rib supports would require excavating to a larger diameter if normal tolerance is provided.' * * *

"* * * [N]ever did we have a bearing failure on a gage cutter as can be verified from job records. Even with ½" wear on gage cutters, excavation would be ½" outside 'A' line in the invert, the most critical point." (AF 110, contractor's answers to questions, p. 1).

¹²⁵ More specifically the contractor states:

"[I]n vicinity of Sta. 770+00 the mole bored 3 feet low and the reach was backfilled with gravel to maintain good trackage. Naturally the bored invert was not located here. The arch survey was taken in the tunnel back in 50 foot increments. Where reaches showed radical elevation changes in the back or roof mats the length of the increments was reduced as necessary." (AF 110, n.124, *supra*, p. 2).

¹²⁶ "The San Jose formation in which Navajo Tunnels No. 1 and No. 2 were driven is comparable to the Naciminto formation in which Navajo Tunnels No. 3 and No. 3A were driven in that both formations contain interbedded sandstone and shale, with groundwater perched in sandstone on top of shale. Rock of the San Jose formation is apparently much stronger than rock of the Naciminto formation. Bennett notes strengths of 5000 to 6000 psi for sandstone in the San Jose formation. Furthermore, there was apparently a much higher percentage of low strength shale materials in the Naciminto formation." (AF 110, n.124, *supra*, p. 3).

January 15, 1981

exposed. It was believed that this was due to the compressive effects of the cutterhead.¹²⁷ After the mole passed, the shale would almost spring into the tunnel and, unless immediately supported, would continue falling.

(AF 110, pp. 3, 4).

Commenting upon the above quote, the contractor's reply states that "[i]t is assumed that the third sentence of the second paragraph quoted is in error, and that the shale began dropping immediately after exposure in Tunnel No. 1, as stated in the fifth sentence." Thereafter, the reply notes that Mr. Bennett refers repeatedly to "air slaking" but fails to clearly indicate that the problems encountered were of a nature different from air slaking. The reply also notes Mr. Bennett's observation that the shale dropping

"was believed due to the compressive effects of the cutterhead" after which it states:

Bennett does not describe the size of shale pieces which "began dropping immediately." Cutterhead contact with the ground is through the cutter bits, and consists of a small contact area at each bit. Theoretical considerations following the St. Venant's principle would suggest that the volume of ground significantly affected by each cutter bit contact area has dimensions of the same order of magnitude as the bit contact area. This would suggest that each cutter bit can break out small pieces of rock whose dimensions are also of the same order of magnitude as the bit contact area. This would suggest that each cutter bit can break out small pieces of rock whose dimensions are also of the same order of magnitude as the bit contact area—i.e., dimensions of a few inches or less. Visual observation of muck produced by tunnel boring machines, as reported by Haller, et. al. in the report *Interrelationship of In-situ Rock Properties, Excavation Method and Muck*, Sept. 1972, National Technical Information Service publication AD-751 058, indicates such muck typically is in the 1½ inch to No. 4 (0.187 inch) sieve sizes, with a significant percentage (10% or more) passing the No. 200 sieve (0.003 inches).

¹²⁷ Following this analysis, the reply states:

"Thus, in the absence of any statement by Mr. Bennett concerning the size of the shale particles which began dropping immediately after exposure in Tunnel No. 1, it would be assumed that particles which fell due to the compressive effects of the cutter head would be of the same general size as muck produced by the machine—i.e. generally 1½" or smaller in dimension. This, and the unclear differentiation between 'cutterhead effects' and air slaking, implies that the problems with falling shale at Navajo No. 1 were of the nature of small shale pieces falling in a raveling process.

"The fall of such small size pieces in a raveling process is not the problem which caused so much trouble at Navajo No. 3. Problems at Navajo No. 3 involved falling blocks six to eight inches thick and two to three feet wide. I do not see how such blocks could be formed by the compressive effects of the cutter head. If they could, why did the Navajo No. 3 muck come out in pieces of a few inches or less in dimension? Why do tunnel boring machines typically produce muck of less than 1½" dimension? Why is the attempt to produce coarser muck at a resulting lower energy consumption such an important consideration in boring machine research and development?" (AF 110, n.124, *supra*, p. 5).

Focusing upon Mr. Bennett's reference to falls in shale, the contractor's reply notes (i) that "[f]ailures at Navajo No. 3 were not confined to shale alone, but were experienced also in sandstone and siltstone, independent of the presence of shale"; and (ii) that "[f]allout, support problems, and progressive failure in Navajo No. 3 showed an excellent correlation with depth of cover, i.e., with the magni-

tude of in-situ stresses about the tunnel." ¹²⁸

Concluding the comparison between Bennett's assessment of rock failures in Tunnel No. 1 and those experienced by the contractor in Tunnel No. 3, the contractor's reply states:

Based upon the descriptions given by Bennett for Tunnell [*sic*] No. 1, and upon my observations in Tunnel No. 3 it is our conclusion that the severity of failures which occurred in Navajo Tunnel No. 3 was of a different order of magnitude than experienced in Navajo Tunnel No. 1, and was due to an entirely different failure mechanism. ^[129]

(AF 110, p. 5).

In reference to the contract documents not indicating the rock failures which developed, the contractor's consultant prefaces his remarks by noting that portions of the specifications which the BOR might claim as representing the rock failures which developed are (i) Paragraph 50, (ii) the detailed technical provisions for support items, and (iii) the support quantities in the bid schedules. After quoting from Paragraph 50, acknowledging that the bid quantities anticipated that 80 percent of the tunnel length would be supported by some means other than rockbolts

and noting that the detailed technical provisions for support items had been given in Report 1856 (AF 77), the consultant states:

The provisions of the Contract Specifications show quite clearly that the tunnel excavations were not expected to stand unsupported and without problems. These provisions, however, say essentially nothing about the nature of the anticipated support problem—i.e., rock failures—which were expected except that problems of surface deterioration and disintegration were to be expected. As discussed in some detail in Section VII B.1 and 2., pages 61 and 62 of Report 1856, the rock failures which caused problems at Navajo No. 3 could not properly be called "deterioration or disintegration when exposed to air or water or when stress relieved or a combination of the three." The ground behavior described by this phrase was observed at Navajo No. 3, but was not the major source of trouble. ^[130]

(AF 110, pp. 7, 8).

In the reply to the BOR questioning of the consultant's statement that the contract documents did not provide for control of the rock failures which developed, the

¹²⁹ The consultant describes the major problems in Tunnel No. 3 in the following terms:

"The major problems at Navajo No. 3 were related to the low strength and the extreme water sensitivity of the shale/siltstone materials, and to the falls of the large blocks of rock immediately behind the cutterhead. The problems of the shale/siltstone materials in which the most severe rock failures occurred were not indicated prior to bid because the low strength and the extreme water sensitivity of those materials was not known prior to bidding.

"Some failures in the rock about the tunnel could be anticipated by the provisions of the Contract Documents. The simple and expected occurrence of such rock failures however, was not the problem in driving Navajo No. 3. Rather, the problem was due to the nature, extraordinary extent and rapid occurrence of these failures." (AF 110, n.124, *supra*, p. 8).

¹²⁸ The reply adds that "in apparently similar rock but under lower cover (i.e. lower stresses), failures in No. 3A were less severe than failures in No. 3" (AF 110, n. 124, *supra*, p. 5).

¹²⁹ In reference to this question, the report adds: "We are not aware of the 'other tunneling publications' referenced by the USBR which describe and explain rock failures such as were experienced in Navajo No. 3" (AF 110, n.124, *supra*, p. 6).

consultant acknowledges (i) that the contract specifications did contemplate that support other than rockbolts would be required for 80 percent of the tunnel length and (ii) that the specifications provided for the use of either steel ribs, shotcrete, the Bernold system, or some combination of these items for support of this 80 percent of the tunnels. Referring to the discussion in Report 1856 (AF 77), the consultant says that experience has shown that none of the support items as provided would have adequately solved the problems of rock support which were experienced.

The reply notes that half circle steel ribs pinned at springline would not have been adequate for the reasons stated in Report 1856 (*see* n.84); that the shotcrete or the Bernold system would have been adequate only in a full 360 degree closed structural ring, which was not allowed by the specifications (*see* n.83); and that while full circle steel ribs of adequate size could probably have supported the tunnel they would not provide as much support capacity as the reinforced ground arch provided by the rockbolt system actually used (*see* n.74). Also noted were the fact that the rockbolt system installed by the contractor did prove adequate and that "most severe problems of progressive failure after excavation and initial rock bolt installation in the arch occurred below springline, where the Owner refused to pay for installation of "rock bolts" (AF 110, pp. 8-10).

Summarizing its position respecting the use of rockbolts, the consultant states:

[P]aragraph 50 of the specifications states "Where conditions in the tunnels are suitable for rock bolt supports the contracting officer will approve the use thereof." * * * USBR letter dated February 2, 1971 states that the suitability of the method of tunnel support must be determined during and following the excavating process. Further on in this letter is mentioned "Where ground conditions in the tunnels are indicated to be unsuitable for the use of rock bolt supports, other support types will be required as indicated under paragraph 50 of the specifications." Fluor Utah was never directed to use these so-called "other support types." In this same letter the USBR states that there is no objection to the use of rock bolts in any portion of the tunnel where conditions are suitable for their use. Fluor Utah considered rock bolts suitable and received revenue for rock bolts. The USBR must have also felt they were suitable or they would have required other support methods or not paid for bolts installed.^[131]

In November and December of 1973 the contractor devoted some time to the question of how the several claims should be presented. By memorandum dated Nov. 6, 1973, Subject: DH-116 Claim (GX J), Mr. B. H. Orred advised the project manager (Mr. J. D. Davenport) of the decision of the San Mateo office that a separate claim from that of the In-Situ Rock Stress Claim,¹³²

¹³¹ The portion of the BOR letter relied upon by the contractor's consultant (AF 13) has been quoted earlier in the opinion in the text accompanying n.8.

¹³² The chart entitled "Navajo 3 & 3A Progress Tabulation" which accompanied the claim letter of May 18, 1973 (AF 77), shows (1) excavation in the vicinity of DH 116 to be included in the High Rock Stress Claim for

—Continued

would be filed for DH-116.¹³³ The memorandum includes specific directions as to how costs are to be calculated¹³⁴ for both claim and reference reaches. In a memorandum dated Nov. 16, 1973, Subject: "In-Situ Rock Stress Claim," Mr. Orred wrote the project manager concerning the procedure to be employed in reworking the sum to be billed for that claim. Discussed in the memorandum were (i) the establishment of reference reaches,¹³⁵ (ii) the preparation of a construction schedule,¹³⁶ (iii) the pro-

cedures to be employed in calculating the direct costs pertinent to the reference reaches; (iv) increases in the direct costs owing to escalation not otherwise allocated, (v) professional services and (vi) indirect expenses (GX K., pp. 1-3).

In an intra-office memorandum addressed to Mr. F. B. Myers of the San Mateo office under date of Dec. 26, 1973, Subject: "Navajo Irrigation Project Claims" (GX L), Mr. Orred furnished information concerning the method being employed to establish the values of Drill Hole No. 116 and the In-Situ Rock Stress Claims. Concerning the latter claim, the memorandum states:

A reference reach will be chosen for each of the contract bid items of tunnel excavation, arch concrete tunnel lining, and invert concrete tunnel lining. The reference reach will be a section of the tunnel showing the best daily rate of advance over a consecutive number of work days. Costs of performing the work in the reference reaches will be analyzed and adjusted to reflect a true picture of costs relative to the reference period.

The entire tunnel length, except for a start-up period, will represent the claim reaches.

A construction schedule will be plotted using the reference reaches data as the standard rate of advance for the respective construction features. Canal structures, canal excavation and lining, and miscellaneous work items will be shown on the schedule in a time frame considered a reasonable period in which to perform that work.

Once the "should have" schedule is plotted and the associated direct con-

Tunnel No. 3; (ii) the Claim reach involves 10,731 feet from Station 859+72 to Station 752+41; (iii) the Reference Reach covers 3,057 feet from Station 752+41 to Station 721+84; (iv) excavation in the Reference Reach for Tunnel No. 3 averaged 185 feet per work day; and (v) the time period for excavation in both the claim and reference reaches for Tunnel No. 3 ran from July 1, 1971, to July 6, 1972.

The same stationing for the claim and the reference reaches in Tunnel No. 3 is reflected in the "In Situ Rock Stress Cost Evaluation" which also accompanied the claim letter of May 18, 1973 (AF 77).

¹³³ "To calculate the value of the claim, a reference reach will be established in an area adjacent to the claim reach. The difference in cost between the two reaches plus other associated costs will be the total amount of the claim" (GX J, contractor's memorandum (11-06-73), p. 1).

¹³⁴ For example, under the caption "Equipment Ownership and Operation," the memorandum states: "It will be necessary to recalculate the equipment ownership expense for the claim reaches and the reference reach at A.G.C. rates to conform with our treatment of equipment ownership expense for the In-Situ Rock Stress Claim * * *" (GX J, n.133, *supra*).

¹³⁵ "[R]eference reaches shall be established for each of the main features of construction, i.e., Tunnel Excavation, Arch Concrete Lining, Invert Concrete. Where necessary, reference reaches shall be set up for each tunnel" (GX K, contractor's memorandum (11-16-73), p. 1).

¹³⁶ "[A] construction schedule shall be plotted using the reference reach best rate of advance for each feature as the rate of prog-

ress. Like schedules shall be prepared using a factor of best rate of advance plus 10% and a best rate of advance plus 20% to register lessening degrees of impact for better ground conditions." (GX K, n.135, *supra*).

January 15, 1981

struction costs assembled, a comparison will be made to the actual costs of construction. The difference [¹³⁷] or additional costs incurred will be represented on the claim billing.

(GX L, pp. 1, 2).

At the conclusion of the meeting between the parties on Feb. 7, 1974, the contractor presented costs to that date in the following categories and amounts: (i) Summary of Costs Associated with Shale-Over-excavation Main Canal Downstream of Tunnel No. 3A Outlet Portal—\$73,303; (ii) Summary of Additional Costs Associated with Conditions Differing Materially From Those Indicated in the Contract in the vicinity of DH-116—\$623,748; (iii) Summary of Costs Associated with Conditions Differing Materially From Those Indicated in the Contract Throughout Tunnels No. 3 and 3A Due to Rock Failures—\$622,876;¹³⁸ and (iv) Summary of Additional Costs Associated with

Conditions Differing Materially From Those Indicated in the Contract Throughout Tunnels No. 3 and 3A Due to Rock Failures—\$2,812,126. In the aggregate these several claims total \$4,132,053.¹³⁹

By letter dated Feb. 27, 1974 (AF 114), the contractor wrote the Bureau to summarize its position on the in situ stress claim and supplement the presentation made orally at the February 7 meeting.¹⁴⁰ The letter noted that the consulting firm of A. A. Mathews, Inc., had been engaged by the contractor when the latent conditions were first encountered in July 1971 and that that firm had been actively involved in the matter ever since.

According to the letter the conclusions reached by A. A. Mathews, Inc., included the following: (i) The low strength and extreme water sensitivity of siltstone/shale materials in which the most severe rock failures occurred were not indicated by any information available prior to bidding; (ii) the rock failures which were the major

¹³⁷ "[T]he gross difference will be reduced by those costs assigned to the DH-116 claim and the costs recovered under Change orders. To illustrate:

Actual Direct Costs Tunnel	
Excavation	\$
Less: Reference Reach Projected Costs Difference.....	\$
Less Direct Costs Previously Charged:	
DH-116 Claim	
Change orders ..	\$
Additional Direct Costs In-Situ Stress Claim.....	\$

(GX L, contractor's memorandum (12-26-73), p. 2).

¹³⁸ In the decision of Dec. 31, 1974, the contracting officer refers to this item as involving "a claim for additional costs associated with differing site conditions—canal lining," after which he states: "This claim has been settled and is not considered herein" (AF 10, p. 11).

¹³⁹ In the aggregate the claimed costs shown in the invoices transmitted by the contractor's letter of July 22, 1974 (AF 115), were in the amount of \$3,500,833. This represented a net decrease of \$631,220 from the Feb. 7, 1973, claim submission of \$4,132,053. The decrease reflects the settlement of the canal lining claim for which the amount of \$622,876 had been claimed (n. 138, *supra*) and a downward adjustment in the In-Situ Rock Stress claim of \$8,344 (from \$2,812,126 to \$2,803,782).

¹⁴⁰ In the decision from which the instant appeal was taken, the contracting officer states: "[A]t this meeting, the principal spokesman for the contractor was Don U. Deere of the consulting firm of Don U. Deere and Andrew H. Merritt, Inc., * * *" (AF 10, Findings of Fact and Decision (12-31-74), p. 9).

source of increased cost to the contractor cannot be described as simple deterioration or disintegration of the rock materials when exposed to air or water or when stress relieved or a combination of the three; (iii) the provisions for tunnel excavation and support contained in the specifications did not represent, or provide means for control of, the rock failures which developed during construction;¹⁴¹ and (iv) the severe problems resulting from the rock behavior encountered could not be predicted,¹⁴² even from a detailed rock mechanic's analysis, from information available prior to bidding (AF 114, p. 2).

The letter goes on to state that because of the unusual nature of the subsurface conditions and the resulting problems encountered, the contractor had engaged a second consulting firm to review the contract documents, the physical conditions and the reports and findings

of A. A. Mathews, Inc. Concerning this endeavor, the letter states:

The members of the firm of Don U. Deere and Andrew H. Merritt, Inc. advised us that they agree with the conclusions expressed in the Mathews' report. Dr. Deere expressed his opinions at our recent meeting in Denver. Pursuant to your request attached is a copy of a letter dated February 10, 1974, summarizing Dr. Deere's and Dr. Merritt's opinions and comments.

(AF 114, p. 2.)

Addressing a question raised at the February 7 meeting as to whether the fact the contractor had completed the tunnels in approximately the original contract schedule was some indication that the conditions were generally as represented, the contractor notes that it had contemplated completing the work in approximately 64 percent of the 1,100 days allowed for contract performance¹⁴³ and that "time of performance is not an indication of the difficulty of performance" (AF 114, p. 3).

In the decision from which the instant appeal was taken the contracting officer refers to Dr. Deere having commented¹⁴⁴ on three different

¹⁴¹ After adverting to this argument in his decision, the contracting officer makes the following comment: "[F]or steel supports the specifications allowed the placement of full circle supports as close as 12 inches clear distance between flanges and that they did not limit the size of the support except as to minimize size" (AF 10, n.140, *supra*, p. 13).

¹⁴² More than 18 months before, the authors of the Sperry/Heuer report had stated: "[T]he distribution, thickness, and length of the lenses of shale in the Nacimiento formation are quite variable and completely unpredictable. Shale lenses have been observed in the tunnel wall to grow from zero, to 10 feet thickness and then thin to zero thickness, all within 150 feet along the tunnel. Shale lenses have dipped down into the tunnel and grown to thicknesses of over 20 feet within 100 feet along the tunnel. It is not possible to predict lithology ahead of the tunnel because of the discontinuous lensing, and because of facies changes parallel to bedding." (AX 4, p. 540).

¹⁴³ "[W]e had contemplated completing the work in 700 calendar days, which was approximately 64% of the 1100 days allowed for completion of the Contract work. In actuality we completed the work except for the concrete lining of the canal, in 1175 calendar days. The Contract completion date has been or will be extended 600 days because of changes, changed conditions, labor disputes and the like. The actual time to complete the work represents 66% of the total Contract time as properly extended." (AF 114, contractor's letter (2-27-74), p. 3).

¹⁴⁴ The contracting officer notes that Dr. Deere's comments at the meeting were subsequently confirmed by a letter to the contractor
—Continued

January 15, 1981

questions¹⁴⁵ at the meeting of Feb. 7, 1974. The questions and Dr. Deere's answers to them as summarized by the contracting officer in his decision are set forth below:

a. *Are the geologic materials encountered in the "reference reach" typical?*—To this question Dr. Deere expressed the opinion that the reference reach¹⁴⁶ contained better rock than the rest of the tunnel but because of operational problems¹⁴⁷ encountered in this reach the progress actually made might be considered a reasonable compromise figure for the representative rate.

b. *How much "flaking" and "invert heave" should have been expected?*—Dr. Deere summarized his answer to this question by stating that we would expect some troublesome but minor problems of air slaking, deterioration, and invert heave in 15–20 percent of the tunnel.

c. *What facts evidence a "material" difference in the site conditions and of an*

dated Feb. 10, 1974 (AF 10, p. 10). A copy of Dr. Deere's Feb. 10, 1974, letter accompanied the contractor's letter to the contracting officer dated Feb. 27, 1974 (AF 114).

¹⁴⁵ The questions as set forth in the contracting officer's decision are identical to those addressed in the Feb. 10, 1974, letter to the contractor from the consulting firm of Don U. Deere and Andrew H. Merritt, Inc. The opening paragraph of that letter states: "We have been asked by your attorneys to address ourselves to the following three questions" (AF 114, consultant's letter (2–10–74), p. 1).

¹⁴⁶ "The reference reach is a 3,057-ft long stretch that extends from Sta. 752+41 to the upstream end of Tunnel 3 at Sta. 721+84. Through this reach the rate of advance averaged 185 ft/day. The contractor is of the opinion that had the geologic conditions been as anticipated, he would have averaged at least this rate throughout the tunnels." (AF 114, n. 145, *supra*).

¹⁴⁷ The operational problems in the reference reach are identified as consisting of "(1) longer haulage than average (13,500 ft), (2) working with tunneling machine and trailing equipment that had been damaged by fallouts in prior extensive areas of poor rock, and (3) damage to the power supply system, possibly by lightning" (AF 114, n. 145, *supra*, p. 2).

"unusual nature"?—This question was divided into two portions by Dr. Deere; namely, the behavior¹⁴⁸ and the amount of shale/siltstone.

(1) Relative to the "*Observed behavior of the shale/siltstone*"¹⁴⁹ Dr. Deere listed four items which he had observed on August 16, 1973, or had been reported to him; these were:

(a) Deep curved shear planes occurring at the walls and in the crown of the tunnel.

(b) Large blocks of rock falling out of the face and roof onto the machine.

(c) Progressive movements in the crown causing buckling of the rock-bolted steel pans and in the sidewalls causing deep slabbing and later fallouts.

¹⁴⁸ The Government's position as stated at the July 24, 1974 meeting was that "nearly all of the major Rock failures that occurred in the tunnel appeared to be due to causes which could be reasonably anticipated from the contract documents. These included rock failures associated with bedding planes, failures of the sidewalls due to pressure from the grippers on the mole, wetting of the water-sensitive siltstone/shale formations, softening of the invert aggravated by the sliding action of the front shoes on the mole, and breakage from running the front-end loader into the tunnel walls." (AF 10, n. 140, *supra*, pp. 11, 12).

¹⁴⁹ Concerning rock failures reported by the contractor, the contracting officer states:

"Mr. Sperry described the failures as 'Failures through intact rock and along existing joints, or along or to existing bedding planes, or where joints and bedding planes came to a feather edge in the excavated opening * * *'. He described one crack wide enough to insert his arm past the elbow which was 3 or 4 inches wide at his fingertips. He also described offsets forming in the rock bolt holes. The Government has been unable to verify these or similar reports by contractor personnel. From the observations of conditions by Government personnel, rock failures in the tunnel were not significant in total extent and in effect upon construction. * * * [C]onsiderable removal of material was required from the tunnel because of alignment deviations exceeding the tolerance limitations of the specifications. These were caused by the fact that the contractor chose to utilize a mole which excavated less than the full dimension of excavation included within the pay lines (or 'B' lines) specified in the contract." (AF 10, n. 140, *supra*, p. 12).

(d) Progressive heave of the invert of 1 foot-2 foot.^[150]

* * * * *

(2) Relative to the "amount of shale/siltstone," Dr. Deere states that two stretches of the tunnel produced construction problems. At one of these, the amount of shale/siltstone encountered agreed well with the amount that could be predicted.^[151] The other stretch was from station 857 to station 814 where Dr. Deere states: "Even considering the lens-like character of the siltstone/shale, etc., there is no reasonable way that the 4.7 feet of shale encountered at drill hole No. 115 and the 5.0 feet of total shale lenses in the very fine sandstone (very silty) sequence at D.H. No. 116 can be interpolated and *extrapolated* to give 4,300 feet of poor tunneling material, susceptible to *overstress slabbing*, *heaving*, and *swelling* right under the highest part of the mesa."

(AF 10, pp. 10, 11).

The parties met again on July 24 and 25, 1974, but failed to reach an agreement on any of the claims still outstanding (AF 116). At that time, however, the contractor was furnished copies of drawings (mappings) of Tunnel No. 3¹⁵² and Tunnel No. 3A¹⁵³ made by the

project geologist, Mr. Kenneth Cooper. Commenting upon the significance of these drawings, Government counsel states:

[E]xhibit A-87, Sheets 1 through 9, which is the Bureau of Reclamation's geologic tunnel mapping is the only evidence in the record which indicates station-by-station where fallout occurred and the nature of the fallout.

* * * * *

This tabulation clearly shows that there were only two stationings where fallout was observed by Ken Cooper, the geologist who did the mapping, which show fresh fracturing associated with the fallout * * * As shown on the tabulation, the fallout from all causes totalled only 3,610 feet of the entire length of the tunnel. Now witnesses testified that they observed fallout associated with fresh fracturing presumably attributed to over-stressing or stress relief, and also observed fallout at bedding planes which were attributed to other causes.

It is the fallout attributed exclusively to over-stressing which fell out rapidly with which we are concerned in this appeal. When one examines Exhibit A-87, it is apparent that there was a great deal of interbedding between the sedimentary rock formation of shale, siltstone and sandstone. There is no other exhibit or testimony which so precisely identifies the exact locations within the tunnel where rock fallout occurred. We submit for that reason that it is the best evidence.

* * * * *

* * * [T]he fallout which occurred from all causes cover approximately only 3,600 feet in Tunnel 3, not the nearly 11,000 feet Appellant alleges. Of this 3,600 feet, approximately 900 feet of the failures are associated with fresh fracturing, apparently the result of stress relief, and by Appeal File Ex. 77 only around 500 feet are characterized as major fallout.^[154]

¹⁵⁴ Appellant's counsel states:

"The Government's characterization of drawings R2093, R2094 and R2095 in Appeal
—Continued

¹⁵⁰ Concerning the observed failures, the letter from the consulting firm states:

"None of the support measures would have prevented the deep cracking, slabbing, and loosening—including the circular steel ribs. The rock bolts, shotcrete, Bernold sheets, and much of the steel rib support did not cover the lower 70% of the tunnel and would not have prevented the wall movement, rib fall-out, and invert heave. The emphasis in the specifications was on shallow, surficial disintegration which would require protective coatings and protection from falling rock blocks." (AF 114, n. 145, *supra*, pp. 4, 5).

¹⁵¹ The stretch in question was from Station 786 to Station 769+30 (AF 114, n. 145, *supra*, p. 5). See n. 115, *supra*.

¹⁵² AX 87 (1), (2), (3), (4), (5), (6), and (9) describe or portray the conditions encountered in Tunnel No. 3.

¹⁵³ AX 87 (7) and (8) describe or portray the conditions encountered in Tunnel No. 3A.

January 15, 1981

(GPB 84-88).

According to the Government's brief the drawings show that a total of 900 feet¹⁵⁵ of Tunnel No. 3 involves "Fallout Associated With Freshly Fractured Rock" and that an additional 2,710 feet¹⁵⁶ of that tunnel involves "Fallout Not Associated With Freshly Fractured Rock."

After contrasting the Government's present position with that

File Exhibit 77A as showing only 550 feet of fallout is totally improper. The claim reach in Tunnel No. 3 starts at 859+72 and extends to 761+90 (the adverse effects continued to 752+41). On drawing R2094, 'continuous fallout' or 'nearly continuous fallout in crown' is shown from approximately 859+72 to 810+50 and from 807+00 to the left margin. On drawing R2093 overbreak or fallout is shown from the right margin to 761+90, except for two short stretches near 784+00 and 790+00. Drawing R2095 shows continuous fallout or cracking or intermittent fallout or overbreak throughout the claim reach in Tunnel No. 3A which starts at 987+68. Note that these failures are identified as 'Rock Failures During Excavation' and that further up the drawings 'Progressive Failure After Excavation' is shown." (ARB, 22, 23).

maintained by it up to the time of the hearing,¹⁵⁷ appellant's counsel states that "the table at GPB 85 is an incomplete and thus inaccurate characterization of the references and mappings in Mr. Cooper's drawings of freshly fractured rock"¹⁵⁸ and that "the Government's table omits fractures noted or mapped or both"¹⁵⁹ (ARB, p. 23).

¹⁵⁷ "Until the hearing * * * the Government had steadfastly maintained that it had * * * been unable to verify these * * * reports by contractor personnel * * * of rapid shear fractures through intact rock and that the few failures which the Government conceded had occurred were the result of bedding planes, wetting or * * * running the front-end loader into the tunnel walls.' (Findings of Fact and Decision by the Contracting Officer, Appeal File Exhibit 10, paragraphs 26 and 27). * * * [T]he Findings of Fact is dated December 31, 1974 which is a year and one-half after Mr. Cooper completed his drawings (Exhibit 87) which showed extensive fracturing of the type reported by Appellant.

* * *
"In contrast to the Government ambivalence, Appellant has consistently maintained both the existence of rapid, shear fractures through intact rock and the position that these were changed conditions. (E.g., Appeal File Exhibits 19 and 77; Exhibits 5 and 20)." (ARB, 21, 22). See also n. 148, *supra*.

¹⁵⁸ In the Remarks Section pertaining to the 450-foot stretch between Stations 800+00 and 795+50, the project geologist states in three different places that the fallout in the roof resulted from separation of planes of lamination and bedding and occurred immediately on removal by excavation of the underlying supporting rock.

In two of such places, however, the project geologist adds the comment: "Many fresh fractures are present in the sandstone near invert" (AX 87(3)).

¹⁵⁹ Fractures at the stations listed below are said to have been omitted:

832+50	---	AX 87(4)

1550 feet

The drawings (AX 87)¹⁶⁰ also include the project geologist's assessment of the various causes of delay which impeded contract performance, as is reflected in his comments in the exhibit.

By letter dated Aug. 7, 1974 (AF 116), the Bureau advised the contractor that any additional documentation or written information which it wished to have considered in the findings of fact should be submitted as soon as possible. In its response of Sept. 30, 1974 (AF 118), the contractor supplemented the written record with respect to the observations made by Mr. T. W. Greene and Mr. P. E. Sperry, concerning their experiences on the project. The letter also contains a listing of what are characterized as ultimate facts on which the in situ stress claim is based which may be summarized as follows: (i) Curved shear planes occurring at the walls and in the crown of the tunnel formed to a great extent through virgin rock;¹⁶¹ (ii) large blocks of

rock fell out of the face and roof onto the mole and which had been formed by the deep shearing and had surfaces corresponding to the deep curved shear planes; (iii) progressive movements in the arch caused by shear failures, deep rock movements, and creep associated with overstressed rock; and (iv) progressive invert heave.¹⁶²

Part II—Entitlement

A. Testimony of Appellant's Witnesses

1. Summary of Testimony of P. E. Sperry

(Tr. 22-187, 1279-1376)

Mr. P. E. Sperry was the project manager for the contractor at the time boring of Tunnel No. 3 commenced on May 13, 1971, and he continued in that capacity until after excavation of Tunnel No. 3 was

which were observed at depths of one to four feet. They were formed to a great extent through virgin rock although the upper side of some coincided with existing bedding planes. They formed very quickly and almost simultaneously with the cutting head, before any type of rock support could be placed." (AF 118, contractor's letter (9-30-74), pp. 1, 2).

¹⁶² Immediately after the statement of the ultimate facts on which the claim is based, the letter adds:

"[O]n the basis the foregoing facts, our consultants, Dr. Don U. Deere, Dr. Andrew H. Merritt and Dr. Ron Heuer have concluded:

"(1) While some slabbing to pre-existing bedding planes could have been anticipated by a contractor bidding on the project, the behavior actually encountered was not and could not have been contemplated. Such behavior is unique and extraordinary and in the experience of Dr. Deere had occurred only before at the Nevada Test Site.

"(2) None of the support measures specified could have prevented the deep cracking, slabbing and loosening, including circular steel ribs." (AF 118, n.161, *supra*, p. 2.)

¹⁶⁰ With respect to Tunnel No. 3A, neither the Government's posthearing brief nor the appellant's reply brief show (i) any fallout associated with freshly fractured rock, or (ii) any fallout not associated with freshly fractured rock. Examination of the drawings pertaining to Tunnel No. 3A discloses, however, that out of 22 remarks columns applicable to this tunnel, some 11 cases of fallout are reported of which ten are from the roof and one from the left wall. In addition, some 14 cases of fractures in the roof are reported. The project geologist does not report any instances of freshly fractured rock, however, nor does he note in any case that fallout in the roof occurred immediately on removal by excavation of the underlying supporting rock (AX 87 (7) and (8)).

¹⁶¹ More specifically the letter states:

"(1) Deep, curved shear planes occurred at the walls and in the crown of the tunnel

completed on July 6, 1972.¹⁶³ Following award of an M.S. in Civil Engineering Construction degree from Stanford University in 1961, Mr. Sperry went to work for Utah Construction and Mining Co., which subsequently became the construction division of the contractor. He continued with the contractor in various capacities¹⁶⁴ until 1968, when he became the project engineer on River Mountains Tunnel. This was the first mole job that the contractor had.

Mr. Sperry personally prepared the bid estimate¹⁶⁵ for the underground work for Tunnel Nos. 3 and 3A, with some assistance from Mr. Welton, which included under-

ground excavation and concrete. Prior to preparing the bid estimate, Mr. Sperry had been part of a pre-bid site investigation team which included the Chief Engineer and the company geologist. The contractor personnel investigating the site were shown the job by Mr. John Rogert of the BOR. Either by himself or together with the company's geologist (Mr. J. J. Hayes), Mr. Sperry looked at a number of things including (i) the rock cores from the exploratory holes; (ii) outcroppings of rock on the site; (iii) the plans and specifications; (iv) the portals of Navajo Tunnel Nos. 1 and 2; and (v) the mole used on Tunnel No. 1. Mr. Sperry sent for and obtained the materials and foundations report referred to in the specifications. He read the Bennett paper (GX A), two articles appearing in *Western Construction* and the report prepared by the company's geologist, Mr. J. J. Hayes (AX 1).

In preparing the bid estimate Mr. Sperry did not consider the depth of overburden (cover) over the tunnel, since in his experience up to that time overburden was not normally considered in a rock tunnel. It was contemplated that mechanical expansion anchors would be used for the rockbolts and that if problems developed they would employ tandem anchors which had been used successfully at River Mountains Tunnel. In performing the contract, however, it was necessary to use resin anchors. Initial problems with this type of anchor were

¹⁶³ Mr. Sperry came to the project in mid-Dec. of 1970, and left the project at the end of Aug. in 1972 (Tr. 33, 34). By that time the excavation of Tunnel No. 3 had been completed (AX 87(9)). At the time of Mr. Sperry's departure, the excavation of Tunnel No. 3A and the placement of concrete in Tunnel No. 3 were just getting underway (Tr. 105, 128; GX AAA (21); GX LLL (8-17-72)).

¹⁶⁴ See AX 88 for a resume of Mr. Sperry's education and experience.

¹⁶⁵ At an earlier time, he had helped prepare the bid estimate for River Mountains Tunnel. In a report prepared about that tunnel following excavation, Mr. Sperry states:

"Many people thought the rock was too hard to mole and, by leaving 34% on the table, doubts were raised that the bid included an adequate allowance for the possible difficulties involved with this method of excavation * * *. Rock, that was harder than expected, was molded; the unforeseen problems were minimized; and the tunnel was holed-through on schedule, nine months later, at a cost somewhat below the contractor's estimate." (GX G, 11-1).

River Mountains Tunnel was moled in an extrusive volcanic rock that varied from soft to hard, one thousand psi to 23,000 psi being estimated. The 12-foot diameter tunnel was 4 miles long and required support for 800 feet. The only support used was rockbolts, all of which were placed in the very soft rock. (Tr. 31-33).

overcome by changing the mix, using a larger rebar and mixing the resin more thoroughly.

In Mr. Sperry's view the contract indicated that the tunnels could be supported to a large extent without rockbolts or other means of artificial support. The bid was based on the use of a Jarva mole. Because the configuration of this mole would not permit getting the rockbolts just behind the dust shield or close to the face of the tunnel, the bid included an allowance for providing a temporary tunnel support over the mole (TETSOM). The provision for TETSOM was considered necessary, as it was estimated that in some portions of the tunnel the standup time would not be over 50 feet.

In fact, however, Tunnel Nos. 3 and 3A were both excavated by using a Dresser mole. The lesser number of grippers on the Dresser mole permitted better working access to support the rock very close to the dust seal and consequently there was no need to use TETSOM with the Dresser mole.¹⁶⁶ Both the Jarva and the Dresser moles had fixed cutter heads (*i.e.*, the head could not be adjusted to make a larger or smaller excavation as is the case with moles having variable size cutter heads). The Dresser mole was used in conjunction with a laser system which was designed to keep

the moling machine on line and grade.

It was contemplated that some water and moisture would be encountered in the tunnel and the bid estimate did include some time for rock support, some delay time and this covered the fallout anticipated from water.¹⁶⁷ The contractor did not anticipate fallout¹⁶⁸ or failures occurring, however, through virgin rock and in good sandstone.

Mr. Sperry noted that after moling began in May of 1971, some fallout occurred in the arch which had not been expected but that by late June, equipment problems had been solved, the contractor had gone to three shifts and the crews were broken in. The last 3 days in June, the contractor had averaged 160 feet a day which was a very good progress in the ground, as had been anticipated. Commencing in July shale seams appeared on the left rib and there was some fine material that the contractor could not anchor bolts in. Then water was encountered in some of the drill holes and as the tunnel progressed

¹⁶⁷ Noted by Mr. Sperry was the fact that the materials test, the supplement to the plans and specifications that was sent for (GX U), indicated that the sandstones were highly water reactive and that in performing the contract it was not the sandstones but the siltstones slash shales which were highly reactive to water (Tr. 64).

¹⁶⁸ Concerning the type of fallout anticipated when the bid estimates was being put together, Mr. Sperry states:

"We anticipated fallout in the siltstone, the weathering, the air slackening [*sic*], that sort of thing."

Fallout was also anticipated at the contact between two different types of material "but the depth of the fallout * * * several feet up there * * * is not the earth type of fallout that we expected" (Tr. 72, 73).

¹⁶⁶ A shield was not considered necessary when contractor started moling. The rock had enough stand up time and the rockbolt grips were up close to the dust seal and they could be tilted forward to support the rock within about 4 to 6 feet behind the dust seal (Tr. 167).

into more and more siltstone, the contractor had to shut down in order to attempt to support the tunnel. The rockbolts used did not hold, and there was about an 80-yard fallout with the result that the job was shutdown for over a month. It was at that juncture that the contractor sought and obtained assistance from the engineering consulting firm of A. A. Mathews, Inc.¹⁶⁹ The consulting firm advised the contractor both orally and in writing concerning the measures that should be taken (AX 5; AF 36) and provided a detailed analysis of the In Situ Rock Stress Claim (AF 77).¹⁷⁰

In commenting upon Drawings R2093 and R2094—they had accompanied the May 1973 report (AF 77)—Mr. Sperry noted that the drawings were a kind of summary of the excavation progress and the conditions encountered during the excavation of Tunnel No. 3. In testifying, Mr. Sperry worked with the profile to the bottom of the page of the particular drawing, since the progressive failures after excavation, the survey of invert elevation and other matters shown above the profile relate to events which occurred after Mr. Sperry had left the job.

¹⁶⁹ It was to this firm that Mr. Sperry went when he left the employ of the contractor in late Aug. of 1972. Mr. Sperry remained with the Mathews firm for 14 months, after which he joined the firm of Foster-Miller Associates, Inc., and then became a private tunnel consultant (AX 88).

¹⁷⁰ It was a member of the A. A. Mathews firm that Mr. Sperry assisted in the preparation of the May 1973 report to the contractor (AF 77).

Summarizing job progress as shown on the above-referenced drawings, Mr. Sperry states that the very rapid progress achieved in late June of 1971, did not continue and that as the contractor approached DH 116 more and more problems were encountered. In that area water dripped from sandstone several feet above the crown (dripped from rock bolt holes and fallout zones). The drawings show that very little progress was made between mid-July and mid-October of 1971. In addition to a strike and a labor vacation which delayed progress, there was no mole advance between July 14 and Aug. 20, 1971, a time when a program for support of the tunnel was being developed. Beginning in mid-October matters improved until about mid-November. From then until about the first of December, the contractor went through a second wet area where the sandstone came down to about spring line.¹⁷¹ The mole progressed a little better in December. From Jan. until about Apr. 10, 1972, excavation proceeded fairly well. While the fallout continued, there were several sections as shown on the "rock failures during excavation bar" with little fallout. In the middle of April, the contractor encountered some soft invert and the mole got several feet low but by early May, it was back on grade. By about June 1, 1972 (as shown by the drawings "rock failures during ex-

¹⁷¹ The second wet area was identified by Sperry as being in the vicinity of Station 847 plus or minus (Tr. 85).

cavation bar"), there was very little fallout and this continued for the rest of Tunnel No. 3.

Addressing the question of how the failures and fallouts slowed down progress, Mr. Sperry stated that just as soon as the arch was excavated the failures started to occur and that what fell on the mole buckets didn't bother much but the rock that fell behind the dust seal of the mole came down and piled up on that part of the mole where the contractor later put a shield.¹⁷²

In the vicinity of Station 821+00, Mr. Sperry saw extensive failures in the rib area ahead of the grippers. Cracks were between the tunnel face and the grippers. The distance between the tunnel face and the forward edge of the grippers was 20 feet but the forward laser target was about 5 or 6 feet behind the heading and the cracks extended into this area. These cracks were pointed out by Mr. Sperry to the inspector and to Mr. Lincoln and Mr. Rogert of the Bureau.

A sketch showing the failures described (AX 9) was drawn by Mr. Sperry. In his comments, Mr. Sperry emphasized (i) that the rock falling out always broke to curved surfaces away from the heading; (ii) that the failures he described were through virgin rock unless a parting between different rock types was involved in which case the failures would be through

the virgin rock and through the parting; (iii) that sometimes failures occurred along the trailing floor or even down behind the trailing floor, which would be 500 feet, or more, behind the heading; and (iv) that there were offsets involving failures in the lower sidewalls. Mr. Sperry referred to one Saturday in January of 1972, in which he saw a large crack in the invert—3 feet to the left of centerline—so large he put his arm down to try to feel the bottom of it. As the crack was curved, Sperry could not get his arm down all the way but he did get his arm down as far as his elbow.¹⁷³

The direct examination of Mr. Sperry concluded with him noting that for the last 161½ days of the excavation, the mole had averaged 185 feet per day. This rate of advance (in what the contractor has called the reference reach) was achieved even though the section of the tunnel involved had the longest haul time, with the haulage delays averaging 12 percent of the scheduled time.

On cross-examination, Mr. Sperry stated that Tunnel Nos. 3 and 3A

¹⁷³ The crack in the invert to which Mr. Sperry testified was at Station 821+00 plus or minus (Tr. 95-96). The section involving failures ahead of the grippers was in the same general area (Tr. 96, 97).

On Voir Dire with respect to AX 9, the following colloquy occurred:

"Q. Now, are the rest of the things that you depict on Exhibit No. 9, in a general sense, rather than a specific stationing?

"A. Yes. These failures extended from the whole claim reach less the sections where there weren't failures. There were one or two sections noted here as little overbreaks or fall-out." (Tr. 97).

¹⁷² Sperry thought the shield was installed on the mole in Aug. or Sept. of 1971 (Tr. 77). In fact, the shield was not installed until Oct. 5, 1971 (n.53, *supra*).

were quite similar to Tunnel No. 1,¹⁷⁴ and that 44 percent of Tunnel No. 1 was supported with steel.¹⁷⁵ With respect to Tunnel No. 1, he noted that because of the configuration of the mole the contractor concerned could not get rockbolts in around the mole and could not get anchorage of their rockbolts. Mr. Sperry agreed that the mole used in Tunnel Nos. 3 and 3A had a fixed cutter head, as contrasted with the mole used in Tunnel No. 1 which had several variable head sizes.¹⁷⁶ While he was of the opinion that the Tunnels Azotea,¹⁷⁷ Blanco,¹⁷⁸ and perhaps Oso¹⁷⁹ had been bored

with moles having variable head sizes, he stated that it was not common to have variable head sizes and that the more recent moles have not been built with variable size cutter heads.

While agreeing that the contract indicated that approximately 80 percent of Tunnel No. 3 would require support other than rockbolts, Mr. Sperry had thought it a bit odd that the Bureau contemplated so much of the support required would consist of other than rockbolts. As to the statement in Paragraph 50 of the Specifications,¹⁸⁰ about Government testing indicating that "many of the sandstones, shales and siltstones to be excavated will deteriorate or disintegrate rapidly when exposed to air or water or when stress relieved or a combination of the three," Mr. Sperry said that in the context of the paragraph the references to "deteriorate" and "disintegrate" clearly referred to superficial things and not to the deep cracking that had occurred in Tunnel No. 3.

After Mr. Sperry left the employ of the contractor in late Aug. of 1972, to join the engineering consulting firm of A. A. Mathews, Inc., he assisted in the preparation of the May 1973 report (AF 77). In that role he had corresponded with Fluor Utah's Mr. R. Hungett, Vice President of Construction. In a letter dated Apr. 6, 1973 (GX B), Mr. Hungett stated that the words

¹⁷⁴ Mr. Sperry recalled the company's geologist, Mr. Hayes, saying that they were quite similar. He had read Mr. Hayes' report (AX 1) before Fluor Utah's bid was submitted (Tr. 104, 105).

¹⁷⁵ The contractor could have erected steel supports in Tunnel Nos. 3 and 3A, but they would have encroached on the "A" line. Mr. Sperry acknowledged that the contractor had taken a calculated risk in assuming that all of the support problems could be cared for by using rockbolts (Tr. 107, 108).

¹⁷⁶ Tr. 108. The Final Construction Report for Tunnel No. 1 states:

[T]he machine can bore diameters of 19 feet 10 inches, 20 feet 10 inches, and 21 feet 2 inches (GX KKK, Appendix, p. 9).

¹⁷⁷ The Final Construction Report on Azotea Tunnel states:

"Rock bolt installation in the test section was conducted using the tunnel bore established for the steel support section (13-foot, 3-inches diameter) from Station 1273+94 to 1260+20.2. At Station 1260+20.2 the contractor reduced the bore diameter to 12 feet 6 inches which was the normal size for a rock-bolt supported section." (GX QQQ, p. 48).

¹⁷⁸ The Robbins tunnel boring machine used in Blanco Tunnel permitted the diameter of the tunnel excavation to be varied from 9-feet 11-inches to 10-feet 7-inches (GX SSS, p. 45).

¹⁷⁹ The Final Construction Report on Oso Tunnel shows that excavation of the tunnel started using a bored diameter of 10-feet 7-inches but that later the cutter head was reduced to a diameter of 10-feet 2-inches (GX RRR, pp. 53, 65).

¹⁸⁰ See Appendix for the provisions of Paragraph 50 and of Clause 4 of the General Provisions ("Differing Site Conditions").

"stress relieved" appearing in the report bothered him in view of what the company was trying to accomplish but that since the words were quoted from the specifications he guessed there was nothing else the company could do.

Upon his prebid site visit, Mr. Sperry saw the layers of shales, siltstones, and sandstones by the portals and concluded that there was a very slight dip to the east. He agreed that the formation in the layers would continue into the mountain and that as the contractor bored into the mountain these layers of different material would intersect right at the circumference of the bore.¹⁸¹

Prior to selecting the Dresser mole¹⁸² for use in the tunnels, Mr. Sperry visited construction jobs where moles were being used and observed the boring machines in operation. The contractor had had direct experience with the Jarva mole on the River Mountains job. In preparing the bid on the instant project, the contractor obtained

¹⁸¹ Where the material changed the contractor could expect to experience rock falls and failures. (Tr. 127). It is not easy to discern where materials intersect in a moled tunnel, however, as is shown by observations made with respect to Tunnel No. 1:

"[O]nly in the portion of tunnel excavated by conventional methods are joint and bedding planes readily visible. The relatively smooth surface of the machine-bored tunnel makes such features difficult to discern. Moreover, a coating of silt and clay plastered on the tunnel surface by action of the machine obscured, and in some places perhaps obliterated, traces of joint planes." (GX KKK, Appendix, p. 10). To the same effect, see GX A, p. 3).

¹⁸² The mole selected was a prototype mole. It was the first mole manufactured by Dresser Industries and had originally been designed for hard rock (40,000 psi) with a 16-foot bore diameter (Tr. 129, 130).

specifications on other moles besides the Jarva mole including those for the Caweld, Lawrence, and Robbins moles.

Further details were elicited on cross-examination as to how the laser system used for guidance of the mole was intended to function and how it had functioned.¹⁸³ Mr. Sperry testified that there were two targets on the mole, the forward target indicating where the cutterhead was and the rear target indicating the direction the mole was steering in; that the mole operator was approximately 10 feet from the rear target and 18 to 20 feet from the front target; that the operator observes where the light is on the front target and positions the mole cutterhead so that he's steering with the spot in the forward target in the center; that the target the operator is required to observe is 8 inches by 10 inches and that he's expected to keep the laser beam in half-inch radius, one inch circle and that's in the center of the target; that the tolerance allowed for the mole going around the circumference was one inch at the bottom of the invert; and that sometimes the mole would get off line and grade more than an inch and cause tightness in the tunnel.¹⁸⁴

¹⁸³ With the laser system used to guide the mole, it was possible for the mole to get off line and grade. One reach of Tunnel No. 3 was moled high and, according to the correspondence, all of Tunnel No. 3A was moled high (Tr. 144).

¹⁸⁴ It would be possible for the mole to be driven with the target system used so that the mole would actually rotate around the laser beam. Mr. Sperry could not say from his experience, however, as to whether this had ever happened (Tr. 146).

Responding to a question as to whether the rock in River Mountains Tunnel was better than the rock in Tunnel Nos. 3 and 3A, Mr. Sperry stated that the rock in River Mountains stood unsupported for long lengths of the tunnel. He added, however, that it was necessary to take into account that the tunnels involved different rock types and different diameters. Noting that the diameter of Tunnel Nos. 3 and 3A (20 feet 6 inches) was much greater than the diameter of River Mountains Tunnel (13 feet excavated), Mr. Sperry stated that failures in the same type of rock would be worse in the bigger tunnel.

Mr. Sperry was aware of the article which had appeared in Western Construction concerning the contractor setting world records in Tunnel No. 3 (GX F). The world records had been set during excavation in the reference reach of Tunnel No. 3. The record set was at the far end of the tunnel between the inlet portal and Station 755 and reflected consideration of the size of the tunnel and the 260 feet of excavation accomplished in one day.

Upon rebuttal Mr. Sperry testified to a number of things including the following: (i) his experience in estimating tunnel projects as a private consultant; (ii) the fact that the mole used on Tunnel No. 1 had been a prototype mole;¹⁸⁵ (iii) that neither the Jarva mole on which the contractor's bid had been

based, nor the Dresser mole used to perform the contract¹⁸⁶ had variable cutter heads; (iv) that it was not common for contractors to use a variable head mole; (v) that at the time of the hearing mole contractors were using a guidance system very similar to what had been employed on Tunnel Nos. 3 and 3A; (vi) that in the vicinity of DH 116 and in another wet area the amount of water pumped had ranged from 30 gallons to 40 gallons per hour; (vii) that as a private consultant Mr. Sperry had participated in the preparation of at least part of the bid estimate for the VAT tunnel and in that capacity had had occasion to see and study the specifications; and (viii) that during excavation he was in Tunnel No. 3 an average of five times a week.¹⁸⁷

It was during Mr. Sperry's rebuttal testimony that his résumé was offered in evidence (AX 88). In the course of such testimony Mr. Sperry drew a diagram showing the location of the roll indicator (AX 89) and another diagram designed to illustrate the functioning of the guidance system (AX 94-A and 94-B). Also offered and received in evidence were two pages from Mr. Sperry's diary (AX 90) showing readings he had taken from gauges measuring pressures being exerted against rockbolts after they had been torqued. The readings were in pounds per square inch and were

¹⁸⁵ It is undisputed that the mole used to excavate Tunnel Nos. 3 and 3A was a prototype mole. See n. 100, *supra*.

¹⁸⁶ The Dresser mole used on the project was neither proposed nor discussed as a variable head mole (Tr. 1291).

¹⁸⁷ Mr. Sperry made an entry in his diary every day that he was on the job (Tr. 1308).

taken by Mr. Sperry in late Dec. of 1971 and in early Jan. of 1972. According to Mr. Sperry the exhibit indicates that while the arch was coming down, the support system of the bolts and pans was taking the weight (*i.e.*, the arch was not falling out behind the bolts).¹⁸⁸

Another exhibit involving Mr. Sperry's diary is AX 92. The entry for Mar. 24, 1972,¹⁸⁹ shows that Mr. Sperry was underground on that date; that at the beginning of the day the face of the tunnel was at Station 781+46; and that the mole advance achieved that day was 63 feet. One of the entries states: "Some ties submerged between Stations 790 and 785. Invert very wet. Bolts over mole again dripping water. Told CRP to drill drain holes between pans." Mr. Sperry said that the instruction was issued to the tunnel superintendent to avoid having the water dripping from the rockbolt holes conducted by the steel pans (attached to the rockbolts) to the rib where it would run down the ribs causing the mole grippers to slip to some extent. The effect of drilling drain holes between the pans would be that more of the water would drip right down on the invert rather than running down the ribs of the tunnel. When the water ran down the ribs, it sometimes ran on to the top of the gripper pads and if the grippers were extended the

water had no place to go except to conduct itself to the leading or trailing edge of the grippers and run down there.

Over the objection of Government counsel two exhibits offered by the appellant were received in evidence. Accepted into evidence was a work sheet (AX 91) which was characterized by Mr. Sperry as a summary of work done by him while at A. A. Mathews, Inc., in 1973,¹⁹⁰ in conjunction with Report No. 1856 (AF 77). Another exhibit to which a Government objection was raised involved an excerpt from the specifications for the VAT tunnel. The purpose of offering the exhibit was to show that the later VAT specifications contained a provision essentially the same as that contained in Paragraph 50 of the instant contract¹⁹¹ but with additional language warning the prospective contractors of possible fracturing due to overloading and extremely short standup times.¹⁹²

¹⁸⁸ The figures used in the exhibit were stated to have been taken from the job records of Fluor Utah except for Column 8 which represents a projection made by Mr. Sperry. The basis for the Government objection was the absence of the records upon which the summary was based (Tr. 1313-15). The hearing member noted the serious question he had about the value of evidence received where the underlying data had not been offered (Tr. 1345).

¹⁹¹ "Government testing indicates that many of the sandstones, shales, limestones, and siltstones to be excavated in the tunnel will deteriorate or disintegrate rapidly when exposed to air or water or when stress relieved" (AX 93).

¹⁹² The language containing the twofold warning reads: "In addition to surface deterioration, fallout may occur along bedding planes and joints, also fracturing may occur in the rocks due to overloading. Extensive reaches may be encountered where the ground stand up time is extremely short" (AX 93).

¹⁸⁸ The diary entries given in AX 90 were for Dec. 29, 30, and 31, 1971, and Jan. 3, 1972.

¹⁸⁹ Mr. Malcolm Logan visited Tunnel No. 3 on Mar. 23 and 24, 1972. Asked whether the conditions he observed on March 24 had obtained on the preceding day, Mar. 23, 1972, Mr. Sperry stated: "Yes. We had been in this condition for some time" (Tr. 1320).

Also objected to by Government counsel was the following testimony elicited from Mr. Sperry:

Q: Did you consider a mole manufactured by Robbins?

A: Yes.

Q: Was that offered to you with a variable head?

A: No. In fact, Mr. Robbins, Dick Robbins, advised against the use of a variable head on the mole.

Q: Had the Robbins mole been used on any of the tunnels mentioned during the course of this hearing?

A: Yes.

Q: Which ones?

A: Azotea, Blanco, and Oso, plus—I guess that's all.

(Tr. 1289-90).¹⁹³

Appellant's witness Sperry also testified upon rebuttal that there is a reach in Tunnel No. 3 which he had selected as the reference reach in connection with the claim. The entire colloquy¹⁹⁴ between appellant's counsel and the witness is set forth below:

Q: Do you recall, Mr. Sperry, that there's a reach of Tunnel No. 3 which the contractor calls a reference reach in connection with his claim?

A: Yes.

Q: Which extends from Station 752 plus 41 to Station 721 plus 84, a distance of some over 3,057 feet, do you recall that?

¹⁹³ The basis of objection to this line of questioning was hearsay (Tr. 1290).

¹⁹⁴ Appellant's counsel returned to the subject a short time later when interrogating Mr. Sperry with respect to AX 91. The following exchange took place:

"Q: And is the Column 6, which is headed 'Reference Reach,' the reference reach which you selected?

A: Yes.

Q: Did you discuss that with any of your superiors at Fluor Utah?

A: Discussed this with Mr. Hungett * * * who was a vice president of Fluor Utah at the time." (Tr. 1313).

A: I recall the reference reach, the station sounds right and I'm not sure of them.

Q: In any event, it was up toward the far end of the tunnel—

A: Yes, right.

Q: —from where you started moling?

A: And those stations are at the far end, yes.

Q: And who selected that reference reach in connection with this claim?

A: I did.

Q: And why did you select that particular reach?

A: Well, the reach goes from where the equipment was finally repaired, put back together after the damage sustained by the fallout and the end of the job. It's the entire length of time in those, from those stations.

Q: And was that reach, in your judgment, comparable to the—were the conditions in that reach comparable to the conditions indicated in the contract?

A: Yes.

Q: Is that why you chose that reach?

A: Yes.

(Tr. 1310-11).

At the conclusion of his testimony the hearing member asked Mr. Sperry to enumerate the factors that had caused him to disregard or at least not proceed on the basis of the Government's estimate that approximately 80 percent of the tunnel would require support other than rockbolts. In response Mr. Sperry stated that the main factor was the way the contractor's prebid investigating party had "interpreted the rock conditions from what we saw on the job, not only the cores but the topography, the mesa land at the jobsite itself and the way that stood and the way it was so massive" (Tr. 1373).

After referring to articles he had read on the Navajo 1 and the Na-

vajo 2 jobs, including the Bennett article,¹⁹⁵ two articles in Western Construction and an article in Mining Engineering, and the fact that the prebid investigating party had looked at the equipment in Tunnel No. 1, Mr. Sperry stated: "And I think a large factor was our success at River Mountains Tunnel which was for the Bureau of Reclamation and our success in steering the mole and also supporting the rock with rock bolts" (Tr. 1373-74).

2. Summary of Testimony of Thomas W. Green

(Tr. 208-50, 266-390)

Thomas W. Green, a professional engineer, went to the Navajo Indian Irrigation Project in January of 1971 as the office engineer. He continued in that capacity until September of 1973 when he became acting project engineer. That position was held by him until the job was completed in June of 1974.

As office engineer Mr. Green was responsible for inventorying critical

¹⁹⁵ After noting that the Bennett paper had been testified to as confusing, Mr. Sperry stated that the gauge cutters on the mole used in Tunnel No. 1 were angled around at quite a sharp angle so they actually cut a very large chamfer between the face of the tunnel and the walls of the tunnel and so cutting at this angle tended to overstress the rock that was to remain.

Mr. Sperry also noted (i) that the pictures they had taken of the cutters used on Navajo-1 showed them to be worn completely flat (through the shell into the bearings); that while these weren't necessarily the gauge cutters, he had assumed that in a lot of cases the gauge cutters must have been worn drastically which he felt certainly damaged the rock; and that the Jarva mole on which the contractor's bid had been based would not damage the rock either by reason of the angle of its cutters to the rock or by reason of the way in which its grippers functioned (Tr. 1374-75).

materials associated with all phases of the work. During the excavation of Tunnel Nos. 3 and 3A Mr. Green monitored the mole cutters and kept records on the cutters that were used on the mole. He estimated that he entered the tunnels an average of twice a week during the excavation of Tunnel Nos. 3 and 3A. Mr. Green did not go into the tunnels nearly as often when the concrete work was being performed. In addition, Mr. Green entered the tunnels for the purpose of taking pictures (he was also job photographer) and because some materials and supplies were kept there.

Mr. Green drew a sketch (AX 12) to illustrate the type of rock failures that he had seen in the claim reach in Tunnel No. 3. The failures that he had seen consisted of (i) failures in the arch extending to a point 5 feet plus or minus the spring line; (ii) failures right on the face of the tunnel with typical failures involving rock that had failed approximately 4 or 5 feet above the invert; (iii) failures up to a layer of shale; and (iv) failures observed in the rib section 4 to 5 feet above the invert. Some of the arch failures seen by Mr. Green involved failures to bedding planes. Some of the failures had curved surfaces and some of the cracks in what appeared to be homogeneous material were considered to be new failures. The failures that he witnessed that were not to distinct bedding planes were failures in one material. Mr. Green estimated that 90 percent of the failures sketched in AX 12 had occurred in the claim reaches of tun-

nel excavation in Tunnel Nos. 3 and 3A.¹⁹⁶

Some of the failures observed in the rib section of the tunnel were behind the cutterhead but ahead of the grippers looking toward the heading. Sometimes it had been necessary to place cribbing between the grippers and the ribs in order for the grippers to achieve the necessary pressure to thrust the mole forward. Generally speaking, cribbing was necessary only where the material was moist. Rock failures were also observed behind the grippers in the rib of the tunnel¹⁹⁷ and sometimes Mr. Green saw fallout back onto the trailing floor which extended about 560 feet from the heading. Mr. Green's sketch of observed failures (AX 12)¹⁹⁸ was received in evidence without objection.

As to the effect that the failures observed had had upon the excavation operations, Mr. Green stated (i) that sometimes the mole had to be shut down in order to handle the muck generated by the failures; (ii) that fallout damaged hydraulic lines to the rockbolt drills and to the hydraulic lines associated with the operation of the mole itself;

¹⁹⁶ Mr. Green gave as a rough estimate that he entered the cutterhead 60 to 70 times in Tunnel Nos. 3 and 3A and that he saw rock failures or fallout ahead of the cutters 40 to 45 times (Tr. 331).

¹⁹⁷ Some failures occurring in the ribs of the tunnel behind the grippers were considered to have been caused by the grippers. Failures of any significance attributable to the grippers occurred where there was a joint or bedding plane underneath the gripper pad (Tr. 336-37).

¹⁹⁸ No stationing is indicated on the sketch (AX 12) by Mr. Green (Tr. 338-39, 382).

(iii) that a considerable amount of the mole downtime attributable to hydraulic system problems was due to the fact that the hydraulic motors were set with very fine tolerances and could not take the contamination of the system by reason of the breakage of the lines; (iv) that the invert concrete operation had been delayed considerably due to having to remove tights from the invert and having to clean the invert prior to concrete placement; (v) that there were delays resulting from continual fallout on the utility lines which damaged the lines and took time to repair;¹⁹⁹ and (vi) that the failures observed which delayed completion of the arch concrete was the additional concrete required to be used behind the forms because of the overbreak outside the bored diameter of the tunnel.²⁰⁰

Eight photographs taken from an album of Fluor Utah showing job progress was introduced as AX 16. All of the photographs related to conditions existing prior to concrete

¹⁹⁹ The failures observed occurred in the claim reach, the reference reach and in the reaches which were neither one. The most severe failures that delayed the contractor the most, however, occurred in the claim reach (Tr. 350-51). In Tunnel No. 3 some tight removal was experienced in the reference reach but that did not severely delay the invert concrete placement (Tr. 352).

²⁰⁰ As to the arch concrete, Mr. Green testified that there was fallout occurring ahead of the concrete placement that was quite severe and that required cleaning before the forms could be set. The fallout had to be cleaned out before the concrete could be pumped behind the arch forms. Utility lines damaged by fallout had to be repaired before the contractor could proceed with the placement of the arch concrete (Tr. 353).

placement and all but AX 16A (showing typical placement of arch forms) were assumed to have been taken in Tunnel No. 3 on Mar. 17, 1973.²⁰¹ With respect to failures in the arch, the following exchange occurred on direct examination:

Q: Do you recall a section in this tunnel (in) which the sub invert [²⁰²] concrete was removed pursuant to order for changes number 1?

A: Yes. I do.

Q: And do you recall seeing the arch in that area?

A: Yes.

Q: Do you recall seeing any—well, could you describe what you saw with respect to the arch in that area?

A: Well, what I saw was several cracks in the arch in that area. The arch appeared to be low. It wasn't a perfect circular tunnel. There were these cracks and it looked like the top of the arch had come down just by visually looking at this.

Q: And was that area of the arch remined, essentially, throughout the reach where the order of changes number 1 applied?

A: That area was remined, in that we had to remove some of the rock bolts in that area, and reinstall the rock bolts after remining.

Q: And, in fact, that was done in a very careful manner, wasn't it?

A: Yes, it was quite dangerous to remove these rock bolts, and to relieve the bearing under the bearing plate, we removed the rock bolts, remove the tights, and then install another rock bolt, was quite time consuming, and quite dangerous for a miner under an area he was relieving the support he had there.

(Tr. 364-65).

On cross-examination Mr. Green acknowledged that the only tunnel

he had been in during excavation were Tunnel Nos. 3 and 3A. He also stated that he could not recall any instances of gripper caused rib failures where the material was more than damp; that in his tunnel visits he had sometimes found it dusty and at other times clear; and that he did not recall how much additional concrete had to be placed within the forms because of the rock failure he had observed in the tunnel.²⁰³

Mr. Green also testified extensively as to quantum.²⁰⁴ He had participated in the preparation of the claims involved in the appeal, as had Mr. Mike Eldridge,²⁰⁵ an accountant employed by the contractor. The general arrangement was for Mr. Green (the office engineer) to determine what equipment was to be used, what dates were to be used that were relevant and what

²⁰³ On cross examination the following colloquy took place:

"Q. Mr. Green, do you have any idea on how much additional concrete had to be placed within the forms because of the types of rock failures or disintegration you observed in the tunnel?

"A. I don't—additional concrete had to be placed, I don't recall the figure." (Tr. 383-84).

²⁰⁴ Testimony as to quantum is included under Part II, Entitlement, since there appears to be some benefit in having the testimony of the witnesses in one section of the opinion where, as here, the failures in what has been designated as the claim reach and those occurring in the reference reach have been characterized as involving only differences in degree (Tr. 352).

²⁰⁵ At the time of the hearing, Mr. Eldridge was outside of the country, as were Mr. Huntgett and Mr. Davenport. Because of the importance of the records which Mr. Eldridge either prepared or collaborated in preparing (AX 10 and AX 11), the record was kept open for 120 days to allow the Government to take the deposition of Mr. Eldridge upon his return to this country. Although Mr. Eldridge did return within the specified time, the Government did not avail itself of the opportunity to depose him (Tr. 244-61).

²⁰¹ That is the date shown for AX 16F which is a photograph depicting Tunnel No. 3 rib tights at Station 781+75 (Tr. 356-61).

²⁰² No subinvert was placed in the tunnel (Tr. 383).

footage was to be involved in the various reaches with Mr. Eldridge responsible for extracting from the books and records of the contractor the dollar figures for the labor, equipment and other items of costs related to the contract work.

Offered and received in evidence as AX 10 was a voluminous document containing working papers²⁰⁶ and other data pertaining to the In Situ Rock Stress Claim. Included in the front of the exhibit is a three page document entitled "Navajo 3 and 3A Progress Tabulation." This tabulation²⁰⁷ was part of the claim submitted to the Bureau of Reclamation in February of 1974. Shown in AX 10 are the costs actually incurred in the claim reaches of Tunnel Nos. 3 and 3A. Categories of costs under the heading "Tunnel Excavation" are "Labor," "Equipment," "Materials & Supplies," and "Permanent Materials," showing the amounts claimed for each. The same categories of costs and the amount claimed for each are also shown under the headings "Place Invert Concrete" and "Place Arch Concrete."

²⁰⁶ At the time Mr. Green testified the working papers included in AX 10 showed the actual costs incurred in the claim reaches for Tunnel Nos. 3 and 3A. The exhibit also shows in various places what is described as "should have been costs" for the claim reaches. Except for limited items of costs (e.g., "Permanent Materials"), the actual costs incurred in the reference reaches were not shown (Tr. 214, 232, 268, 301-09).

²⁰⁷ The tabulation shows the reference reach for the DH 116 claim to consist of 257 feet of tunnel between Station 854+06 and Station 851+49 (AX 10). This stretch of the tunnel is included as part of the claim reach for Tunnel No. 3 (Station 859+72 to Station 752+41) in the May 18, 1973 claim submission (AF 77). See text accompanying n.68, *supra*.

The actual costs shown for Tunnel Nos. 3 and 3A reflect costs extracted by Mr. Eldridge from the general ledger and entered on sheets contained in the exhibit. The backup sheets for summary items (e.g., Tunnel 3 Excavation Labor) include subtractive items for time periods when the contractor was not in the claim reach. These adjustments were necessary because the ledger was not posted on precisely the same day that the claim reach started and ended.

It was Mr. Green who selected the equipment included in the claim but it was Mr. Eldridge who had developed the cost for the equipment applying AGC rates in accordance with the terms of the contract.²⁰⁸ Mr. Eldridge also determined the amount to be included in the claim for the escalation of materials purchased after a certain date²⁰⁹ and calculated the amounts of indirect costs for which claim was made. It was Mr. Green, however, who prepared the computations in support of the amounts claimed for "Additional Mole Rental" and for the actual grout costs in Tunnel Nos. 3 and 3A.

²⁰⁸ Shown on Sheet C1 of AX 10 are the equipment costs claimed for Tunnel Nos. 3 and 3A excavation, Tunnel No. 3 invert concrete and Tunnel Nos. 3 and 3A arch concrete. The costs for equipment ownership and for equipment operating expenses do not represent actual costs but rather represent the development of costs by applying AGC rates in accordance with Paragraph 17 of the Specifications (Tr. 219-23).

²⁰⁹ Mr. Green assumed that the sheets starting with Sheet L1 of AX 10 show the escalation of job materials and supplies after the date the contractor considered the project should have been completed (Tr. 235-36).

In a number of instances items had either been improperly included in or omitted²¹⁰ from the claim. Mr. Green testified as to the proper adjustments to be made to the various schedules and summaries of the costs involved.

Asked upon cross-examination as to how it was determined that one stretch of tunnel would be considered a reference reach and another would be treated as a claim reach, Mr. Green stated that various personnel had had input and that determination of these reaches was not a decision that he had personally made. He noted, however, that the reference reach rates of progress for Tunnel Nos. 3 and 3A were shown at the front in AX 10²¹¹ and that such rates of progress had been attained in some part of the tunnels.²¹² Mr. Green acknowl-

edged that the San Mateo office of the contractor had written to the project manager concerning the establishment of the reference reaches for the various categories or had copied him on other correspondence, as evidenced by Government Exhibits J, K and L. He also agreed that with respect to Tunnel No. 3 there was an overlapping between the invert concrete reference reach (Sheet F1) and the excavation claim reach (Sheet A1) and between the arch concrete reference reach (Sheet I) and the excavation claim reach (Sheet A1).²¹³ Although there was a cost coding for excavation as reflected in AX 10, Mr. Green was unable to say how costs for removing tightts in the tunnel were recorded (Tr. 299-300).

Mr. Green had participated to a limited extent in the preparation of AX 11 ("Equipment Cost and Usage"). Comparatively little testimony was elicited from him with respect to the portions of the exhibit that he had prepared or assisted in preparing.²¹⁴

3. Summary of Testimony of Thomas Case Stone

(Tr. 784-825, 970-75a, 1068-98)

Mr. Thomas Case Stone (a certified public accountant employed by the contractor) testified extensively with respect to the quantum aspects of the claim with particular em-

²¹⁰ Among the examples of costs thought at one time have been omitted from the work sheets as prepared by Mr. Eldridge (AX 10) were the operating expenses for the equipment used on the second and third shifts for Tunnel No. 3 excavation (Tr. 225) and for Tunnel No. 3 arch concrete (Tr. 229-30).

²¹¹ Tr. 272-73. "Navajo 3 and 3A Progress Tabulation" (AX 10) shows the rates of advance in the reference reaches to be as follows:

"Tunnel 3 and 3A excavation reference reach -----	185 FPD
Tunnel 3 Invert concrete reference reach -----	676 FPD
Tunnel 3 arch concrete reference reach -----	378 FPD
Tunnel 3A arch concrete reference reach -----	300 FPD"

²¹² Addressing the question of whether the rates of progress shown for the reference reaches represented the fastest rates of progress achieved throughout the project for the various categories, Mr. Green said that was clearly not true with respect to the rate used for excavation.

Mr. Green stated that except for excavation he could not answer the question posed with respect to the various categories without examining the daily logs for the particular activity (Tr. 274-78).

²¹³ In Tunnel No. 3 a total of 444 feet of the invert concrete reference reach and a total of 1,324 feet of the arch concrete reference reach fell within the excavation claim reach (Tr. 289-91).

²¹⁴ Tr. 310-17, 386-90. See n.205, *supra*.

January 15, 1981

phasis upon additions to, deletions from or corrections of AX 10.²¹⁵ Offered in evidence as simply a digest of the work papers included in AX 10 was AX 77.²¹⁶ Among the changes made by Mr. Stone to AX 10 was the inclusion in the front of the exhibit of a lead schedule (work paper "A") in which is set out the claim reach cost and the reference reach costs under sections designated by Roman numerals in related exhibits (AX 10; AX 77; AX 84). Roman I is "Tunnel Excavation," Roman II is "Place Invert Concrete," and Roman III is "Place Arch Concrete."²¹⁷ The lead schedule was considered necessary since there were work papers in AX 10 relating to Tunnel No. 3 or Tunnel No. 3A or to other things such as arch repairs, grout, or cleanup.

The data developed by Mr. Stone with respect to the actual costs incurred in the reference reaches had not been included in the working

papers prepared by Mr. Eldridge or Mr. Green (n.206, *supra*). Mr. Stone also made changes in the working papers (AX 10) to correspond with the testimony given by Mr. Green concerning changes considered necessary to accurately reflect the costs properly includible in the claim. For the most part Mr. Stone's testimony consisted of identifying working papers in AX 10 prepared by Mr. Eldridge or Mr. Green and explaining how figures carried forward to the lead schedule had been obtained from such data (*e.g.*, adding the subtotal of columns in the various schedules included among the work papers).

In some instances, however, entirely new schedules were developed by Mr. Stone or his assistants and added to the other work papers in AX 10. This was true with respect to such items as arch repair, grout, or cleanup. The amount claimed for arch repair as shown on Working Paper K16, was \$48,437,²¹⁸ comprised of costs for labor (\$34,203), equipment (\$8,203), material and supplies (\$3,887), and permanent materials (\$2,144). The figures for these categories of costs were carried forward to the lead schedule (AX 10). Work Paper K7 shows the costs incurred for grout in the cost categories of labor, equipment, material and supplies, and perma-

²¹⁵ At the time he testified Mr. Stone was manager of project accounting for the contractor. Throughout Mr. Green's testimony he had been present in the hearing room for the purposes, among other things, of later determining the costs incurred in the reference reaches on the same bases as had been used by Messrs. Eldridge and Green in determining the costs in the claim reaches (Tr. 201-08, 787-88).

²¹⁶ Before his testimony concluded, Mr. Stone had discovered that the figures shown in AX 77 for equipment items were in error in that the exhibit reflected an overstatement of equipment operating expenses and an understatement of equipment ownership expenses. According to Mr. Stone's testimony, AX 84 reflects the amounts properly includible on the claim for equipment items based upon the use of AGC rates (Tr. 970-75, 1070-73).

²¹⁷ The costs collected in these three Roman Numeral sections are subdivided further into the categories of "Labor," "Equipment," "Materials & Supplies," and "Permanent Materials" (AX 10; AX 77; AX 84).

²¹⁸ The figure of \$48,437 is the addition of the amounts in the General Ledger Account 7304013 and reflects minor adjustments in the General Ledger from the time Eldridge or Green prepared an earlier work paper. The comparable figure for this item in the July 22, 1974, claim submission (AF 115) is \$48,523 (Tr. 803-04).

nent materials for Tunnel Nos. 3 and 3A,²¹⁹ and the allocation of such costs between claim reach costs and reference reach costs with the combined figures for the two tunnels being posted to the lead schedule. The combined costs for cleanup in Tunnel Nos. 3 and 3A are shown in Work Paper K14,²²⁰ broken down into the categories of costs for labor, equipment, and materials and supplies.

In the course of his testimony Mr. Stone discussed the manner in which the claim had been computed in the three categories of "Excavation," "Place Invert Concrete," and "Place Arch Concrete." He stated that he had collected the costs within the three categories for both the claim reach and the reference reach by adding various columns representing labor, equipment, materials and supplies, and permanent materials as is reflected in the lead schedule (AX 10) after which he had transferred the figures so obtained for the reference reaches and the claim reaches to AX 77.²²¹ The

linear feet shown on AX 77 for both the reference reaches and the claim reaches were obtained from the "Navajo 3 and 3A Progress Tabulation" included in the front of AX 10.

Under Roman Numeral I "Tunnel Excavation," AX 77 shows the reference reach and the claim reach to consist of 3,057 linear feet and 13,784 linear feet respectively. The \$49.83 shown as the cost per foot without changed conditions is arrived at by dividing the total cost shown for tunnel excavation in the reference reach of \$152,336 by 3,057 (the linear feet of tunnel in the reference reach). The exhibit shows that if the 13,784 feet of tunnel comprising the claim reach could have been excavated at the cost per foot in the reference reach, the cost to the contractor would have been in the amount of \$686,882. According to AX 77, however, the costs actually incurred in the claim reach for excavation were in the amount of \$2,036,564. Deducting from this figure the amount of \$686,882 (cost of excavating in the claim reach but for the changed conditions) the dollar figure claimed for tunnel excavation of \$1,349,682 is obtained.

The amounts claimed for Roman Numeral II (Place Invert Concrete) of \$154,770 and for Roman Numeral III (Place Arch Concrete) of \$660,657 have been calculated on

of this aspect of the claim, however, since all of Mr. Stone's testimony in this area was given with respect to AX 77. While the changes reflected in AX 84 and in corrected AX 84 have affected the amounts claimed for various items, there has been no change in the method of computing the claim.

²¹⁹ In preparing the work paper the General Ledger balances for three accounts (two for Tunnel No. 3 and one for Tunnel No. 3A) were picked up. The combined figures for grout for the two tunnels as shown in Work Paper K7 (AX 10) are \$98,033 for the claim reach cost and \$10,092 for the reference reach cost. The same type of costs are included in the July 22, 1974, claim submission (AF 115) in the amount of \$66,576 (Tr. 804-07).

²²⁰ The cleanup costs come from two ledger accounts, one for Tunnel No. 3 and one for Tunnel No. 3A. The combined figures for cleanup are \$61,752 for the claim reach cost and \$4,507 for the reference reach cost. The same type of costs are included in AF 115 in the amount of \$16,994 (Tr. 807-08).

²²¹ AX 77 has been replaced by AX 84 (n.216, *supra*) and that exhibit has in turn been replaced by corrected AX 84 (*see* n.1, *supra*). We have referenced AX 77 in our discussion

January 15, 1981

the same basis as has been described for Roman Numeral I (Excavation). In the aggregate the three categories of costs total \$2,165,109, as is shown on AX 77 opposite Roman Numeral IV (Total Increased Direct Costs due to Changed Conditions).

Mr. Stone also testified with respect to Roman Numerals V through XIII except for Home Office Overhead. With respect to Roman Numeral V (Consultant's Services), the claim is said to represent payments made to A. A. Mathews, Inc., for consulting services not related to the prosecution of the claim.²²² Copies of supporting invoices are contained in Work Paper M of AX 10. Roman Numeral VI (Escalation on Job Materials Purchased After Oct. 9, 1972) involves a claim in the amount of \$33,067. The details pertaining to the claim are contained in Work Paper L of AX 10, a work paper prepared by Mr. Eldridge or Mr. Green with the total amount shown on the work paper being simply brought forward without change to AX 77. In Roman Numeral VII (Additional Mole Rental) the contractor makes claim for this item in the amount of \$22,058. The backup for this claim is contained in Work Paper N (AX 10) which was apparently prepared by Mr. Green.

²²² AX 78 (covering at least some of the consulting services rendered by A. A. Mathews, Inc., in connection with the DH 116 Claim and the Navajo 3 and 3A stress claim) was introduced in evidence for the purpose of highlighting that the amounts paid for consulting services of that nature were not included in the claim (Tr. 810-14).

Here again the total from the work paper was carried forward by Mr. Stone to AX 77 (Tr. 814-15).

A major claim item is Roman Numeral VIII (Additional Project Indirects due to Prolongation on the Contract). The claim is in the amount of \$826,361. Data pertaining to the claim is included in Work Paper O (AX 10), a work paper prepared by either Mr. Eldridge or Mr. Green. Mr. Stone stated that the total amount claimed for this item on AX 77 is simply a combination²²³ of lines 24 and 25 of Work Paper O.

Another major claim item is Roman Numeral IX (Home Office Overhead). On AX 77 this claim item is shown to be in the amount of \$341,330.²²⁴ Offered in support of this item was AX 79, a paper prepared by Mr. John Schulz, Controller of Fluor Utah. The paper shows total company revenue, home office costs and the derived percentage figures for the years 1971, 1972, 1973, and 1974 (*i.e.*, the years of

²²³ The following colloquy occurred on direct examination:

"Q. Why did you combine the amounts on those two lines?

"A. Because we now have only one claim.

"Q. What were the two lines before you combined it, what were the two lines on the work paper?

"A. It was the total line and the line just above it was DH 116 claim.

"Q. Which had previously been a deduction to arrive at the total on the work paper?

"A. Yes.

"Q. So you just put it back in?

"A. Yes." (Tr. 815).

²²⁴ In AX 84 the amount claimed for this item was increased to \$345,122. In correcting AX 84 which accompanied the appellant's opening brief the figure has been reduced to \$336,234. See n.1, *supra*.

contract performance). Mr. Schulz testified ²²⁵ that the figures for total revenue and home office costs for the years involved were extracted by him from the books and records of Fluor Utah which had been kept in the ordinary course of business.

Roman Numeral X (Premium on Bond Surcharge) involved a claim in the amount of \$8,280. The claim is for reimbursement of a surcharge over a period of 20 months at \$414 per month. Concerning this claim item Mr. Stone stated that it was a number he had picked up from the summary of additional costs due to rock failures (AF 115).²²⁶

Still another major item of claim is Roman Numeral XI (Profit at 10 percent). The amount claimed in AX 77 of \$342,465 ²²⁷ represents a figure derived from multiplying the subtotal of Roman Numerals IV through X by the 10 percent claimed as profit.

Roman Numeral XII (Bond Premium on Increased Contract Amount at .4 percent) involves a

claim of \$15,068 ²²⁸ on AX 77. This is another derived claim item being the result obtained from multiplying the subtotal of Roman Numerals IV through XI by the .4 percent claimed for additional bond premium.

Roman Numeral XIII (New Mexico Gross Receipts Tax at 4 percent) represents a claim for reimbursement in the amount of \$151,287.²²⁹ This is still another derived figure as it was obtained by multiplying the subtotal of Roman Numerals IV through XII by the 4 percent claimed for the New Mexico Gross Receipts Tax.

Following the conclusion of his direct testimony with respect to AX 77, Mr. Stone gave further testimony concerning the equipment rates used in the claim. Commenting upon AX 80,²³⁰ Mr. Stone states that based upon the equipment items selected for comparison the amounts included in the claim for equipment are lower overall than would be the case if the applicable AGC rates in effect in 1970 had been used. (Tr. 823).

On cross-examination Mr. Stone denied that he had testified that he

²²⁵ On cross examination Mr. Schulz stated that the figures in AX 79 did not include any amounts for (i) contributions or donations; (ii) losses on other contracts; (iii) interest; (iv) premium on bonds; or (v) subsidiary companies. While acknowledging that some business entertainment expenses were included in the figures submitted, Mr. Schulz was unable to say offhand the amount involved. Some company-type advertising was also included in the figures but in Mr. Schulz's opinion the amount so included would have been a minor amount which he imagined would be in the realm of five to ten thousand dollars a year for each of the years involved (Tr. 860-64).

²²⁶ Earlier Mr. Stone had testified that he had been successful by and large in tracing all the figures in AF 115 except for the bond surcharge for 20 months at \$414 per month (Tr. 787).

²²⁷ Tr. 820. In AX 84 the amount claimed for this item is \$346,261. Corrected AX 84 (n.224, *supra*), shows the claimed amount to be \$335,159.

²²⁸ Tr. 820. In AX 84 the amount claimed for this item is \$15,235. Corrected AX 84 shows the claim for this item to be in the amount of \$147,470. See, however, n.1 *supra*.

Mr. Stone acknowledged that the percentage figure employed had been obtained from AF 115 (see n.226, *supra*).

²²⁹ Tr. 821. AX 84 shows the amount of this claim item to be \$152,964, while corrected AX 84 shows the applicable figure to be \$148,060.

²³⁰ AX 80 is a memorandum from Mr. C. H. Coulson to Mr. Stone under date of May 5, 1976, in which Mr. Coulson (then an assistant to Mr. Stone) states:

"[T]he average 1970 AGC rate appears to be higher than our average claimed rate."

had been able to tie the data in AX 10 to the contractor's ledgers.²³¹ Interrogated as to his knowledge of other matters, Mr. Stone was unable to say (i) whether equipment costs, insofar as they involved idle time, had been prepared in accordance with Paragraph 17; (ii) whether the equipment in the third shift referred to on page G3.2 of AX 85 was operating; or (iii) whether the figures shown on the claim reach side of Roman Numeral VIII of AX 84²³² included an amount for the New Mexico Gross Receipts Tax.

4. *Digest of Testimony of Dr. Ronald Eugene Heuer (Tr. 390-554, 1275-79)*

Dr. Heuer was an important witness for the appellant, not only because of his expertise in the field of soil and rock mechanics²³³ but

²³¹ Immediately thereafter the following exchange took place:

"Q. You didn't say that?

"A. (Indicates negatively).

"Q. Well, were you able to do that?

"A. I did not attempt." (Tr. 1083).

²³² Mr. Stone also appeared to be uncertain as to whether Roman Numeral VIII (Additional Project Indirects due to Prolongation of the Contract) of AX 84 included general and administrative expenses for the project. This was so even though Mr. Stone's attention was directed to Work Paper O (AX 10) which he had testified was the supporting data for Roman VIII and which has a column labeled G & A under which are figures that are reflected in the total figure carried to AX 84 (Tr. 1094-96).

²³³ Dr. Heuer's doctorate in civil engineering (granted by the University of Illinois in 1971) was in soil mechanics and rock mechanics. His master's degree from the same school was in geology. In addition to his educational background, Dr. Heuer had had extensive consulting experience in the areas of his specialty (AX 19; Tr. 391-94).

also because of the important role he apparently had had in the development of a support program for the tunnels based almost entirely upon the use of rockbolts. When the rock conditions encountered in mid-summer of 1971 resulted in tunnel advance being halted for over a month, the engineering consulting firm of A. A. Mathews, Inc., was retained by the contractor. Dr. Heuer, then an employee of A. A. Mathews, Inc., was given the initial assignment and remained the person principally responsible in that firm for handling problems arising in connection with Tunnel Nos. 3 and 3A.

We previously have considered at length reports which Dr. Heuer authored either entirely or in large part. These reports include Construction Report No. 743 dated Sept. 17, 1971 (AX 5);²³⁴ Construction Report No. 743-3 dated Dec. 23, 1971 (AF 36);²³⁵ and Construction Report No. 1856, May 1973 (AF 77A).²³⁶

In his testimony Dr. Heuer covered much of the same ground and in the same manner as had the referenced reports. Since we have quoted extensively from or otherwise treated these reports in our above discussion, we will give primary emphasis to the testimony Dr. Heuer gave concerning (i) the photographs, sketches and other exhibits offered in evidence through him and (ii) the an-

²³⁴ See n.11 and 12 and accompanying text.

²³⁵ See n.35 to 46 and accompanying text.

²³⁶ See n.67 to 99 and accompanying text.

swers he gave to the basic questions raised concerning the claims asserted. But first, we shall turn to the conditions Dr. Heuer observed on his initial visit to the site.

Dr. Heuer's first visit to Tunnel No. 3 was on July 16, 1971. The following day he prepared a handwritten report (AX 20). The report describes the general rock types that Dr. Heuer observed²³⁷ and contains sketches of the fractures and failures visible to him in the excavated portions of the tunnel. The sketches are accompanied by explanatory comments among which are the following:

Failures showed some relation to joints or bedding [²³⁸] but most striking was the fact that fractures generally cut through "intact" rock, generally with "curved" or "dished" failure surfaces.

Shear movement and buckling of pans in many places has occurred after bolts and pans were placed.

Sections about 150-200 ft. in from portal shows shear displacement low on sidewalls with crumpling and shearing in the crown.—16" wide sheet metal pans (on rock bolts) in arch show buckling due to compressive movements, some have occurred recently, far behind heading (AX 20, p. 5).

Section near portal shows fallout in

²³⁷ After noting that the geology, in general, was very similar to Navajo Tunnel Nos. 1 and 2 (sedimentary rocks, very flat lying, dip 2 degrees or less), the report states:

"Sandstone and siltstone predominates, contains interbeds and lenses of shale.—Shale interbeds can range up to perhaps 20 ft. thick, as seen in cliffs above #3 outlet tunnel.—Shale lenses can be very irregular in tunnel, vary from paper thin to 3' thick. Lenses may be 3' thick on one wall, almost nonexistent on other wall. Present problem in shale interbed or lens grew from nothing to nearly full face." (AX 20, p. 3).

²³⁸ Elsewhere the report states: "[B]edding and jointing in tunnel very indistinct generally, can only be seen in a few places" (AX 20, p. 4).

arch going up perhaps 2' to what is generally a shale seam. Breach occurred through fresh rock, not along joints. Fall occurred before bolts could be placed, pans are bent to shape of fall.

Similar failures occurred further in. Crown fallouts generally occur immediately behind dust shield, about 4' back of face, 8' ahead of rock bolt augers.

(AX 20, p. 6).

Introduced as illustrative of what Dr. Heuer saw in his first visit to the tunnel were four photographs (AX 21, 22, 23, and 24). Relating these photographs to the sketches made of the conditions observed (AX 20), Dr. Heuer stated that while the photographs were not taken on the day of his visit, they show the things which could be seen in the tunnel that day. AX 21 shows spalling at spring line attributed to the action of the gripper pads; AX 22 illustrates fractures that had formed in the rock looking toward the heading on the left side of the upper quarter arch, a few feet left of the spring line.²³⁹ AX 23 shows cracks in the lower quarter arch. The same situation is illustrated on page 5 of AX 20 where at the bottom of the circle shown there is an arrow pointing to the fracture accompanied by the words "offset $\frac{1}{2}" \pm$." AX 24 portrays shearing deformation of the rock, which is also shown in the sketch on page 7 of AX 20 and Figure 6 of the May 1973 report (AX 77A). In connection with AX 24, Dr. Heuer also noted that a large cavity in the cen-

²³⁹ The same type of fractures are illustrated on page 6 of AX 20 but in the crown. As to this aspect, Dr. Heuer states: "As the tunnel progressed into the mountain, the location of that fracture and fallout varied around the crown" (Tr. 404).

ter of the picture is where a large wedge of shale sheared and fell out.

According to Dr. Heuer, "a shear type of failure means that the material has been overstressed and it deforms in a shearing motion" (Tr. 407). Amplifying upon this answer he noted that in connection with the doctoral thesis for his Ph.D., he had made a model study on behavior of tunnels in high stress fields. A number of exhibits were introduced as background for the conclusions reached in the model study.²⁴⁰ In order to further explain shear type failures, Dr. Heuer drew six sketches showing rock failures in the two common failure modes (shear failure mode and extension failure mode). Other exhibits introduced to show fractures around tunnels due to overstressed ground were AX 38 (extension fracturing) and AX 39 (shear fracturing).

In his thesis Dr. Heuer had noted that he had not been able to find documentation for shear failure modes²⁴¹ but only for extension failure modes. He had anticipated where documentation for the former might be found, however, and read the following into the record from page 307 of his thesis (AX 40):

This question might be answered by observation of the failure mode about machine circular tunnels. The study should be made in such a tunnel in a fairly brittle rock, for example a sand-

stone rather than a shale, which is massive and at a depth such that the vertical free field stress is approximately equal to the rocks unconfined compression strength. Such a field situation would approximate the model situation very closely and should exhibit the same failure mode if the models do in fact, achieve the desired degree of similitude.

Immediately following the reading of the above quote, Dr. Heuer stated: "And there they were." The following colloquy then ensued:

Q. Does "there they were" mean that when you walked into Navajo Tunnel you had found this very thing that you described, with the massive rock and the appropriate cover [²⁴²] and all of the rest of the qualifications that you just read from your thesis?

A. Yes.

(Tr. 433-34).

On subsequent visits to the site²⁴³ Dr. Heuer saw many other examples of the type of rock failures he had seen on his first visit, as exemplified by all but one of 34 photographs²⁴⁴ received in evidence. Wherever possible, Dr. Heuer undertook to provide exact stationing as shown below:²⁴⁵

²⁴² On his first visit, Dr. Heuer had been conscious of cover, stating: Depth of cover over No. 3 is typically 400 ft. or less, but one length of $\pm 4000'$ reaches 1170 ft. of cover. Cover over No. 3A is less than 280 ft." (AX 20, p. 2).

²⁴³ Besides the initial visit Dr. Heuer visited the site at least ten more times, several of which were in the 6 months following July 16, 1971 (Tr. 437-38).

²⁴⁴ See AX 41, 42, 43, 44A, 44B, 44C, 44D, 45, 46, 47, 48, 49A, 49B, 49C, 49D, 50A, 50B, 50C, 50D, 51A, 51B, 51C, 52, 53A, 53B, 53C, 53D, 54A, 54B, 54C, 55, 56A, and 56B. All but AX 56B (photo of Zoo Park Station Pilot Tunnel, Washington, D.C.) are of Tunnel No. 3 (Tr. 438-63).

²⁴⁵ With respect to AX 52 he testified that it was taken some where between Stations 855 and 856.

²⁴⁰ See AX 25-31; AX 39. The thesis itself is AX 40 (Tr. 406-13, 427-29, 437).

²⁴¹ The search in the literature for documentation of shear failure modes was being conducted by Dr. Heuer in late 1968 (Tr. 434).

AX 56A-----	(1/11/72)-----	827+60

Sometimes he could only provide approximate stationing.²⁴⁶ In some cases only the approximate time periods²⁴⁷ in which the pictures were taken were known.²⁴⁸

²⁴⁶ Approximate stationing was given for the following:

Exhibit No.	Date	Stationing
43	Fall of 1971/ spring 1972	Between 835 and 855
54A	August of 1971	Vicinity of DE 116
55	Fall of 1971	Between 835 and 855

²⁴⁷ For the following exhibits time periods but no stationing were given:

Exhibit No.	Period in Which Picture Taken
AX 41-----	Fall of 1971
AX 42-----	Fall of 1971
AX 44A-----	Fall of 1971
AX 44B-----	Fall of 1971
AX 44C-----	Fall of 1971
AX 44D-----	Fall of 1971
AX 45-----	Fall of 1971
AX 48-----	Prior to preparation of AX 4 in spring 1972
AX 53D-----	February 1973

²⁴⁸ Except for AX 53D, all the photographs listed in n.247, *supra*, were taken by Dr. Heuer,

While all of the photographs introduced by Dr. Heuer were discussed to some degree, his comments upon a number of them were particularly significant in terms of developing the patterns by which rock failures in the shear mode or in the extension mode are recognizable. A pair of photographs (AX 41 and 42) taken by Dr. Heuer in the fall of 1971 show the left wall of the tunnel looking toward the heading. They show fractures above and below the fan line, angling back into the wall isolating a wedge behind the fan line. Concerning AX 43 he noted that it and Figures 5 of AX 4 are photographs taken on top of the mole around the

prior to preparing AX 4 in early 1972. Concerning the lack of stationing, he stated: "Yes. I wasn't thinking of a claim presentation at the time and I didn't sufficiently identify the time and place in which they were taken" (Tr. 445).

rockbolting operations. He called attention in Figure 5, to a fracture in the rock showing up immediately above the rockbolt drill, a curved fracture starting about in the center of the photograph and angling back to the left, revealing a rock block which is being isolated by a fracture.

Dr. Heuer drew a sketch (AX 57) to illustrate the excavated perimeter of the tunnel arch showing above that two families of shear planes, potential shear planes. With respect to the sketch he noted (i) that the two intersecting families interforge a number of wedges; (ii) that they form sawtooth, irregular sawtooth lines bounded by shear surfaces; (iii) that the wedges below the sawtooth line represent wedges which have been loosened and detached from the wall because of the formation of shear fractures due to overstressing of the rock; and (iv) that the significant thing is the pattern of irregular sawtooth excavation parameters. Then Dr. Heuer called attention to the fact that in Figure 5 of AX 4 and in AX 43 you can see the very thing illustrated in the sketch, the irregular sawtooth surfaces formed in the crown after these wedges have been isolated by the shear fractures and allowed to fall into the tunnel.

Concluding this phase of his testimony Dr. Heuer stated that one distinctive thing about a shear fracture is the curved failure surface while another is the very fresh appearance of the fracture (a fresh fracture through virgin intact

rock). As illustrative of this fresh fracture through intact virgin rock, Dr. Heuer pointed to AX 22 and to photograph 2 of AX 5 (Tr. 453-55).

Cited as an example of shear fracturing in an early stage is Figure 13 of AF 77A (Station $826 \pm (1/28/72)$). Said to illustrate what happened in that general area in the tunnel over a period of time are AX 44A, B, C, and D. A picture in the same general area (Station 828) is the bottom photograph in AX 46, showing extension slabbing and spalling. As to these several photographs, Dr. Heuer stated that what he was showing were examples, fracturing, failure of the rock due to overstressing, sometimes in the shear mode and sometimes getting into the extension failure mode.

Concerning AX 51A and C and AX 52, Dr. Heuer said that these photographs show that the material above the crack has moved inward, there has been a shearing displacement.

Dr. Heuer also described the effects of the failures he had observed in a 1½-inch diameter hole drilled radially up into the crown of Tunnel No. 3 at Station 851 on October 26, 1971. Using a sketch to illustrate his testimony (AX 58), he said that if the hole had been through virgin intact rock and you looked up it, you would have seen a simple circle as shown in Figure 1-B. Looking up the hole actually made, however, you see (as shown in Figure 2-B) a short distance up the hole an arc

that shows the hole which has been offset by a sliding shearing motion along a crack in the rock.

In the course of his testimony Dr. Heuer referred to three large drawings²⁴⁹ which accompanied the May 1973 report (AF 77A). He undertook to explain what these drawings show above the profile. Of particular interest were his comments on the bar chart labelled "Progressive Failure After Excavation" which he noted shows three divisions: (i) an uncolored or open section (little to no visible progressive failure); (ii) slightly darker, lightly shaded (labelled "Some Progressive Failure"); and (iii) heavy shading, darker (labelled "Significant Progressive Failure"). Dr. Heuer also called attention to the fact that the notes above the bar chart describe in more detail the type of progressive failure which occurred and to the fact that the number of photographs submitted by him dated Feb. 6 or 7, 1973. (n.245, *supra*), had been taken by the contractor at his request to illustrate the sort of thing depicted in the bar chart.

Above the bar chart there is a graph labelled "Invert Elevations Relative to A Line" reflecting information obtained from the "Brewer Survey (Sept. 1972)," the "Owner Survey," and the "Spider Survey,"

²⁴⁹ Drawings R2093, R2094, and R2095. The actual drafting was not done by Dr. Heuer but he prepared the data which the draftsmen used in preparing the drawings. Data came from observations made in the tunnel on Feb. 2 or 3, 1973, and from tabulations supplied by the contractor which had been abstracted from his daily shift reports, as well as information which the contractor gave Dr. Heuer that had come from the Bureau (Tr. 466-74).

a survey made by the contractor in February of 1973, immediately following Dr. Heuer's visit. The "Spider Survey" was made to try and determine the elevation at which Tunnel No. 3 had been actually bored. Still higher in a series of notes across the top of the drawings labelled "Areas of High Invert Requires Removal of Tights Before Invert Concrete Placement." Along the length of the tunnel is shown the amount of material which had to be chipped out of the invert in order to place the required thickness of concrete.

Answering questions posed as to the conclusion he had reached with respect to the causes of the rock failures he had described, Dr. Heuer stated that the failures were not due to (i) unusually high stresses in the sense of stresses which are higher than those which might have been anticipated; (ii) stress relief;²⁵⁰ or (iii) fallouts along joints and bedding planes.²⁵¹ He acknowledged, however, that there were cases in the Navajo Tunnel where fractures forming through intact rock, shear fractures, for example, which would propagate back into the virgin rock

²⁵⁰ While acknowledging that some of the failures he observed might possibly be interpreted as stress relief fractures, Dr. Heuer

considered that they were more likely extension failures due to overstraining, as he states: "[B]ut when right next to it you see another curved shear [sic] fracture, you know that overstraining failures are occurring, which leads one to suspect that the fracture in question was an overstraining fracture and an extension failure mode" (Tr. 477-78).

²⁵¹ AX 56B and AX 60 through AX 66 illustrate fallout along joints or bedding planes in other tunnels, in other geologic situations. Fallout and separation along joints and bedding planes in tunnels are characterized by flat planar surfaces bounding the fallout.

around the tunnel until they intersected a nearly horizontal bedding plane, terminating there. The rock wedge isolated by the curved shear fractures and the flat bedding plane would then drop out. Dr. Heuer stated that this type of behavior is illustrated in photographs 1 and 2 of AX 5 and in Figure 2.14, page 2-28, of AX 38.²⁵²

Dr. Heuer stated that in September of 1970, he could have predicted that failures of the sort he described would occur. In explaining his answer he noted that the depth of cover over the tunnels was indicated in the plans and specifications; that the materials report available to a contractor upon request showed that the BOR had run unconfined compression tests on rock samples and that they had had failures at stresses which were relatively low; that the weakest 60 percent of the sandstone averaged about 770 psi; and that when you compare that strength with the 2,000 psi you might expect in the wall of the tunnel, you see that the material is overstressed and you would predict²⁵³ it would fail. Dr. Heuer would not have been able to predict, however, how fast the fail-

ures were going to occur.²⁵⁴ Also noted by Dr. Heuer were the progressive failures he had observed²⁵⁵ and which were chartered across the large drawings which accompanied AF 77A.

In Dr. Heuer's opinion the type of failures to which he testified had not been indicated in the contract. In support of this opinion, Dr. Heuer noted that the main problem during excavation was the rapid rate of failure and that there were no provisions in the contract which call attention to the need for (placing) support any closer than the contractor actually installed it (Tr. 499-501).

Asked for his interpretation of Paragraph 50 of the specifications and more specifically a particular subparagraph ("Government testing indicates that many of the sandstones, shales and siltstones to be excavated will deteriorate or disintegrate rapidly when exposed to air or water or when stress relieved or a combination of the three"),²⁵⁶ Dr. Heuer stated that the subparagraph did not indicate the type of failures

²⁵² AX 67 also contains illustrations of fallout to joints and bedding planes in rock tunnels. Although noting that fallout to joints and bedding planes is a very common behavior problem in rock tunneling, Dr. Heuer stated that Mr. Hayes, in his report (AX 1), had described how he did not anticipate the problem due to the massive character of the rock (Tr. 488-92).

²⁵³ Dr. Heuer made a point of saying, however, that he had not testified that a common contractor (as opposed to people well versed in rock mechanics) could have predicted the failures which occurred (Tr. 550-51).

²⁵⁴ At Navajo the failures were said to have occurred immediately. Figure 5 of AX 4 was cited as an example of immediate failure with the rock from the fallout lying on the partial shield of the mole (Tr. 498).

²⁵⁵ According to Dr. Heuer the progressive failures could take days, weeks and months (or perhaps even years) to develop. Figure 13 of AF 77-A, AX 46, and other photographs in this same general area (Station 826 to 828) were said to illustrate progressive failure (Tr. 498-99).

²⁵⁶ Tr. 501-04. Asked whether there was anything else in the contract which indicated the things that had actually occurred and which had impeded the contractor's operations, Dr. Heuer answered "No" (Tr. 504).

which the contractor actually encountered. In support of this interpretation, Dr. Heuer said that later provisions in Paragraph 50 indicate that the problems of disintegration or deterioration due to air or water or stress relief could be solved by the application of protective coatings, by the use of a subinvert or by pumping water out of the tunnel and not allowing it to flow in the invert, after which he stated:

The problems which I've described, the overstressed problems to the large fractures falling out could not have been resolved or solved or prevented by any of those means. This just does not convey to me what I saw in the tunnel. It does not provide for control of what I saw in the tunnel.

(Tr. 504).

Queried as to whether the deterioration, disintegration, and fallout in the vicinity of DH 116 had been caused by water,²⁵⁷ Dr. Heuer stated that while water had had a part in what happened there, it was not primarily responsible for the magnitude of the failures that occurred.²⁵⁸ Nevertheless, he considered that the water problems encountered at Navajo were more severe than he had seen elsewhere in tunnels.

Dr. Heuer said that if he had been assisting in the preparation of the bid estimate in 1970, he would not have anticipated some of the

problems that occurred, because he did not believe that the very low strength of these very reactive materials and their sensitivity to water was indicated by any information that would have been available to him. Elaborating upon his answer, Dr. Heuer said that the water immersion test data tabulated in the materials report available to contractors from the BOR describes sandstone as the most water reactive material and shale and siltstone as less so, while, in fact, in the tunnel it was exactly the opposite.²⁵⁹ He did not consider it unexplainable that the sandstone did appear to be very reactive, however, for it was a very weak material, very poorly cemented, and depending on the nature of the cementing agent, it could be very water reactive.

Another hypothetical question was addressed to Dr. Heuer based upon the assumption he had been part of the contractor's bidding team in 1970. Knowing the Government's estimate as to the overburden on the tunnel and assuming the tunnel was going to be excavated through the type of rock described, he was asked whether he would have considered the amount of overburden presented a serious problem in terms of overstress. Dr. Heuer said that he would have.

On cross-examination Dr. Heuer stated that when the A. A. Mathews firm was engaged as a consultant,

²⁵⁷ Disintegration and deterioration due to water alone is said to be shown in the top photograph of AX 46 (Tr. 505).

²⁵⁸ Page 9 of AX 20 was said to illustrate the interaction of water and oversteering. While the area involved was just short of DH 116, it was in the same area and involved problems of water and shale and large fallout (Tr. 505-06).

²⁵⁹ Immediately thereafter Dr. Heuer stated: "[T]here were minimal if any problems with water sensitivity in sandstone materials; but the shale and the siltstone materials were extremely water sensitive and caused a great deal of trouble" (Tr. 508).

the problems the contractor was having were that material was falling out of the sides and crown of the tunnel and that difficulties were being experienced in supporting the tunnel and maintaining it in a stable condition. The recommendation of the consulting firm for supporting the tunnel are contained in the Dec. 23, 1971, report (AF 36).

After ascertaining that the materials used in the model tunnel were considered to be of a homogeneous and isotropic nature, Government counsel interrogated Dr. Heuer as to the extent to which Tunnel Nos. 3 and 3A had been driven in materials of this nature. Responding to these questions Dr. Heuer stated (i) that the Nacimiento formation as a whole was not a homogeneous and isotropic formation; (ii) that the entire section of that formation in which Tunnel Nos. 3 and 3A were driven was not; (iii) that the entire portion of these tunnels which are within the claim reaches were not comprised of homogeneous and isotropic materials; (iv) that because of the relatively flat dip of the structure of the beds, anytime you had a section which was relatively homogeneous and isotropic that would continue for a long distance in the tunnel with no interbedding of any other material; and (v) that an example of homogeneous and isotropic materials in the tunnel would be sections consisting of pure sandstone (Tr. 534-36). Upon redirect examination the attention of Dr.

Heuer was directed to AX 4 and GX P,²⁸⁰ after which he was asked how he was using the term "deterioration" in those two exhibits. Dr. Heuer said that as he used the term "deterioration," it meant "a reduction in quality, a getting poorer, if you will" (Tr. 538-40).

Near the conclusion of his testimony Dr. Heuer was asked whether if the tunnel had been supported with steel the problem he had described would have been alleviated to a considerable extent. He said that simply installing steel would not have alleviated most of the problems and that practically speaking he did not think that the steel sets could be installed any closer to the heading than they were installing the rockbolts (Tr. 549).²⁸¹

5. Digest of Testimony of A. A. Mathews

(Tr. 554-618)

A. A. Mathews, a construction engineering consultant, gave testimony supporting that given by Dr. Heuer with respect to many of the key issues involved in this appeal. At the time he testified, Mr. Mathews had had 40 years' experience as a professional engineer of which he estimated more than 50 percent was related to tunneling and under-

²⁸⁰ GX P was page 49 of an earlier draft of AF 77A. (See n.75, *supra*.) Both GX P and GX Q (see n.106-112, *supra*) were received in evidence over objection of appellant's counsel. Another exhibit introduced in evidence on cross-examination was GX R (letter to the contractor from A. A. Mathews, Inc., dated Nov. 2, 1971 (n.43, *supra*)).

²⁸¹ See n.74, *supra*.

ground work.²⁶² Prior to the A. A. Mathew, Inc.'s firm being retained by the contractor in July of 1971, the firm had been a consultant to the contractor responsible for construction of the Azotea Tunnel.²⁶³ He personally participated in the engagement relating to the tunnels involved in the instant appeal²⁶⁴ by visiting the site, by assigning Dr. Heuer responsibility for handling problems arising with respect to Tunnel Nos. 3 and 3A, by reviewing reports submitted to the contractor by Dr. Heuer, and by concurring in his recommendations.

From the observations he made in the tunnel and from the reports reviewed by him, Mr. Mathews concluded that the rock failures the contractor was experiencing in the tunnel were due to what he termed "geodynamic pressures." This was a term "coined" by Mr. Mathews which he defined as "pressures on the tunnel structure that are mobilized when the stresses from the surrounding rock exceed * * * its strength" (Tr. 564). He knew that he was seeing failures resulting from geodynamic pressures because he observed cracking that was described in detail by

Dr. Heuer and which he considered to be unique²⁶⁵ to a failure resulting from geodynamic pressures. Mr. Mathews did not believe that the failures he was seeing were fallout to bedding planes or joints for the most part;²⁶⁶ nor did he consider the failures he observed to be the result of stress relief.²⁶⁷

Mr. Mathews gave as his opinion that the contract documents indicated that the contractor should only have to consider support due to loosening of the ground by which he meant loosening due to rock defects. After noting that the contract documents provide for several options with respect to supporting the ground, Mr. Mathews stated that none of them were suitable for resisting geodynamic pressures. He also expressed the view that the occurrence of geodynamic pressures in

²⁶⁵ In developing this position on cross-examination Mr. Mathews stated:

"Well, it's the shape of the fractures that indicate the reason for the failures * * *. These fractures running up on a curved surface that had nothing to do with the bedding planes, that fractured in intact rock, and if one of them happened to eventually intercept the bedding plane and the failure occurred, then the bedding plane would be a natural termination for the failure" (Tr. 588).

²⁶⁶ While occasionally fallouts terminated at bedding planes, that was considered to be only coincidental having nothing to do with the instigation of the failure (Tr. 564-65).

²⁶⁷ In Mr. Mathews' view the term "stress relief" when properly used describes what occurs when in excavating a tunnel you take the rock away thereby removing a pressure that at one time served to maintain the stress in the rock. Explaining why he uses the term "stress relief" interchangeably with stress redistribution or stress concentration, Mr. Mathews stated: "When you remove this rock and remove this pressure you also, if you are deep enough, will be mobilizing the geodynamic pressure which causes the stress redistribution, so the act of permitting stress relief on the surface induces these other things" (Tr. 608-09).

²⁶² The résumé of Mr. Mathews' experience (AX 68) does not include all of his experience in bored tunnels (Tr. 559-61).

²⁶³ Azotea Tunnel was the first tunnel the BOR ever had bored (Tr. 618). The size of the bore excavation on the Azotea Tunnel was about 9 feet (Tr. 599).

²⁶⁴ Mr. Mathews' initial visit to Tunnel No. 3 was in July of 1971. Following that visit he was the author of a letter to the contractor under date of July 24, 1971 (GX 8). He made one or two additional visits to Tunnel No. 3 while it was being excavated. Mr. Mathews did not visit Tunnel No. 3A during construction (Tr. 561-63).

a moled tunnel was a very rare phenomenon and that prior to September of 1970 he had only observed the phenomenon once before and that was in Azotea Tunnel.²⁶⁸ Mr. Mathews stated that the failures in Tunnel No. 3 were not the result of defects in the rock but were the result of geodynamic pressures.

Mr. Mathews was asked for his expert opinion as to the best means of supporting Tunnel No. 3 bearing in mind the conditions that actually exist in that tunnel. He prefaced his answer by stating that one principle that has generally been accepted where you have geodynamic pressure is that you have to permit the ground to relieve itself, to come in in order to reduce the pressure to a value which can be tolerated or handled. Given that requirement, it would have been possible to support the tunnel with (i) full circle steel ribs;²⁶⁹ (ii) shotcrete as long as it is put around the full circle; or (iii) rockbolts. As to item (iii), Mr. Mathews said he was not ignoring the fact that the failures occurred very close to the face and therefore the rockbolts would have to be installed pretty close to the face. He categorically stated that the tunnel

could not be supported with half circle steel ribs.²⁷⁰

On cross-examination Mr. Mathews stated that the observations he had made concerning the support systems for the tunnel were based upon his study of the specifications, particularly Paragraphs 50, 53, 54, 55, 56, 57, 58, 59, and 60. He considered these to deal primarily with the difficulty in driving the tunnel. Mr. Mathews acknowledged that the contract drawings indicated a possibility of using a full circle steel rib. Mr. Mathews also testified (i) that the falling rock he had testified about did not involve homogeneous and isotropic materials; (ii) that in drill and blast tunnels, rock failures due to geodynamic pressures²⁷¹ were an expected phenomenon; (iii) that the water conditions he had observed in Tunnel No. 3 were similar to those he had observed in the Azotea Tunnel.²⁷²

Predicated upon his experience as an estimator, Mr. Mathews was asked a number of questions concerning whether the depth of over-

²⁶⁸ In Azotea Tunnel the heading was at least a mile ahead when the phenomenon was first observed (i.e., the fallout did not occur immediately as it did at Navajo) (Tr. 569-70).

²⁶⁹ On redirect examination, Mr. Mathews testified that full circle steel ribs installed in the manner specified in the contract would not have supported the rock in Tunnel No. 3. Nor did he consider that any of the methods of supports illustrated on the contract drawings and installed in the manner required by the specifications would have supported the rock in Tunnel No. 3 (Tr. 613).

²⁷⁰ In support of this view he stated: "[G]eodynamic pressures are exerted all the way around a periphery and in Navajo Tunnel number 3 it's a matter of record that the bottom did come up. So obviously a half cycle support is supporting the top half and is not going to supply any support to the bottom half" (Tr. 612).

²⁷¹ It was Mr. Mathews opinion that if the Bureau had anticipated the geodynamic pressures they probably would have required the excavation to be done in such a way as to permit some of the ground to move into the tunnel without encroaching on the A line (Tr. 570-72).

²⁷² Mr. Mathews had observed very little water in the Azotea Tunnel (Tr. 602).

burden or cover over the top of the tunnel was a relevant factor to consider in submitting a bid.²⁷³ In a case where it was assumed that the contractor did not know about problems attributable to geodynamic pressures, Mr. Mathews stated that the depth of cover would not be relevant to estimating a tunnel job, insofar as the difficulty in excavating or supporting the ground were concerned. Later, Mr. Mathews, was asked whether if he had looked at the material in the contract and had made an adequate site investigation of the area involving Tunnel No. 3, he would have considered that the amount of cover was relevant to determining the stress that the contractor would encounter in the tunnel. In response he stated that a person would have to have a very strong qualification in geology in order to have foreseen the possibility of geodynamic pressures developing in Tunnel No. 3. Mr. Mathews said that had he been involved personally in estimating the job for the contractor in 1970, he did not think he would have expected the development of geodynamic pressures in Tunnel No. 3 and he knew he would not have if he had not had the experience in the Azotea Tunnel (Tr. 607-08, 615-16).

²⁷³ Concerning the relevancy of the cover question, Mr. Mathews stated that geodynamic pressure is not present at shallow depth; that for any given type of rock it would be necessary to be down to some depth before the geodynamic pressure would develop; that in between a nominal amount of cover and the point where geodynamic pressure became a problem, the depth of cover is not important; and that rock which is loosened because of defects in the rock is independent of the depth of cover (Tr. 607-08).

B. Testimony of Government's Witnesses

1. Summary of Testimony of Dr. J. W. Hilf

(Tr. 624-713)

Dr. J. W. Hilf, an expert in the field of rock mechanics, gave important testimony in the area of his specialty. At the time he testified Dr. Hilf had had very extensive experience with dam projects of which about half had had tunnels in them. From 1946 until 1962 he was employed by the Bureau in the design office in Denver, specializing in geotechnical engineering,²⁷⁴ soil mechanics and foundation engineering.²⁷⁵ In 1966, Dr. Hilf became Assistant Chief, Designing Engineer, Division of Design, Bureau of Reclamation. In 1970 he was made chief of the division in which capacity Dr. Hilf served until May 1975 when he resigned from the Bureau to become a consulting engineer in private practice.

The technical provisions of the specifications and the drawings involved in this appeal were prepared under the direct supervision of Dr. Hilf. He had also participated in a conference with the contractor's representatives concerning the July 22, 1974, claim submission. Dr. Hilf had

²⁷⁴ Geotechnical engineering encompasses soil mechanics, rock mechanics and engineering geology (Tr. 626). Dr. Hilf's major technical experience has been the geotechnical engineering of earth dams (GX T).

²⁷⁵ Dr. Hilf was graduated from New York University in 1940, with a Bachelor of Science degree in civil engineering. His Masters degree (1948) and his Ph.D. degree (1956), were obtained by him from the University of Colorado (Tr. 625).

not been in Tunnel Nos. 3 or 3A during construction but he was familiar with the geology in the vicinity of the tunnels, as he had visited the general area in 1958 or 1959 during the construction of the Navajo dam. Dr. Hilf had also visited the tunnels in March of 1976 (*i.e.*, following the completion of the tunnels but prior to the hearing).

In addition to the information provided to bidders in the usual core logs, they were advised in Paragraph 42 of the specifications of the availability of a construction and foundation materials test data report (GX U). Table 1 of the report gives the compressive strength²⁷⁶ for the core samples taken along the alignment of Tunnel Nos. 3 and 3A in pounds per square inch (psi). In Tunnel No. 3 the highest and lowest values shown for the 13 samples tested were 6,610 psi and 630 psi, respectively.²⁷⁷ For Tunnel No. 3A the values shown for the eight samples tested vary even more widely ranging from a high of 9,700 psi to a low of 300 psi.

Asked to comment upon Dr. Heuer's testimony with respect to his thesis and his observations in

Tunnel No. 3, Dr. Hilf noted that when Dr. Heuer entered the tunnel for the first time he saw some evidence of shear failures which were remarkably similar to the failures he had observed in the model used for his doctoral thesis. He also noted (i) that the rock used in the model was prepared by Dr. Heuer from sand, plaster of paris and water; (ii) that he cured, instrumented and drilled a hole in the material; (iii) that then he subjected the rock with the hole in it to stresses by means of the testing machine until it failed and (iv) that he observed certain modes of failure.

While conceding that Dr. Heuer quite properly attempted to make a homogeneous material for his rock and was also trying to make an isotropic material, Dr. Hilf said that to relate the results of the model tests to a real life condition involves answers to the questions of whether the rock in the real situation is close to or far from being homogeneous or close to or far from being isotropic.²⁷⁸ Although acknowledging that an intact sandstone or an intact shale can be possibly near homogeneous, Dr. Hilf questioned whether the rock involved in Tunnel No. 3 could be isotropic with regard to strength because of the very nature of the deposition.²⁷⁹

²⁷⁶ The compressive strengths given in Table 1 of GX U were characterized by Dr. Hilf as very low rock strengths (Tr. 636). This assessment is borne out by GX V in which intact rock having a strength of less than 4,000 psi is placed in the very low strength category. See also GX W where rock with a compressive strength of less than 6,000 psi is classified as "soft" (Tr. 636-43).

²⁷⁷ The figure used by Dr. Heuer of 770 psi as the average rock strengths for the lowest 60 percent of the samples was considered to be about correct (Tr. 637).

²⁷⁸ Isotropic means that the material has the same properties in all directions (Tr. 649).

²⁷⁹ Concerning this aspect, Dr. Hilf stated: "As a sedimentary rock, it would have to be deposited in layers, so that it might be massive, but it would undoubtedly have different properties in different directions" (Tr. 650).

Of even more interest in comparing the prototype in the field and the laboratory model is the fact that Dr. Heuer had his model tunnel before he loaded it, or in the words of Dr. Hilf: "He had a hole in there, with a perfectly bald tunnel, and he loaded it, whereas in the ground, the stresses were already there, these stresses due to the overburden, and then the contractor, under this contract, bored the hole" (Tr. 650-1). To make any equivalence between the model tunnel and the ground tunnel, more is needed in Dr. Hilf's view than homogeneity and isotropy. The application of the principle of superposition must also be considered. In cases where the principle applies, it doesn't matter which operation is performed first, insofar as the net result is concerned. The principle of superposition is used with respect to steel and sometimes concrete but, as Dr. Hilf sees it "to use it in a rock material is maybe stretching it too far."²⁸⁰

There were a number of areas where Dr. Hilf agreed with the testimony given by Dr. Heuer. He agreed, for example, that without knowing anything about lateral stresses, it was reasonable to assume that the lateral stresses are equal to the vertical stresses. Dr. Hilf also agreed that theoretically the hori-

zontal stresses could vary from a half to maybe two or three or even more of the vertical stresses.

In addition, Dr. Hilf agreed with Dr. Heuer where in his testimony he referred to tangential stresses of approximately 2,000 psi which could be predicted at the tunnel wall. At the request of Government counsel Dr. Hilf undertook to explain tangential pressures in terms of the model in which he assumed a stress of about 1,000 psi around the model before the hole is drilled, noting that stresses at any point would all be 1,000 psi compressive in every direction in that block. When a hole of any size is drilled in that block, stresses are relieved at the place where the hole is and those stresses can no longer be in the direction radial to the hole. The stresses must be redistributed.

When the stresses are redistributed, the radial stress goes to zero as a result of drilling the hole while the tangential stresses all around the periphery of the tunnel doubles up with the result that if you started with 1,000 psi tangential stress at the boundary it would become 2,000 psi tangential stresses and the normal stresses or radial stresses would be zero. Illustrating when rock might be expected to fail as a result of stresses upon it being greater than its strength, Dr. Hilf states:

So remember the stress redistribution theoretically causes this overburden stress or geostatic stress or whatever you want to call it to say about double.

So if you had three hundred psi stress it would. the tangential would be about six hundred. So any strength of rock less

²⁸⁰ Tr. 648-51. Dr. Hilf considered that the failures Dr. Heuer saw were not attributed by him to stress relief because the procedures followed with respect to the model tunnel had caused Dr. Heuer to look at the failures from the standpoint of stressing from the outside and therefore overstressing, rather than looking at it from the inside when you are removing the restraining stresses by removing the material, i.e., stress relief (Tr. 664-65, 695-96).

than six hundred would be subject to a failure just like an unconfined, in an unconfined compression test.

(Tr. 659-60).

Referring to the testimony he had given concerning the stresses which would be created when the tunnel was bored, Dr. Hilf was asked upon cross-examination whether there would be a stress in the invert of the tunnel. Upon receiving an affirmative answer, Dr. Hilf was also asked whether if the stress exceeded the strength of the rock in the invert, the rock would fail. When Dr. Hilf again responded affirmatively, he was asked whether if there were a sufficient difference between the stress and the strength of the rock, the rock could move. This question also received an affirmative answer.

Immediately thereafter Dr. Hilf was interrogated as to which of the support systems in the contract dealt with upward movement in the invert. Dr. Hilf gave as his answer, "[F]ull circular steel rib."²⁸¹ Defending his answer Dr. Hilf stated that if a full circular rib would support everything, its support of the invert would not be coincidental.²⁸²

²⁸¹ Tr. 688. On direct examination Dr. Hilf had stated that full ring support would be adequate to support Tunnel Nos. 3 and 3A even under worse fallout conditions than had been encountered in the tunnels (Tr. 674-77).

The specifications provision relating to the installation of steel supports reads in part: "a. General.—Where structural steel supports are used to support the roof and sides of the tunnel, they shall be installed as shown on the drawings, as prescribed in this paragraph, and as approved by the contracting officer" (AF 1, Specifications, Par. 56, Structural Steel Tunnel Supports).

²⁸² Tr. 690-91. Interrogated as to where in the specifications or drawings there was an in-

He agreed, however, that installing the supports in the manner prescribed in the specifications for shotcrete,²⁸³ steel reinforcement sheet and shotcrete support,²⁸⁴ and rockbolts²⁸⁵ would not have protected against or prevented any uplift in the invert of the tunnel.

Dr. Hilf was examined at length with respect to the following provision from Paragraph 50²⁸⁶ which was read into the record:

Government testing indicates that many of the sandstones, shales and silt-

dication of the possibility of uplift in the invert, Dr. Hilf stated: "[T]he provision on the drawing for the full circle steel rib would indicate that it would have the capability of supporting the entire perimeter of the tunnel, including the invert" (Tr. 692).

The reason for providing full circle steel support was to be able to handle any kind of a contingency in the tunnel. *E.g.*, where the half circle steel support wouldn't stay up (Tr. 692-93).

²⁸³ Tr. 689-90. The applicable specifications provision reads in part: "a. General.—Where shotcrete is used to support the roof and sides of the tunnels it shall be applied to the surfaces of the tunnels except the surfaces in the tunnel inverts within the following limits: * * * (2) in the lower 70° of circular sections" (AF 1, Specifications, Par. 55, Shotcrete For Tunnel Support).

²⁸⁴ Tr. 691. In pertinent part the specification provision in question reads: "a. General.—Where steel reinforcement sheet and shotcrete support is used to support the roof and sides of the tunnel, they shall be installed as shown on the drawings, as prescribed in this paragraph, and as approved by the contracting officer" (AF 1, Specifications, Par. 56A, Steel Reinforcement Sheet And Shotcrete Support).

²⁸⁵ Tr. 691-92. The governing specification provision reads in pertinent part:

"a. General.—Where rock bolt supports are used to support the roof and sides of the tunnel they shall be of either the expansion-anchor type with both ends threaded, expansion-anchor type with fixed heads at one end and threaded at the other end, or slot-and-wedge type. The rock bolts shall be installed as shown on Drawing No. 13 (809-D-227) and 11 (809-D-330), as prescribed in this paragraph, and as approved by the contracting officer." (AF 1, Specifications, Par. 58, Rock Bolt Supports.)

²⁸⁶ AF 1, Specifications, Par. 50, Construction Of Tunnels, General. See Supplemental Notice No. 3 (9-11-70), p. 28.

stones to be excavated will deteriorate or disintegrate rapidly when exposed to air or water or when stress relieved or a combination of the three. The contractor shall be responsible for providing a clean, undisturbed surface for placement of the lining. He may accomplish this by applying protective coatings under Paragraph 54, installing subinvert tunnel protection in accordance with Paragraph 60, by dewatering in accordance with Paragraph 51, or by removing any deteriorated or disintegrated material back to clean, undisturbed surfaces in accordance with Paragraph 59. If protective coatings or subinvert concrete is not installed, removal of substantial amounts of deteriorated or disintegrated materials is expected.

Upon direct examination Dr. Hilf stated that at the time the specifications for the instant contract were prepared he was the chief designing engineer and that to his knowledge that was the first time in any tunnel specification that the first portion of this paragraph was included in the specifications. He said the reason for its inclusion was the desire of the Bureau to improve the specifications based on the experiences it had already had in the tunnels Azotea, Blanco, Oso, and in Tunnel Nos. 1 and 2 of the Navajo Irrigation Project.

Noting that the Bureau had had trouble in some of the formations encountered in these other tunnels which were somewhat similar to the formations that would be penetrated in performing the instant contract, Dr. Hilf stated that the question came up as to how to alert the contractor to these problems. To his knowledge, the BOR was not thinking of particular kinds of fail-

ures or particular kinds of conditions but at least Dr. Hilf had hoped that the impression the whole sentence would convey would be that the Bureau had had problems with these materials deteriorating, used in a broad sense, just reducing in quality, or disintegrating²⁸⁷ by which was meant breaking into pieces without thinking of whether they were little or big pieces.

Responding to a question on cross-examination related to Paragraph 50 of the specifications, Dr. Hilf acknowledged that as reflected in the construction and materials report (GX U) the Bureau had only tested the core samples with respect to immersion in water and not with respect to deterioration or disintegration when exposed to air or stress relief.²⁸⁸ He also acknowledged (i) that the compressive strength shown on Table 1 (GX U) for 13 samples of rock from Tunnel No. 3 were not representative of the entire tunnel and (ii) that no tests had been performed on samples taken from under the Harris Mesa.²⁸⁹

²⁸⁷ Addressing what he considered to be testimony given by Dr. Heuer to the effect that disintegration was a superficial phenomenon, Dr. Hilf noted that the Sperry-Heuer Report (AX 4) appeared to use the term as he did (Tr. 667-69).

²⁸⁸ A simple standard test for water existed but none was available for either air or stress relief (Tr. 707).

²⁸⁹ Dr. Hilf considered that expense may have influenced the decision not to select samples from under the Harris Mesa. In his view, however, any samples selected from there would in all probability have fallen within the range of the test results reported because of the random nature of the sampling (Tr. 693-95, 705-06).

In answer to other questions posed upon cross-examination involving Paragraph 50, Dr. Hilf stated (i) that the application of protective coatings as provided in Paragraph 54 of the specifications would not have prevented the deep failures of the rock in Tunnel Nos. 3 and 3A as described by Dr. Heuer in his testimony, and (ii) that the installation of subinvert tunnel protection in accordance with Paragraph 60 would not have prevented such failures. Then Dr. Hilf was asked whether it was fair to say that none of the things mentioned in the portion of Paragraph 50, quoted *supra*, would have prevented those deep failures. In his response Dr. Hilf stated:

What you are asking me as I understand the question, what you said none of those things, if you mean by that providing a clean undisturbed surface for placement of lining and doing this by applying protective coatings, installing sub-invert or dewatering or by removing any deteriorated or disintegrated material back to clean undisturbed surfaces in accordance with the various paragraphs, no, those are superficial treatments.

(Tr. 698-700).

Asked about the stresses at the Navajo Tunnel site, Dr. Hilf referred to the contract drawings (Drawing No. 809-D-393 and 809-529-939) and in connection therewith stated (i) that in the Harris Mesa area the elevation is shown to be about 7,000 feet above mean sea level; (ii) that the tunnel grade in that vicinity is about 5,932 feet above mean sea level; and (iii) that there is therefore a little less than

1,100 feet of cover over the tunnel in the high area of the Harris Mesa.²⁹⁰

Addressing the question of what the significance to a contractor would be of the amount of cover reflected in the drawings and the compressive strength for samples tested as reported in GX U, Dr. Hilf stated that the vertical load on a plane in the ground below the surface of the ground is equal to the height of the fill above it times the weight of that fill, whether it is rock or soil or anything. Thereafter, Dr. Hilf said: "So that as a rule of thumb, Terzaghi ^[291] says, and Dr. Heuer says to use one pound per square inch for each foot of fill, and this is proper, because that is assuming that the one cubic foot of material weighs 144 pounds per cubic foot, which is approximately correct" (Tr. 647).

This principle was discussed by Dr. Hilf in a situation where it was assumed that there was 1,000 feet of cover and the average strength of rock in that area was approximately 1,000 psi. In these circumstances it would be known that the stress in the rock before tunneling would be of the order of 1,000 psi; that the result of tunneling is to make a hole; that when this occurs there will be a redistribution of stresses; and that there will be a necessity to support that tunnel.²⁹²

²⁹⁰ Except for the Harris Mesa, a mean for Tunnel No. 3 would involve 300 to 350 feet of cover (Tr. 645).

²⁹¹ Dr. Karl Terzaghi. See AX 67, p. 48.

²⁹² See discussion in text, *supra*, of Dr. Hilf's explanation of tangential pressures exerted where a stress of 1,000 psi around the model was assumed before the hole was drilled.

Dr. Hilf agreed with Dr. Heuer that the speed of failure of the rock would be difficult to predict. He noted, however, that if you have a high stress due to a very high overburden and a very weak rock, you would expect that it wouldn't take any time at all for the rock to fail once you relieve the restraining pressure. But in predicting the speed of failure you must consider not only the amount of the difference between the strength of the rock and the amount of the stress but you must also take into account the stress strain characteristics of the rock (*e.g.*, whether the rock is brittle or a more plastic material). The stress strain relationship is not specifically defined in the specifications, although some information pertaining to that aspect is contained in Table 1 of GX U. While the failures could be plotted from such information, you would not know the true stress-strain for the entire range involved.

As to the type of support contemplated by the specifications, Dr. Hilf stated that the support system provided for would have handled any type of rock fallout or rock failure that could have been expected in the tunnels. After adverting to the fact the specifications indicated that 80 percent of the support required would be other than rockbolts, Dr. Hilf said that a variety of supports had been provided because while the cover over the tunnels was known and while it was also known that the rock in the area was particularly weak, the Bureau didn't know exactly where it was going to

be overstressed or where the stresses would be greater than the unconfined compressive strength of the rock.²⁹³

In his testimony Dr. Hilf stated that the information available to the contractor prior to bidding on the instant contract included the Bennett Report (GX A)²⁹⁴ and the Cannon Report (GX X). In the latter report the excavation rate of progress in Blanco Tunnel was said to be inversely proportional to the amount of cover on the tunnel.²⁹⁵ Dr. Hilf was unable to say whether this was true with respect to Navajo Tunnel No. 3 (Tr. 706-07).

Asked upon cross-examination to say what had occurred at Navajo, Dr. Hilf stated:

Well, there (was) evidence from Dr. Heuer's testimony, and I have no reason

²⁹³ Appropos the size of the boring machine selected by the contractor, Dr. Hilf stated:

"[W]e established a pay line, a B line which we would pay for excavation and concrete and the contractor chose not to have a boring machine that size.

"Now, there's * * * nothing against the specifications in doing so, he could do that and he did" (Tr. 676).

²⁹⁴ For a discussion of the Bennett Report, see n.126 to n.129, *supra*, and accompanying text.

²⁹⁵ "In analyzing excavation progress made in Blanco Tunnel, it is interesting to note that generally the excavation was inversely proportional to the amount of cover on the tunnel. This was particularly evident when the cover exceeded 1,000 ft. Maximum cover on the tunnel was 1,870 ft. * * * Little fallout occurred in the crown presumably because of the support afforded by the rock bolts which were installed immediately behind the cutting head. The major cause of fallout is believed to be stress relief in the rock; however, a combination of factors including action of the mole side grippers, jointing, weak bedding planes, and lithological character of the rock contributed to the fallout and spalling * * * Use of the rock bolts was found to be more effective than circular steel ribs with lagging and contributed to the record progress." (GX X, "Record tunnel excavation with boring machines" by D. E. Cannon, Aug. 1967, p. 48).

to doubt him, because I wasn't there, that shear fractures or shear failures occurred and undoubtedly, if they occurred in intact rock it was because the tangential stress was greater than the strength.²⁹⁶

(Tr. 696).

2. *Digest of Testimony of Bert Levine* (Tr. 713-78)

Mr. Bert Levine, project construction engineer, Navajo Indian Irrigation Project, was the authorized representative of the contracting officer and therefore had responsibility for Tunnel Nos. 3 and 3A. In that capacity his supervisor was the Director, Design and Construction. After becoming an engineer,²⁹⁷ Mr. Levine had a variety of work experiences (e.g., employment by the Navy Department and the Corps of Engineers) before going with the Bureau of Reclamation in 1949. He was given a number of assignments within the Bureau before being made project construction engineer for the Navajo Indian Irrigation Project in 1963.

Much of Mr. Levine's testimony upon direct examination was confined to reading brief passages from exhibits contained in the appeal file and occasionally offering

²⁹⁶ Concerning the terminology employed, Dr. Hilf said that Mr. Mathews' term "geodynamic pressures," Dr. Heuer's terms (over-stressing or stress intensification) and his term "stress relief" all are referring to the phenomenon of failure where the strength of the rock is less than the stress on the rock (Tr. 657, 664-65, 680-82).

²⁹⁷ Mr. Bert Levine received a Bachelor of Science degree in civil engineering from the University of South Carolina in 1940 (Tr. 714).

comments upon them.²⁹⁸ By reason of his supervisory role, some 23 photographs of Tunnel No. 1 and one photograph of Tunnel No. 3 were identified by and offered in evidence through him.²⁹⁹ No substantive testimony was given by Mr. Levine, however, with respect to any of the photographs.³⁰⁰

After referring to a statement by the contractor concerning the installation of a shield over the mole (n.6, *supra*), Mr. Levine stated that the shield was installed on Oct. 4, 1971 (*cf.* n.53, *supra*).

Asked upon cross-examination as to why he had not accepted the invitation contained in the contractor's letter of Feb. 2, 1973 (AF 110), to observe a survey crew working in Tunnel No. 3 on Saturday, Feb. 3, 1973, Mr. Levine stated that historically the contractor and the BOR had exchanged survey information and that he had not seen any reason for his people being present as observers. He did not recall that a similar invitation had been received to attend the Brewer Survey. He

²⁹⁸ In addition to the photographic evidence GX Z (memorandum of Nov. 5, 1970, meeting between parties), GX AA (memorandum of pre-construction conference of Dec. 2, 1970), and GX ZZ (Rate of Advance for Boring Machine, Tunnel Nos. 3 and 3A) were received into evidence upon Mr. Levine's testimony.

²⁹⁹ The photographs of Tunnel No. 1 (GX BB through XX) were offered and received in evidence as relating to the second category changed conditions claim. The photograph of Tunnel No. 3 (GX YY) was received in evidence without restriction (Tr. 730-35).

³⁰⁰ The discussion of rock fallout in Tunnel No. 1 took place in connection with discussion of the size of the mole. Mr. Levine believes that Mr. Sperry was shown the project's photograph file at the time. This was over 3 months after the bids were opened (Tr. 728-29, 747-49).

could not say whether, if received, such an invitation would have been accepted, since the availability of personnel to go is always a factor to be considered. Mr. Levine also indicated that the Bureau would be more likely to accept an invitation to participate in a joint work survey than it would to simply witness someone else's survey as an observer (Tr. 772-77).

In his testimony concerning the size of the bored excavation, Mr. Levine noted that in the meeting of Nov. 5, 1970 (GX Z),³⁰¹ Mr. Sperry had advised that the excavation would be by mechanical mole excavating to a diameter of 20 feet 6 inches; that in the letter of Dec. 7, 1970 (AF 11), the contractor had stated that it would be excavating the tunnel with a mole to a 20 foot 6 inch-diameter; that on numerous occasions after the Nov. 5, 1970, meeting, Mr. Levine had expressed concern that the small diameter of the mole would only permit the installation of rockbolt type supports; that in the letter of Jan. 19, 1971 (AF 12), the contractor had stated that it still believed the 20 foot 6 inch-diameter size to be adequate for the support required;³⁰² and that in mid-March of 1971 Mr. Levine had attended a showing of the Dresser mole in Beaumont, Texas, at which time he had formed the impression³⁰³ that the Dresser mole

had a variable size cutter which would permit going up another 6 inches; that on Feb. 2, 1971 (AF 13), Mr. Levine wrote the contractor to say that the proposed excavated diameter appears to be adequate for meeting minimum dimensions for "A" line thickness for rockbolts but that the use of steel rib supports would require excavating to a larger diameter if normal tolerance is provided.³⁰⁴

When documents relating to Mr. Levine's testimony are examined, they show that during the same time period the contractor was advising the BOR that it contemplated excavating the tunnels to a 20 foot 6 inch-diameter, it was also informing the Bureau of its intention to rely exclusively upon rockbolts for tunnel support.³⁰⁵ At the meeting on Nov. 5, 1970, Mr. Sperry is reported to have stated that the contractor planned to use rockbolts exclusively for support (GX Z, p. 2). In the preconstruction conference on Dec. 2, 1970, Mr. Sperry is recorded as having said that the contractor did not intend to use shotcrete, steel reinforcement sheets or steel sets for tunnel support but intended to use rockbolts in a pattern placed approximately four feet behind the cutter head (GX AA, p. 3). Reliance upon rockbolts

³⁰¹ See text accompanying n.4, *supra*.

³⁰² See n.7, *supra*, and accompanying text.

³⁰³ The basis for the impression is not clear. Mr. Levine states:

"[W]e were * * * talking of the mole size and I got the impression, which may be a lack of communication, you can't determine, because I know Joe Sperry and I know he told

me what the facts were, I got the impression at that time that this mole was a variable size cutter, that we could expand the mole" (Tr. 722).

³⁰⁴ Tr. 722-23. See n.8, *supra*.

³⁰⁵ The record indicates that at the time the bids were opened, the BOR knew that the contractor and the three other lowest bidders contemplated using only rockbolts for support (see n.10, *supra*, and accompanying text).

for support was confirmed in the contractor's letters of Dec. 7, 1970 (AF 11), and Jan. 19, 1971 (AF 12).

In the Bureau's letter of Feb. 2, 1971 (AF 13),³⁰⁶ Mr. Levine stated that whether conditions in Tunnel Nos. 3 and 3A are suitable for an extensive use of rockbolt supports must be determined during and following the excavating process. Approximately 31½ months later, the project construction engineer was noting that it was apparent the contractor was planning to rely entirely on rockbolts for tunnel support.³⁰⁷

Another serious question confronting both the contractor and the Government was the type of anchorage required for the rockbolts if they were to adequately support the tunnel. Even before the major difficulties were encountered in the general vicinity of DH 116, the BOR had advised the contractor, by letter dated June 25, 1971 (AF 17), that rockbolt anchorage tests conducted by a Bureau of Mines geologist had disclosed that the anchorage obtained through use of the Pattin D-5 shell was inadequate. Consideration of the type of support methods that might be used to secure adequate anchorage for rockbolts continued during the shutdown period (AX 70). Inadequate anchorage of rockbolts continued to plague the contractor even after the resumption of

operations.³⁰⁸ In a letter dated Sept. 16, 1971 (AF 25), the BOR complained that the contractor was not adhering to an informal agreement to use tandem shells rather than single shells for rockbolts and to grout the rockbolts which did not attain and retain adequate torque. Almost 2 months later, however, the Bureau was advising the contractor that the grouted tandem expansion shell anchor was not approved because the use of such an anchor did not provide a safe roof support by reason of the excessive time required for the grout to cure.³⁰⁹

At the time of the Dec. 6, 1971, conference (AX 74), considerable progress had been made but the question of whether rockbolts were adequate as support for the entire tunnel was still very much in doubt (*see* n.27 and n.34, *supra*). By early March of 1972, however, Mr. Levine was in a position to advise the Director, Design and Construction, that the use of rockbolts for support had been found to be satisfactory since the epoxy anchor had been in use.³¹⁰

Upon cross-examination, Mr. Levine acknowledged that under date of Jan. 26, 1972, he had furnished to the Director, Design and Construction, a geology progress report (AX 69). Noting that Tunnel No. 3

³⁰⁶ See text accompanying n.8, *supra*.

³⁰⁷ AF 16. Mr. Levine testified that by that time he knew that the mole did not have a variable diameter and that it was restricted to a 20 foot 6 inch-diameter (Tr. 723-24).

³⁰⁸ In the report submitted to the contractor by A. A. Mathews, Inc., under date of Sept. 17, 1971 (AX 5), the consultants state that the presence of water is a direct consideration in the selection of bolt anchors where rockbolts are used. *See* n.18, *supra*.

³⁰⁹ See n.24 and accompanying text.

³¹⁰ See text accompanying n.47.

was excavated from Stations 824+00 to 845+47 primarily in siltstone and shale and that the project geologist had been on leave most of December, the report states:

Fallout 6-inches to one foot deep and 2- to 6-foot wide occurred in local areas primarily where shale was present in the arch. The fallout occurred immediately after excavation removed the underlying rock support. Stress relief-type fractures developed in the sides below springline from Stations 825+00 to 829+00. The rock is fractured to depth of one foot. Scaling revealed a bedding plane and shaly zone near springline from Stations 826+00 to 829+00. Fractures dipped towards this plane and fracturing is believed triggered by the gripper pressure of the mole on the shale. Fractures from Stations 825+00 to 826+00 are present below the gripper imprint and thicken from fourth-inch slabs at the top to estimated 6 inches thick at the bottom near invert.^[31]

3. Digest of Testimony of John Rogert (Tr. 825-57, 865-913)

Mr. John Rogert, a civil engineer with the Bureau of Reclamation,³¹² was responsible for the supervision of the inspection forces in Tunnel Nos. 3 and 3A until he left the Navajo Indian Irrigation Project

in January of 1973. At an earlier time he had exercised the same supervisory authority over the inspectors in Tunnel Nos. 1 and 2. Mr. Rogert made trips into Tunnel Nos. 3 and 3A almost every day that he was on the site and the contractor was working in the tunnel or tunnels. At the time he left the Navajo Indian Irrigation Project in January of 1973, the contractor had only completed about a third of the concrete invert lining in Tunnel No. 3. Inspectors prepared daily reports for every shift they worked in Tunnel No. 3, many of which were offered and received in evidence (GX AAA(1) through AAA(24)).

A substantial part of Mr. Rogert's testimony concerned Tunnel No. 1. For example, all of the photographs about which he testified (GX JJ, KK, LL, PP, QQ, RR, SS, UU, VV, WW, and XX) were pictures taken in Tunnel No. 1. In many areas he was asked to compare the conditions that he had observed in Tunnel Nos. 3 and 3A with those he had witnessed at an earlier time in Tunnel No. 1. All three of these tunnels were bored tunnels. Mr. Rogert testified that generally the rock failures and fallout he had observed in Tunnel No. 3 had occurred in the arch of the tunnel but that he had also observed fallout from the side ribs; that the rock failures and fallout occurred near the moling machine and away from the moling machine; that the rock failures and fallout observed in Tunnel No. 3A were similar to those he had seen in Tunnel No. 3;

³¹¹ Immediately thereafter the report states: "Popping rock was heard from Stations 833+00 to 836+00 on January 14. This section was excavated during the last week in December 1971. Popping occurred more frequently after passage of a loaded train. A few fractures developed in the roof in this section after support was installed. Occasional popping at the face was reported by inspectors as the excavation advanced from Station 825+00 to 839+00." (AX 69, Memorandum dated Jan. 26, 1972, Subject: Geology Progress Report, Dec. 1, 1971, Through Jan. 15, 1972—Navajo Indian Irrigation Project.)

³¹² Mr. Rogert has a Bachelor of Science degree in civil engineering from the University of Colorado (Tr. 826).

and that the rock failures and fall-out observed in Tunnel No. 1 were similar to those he saw later in Tunnel Nos. 3 and 3A.

Upon direct examination, Mr. Rogert testified that in Tunnel Nos. 3 and 3A there were dust problems, electrical problems, and mechanical problems, some of which were due to rock falling. He also testified that he had seen muck cars derailed in Tunnel No. 3 and that he had seen muck falling off the cars in that tunnel. Upon cross-examination he admitted, however, that all of these conditions had also been seen by him in Tunnel No. 1.³¹³

Some testimony was elicited from Mr. Rogert with respect to the amount of water encountered in Tunnel Nos. 3 and 3A and that experienced in Tunnel No. 1. He had observed water coming out of rock-bolt holes after they had been drilled and sometimes had noticed a slight amount of water coming through the walls and arch of the tunnel. Mr. Rogert testified that he believed GX LL showed water coming out of rockbolt holes but he could not say positively. Whatever the source of the water, it was collected near the heading or behind the heading in sumps and pumped out in a pipeline³¹⁴ to the outlet portal of Tunnel No. 3 and from there it was pumped to a drywash and sometimes even to a spoils area. Measurement of the flow of the wa-

ter in the pipeline varied from a low of three gallons, or less, to a maximum of almost 10 gallons per minute.³¹⁵ Mr. Rogert did not consider that to be a lot of water. In his opinion the water problems in Tunnel No. 1³¹⁶ were somewhat similar to the water problems in Tunnel No. 3, while the water problems in Tunnel No. 3A were considered to be only about half as much as those in Tunnel No. 3.

Mr. Rogert gave testimony as to the A and B lines and the system used by the contractor to keep the mole level and on line and grade. After establishing that the witness was familiar with how the contractor positioned the mole for excavation, a very large exhibit (consisting of one very large sheet and on top of that a clear plastic overlay) was offered and received in evidence as GX BBB. The exhibit shows how the actual mole excavation lines up with the A line and B line if the mole is perfectly level and the targets and laser beam are lined up properly as well as showing what occurs if the mole is not kept on target. In the latter event,

³¹⁵ Converting Mr. Rogert's estimate into gallons per hour, the flow of water in Tunnel No. 3 varied from 180 to 600 gallons per hour. In a letter dated Apr. 22, 1972 (AF 50), the contractor estimated that water in the vicinity of DH 116 of Tunnel No. 3 drained at a rate of from 20 to 40 gallons per hour. In a letter written some 10 months later (AF 57), the contractor estimated the water from a drain pipe grouted into DH 116 at Station 855+73 was continuing to drain at the near constant rate of 28 gallons per hour.

³¹⁶ The Final Construction Report for Tunnel No. 1 states: "The occurrence and seepage of groundwater did not present a problem in Tunnel No. 1" (GX KKK, Appendix, p. 11).

³¹³ Derailed muck cars and muck spilling out of cars were also seen by him in Tunnel No. 2 (Tr. 876).

³¹⁴ The pipeline is not visible in GX UU (Tr. 901).

tights would be likely to occur in the invert or in the arch or on either side of the tunnel depending upon whether the center of the target was above, below or to the left or right of the laser beam. Also noted by Mr. Rogert was the fact that if you have a combination of the target being off the laser beam and the machine being out of a level position, there would be increasingly more tights.

Upon redirect examination Mr. Rogert stated that with the mole laser system used in Tunnel Nos. 3 and 3A it would be possible for the mole to get off line and grade because the mole could rotate around the laser beam.³¹⁷ He was unable to say, however, whether the laser target system used in Tunnel No. 1 was designed in such a way that it would allow the mole to rotate around the laser beam. Also upon redirect examination Mr. Rogert stated that the laser system used in Tunnel No. 1 was a better system than that used in Tunnel No. 3³¹⁸ because the operator of the mole in Tunnel No. 1 had more control over positioning of the mole as a result of what was shown on the board right in front of him as well as having more control over keeping the mole level.³¹⁹

As to keeping the mole level Mr. Rogert was of the opinion that the

operator was told to check a carpenter's level on the mole but that the operator of the mole could not read the bubble to see if the mole was level unless he left the cab of the mole. Mr. Rogert had no recollection of having seen the roll indicator to which Mr. Sperry testified, however, and consequently gave no testimony concerning what function the roll indicator performed³²⁰ in assisting the operator to keep the mole level.

Mr. Rogert had observed the contractor's crews chipping tights in the invert on a number of occasions. Removal of the tights was part of cleaning up just ahead of the concrete placement after practically all of the loose material had been removed. About one third of the concrete had been placed in the invert at the time Mr. Rogert left the project in January of 1973. Upon cross-examination Mr. Rogert emphasized that his testimony in this area related only to Tunnel No. 3 and not to Tunnel No. 3A. As to Tunnel No. 1, however, Mr. Rogert stated that he had seen tights in the invert, in the arch and in the walls.

Testifying as to specification requirements, Mr. Rogert stated that he was familiar with the specifications for Tunnel No. 1 but not for

³¹⁷ Tr. 904. Upon recross-examination Mr. Rogert acknowledged that lots of things are possible (Tr. 907-08).

³¹⁸ Tr. 903. Upon recross-examination Mr. Rogert could not recall having given this testimony (Tr. 906).

³¹⁹ Mr. Rogert was unable to offer an explanation, however, as to how the laser system in Tunnel No. 1 indicated levelness of the mole (Tr. 912).

³²⁰ In his testimony upon rebuttal Mr. Sperry indicated that the roll indicator was an accurate instrument to determine whether the mole was level. Although upon direct examination he had stated that the carpenter's level was used to check the roll indicator, he changed this testimony upon cross-examination to say that the carpenter's level was used to check the mounting of the roll indicator for damage from rock fallout (Tr. 1294-98, 1329-30).

the Azotea Tunnel.³²¹ He expressed the view that the support requirements for Tunnel Nos. 3 and 3A were very similar to those for Tunnel No. 1. Mr. Rogert did not recall any provision in the specifications for Tunnel No. 1, however, which related to deterioration or disintegration.³²² While he did not consider the rock to be uniformly of one type, Mr. Rogert did consider that the rock in Tunnel No. 1 was generally the same as in Tunnel Nos. 3 and 3A (Tr. 878).

In his testimony Mr. Rogert noted that there were three or four occasions when the workers walked off the job in what were apparently "wildcat strikes"; that from time to time there were problems with the conveyor belt system for hauling muck; and that sometimes the job had to be shutdown temporarily when the rockbolt drills or cutterheads become inoperative during the week and had to be changed before work could be continued.³²³

4. Digest of Testimony of Malcolm Logan (Tr. 913-965, 906-1067)

Mr. Malcolm Logan was employed by the Bureau of Reclamation as a geologist³²⁴ in various capacities from 1945 until 1973. He was the chief geologist for the Bureau of Reclamation from 1969 un-

til his retirement in 1973. As chief geologist Mr. Logan was responsible for the technical adequacy and accuracy of the geologic data developed in the field and transmitted to the chief engineer's office for analysis and study with a view to the preparation of specifications for various projects.

In the course of carrying out its responsibilities for collecting geologic data and helping to develop the specifications, the geology branch conducted some field tests in the form of drill holes and took samples which were tested in a laboratory at Denver. At the hearing Mr. Logan acknowledged that he was the man in charge of the geology work reflected in the bid documents and that he and other people in the branch had had many meetings with the designers at which they supplied certain criteria and information such as the estimated length of tunnel that would require support as well as discussing the type of material that should be provided to the bidders (*e.g.*, examination of samples).³²⁵

During contract performance Mr. Logan visited Tunnel No. 3³²⁶ on three different occasions. The first

³²¹ Tr. 878-80. During excavation Mr. Rogert had been in the Azotea Tunnel on two occasions and in Blanco Tunnel on one (Tr. 876, 907).

³²² Tr. 880-1. See also n.9, *supra*.

³²³ Tr. 851-52. Some of the tools were damaged but a lot had been worn out (Tr. 851).

³²⁴ Mr. Logan was graduated from the University of Wyoming in 1941 with a B.A. degree in geology (Tr. 914).

³²⁵ The bulk of the technical data was included in the specification drawings. The complete drill logs (GX EEE(1)-EEE(12)) were available to bidders upon request. Samples of core were also available to bidders who wanted them to conduct their own tests. Two core samples were taken by the contractor (Tr. 930-37).

³²⁶ Three photographs of Tunnel No. 3 were the subject of testimony by Mr. Logan. These were taken on Sept. 2, 1971 (GX HHH), Sept. 17, 1971 (GX FFF), and Jan. 11, 1972 (GX GGG).

visit was from Sept. 13 to 15, 1971. Upon direct examination he testified that the tunnel face was then at approximately Station 855+26; that Drill Hole No. 116 was totally dry; that the boring machine was not operating; that water was ponded all around the area of the cutter-head; and that there was a considerable amount of muck down in the area in front of the machine. The second visit took place on Mar. 23 and 24, 1972, when the tunnel face was an approximately Station 782+00. On this occasion Mr. Logan observed failures in the sidewalls of the tunnel and bent pans and some cracking of the rock all along some of the crown, as well as water and muck in the invert. It was on this visit that Mr. Logan rode in the cab of the mole and was thus in a position to observe the tunnel from that vantage point.

The third visit to the site was on Feb. 26 and 27, 1973. The visit was made for the dual purpose of conducting a geologic examination of the portion of the tunnel not seen on prior visits and to discuss the invert heave problems.³²⁷ By the time of the third visit concrete had already been placed in the invert and there was a noticeable cracking of concrete in specific areas. The conditions observed by Mr. Logan were identified as occurring at approxi-

mately Stations 820+00 to 835+00, 842+00 and 853+00. The invert heave was attributed by Mr. Logan to stress relief³²⁸ producing openings in the shale into which the water ponded in the area entered causing the shale to swell.³²⁹

Mr. Logan did not agree with the conclusion expressed by Dr. Heuer that the materials report (GX U) did not indicate the sensitivity to water of the materials in the tunnel. In support of this position he cited the significant amount of clay materials shown on the last page of GX U,³³⁰ referred to the note³³¹ appearing on that page and read into the record an excerpt from a report submitted by the contractor's geologist, Mr. J. J. Hayes, prior to bidding in which he stated that "[t]he shale

³²⁸ In the opinion of Mr. Logan stress relief occurs whenever you remove the material to create the tunnel. He regarded questions related to redistribution of stresses and the intensity of stresses as involving primarily engineering questions in the field of rock mechanics rather than geologic questions (Tr. 1033-34, 1065-66).

³²⁹ Tr. 962-63. Upon cross-examination Mr. Logan stated:

"[I]n the shale, water could then enter those cracks and you have a much greater area for exposure to moisture, and therefore the action is speeded up and so it is not a straight line failure pattern. The more area that is exposed the faster the effect is of 'swelling,' deterioration, disintegration." (Tr. 1042).

³³⁰ As shown thereon, samples were taken from Drill Hole Nos. 113, 116, 117 and 118. The only samples showing Montmorillonite and other clay materials obtained in Tunnel No. 3 at tunnel depth is from DH 116 (Tr. 988-91). The results of the exploratory drilling at DH 116 are set forth in the geologic logs (GX EEE(10)).

³³¹ The note reads: "This range of materials described in this category covers the finer-textured materials that are commonly referred to in the field classifications in the geologic logs as 'shale' and occasionally as 'mudstone' and 'claystone,' as well as the more argillaceous siltstones" (GX U).

³²⁷ Responding to a question on cross-examination as to why there had been no invert heave in the area of DH 116 despite the presence of water, Mr. Logan stated that there was no large bed of shale in the invert of Tunnel No. 3 at that point but that there was fallout in the arch in that area as a result of stress relief and water causing the shale in the arch to swell (Tr. 998-1000).

January 15, 1981

(siltstone) is very water reactive." ³³²

Upon cross-examination Mr. Logan stated that the type of geologic environment which would be encountered in Tunnel Nos. 3 and 3A could be predicted but that it would be difficult to correlate between drill holes. This assessment stemmed from Mr. Logan's view that all of the materials of which the tunnels were composed (sandstone, shale, and siltstone) was heterogeneous ³³³ and the variations were three dimensional (horizontally, vertically, and laterally). Despite his view that none of the materials involved were homogeneous, Mr. Logan testified at one point that a bidder should know of the water sensitivity of materials in Tunnel No. 3 (approximately 15,000 feet in length) from one sample taken at tunnel depth showing it contained Montmorillonite (Tr. 991-92).

Appellant's counsel interrogated Mr. Logan at length with respect to his travel report of Oct. 4, 1971, pertaining to his first visit to Tunnel No. 3 (AX 82). The stated purpose of the visit was to conduct a geologic examination relating to slow progress of excavation. The mid-September visit came after and was related to the contractor's changed conditions notice of July 29, 1971 (AF 19). In his testimony Mr. Logan stated the purpose of the visit was to observe the geologic

conditions ³³⁴ in the vicinity of DH 116 with a view to determining what the facts were so that if a claim on this reach were submitted, the BOR would have factual information on which to base a judgment as to the settlement of the claim, insofar as the geologic aspect was concerned.

In the language of the report, "The examination was directed toward outlining programs which the project geologic personnel should pursue in compiling data on the contractor's allegations of changed conditions." Immediately thereafter the report refers to proposed programs of data collection based on six findings developed during the field examination. After acknowledging that the six findings had been made by him and that they were not factual, Mr. Logan stated that the programs outlined were to determine whether the findings that had been developed during the field examination were correct or not. Following this Mr. Logan was interrogated on each of the six "findings" to determine the extent to which he considered that factual data developed by the project personnel showed the "findings" to be correct. Each of the "findings" are quoted below followed by a summary of Mr. Logan's testimony with respect to them.

(1) squeezing ground is not present in the tunnel and the localized linear

³³² Tr. 1057-58; n.71, *supra*.

³³³ Heterogeneous was defined as "[a] median in which properties of that material vary in varying directions" (Tr. 981-82).

³³⁴ Commenting upon the depositional character of the Nacimiento formation in which the tunnels were driven, Mr. Logan said the continental deposits involved should be classified as heterogeneous mixtures rather than homogeneous (Tr. 919-24).

cracking of the rock near spring line is related to machine operation.

Although noting that it had been quite awhile, Mr. Logan stated that to the best of his recollection the factual geologic data compiled by project personnel³³⁵ showed finding No. 1 to be correct.

(2) fallout in the tunnel arch is primarily related to the stratigraphic sequence in which lenses and relatively thin beds of shale, micaceous sandstone, etc. are present at or near the tunnel arch and do not have sufficient tensile strength to attain natural arching in the 20.5-foot-diameter tunnel.

The geologic data compiled by the project personnel subsequently was said to have demonstrated that finding No. 2 was correct.

(3) machine operation and associated rock failure in the spring line area is contributing—in a “ripple” effect—to localized failure conditions extending from tunnel arch to spring line.

Mr. Logan stated that the compilation of geologic data by project geologic personnel showed this finding to be partially correct in that based primarily upon direct observation of the mole it had been determined that only some of the failure along the spring line was attributable to the gripper. Mr. Logan was not sure that the failures attributed to the gripper had been identified by station but considered that it had been identified by location on the periphery of the tunnel as extending from a short distance above spring line to three to four feet below the crown.

(4) the presence of water and the related disintegration of the fine-grained

sedimentary rock are clearly evident in the tunnel, but were as clearly indicated in the specifications document.

The data compiled by the project geologic personnel subsequently was said to have demonstrated that “finding” No. 4 was correct.³³⁶

(5) the slow rate of progress, due primarily to mechanical failures, is promoting excessive rock failure through delays in establishing artificial arch support and in allowing the accumulation of water at the cutterhead to become a problem of machine operation.

Mr. Logan was unable to say whether this finding was subsequently confirmed as correct by data compiled by the project geologic personnel.³³⁷ Asked what sort of factual geologic data he would have expected the project geology personnel to compile with respect to that “finding,” Mr. Logan said it would have involved reporting damage to the machine occurring from rock fall.

(6) geologic conditions encountered in the tunnel to date do not differ from that portrayed by the specifications document.

Mr. Logan was also unable to say whether factual geologic data prepared by the project geologic per-

³³⁵ The record before us is devoid of the factual geologic data on which Mr. Logan's opinion is based with respect to “findings” 1, 2, 3, and 4. Tests conducted by the Government on NX core samples obtained from horizontal drill holes located below spring line of the tunnel where the grippers had exerted heavy pressure on the tunnel walls during tunneling operations were termed “generally inconclusive” (n.23, *supra*).

³³⁷ The following exchange took place:

“Q. Did your project geologic personnel disobey your instructions with respect to finding No. 5 and not compile any geologic data?

“A. Certainly. [sic] I don't know whether he did or not prepare any.” (Tr. 1035).

³³⁶ See n.22, *supra*, and accompanying text.

January 15, 1981

sonnel had confirmed finding No. 6 as correct.³³⁸

The extent to which the grippers on the boring machine may have contributed to the fallout and other rock failures in Tunnel No. 3 was the subject of a considerable amount of testimony by Mr. Logan. Commenting upon the photograph taken on Jan. 11, 1972, near Station 831+25 (GX GGG), he stated that the picture showed slabby rock and that there was evidence of this type in many places throughout the tunnel when he observed it at a later time. After noting that the slabby-ness in the ribs of the invert was caused by stress relief, the subsequent redistribution of the stresses and a loosening around the periphery of the tunnel, he stated:

Now, I think much of it was the gripper, much of it was attributable to the gripper failure because it had a very low strength rock under it in the first place and the stress relief under the redistribution of stress and the peripheral zone in the tunnel is well known that the rock will move into the tunnel. You have further weakened that rock and then you are applying an artificial stress. We've been talking about natural stresses in the rock, but we were applying artificial stress to that rock and consolidated the rock and I saw this occurring when I was riding in the cab, where the material was consolidated at least a half an inch and in which streams of water were pouring down the leading and trailing edge of the grippers.^[339]

³³⁸ Tr. 1036-37. Upon direct examination Mr. Logan had summarized his position in this area by stating: "I would say that they encountered exactly what was portrayed in the specifications" (Tr. 964).

³³⁹ Substantially the same testimony was given upon cross-examination. Mr. Logan testi-

So I would attribute much of this type of fracturing in Exhibit GG—GGG as being affected by the grippers.

(Tr. 956a-57).³⁴⁰

A photograph taken at Station 856+03 on Sept. 2, 1971, was received in evidence as GX HHH.³⁴¹ Mr. Logan testified that the photograph shows some of the failure of the rock that is occurring beneath the gripper pad. Upon cross-examination Mr. Logan referred to his prior testimony in which he had stated that the grippers were only a part of the failure pattern and that they were not solely the cause of the failures.

Water immersion tests were conducted on samples of core taken from Tunnel Nos. 3 and 3A at varying depths. Referring to a picture taken of a core sample of clayey siltstone from Drill Hole No. 117

fied, however, that he did not see any rockbolts in the arch of the tunnel when he observed the action reported of the grippers; that he did not remember seeing any water above the spring line; that the material was dry above the gripper prior to gripping; and that the material appeared to be dry ahead of the gripper (Tr. 1024-26).

³⁴⁰ The following colloquy occurred on cross-examination:

"Q. * * * Where did the gripper pressures contribute to rock failures?

"A. I do not know the stations at which they did occur. In my opinion, they were a contributing factor to the fallout, on the sides, or in the spring line of the tunnel.

"Q. Yes, sir. And the only place that you saw that in order to form that opinion, was where the face was at Station 782 plus zero, zero in March of 1972?

"A. Yes." (Tr. 1054-55).

³⁴¹ The caption on the photograph reads: "Side gripper on the right side of boring machine gripping against the left wall at Station 856+03. Note siltstone back of gripper. The rock was broken on gripping and about 6 inches fell out when gripper was released" (GX HHH).

in Tunnel No. 3A (GX U), Mr. Logan said that the picture shows the disintegration and deterioration of the sample after 15 minutes of soaking in water. Mr. Logan also referred to the portion of Table 1 of GX U pertaining to Tunnel No. 3 in which three of seven core samples of sandstone taken from DH 113 at various depths are shown to have disintegrated on immersion during preparation for absorption test.³⁴² With respect to what is shown on Table No. 1 for Tunnel No. 3, Mr. Logan stated upon cross-examination that under the right hand column headed "Effects of Wetting by Immersion" (i) only one siltstone sample was reported for which the comment is made: "Expands slightly with cracks," and (ii) that no samples of shale were reported (Tr. 1037-38).

Mr. Logan was unable to remember whether a geology report relating to the site of the tunnels had been prepared but he believed that one had been. While not in a position to say whether a geology report had been furnished to the designers, he was certain that no geology report had been made available to the bidders. Asked about how the failure to furnish the geology report to bidders could be reconciled with his statement that they had been given the most complete information pos-

³⁴² After noting that the samples tested and reported on in Table No. 1 for Tunnel No. 3 (GX U) were sandstones primarily and that many of the samples had disintegrated, Mr. Logan stated that from the geological standpoint the unique part was for a sandstone to swell and slake apart as had occurred, after which he added: "We would know that the siltstones and shales would, because of the clay mineral content, and this is quite well understood" (Tr. 948-49).

sible, Mr. Logan said that that statement related to the most complete factual information possible and not to a highly interpretative document such as a geology report. He acknowledged, however, that such a report would be likely to contain an interpretation of how the rock might behave when a tunnel is moled through it (Tr. 983-84, 1007).

Included as part of the bidding documents were various contract drawings including Drawing No. 809-D-400 and Drawing No. 809-D-317. Referring to these drawings, Mr. Logan stated that the information shown thereon includes: (i) the alignment of the two tunnels; (ii) description of the various overburden materials comprised of loose materials and outcrops of the sandstone and siltstone and shale wherever visible; (iii) the depth of cover; (iv) a ground profile along the tunnel alignment with drill holes plotted thereon; (v) the logs of the drill holes and a sort of lithologic column giving depths in the drill holes; (vi) the locations where samples were taken for the petrographic examination and physical properties testing; and (vii) observations as to air slaking.³⁴³

5. *Digest of Testimony of Gordon C. Dalen*

(Tr. 1099-1145, 1152-73)

Mr. Gordon C. Dalen, a civil engineer for the Bureau of Recla-

³⁴³ Tr. 925-30. Mr. Logan considered that a protective coating of shotcrete would have protected against air slaking since it would protect the surficial material on the tunnel by maintaining a uniform moisture content (Tr. 1067).

January 15, 1981

mation employed in the contract administration section, also testified as a Government witness. Mr. Dalen³⁴⁴ had been with the Navajo Indian Irrigation Project since the beginning of the tunnel work in Tunnel No. 1. He had been in Tunnel No. 1 and in Tunnel No. 3 on a number of occasions. He had visited Tunnel No. 3A at the time of the initial excavation and one other time.

Mr. Dalen had been assigned contract administration responsibility for Tunnel Nos. 3 and 3A and had written all of the final construction report for Tunnel No. 1 except for the appendix. The report included data as to various contract operations both sequentially and by type (*e.g.*, concrete work). Incident to his contract administration responsibilities, Mr. Dalen was involved in the determination of pay quantities and therefore kept track of concrete operations in Tunnel Nos. 3 and 3A.

Offered in evidence through Mr. Dalen were GX LLL, GX MMM, and GX NNN. The exhibits show the amount of concrete and cement used daily in Tunnel Nos. 3 and 3A (GX LLL) and in Tunnel No. 1 (GX MMM) as reflected in the official project records, together with some summary sheets prepared by Mr. Dalen. In these summary sheets Mr. Dalen has calculated the overruns for these tunnels.³⁴⁵ GX NNN

³⁴⁴ Mr. Dalen is a registered engineer in Colorado and in New Mexico and has a B.S. degree in civil engineering from Montana College (Tr. 1099-1101).

³⁴⁵ A neat line volume of excavation is obtained by multiplying the excavated diameter

is a comparison of the overruns for the three tunnels showing that the percent of the overrun³⁴⁶ based on neat line as excavated was 2.74 percent for Tunnel No. 1, 3.23 percent for Tunnel No. 3, and 3.18 percent for Tunnel No. 3A. With respect to Tunnel Nos. 3 and 3A, however, the same exhibit shows that the percent overrun paid for based on final pay for excavation was 8.29 percent for Tunnel No. 3 and 8.30 percent for Tunnel No. 3A.³⁴⁷

Rock failures were observed by Mr. Dalen in all three tunnels. While he did not recall the type of fallout (*e.g.*, whether it involved curved planes), Mr. Dalen did recall that in Tunnel No. 1 he had seen fallout from the top and sides of the tunnel and from right behind the cutterhead. He had also seen rock

of the tunnel (20 feet 6 inches in Tunnel Nos. 3 and 3A) times the length of tunnel involved to arrive at the neat line as excavated (excludes any overrun). A similar computation is made for the neat line volume of concrete. In that case, however, after the neat line quantity for excavation is obtained there must be deducted therefrom the finished diameter of the hollow portion of the tunnel (18 feet in all three tunnels) to arrive at the neat line quantity of concrete (Tr. 1107, 1114-15).

³⁴⁶ Speaking of overruns in concrete outside the neat lines and noting that that involved filling up the various voids of fallout areas, Mr. Dalen states: "I have taken the neat line quantity versus the total quantity and the difference between the two is what I called 'over-run of concrete'" (Tr. 1115-16).

³⁴⁷ After referring to the specification provision under which the contractor was to be paid to the B line irrespective of whether or not he had excavated to the B line, Mr. Dalen commented: "[W]hat I am trying to say is it actually ran 3.23 percent more than the neat line, as excavated, but based upon the pay quantities of what we actually paid for, was 8.29 percent, in other words, we paid for actually more than had fallen out. That was in Tunnels 3 * * * [in] 3A, the comparable is 3.18 percent for neat line, and 8.30 percent for actual pay" (Tr. 1117).

falling in Tunnel No. 1 away from the moling equipment (Tr. 119-20).

Upon cross-examination Mr. Dalen acknowledged that the final construction report for Tunnel No. 1 (GX KKK) states that the occurrence and seepage of ground water in Tunnel No. 1 did not present a problem (Tr. 1165-66). He also acknowledged that the report referred to some 14 or 15 drawings which were not included in the report.³⁴⁸ Although Mr. Dalen testified to some difficulties that the contractor had had with the trailing equipment and expressed the view that damage to that equipment had created some problems throughout the length of the tunnel with respect to the trailing floor, he was unable to put a percentage on the number of times he had observed problems of this nature. Mr. Dalen did consider that the difficulties the contractor had had with equipment had delayed excavation some. With respect to Tunnel No. 1 Mr. Dalen did not recall seeing any delays attributable to trailing equipment but he acknowledged that the Final Construction Report for Tunnel No. 1 (GX KKK) contains a summary of machine shutdown periods of 3 days or more and refers to some trouble with the muck cars coming partially open during transit and allowing the finely excavated muck

to spill out (Tr. 1121-24, 1153-56, 1170-72).

G. Digest of Testimony of Cecil Tackett

(Tr. 1174-1218, 1235-63)

At the time of the hearing Mr. Tackett was a consulting civil engineer in private practice. Prior to his retirement in 1974, however, he had been an employee of the Bureau of Reclamation for 26 years.³⁴⁹ His testimony related principally to Azotea Tunnel, Oso Tunnel, and Blanco Tunnel, all of which were part of the San Juan Chama Project. Mr. Tackett was in charge of the work on that project for 9 years from 1963 to 1972, when he was assigned to the chief engineer's office in Denver.

Mr. Tackett had never been in Tunnel No. 3 but he had been in Tunnel No. 1 on two occasions during excavation and once during concreting. Mr. Tackett testified that the material in Tunnel No. 1 was similar to the materials present in Azotea, Oso, and Blanco Tunnels.³⁵⁰ The judgment as to similarity was based on reading geology reports and his visual observations in Tunnel No. 1 and the three tunnels of which he was in charge.³⁵¹

³⁴⁹ Mr. Tackett went to work for the Bureau in 1948, immediately after receiving a B.S. degree in civil engineering from Kansas State University. He is a registered engineer in the States of Colorado and Oklahoma (Tr. 1174).

³⁵⁰ Mr. Tackett did not know the formation in which Tunnel No. 1 had been driven. He considered the four tunnels to be similar, however, because they were all comprised of shales and sandstones, sedimentary type of deposit (Tr. 1180).

³⁵¹ Azotea, Oso, and Blanco Tunnels were approximately 110 miles from Tunnel No. 3.

³⁴⁸ A motion by appellant's counsel to exclude GX KKK from evidence and strike all testimony with respect to it on the ground the exhibit was incomplete was denied on the ground that the report as finally submitted had apparently not included the missing drawings (Tr. 1161-64).

January 15, 1981

Tunnel No. 1 was a bored tunnel and so were the Azotea, Oso, and Blanco tunnels. The boring machines used in the latter three tunnels ³⁵² had been manufactured by the Robbins Manufacturing Co. of Seattle, Washington, and had variable head sizes. In Mr. Tackett's opinion as an engineer, there were two advantages to having a boring machine with a variable head size. It permitted the contractor to enlarge the size and put in steel sets whenever ground was encountered that was difficult to support by rock bolting. The mole head could also be enlarged to eliminate tight spots when surveys disclosed there were a number of tight spots in the tunnel (Tr. 1191-97, 1248).

Rock failures including fallout were observed by Mr. Tackett in all three tunnels of which he was in charge. The bulk of the fallout occurred immediately or within 50 feet of the heading. Mr. Tackett did not recall any delayed fallout occurring in Oso Tunnel. In Blanco Tunnel where the fallout was the worst by a considerable margin, however, there was some fallout that would occur as much as 2 to 3 months later. Mr. Tackett described the void that remained after the worst type of fallout in Blanco as involving irreg-

ular shaped openings, holes in the spring line and in the crown. Mr. Tackett also said that he had observed fallout in Azotea Tunnel which was very similar to that he had described as occurring in Blanco Tunnel. Concerning tunneling in general he considered that it is important to consider both the strength of the rock and the amount of overburden.³⁵³

With respect to Azotea Tunnel, Mr. Tackett testified (i) that during the first 2 to 3 miles of excavation from the outlet portal the amount of cover varied from 150 to 400 feet and the amount of fallout was relatively small; (ii) that as the tunnel proceeded further under the mountain, the amount of overburden increased and the fallout increased; (iii) that the only portion of the Mancos shale that fell out very badly was where the overburden was the highest over the Mancos shale; (vi) that the final construction report attributed the fallout in one reach to neglect and moisture:³⁵⁴ (v) that the fall-

³⁵³ Tr. 1199-1203, 1239, 1249. On direct examination Mr. Tackett gave the following testimony concerning the relationship between rock failures and the amounts of overburden:

"Q. * * * [D]id you make any observations as an engineer relating to some sort of correlation between the overburden and the failure?

"A. Yes. After tunnelling had gone on for a period of time—and by that I mean a year or two. * * * [W]e had the three tunnels open at the same time, which made it easier to compare. But when we were near the end of the excavation we felt we could anticipate where we would have most fallout problems due to the amount of the overburden." (Tr. 1197, 1203).

³⁵⁴ Tr. 1198-99, 1250-54. The final construction report states: "[I]n general the heavy fallout of shale beds through the Mesaverde formation could be attributed to neglect and moisture" (GX QQQ, p. 92).

The final construction reports for Azotea (GX QQQ), Oso (GX RRR), and Blanco (GX SSS) were all prepared under Mr. Tackett's supervision (Tr. 1177-79, 1190).

³⁵² The size of the bore at Azotea varied with the smallest and largest size being respectively 12 feet 6 inches and 13 feet 5 inches. At Oso the two bore sizes were 10 feet and 10 feet 7 inches while at Blanco Tunnel there were four bore sizes excavated with the minimum size being 9 feet 11 inches and the maximum size being 10 feet 7 inches or 10 feet 8 inches (Tr. 1179, 1187-89).

out that occurred was the result of stress relief; and (vi) that the common terminology used by the personnel of both the contractor and the Government to describe the fallout in the tunnel was stress relief.

In his testimony concerning Blanco Tunnel, Mr. Tackett stated (i) that the invert heave in that tunnel was much worse than in Azotea Tunnel; (ii) that in his opinion the invert heave had been caused by the amount of overburden in that particular reach;³⁵⁵ (iii) that the contractor was paid for removing the invert heave in Blanco Tunnel;³⁵⁶ (iv) that occasionally the fallout would follow a joint but none of it looked as if it had fallen out to a bedding

plane;³⁵⁷ and (v) that the contractor had installed rockbolts to within 2 to 3 feet of the cutterhead³⁵⁸ (Tr. 1239-44).

The final construction reports on Azotea (GX QQQ), Oso (GX RRR), and Blanco (GX SSS) tunnels were received in evidence over the stated objection of appellant's counsel that the proffered exhibits were not relevant to the issues involved in the appeal. In ruling upon the objection the hearing member found that the exhibits offered by the Government were relevant to the appellant's second category changed conditions claim (a position advanced by Government counsel) and that since at least one of appellant's witnesses had testified concerning one or more of the tunnels to which the final construction reports pertained, the exhibits in question had some relevance even aside from the second category changed conditions claim. In admitting the exhibits, however, he noted that the differences in bore size³⁵⁹ between the various tunnels as well as other differences between the San Juan Chama Project tunnels and the Navajo Indian Irrigation Proj-

³⁵⁵ Appellant's counsel states: "In Mr. Tackett's opinion the invert heave in the Blanco Tunnel was caused by the amount of overburden (Tr. 1244). Since overburden would create vertical stress and since maximum stresses at the tunnel wall occur at the ends of a diameter of the tunnel perpendicular to the maximum stress direction (Tr. 460), it is obvious that overburden did not cause invert heave. For the invert to heave the maximum stress direction must be horizontal" (AOB 51).

Mr. Tackett testified that he was not a geologist and not an expert in rock mechanics or rock theory (Tr. 1259).

³⁵⁶ Upon cross-examination the following exchange took place:

"Q. You had to approve or initiate that change order, didn't you?

"A. Yes, sir.

"Q. * * * Did you know the amount of overburden that there would be in that particular reach before you advertised for bids for that contract?

"A. Yes, We had profiled the ground surface prior to preparing drawings.

"Q. And then after the contract was executed, and the contractor excavated through that reach, even though you knew the amount of burden, long before the contracts was executed, you paid the contractor for removing the heave which resulted from this known condition of overburden?

"A. We paid him in this particular reach. * * * I don't remember how long it was." (Tr. 1243-44).

³⁵⁷ The Final Construction Report on Blanco Tunnel shows that there was fallout to bedding planes as well as to joints (GX SSS, p. 51). As to questions relating to what the rock fallout areas looked like and how far behind the cutterhead support was installed, Mr. Tackett had not refreshed his memory before testifying (Tr. 1240-42).

³⁵⁸ This testimony was based upon Mr. Tackett's unrefreshed recollections (Tr. 1242). The Final Construction Report for Blanco Tunnel states: "Support in the mole-excavated tunnel was installed approximately 12 feet in back of the mole cutterhead" (GX SSS, p. 56).

³⁵⁹ In Mr. Tackett's opinion as an engineer, rock in a tunnel twice as large as another tunnel in the same formation is going to react differently (Tr. 1187-88).

ect tunnels (including the formations in which they were driven) could affect the weight to be accorded to Government Exhibits QQQ, RRR, and SSS (Tr. 1183-91).

Mr. Tackett was examined at some length with respect to whether the final construction reports (GX QQQ, GX RRR, and GX SSS) were available to the public prior to bidding. In the course of his testimony he stated: (i) that he did not know whether bidders on Tunnel Nos. 3 and 3A had been advised as to the availability of these reports or of the Final Construction Report on Tunnel No. 1 (GX KKK); (ii) that during the time he was project construction engineer on the San Juan Chama Project between 1969 and 1972, the Bureau had adopted the policy of making the final construction reports available to the public; (iii) that these reports are available in the Bureau of Reclamation library in Denver; (iv) that they were available when he went to Denver in 1972; and (v) that he didn't know when the practice of having final construction reports in the library had started.³⁶⁰

Also offered and received in evidence was GX TTT, a summary of overbreak in the tunnels involved in the San Juan Chama Project. The exhibit states that the amount of

overbreak³⁶¹ or fallout is expressed as a percentage of the neat line excavation (mole head size) and that the data is only for the mole excavated sections. For Azotea Tunnel the exhibit shows the neat line excavation volume³⁶² is 317,781.18 cubic yards, the volume of overbreak is 19,037.62 cubic yards and the percentage of overbreak is 6 percent. The comparable figures for Blanco Tunnel shown in the exhibit are 118,971.28 cubic yards, 13,957.56 cubic yards, and 11.7 percent. No corresponding figures are shown for Oso Tunnel³⁶³ as Mr. Tackett was unable to complete the computations prior to the hearing. Explaining the absence of the work papers containing the computations made to arrive at the figures shown in GX TTT,³⁶⁴

³⁶¹ As defined by Mr. Tackett, overbreak in a moled tunnel is anything outside of the theoretical excavation that would be made by the size of the cutterhead. Overbreak in a conventional tunnel means anything outside the B Line (Tr. 1247).

³⁶² In preparing GX TTT the neat line excavation was computed by using the diameter of the cutterhead (Tr. 1246).

³⁶³ Oso Tunnel had very little fallout. Mr. Tackett attributed this to the fact that "700 feet was about the maximum overburden, and most of it ran in about the four to five hundred foot range" (Tr. 1204).

Cf. with the following statement concerning Blanco Tunnel:

"Fracturing from stress relief occurred in the invert and lower quadrants of the tunnel where overburden exceeded 500 feet. The fallout, fractures, and stress relief increased as the depth of overburden increased above 500 feet and was influenced by the particle makeup of the shale. The excavated shale in the reach where overburden was less than 500 feet in depth had very little fallout, fractures, or stress relief."
(GX SSS, p. 51).

³⁶⁴ With respect to GX TTT, Mr. Tackett acknowledged upon cross-examination that if the contractor in Azotea or Blanco tunnels were poor steerers and got off line and grade the method of computation employed in the

—Continued

³⁶⁰ Tr. 1235, 1258-63. The following exchange occurred upon redirect examination:
"Q. * * * Are those Final Construction Reports made available to the public?"

"A. I believe they are. They're in the Bureau of Reclamation library in the Denver Office."
(Tr. 1258).

Mr. Tackett stated that they were not in a condition to bring to the hearing. He also noted that all the information needed to make such computations is contained in the final construction reports (GX QQQ, GX RRR, and GX SSS).³⁶⁵

7. Digest of Testimony of William Groseclose

(Tr. 1219-21)

Also called as a Government witness was Mr. William Groseclose, Chief of the Division of Construction in the Office of Design and Construction, Bureau of Reclamation, in Denver. Identified by Mr. Groseclose and received in evidence was GX UUU, a report prepared by the Bureau of Reclamation, concerning machine tunnel excavation that the Bureau had accomplished.

Upon direct examination Mr. Groseclose testified that a variable mole head size was currently being used on Tunnel No. 5³⁶⁶ of the Navajo Indian Irrigation Project. Mr. Groseclose was not cross-examined.

exhibit (n.362, *supra*) would show a percentage of overbreak even though there was not one ounce of fallout in those tunnels (Tr. 1245-46).

³⁶⁵ Tr. 1204-06, 1213. Concerning GX TTT, appellant's counsel noted that the absence of the work papers to support the figures shown in the exhibit would go to its weight rather than to its admissibility (Tr. 1213-14).

³⁶⁶ Testifying upon rebuttal, Mr. Sperry stated that a variable head size mole was not being used in Tunnel No. 5. Although it was clear that Mr. Sperry's statement was based upon hearsay, the testimony was received in evidence (Tr. 1298-1301). Following receipt of this testimony, the hearing member verified that Mr. Groseclose was no longer in San Francisco and hence not available to be recalled as a witness in the hearing (Tr. 1321).

8. Digest of Testimony of Gaylor Hay

(Tr. 1222-33)

Mr. Gaylor Hay, a civil engineer employed by the Bureau of Reclamation, was the Government's principal witness with respect to quantum. At the time he testified Mr. Hay was the office engineer on the Auburn Folsom South Project. Prior to that he had had extensive experience in making computations relative to contract adjustments and carrying out other responsibilities commonly associated with contract administration. While assigned to the contract administration section in the Denver Office of the Bureau, Mr. Hay had been involved in the review of the differing site conditions claims filed by the contractor with respect to Tunnel Nos. 3 and 3A. In March of 1974 he had visited the Navajo Indian Irrigation Project Office in Farmington, New Mexico, and the contractor's field office near Bloomfield, New Mexico.

Following the completion of the trip Mr. Hay submitted a travel report to the Director of Design and Construction under date of Apr. 29, 1974 (GX VVV). Listed in the report as among the principal facts emerging from the study of the contractor's records³⁶⁷ were

³⁶⁷ The major cost overruns as set forth in the memorandum are:

"(1) \$400,000 in direct cost during tunnel excavation, which is 16 percent of the budgeted cost.

"(2) \$1,500,000 in direct cost during concrete tunnel lining, which is 120 percent of the budgeted cost.

"(3) \$400,000 in direct cost on work outside
—Continued

(i) that the contractor's cost of performing the original contract work would exceed the estimated costs by more than \$3,600,000 (\$600,000 of which is covered by the contingency amount included in the bid); (ii) that as of the time of the review, the contractor stood to lose about \$1,500,000 on the contract; (iii) the contractor had delayed in providing support behind the cutterhead on the mole;³⁶⁸ and (iv) the contractor's cost records, particularly the bid computations, rather than supporting the contractor's claims of differing site conditions, tend to refute the claim.

Transmitted with the travel report was a seven-page report setting forth in greater detail the results of a review of the contractor's cost records³⁶⁹ in various areas including the basis upon which the bid was predicated with respect to the rate of progress anticipated for

the tunnels, which is 60 percent of the budgeted cost.

"(4) \$1,400,000 in plant and general and administrative costs, which is 70 percent of the budgeted cost." (GX VVV, memorandum, p. 2).

³⁶⁸ The memorandum states:

"d. The contractor in preparing his bid recognized the necessity of temporary support immediately behind the cutterhead on the mole, which he referred to as a tetsom (Temporary Tunnel Support Over Mole). I understand, however, that during performance of the contract such a provision was not made until October 4, 1971, after he had completed excavation through Reach 1 of the Drill Hole 116 claim." (GX VVV, p. 2).

³⁶⁹ The report states: "Mr. Eldridge showed us the supporting computations for the claims for Drill Hole 116 and for in-situ stress. He explained that these computations had been taken primarily from the contractor's cost records, with the equipment cost being recomputed to agree with Paragraph 17 of the specifications" (GX VVV, report, p. 5).

excavation³⁷⁰ and for concrete placement,³⁷¹ the time required for completion of the work³⁷² and the amount included for home office overhead.³⁷³ Attached to the report relating to the review of the contractor's cost records were five exhibits containing information copied from the contractor's records with respect to the original bid and reestimates of costs and budget information,³⁷⁴ as well as copies of

³⁷⁰ "Included in the original bid computations was one sheet which indicated that the contractor anticipated excavating with the mole at a rate of 120 feet per working day" (GX VVV, report, p. 1).

³⁷¹ "On concrete placing, the bid anticipated that the tunnel invert would be placed at the rate of 300 feet per day working one shift, and the arch would be placed at the rate of 300 feet per day working three shifts. Actual progress on invert placement was about 277 feet per day in Tunnel 3 and 154 feet per day in Tunnel 3A. On arch placement, actual progress was about 238 feet per day in Tunnel 3 and 191 feet per day in Tunnel 3A." (GX VVV, report, p. 2).

³⁷² "The bid computations verified that the contractor had intended to complete the work in considerably less time than was allowed in the specifications. Specifically, he anticipated that a Project Manager would be required for 32 months and Equipment Superintendent and Engineer for 24 months (the specifications allowed 37 months)" (GX VVV, report, p. 2).

³⁷³ "The bidding documents indicated that there would be no home office overhead charge to the job. The profit or margin used in computing the bid was 16 percent so there was room to pick up home office costs and profit if the jobsite costs had not overrun. * * *

"A subsequent review of other records would indicate that the in-house charge designated depreciation probably includes home office overhead costs related to equipment ownership." (GX VVV, pp. 2, 6).

³⁷⁴ "Mr. Eldridge furnished what he said were the original bid computations * * *. He also gave us a copy of the contractor's original budget, which he explained was in agreement with the original bid breakdown. * * *

"* * * The budget amounts on the monthly summaries are based on the original estimated unit cost and the actual quantities for each item of work." (GX VVV, report, pp. 1, 3).

an intercompany memorandum, "Subject: Head Office Service Charge", a Monthly Cost Summary (Jan. 31, 1974) and a Monthly Cost Summary (Feb. 28, 1974). In addition to the information obtained from the contractor's records at the time of his March 1974 visit, and attached to his travel report, Mr. Hay also secured upon discovery a copy of the contractor's "Navajo Indian Irrigation Project Cost Summary, June, 1974," when he went to the contractor's office in San Mateo (GX XXX).

Proceeding upon a number of stated assumptions as set forth in GX WWW,³⁷⁵ including the assumptions that the contractor had encountered a differing site condition which resulted in early rock failures, that the contractor's original estimated costs with the amount included for contingencies was a reasonable measure of what his costs should have been and that the contractor's cost data shown in the Monthly Cost Summary dated June 30, 1974 (GX XXX), was sufficiently accurate to compute an

equitable adjustment, Mr. Hay calculated that in the assumed circumstances the contractor would be entitled to an equitable adjustment for differing site conditions in the amount of \$145,910 (GX WWW; Tr. 1228-32). Mr. Hay was not cross-examined.

C. Discussion

1. Contract Indications

In support of its request for an equitable adjustment under the "Differing Site Conditions" clause, the appellant refers to indications in the contract upon which it relies to establish its first category differing site conditions claim. The contract indications so relied upon are:

1. The tunnels could be moled.
2. Neither early nor full perimeter support was indicated.
3. The tunnels could be supported by any one of the specified methods.
4. Only surficial deterioration or disintegration was indicated in Paragraph 50.
5. Water sensitivity of shale/silt-stone.
6. Air slaking (AOB 1-8).

In the view we take of the case, only items 2 and 4 merit detailed consideration. Our comments on the remainder of the items will be relatively brief.

Item No. 1.—The appellant states: "Implicit in this condition was the concomitant condition that the tunnels could be moled without unusual difficulty or expense" (AOB 1). That the tunnels could be moled is clear and undisputed. The basis for inferring that because

³⁷⁵ Among the assumptions were the following:

"3. Early rock failures were the sole reason for cost variances during excavation but cost variances during concrete placement were due in part to other causes.

* * * * *

"5. The early rock failures resulted in cost overruns in concrete placing, plant costs, and in G & A expressed in the same proportion as the cost overruns during the excavating and supporting work.

* * * * *

"8. The 'Budget Amount' shown on the contractor's 'Monthly Cost Summary' is in agreement with his original estimate except that the original estimate contained \$800,000 to cover contingencies which was not distributed to the appropriate items in the budget." (GX WWW, p. 1).

tunnels can be moled they can be moled without unusual difficulty or expense is not apparent, however, where, as here, the contractor had the option to mole the tunnel with a boring machine or employ conventional tunneling methods and, in addition, had been given a considerable amount of discretion as to the manner of proceeding (e.g., choice of boring machine, guidance system, size of bore, type of cutterhead).

Item No. 3.—The specified methods to which the appellant refers are contained in Paragraph 55 (Shotcrete for Tunnel Support), Paragraph 56 (Structural-Steel Tunnel Supports), Paragraph 56A (Steel Reinforcement Sheet and Shotcrete Support), and Paragraph 58 (Rock Bolt Supports). Concerning these the appellant states that the contract in effect says: "Here are four acceptable and adequate means of support any one of which will work, plan to use any one you choose" (ARB 18). We note the Government's estimate in the specifications, however, that approximately 80 percent of Tunnel Nos. 3 and 3A would be supported by other than rockbolts (n.123, *supra*).

Item No. 5.—The appellant says that there was nothing in the contract to indicate the degree of sensitivity or the rate of reaction to water of the rock through which Tunnel Nos. 3 and 3A were to be moled. Also noted by the appellant is the fact that the "Construction and Foundation Material Test Data" (GX U) showed that sandstones would be more water sensi-

tive than the shales and siltstones, while in performing the contract the opposite was true. There is no allegation that the test results shown on GX U for the materials actually tested were inaccurate; nor is there any indication that the test results shown thereon misled the personnel of the contractor who were involved in the preparation of the bid estimate for the underground work. In a report submitted prior to bidding (AX 1), the contractor's geologist emphasized that it was the shale (siltstone) which was very water reactive (n.71, *supra*). This report was considered by Mr. Sperry in preparing the bid estimate in which he anticipated fallout in the siltstone (nn.168&174, *supra*).

Item No. 6.—The appellant states: "[T]his distintegration of the surface of the rock when exposed to air was indicated in the logs as well as in Paragraph 50 of the Specifications (AOB 8). It does not appear that the Government would contest the accuracy of this statement so long as it is understood that in its view neither Paragraph 50 nor other provisions of the contract are to be seen as indicating that only surficial deterioration or disintegration would be encountered in performing the contract.

Central to the resolution of this dispute is the proper interpretation to be placed upon the 14th paragraph of Paragraph 50 of the contract specifications and the paragraphs of the specifications dealing

with particular types of support, as well as the significance to be accorded to the fact that one of the methods of support shown on the contract drawings is full circle steel rib. Since the stated absence from the contract of anything indicating that early or full perimeter support would be required (Item 2, *supra*) and the presence in the contract of the provision quoted below from Paragraph 50 (Item No. 4, *supra*) are seen as complementary to one another and both are considered to be related to the contract drawing showing full circle steel rib support, these matters will be treated together in the ensuing discussion.

In especially pertinent part, Paragraph 50 of the specifications reads as follows:

The tunnels shall be supported where conditions encountered are such as to require support. Approved types of support are shown on the drawings.

Where conditions in the tunnels are suitable for rock bolt supports the contracting officer will approve the use thereof. Rock bolts shall be furnished and installed in accordance with the provisions of Paragraph 58 and payment therefor will be made at fixed unit prices as prescribed therein * * *.

Where the ground conditions in the tunnels are such that the use of supports is required, the contractor may at his option use either shotcrete support or structural-steel supports or an approved combination thereof, or steel reinforcement sheets and shotcrete support. * * *

* * *
Shotcrete support shall be in accordance with Paragraph 55. Structural-steel tunnel supports shall be in accordance with Paragraph 56. Steel reinforcement

sheets shall be in accordance with Paragraph 56A.

* * *
Under Schedules No. 2 and 2A the tunnels are to be constructed to the requirements of the machine-bored tunnel sections as shown on Drawing No. 11 (809-D-330).

* * *
Government testing indicates that many of the sandstones, shales and siltstones to be excavated will deteriorate or disintegrate rapidly when exposed to air or water or when stress relieved or a combination of the three. The contractor shall be responsible for providing a clean, undisturbed surface for placement of the lining. He may accomplish this by applying protective coatings under Paragraph 54, installing subinvert tunnel protection in accordance with Paragraph 60, by dewatering in accordance with Paragraph 51, or by removing any deteriorated or disintegrated material back to clean, undisturbed surfaces in accordance with Paragraph 59. If protective coatings or subinvert concrete is not installed, removal of substantial amounts of deteriorated or disintegrated materials is expected.

(AF 1, Specifications, Supplemental Notice No. 3.)

On cross-examination Dr. Hilf acknowledged that the four methods of tunnel support given in Paragraph 50 all refer to support for the roof and sides of the tunnels. In the course of the same questioning Dr. Hilf also acknowledged (i) that stresses created when the tunnel was bored would be present in the invert; (ii) that if the stresses exceeded the strength of the rock the rock would fail; and (iii) that if there were sufficient differences between the stress and the strength of the rock, the rock could move. Re-

sponding to a question as to which of the support systems dealt with upward movement of the invert, Dr. Hilf said: "[F]ull circular steel rib." Dr. Hilf conceded, however, that placing or installing shotcrete, steel reinforcement sheet and shotcrete support or rockbolts in the manner prescribed in the contract would not have protected against or prevented any uplift in the invert of the tunnels (nn.281-85, *supra*, and accompanying text).

The appellant contends that the portion of Paragraph 50 which refers to Government testing (quoted above) indicates that only surficial deterioration or disintegration would be encountered in tunneling (AOB 33). The Government flatly disagrees, stating that it is absurd to limit the phrase "deteriorate or disintegrate" to a surficial condition (GPB 43).

Appellant's expert witness, Dr. Heuer, interpreted the language in question from Paragraph 50 as indicating that problems of deterioration or disintegration due to air or water or stress relief could be solved by the application of protective coatings, by the use of subinvert or by pumping water out of the tunnel and not allowing it to flow in the invert. Dr. Heuer also testified (i) that the problems he had described (the overstressing and large fractures falling out) could not have been solved or prevented by any of those means and (ii) that the cited subparagraph does not provide for control of what he had seen in the tunnel. (*See* text accompanying n. 256, *supra*.)

The Government points out, however, that prior to the hearing Dr. Heuer had at various times used the term "deterioration" in a way clearly not restricted to surficial conditions. Referring to a chart on page 556 of AX 4 showing circumferential stress distribution about the tunnel, the Government states: "[E]ven the contractor's own consultants show by line 'd' on the chart that *deterioration* is a process which would occur well beyond the surface of the bored tunnel" (GPB 43-44). Also stressed by the Government is the fact that in the final report prepared by A. A. Mathews, Inc. (AF 77), the term "degree of failure" has been substituted for the term "degree of deterioration" which had been used in an earlier draft of the report, a page from which was identified by Dr. Heuer at the hearing and which was received in evidence as GX P (n.75, *supra*). The Government comments: "Thus, as can be seen by comparing these two exhibits, even Dr. Heuer used the word 'deterioration' to depict conditions which were clearly not limited to surficial problems" (GPB 45). In addition, the Government refers to a letter from Mr. Hungett (a portion of which we have previously quoted at n.76, *supra*), in which Mr. Hungett states: "The perennially troublesome word 'deterioration' continues to bother me" (GPB 42).

We find that the references in the exhibits upon which the Government relies to support its argument (the use of the term "deterioration"

in a chart included in AX 4, the employment of the term "degree of failure" in AF 77 and the earlier use of the term "degree of deterioration" in GX P) were all made in the context of describing hypothesized ground behavior in the light of model studies conducted by Dr. Heuer and observations made in Tunnel No. 3. In this context there is no discussion of nor any reference to the Government testing provision of Paragraph 50. That provision is both quoted and discussed later in the May 1973 report, however, where the terms "deterioration" and "disintegration" are said to describe a surface phenomenon (AF 77, pp. 61-62). It may have been the use of the word "deterioration" sometimes in a general sense and at other times in a restrictive sense in the same report that caused Mr. Hungett to refer to the term as "perennially troublesome."

Upon direct examination the Government's expert witness, Dr. Hilf, was asked for his interpretation of the Government testing provision of Paragraph 50, *supra*. Dr. Hilf prefaced his response by noting that prior to the time the specifications were written, the Bureau had experienced some trouble in formations (those involved in Azotea, Oso, and Blanco Tunnels and Tunnel Nos. 1 and 2) somewhat similar to the formations to be penetrated in performing the instant contract and that a question had come up as to how to alert contractors to these problems. Immediately thereafter Dr. Hilf stated:

To my knowledge, we were not thinking of particular kinds of failures or particular kinds of conditions, we were thinking of—and I think at least I had hoped at that time that the impression of the whole sentence was that we had problems with these materials lessening in quality of deteriorating, used in a broad sense just reducing in quality or distintegrating which we meant breaking into pieces without thinking of whether they were, whether they were little pieces or big pieces.

They were distintegrating, they were breaking up into pieces by action of air, water and stress relief.

(Tr. 667).

Upon cross-examination Dr. Hilf conceded that none of the measures specified in the Government testing provision of Paragraph 50 would have prevented the deep failures of rock to which Dr. Heuer had testified. As to these he stated, "those are surficial treatments." (*See text accompanying nn.286-90, supra.*)

With respect to the above testimony, the Board notes that if at the time the invitation for bids was issued in the fall of 1970, the BOR knew of deep failures of rock which had occurred in its earlier tunnels, it is at least surprising that the Bureau should have devised a provision to "alert" contractors to the difficulties encountered in such earlier tunnels without including therein any remedial measures for the treatment of deep rock failures, while including several such measures for remedying failures of a surficial nature.

We have previously referred to Dr. Hilf's testimony that full circle steel ribs could have been used as

support to control upward movement of the invert. Dr. Hilf also considered that the provisions on the drawings for full circle steel rib support (Drawing 809-D-330) indicated that it would have the capability of supporting the entire perimeter of the tunnel. As to the relationship between the provision for half circle steel rib support and full circle steel rib support, Dr. Hilf said that if the half circle steel rib support would not stay up, you would put the full ones in. According to Dr. Hilf the reason for providing for full circle steel rib support was in order to be able to handle any kind of a contingency in the tunnel (n.282, *supra*, and accompanying text).

It is undisputed that the contract drawings show full circle steel rib support. In their testimony appellant's witnesses asserted that the pattern of rock bolt support eventually developed was more effective in controlling the deep rock failures which occurred following excavation, however, than would have been the case if full circle steel rib support had been utilized. Dr. Heuer testified that installing steel sets would not have alleviated most of the problems because the problems developed before the steel sets could have been installed any closer to the heading of the tunnel than the contractor had installed the rockbolts. Treating the same subject in the May 1973 report (AF 77), Dr. Heuer states: "Steel ribs and wood blocking are a passive support which do not actively strengthen

and restrain the rock, and as such would allow more fracture development and rock failure than the pre-tensioned rock bolt system used by the Contractor" (n.261, *supra*, and accompanying text).

Appellant's expert, Mr. Mathews, testified that one principle that has generally been accepted where you have "geodynamic pressure" is that you have to permit the ground to relieve itself, to come in in order to reduce the pressure to a value which could be tolerated. Thereafter he stated that given that requirement, it would have been possible to support the tunnel with full circle steel ribs. Mr. Mathews qualified his answer by stating that full circle steel rib support installed in the manner specified in the contract would not have supported the rock in Tunnel No. 3 (n.269, *supra*, and accompanying text).

Testifying with respect to the adequacy of full circle steel rib support authorized by the specifications, Dr. Hilf pointed out that for such support only minimum sizes were given but sizes up to 8 inches could have been used. He also noted that even in cases where the rock was much weaker than the overburden pressure, the full circle steel rib supports would be sufficient. Apparently in answer to a question raised by Mr. Mathews, Dr. Hilf stated that the full circle steel rib support would not be installed smack against the tunnel but that there would be lagging in between where there was any tendency for the material to come

in and that that would cushion the forces on the supports (Tr. 677).

In his testimony, Dr. Hilf never directly addressed the question of whether full circle steel rib support could be installed any closer to the heading than the rockbolts had been installed; nor did he undertake to say whether, if installed, the full circle steel rib support would be more effective or even, as effective, as the rockbolt support system used by the contractor. With respect to the latter question, however, Dr. Hilf read into the record a passage from an article by D. E. Cannon, Project Construction Engineer, Bureau of Reclamation. The article is entitled "Record Tunnel Excavation with Boring Machines." In the course of analyzing excavation progress made in Blanco Tunnel, Mr. Cannon states: "[U]se of rock bolts was found to be more effective than circular steel ribs with lagging and contributed to the record progress" (GX X, p. 48; Tr. 671-74).

It is clear from the record that the four lowest bidders on the work covered by the instant contract all contemplated that they would support virtually the entire length of the tunnels with rockbolts. In a memorandum written more than a month before excavation with the mole had commenced in Tunnel No. 3, the project construction engineer wrote the Director, Design and Construction, to say: "[T]he four low bidders made only token bids for the tunnel support system, which indicates that they planned to use rock bolts" (n.10, *supra*). The wide range in the prices submitted by the

lower and the higher bidders indicate that the bidders differed radically in their views as to the difficulties likely to be encountered in performing the contract work. We note, for example, that the total bid price submitted by the highest bidder is almost double the amount bid by the appellant (GX Y).

2. *Prebid Investigation*

The Government has put squarely in issue the adequacy of the contractor's prebid investigation by charging that in preparing the bid estimate the appellant (i) ignored Paragraph 50, (ii) ignored overburden, (iii) disregarded the immediate fallout which had occurred in Tunnel No. 1 of which it had knowledge prior to bidding, and (iv) provided for the exclusive use of rockbolts for support for the tunnels despite the indication in the specifications that 80 percent of the length of the tunnels would require support other than rockbolts. While these charges have sometimes been couched in general terms, it is obvious that the Government considers Mr. Sperry to have been the person principally responsible for the appellant's failure to consider (or act in a way consonant with) data furnished by the Government. Sometimes Mr. Sperry is specifically identified as at GPB 25 where the following statement appears: "For the purposes of bidding Navajo 3 and 3A, Fluor may well have been at the mercy of the inexperience of Mr. Sperry."

Before considering the specific points raised by the Government, it would perhaps be well to briefly re-

January 15, 1981

fer to some of the factors taken into account by the contractor in the bid estimate for the underground work for Tunnel Nos. 3 and 3A, as well as what knowledge can properly be imputed to the contractor at the time of the bid submission.

Among those actively participating in the prebid investigation, in addition to Mr. Sperry, were Mr. J. F. McCreight (chief engineer) and Mr. J. J. Hayes (company geologist). According to Mr. Sperry's testimony the contractor's personnel investigating the site were shown the job by Mr. Rogert of the Bureau of Reclamation. The things looked at included the rock cores from the exploratory holes, the rock outcroppings on the site, the plans and specifications, the mole used on Tunnel No. 1 and the materials and foundation report (GX U). The papers read by Mr. Sperry included the Bennett report (GX A) and the Hayes report (AX 1).

In undertaking to say what the contractor should have known about the conditions likely to be encountered in Tunnel Nos. 3 and 3A, the Government attaches a great deal of significance to what is revealed in the final construction reports for the three bored tunnels in the San Juan Chama Project, as represented by the reports on Azotea Tunnel (GX QQQ), Oso Tunnel (GX RRR), and Blanco Tunnel (GX SSS). The Government asserts that the final construction reports for these three tunnels were available to the public at the time Navajo 3 and 3A were bid, citing the testimony of Mr. Tackett at Tr.

1258 (GPB 25). The colloquy between Government counsel and Mr. Tackett at Tr. 1258 does not establish that these final construction reports were available to the public at the time of bidding; nor does any other testimony elicited from Mr. Tackett or any other witness. With respect to this subject, Mr. Tackett testified that at some time during the period when he was project construction engineer on the San Juan Chama Project between 1969 and 1972, the BOR had adopted the policy of making the final construction reports available to the public; that these reports are available in the BOR library in Denver; that they were available when he went to Denver in 1972; and that he did not know exactly when the practice of having the final construction reports available in the BOR library had started (n.360, *supra*, and accompanying text).

There are weaknesses in other elements of the Government's proof respecting the availability of these final construction reports. For example, according to the reports themselves, Blanco Tunnel (GX SSS) was constructed during the period 1965-69, while Azotea Tunnel (GX QQQ) and Oso Tunnel (GX RRR) were not completed until 1970. As the invitation for bids with respect to Tunnel Nos. 3 and 3A was opened on Sept. 22, 1970 (AF 1), a question arises as to whether the reports (particularly those for Azotea and Oso Tunnels) had even been furnished to the BOR library in Denver by the time the bids were required to be submitted.

Another question that arises with respect to the final construction reports introduced into evidence in these proceedings is the question of why the Government should have made so sustained an effort to prove that the final construction reports for the three tunnels involved in the San Juan Chama Project (GX QQQ; GX RRR; and GX SSS) were available to the public in the BOR library in Denver and so little effort to show that the Final Construction Report for Tunnel No. 1 (GX KKK) was available. The point is considered to be of some significance since it is undisputed that the three San Juan Chama Project Tunnels were approximately 110 miles from Tunnel No. 3 and that the largest bore size involved in any of these tunnels was 13 feet 5 inches. By way of contrast, Tunnel Nos. 1, 3, and 3A were all part of the Navajo Indian Irrigation Project and were almost identical with respect to the size of the bore ranging from 19 feet 10 inches to 20 feet 10 inches in Tunnel No. 1 (GX KKK, p. 69) and being 20 feet 6 inches in Tunnel Nos. 3 and 3A (GX YYY). We also note that construction was apparently completed in Tunnel No. 1 by 1967, and that the final construction report for that tunnel was transmitted to the Chief Engineer by letter from Bert Levine, Project Construction Engineer dated Jan. 5, 1968 (GX KKK).

a. *Consideration of Paragraph 50*

In asserting that the appellant ignored Paragraph 50 (GPB 6), the Government appears to have over-

looked the testimony given by Mr. Sperry upon cross-examination respecting the manner in which the Government testing provision of Paragraph 50 (quoted above) should be interpreted. It was his testimony that in the context of that provision the terms "deterioration" and "disintegration" refer to superficial things and that none of the remedial measures specified therein would have prevented the deep-seated failures that occurred at Navajo Tunnel No. 3 (Tr. 112-14).

b. *Failure to consider overburden (cover)*

It is undisputed that the contract drawings showed the amount of cover over the tunnels and that in preparing the bid estimate Mr. Sperry did not consider this factor. The explanation offered for not doing so was that in Mr. Sperry's experience up to that time overburden was not normally considered in a rock tunnel.³⁷⁶ In support of its position that overburden should have been considered in preparing the bid estimate, the Government points to the testimony of witnesses for the appellant (Dr. Heuer and Mr. Mathews) and for the Government (Dr. Hilf and Mr. Tackett).

Dr. Heuer testified that in September of 1970 (time of bid submission), he would have been able

³⁷⁶ Mr. Sperry's lack of concern over support problems attributable to depth of cover may have been simply a reflection of the conventional ideas prevalent at that time (i.e., loads on rock tunnels are independent of the depth of cover over the tunnel). According to Dr. Heuer, this view prevailed generally because at normal tunneling depths the in situ stresses are normally low with respect to the intact ground strength (AF 36, III-6).

to predict the rock failures of the type he had described from the information shown in the plans and specifications (depth of cover), the information available to bidders upon request (GX U) and the amount of stress which would develop when the tunnel was excavated through a mountain where there was 1,000 feet of cover (GPB 28-32). Dr. Heuer emphasized, however, that while in 1970 he would have been able to predict the fractures he had described, he would not have been able to predict how fast they would form. Dr. Heuer also made a point of saying that he had not testified that a common contractor (as opposed to people well versed in rock mechanics) could have predicted the failures which occurred (nn.253&54, *supra*, and accompanying text). The testimony given by Dr. Heuer in this area was corroborated by the Government's expert Dr. Hilf who testified (i) that the amount of cover and the compressive strength of the samples of rock tested (GX U) were significant factors to consider in determining the need for support following excavation and (ii) that the speed of failure would be difficult to predict. (*See text accompanying nn.290-92, supra.*)

The Government also cites the testimony of Mr. Mathews on the predictability of rock failures (GPB 32, 83). In response to a question from the hearing member, Mr. Mathews gave as his opinion that a person would have to have had a "very strong qualification in

geology" in order to have foreseen the possibility of "geodynamic pressure" developing in Tunnel No. 3. Immediately thereafter he added, however, that if he had been estimating the job for the contractor in 1970, he did not think he would have expected the development of "geodynamic pressure" and that he knows he would not have if it had not been for his prior experience in Azotea Tunnel. (*See text accompanying nn.268&273, supra.*) The Board notes that at the time of the hearing Mr. Mathews had had 40 years of experience as a professional engineer of which it was estimated more than 50 percent was related to tunneling and underground work (n.262, *supra*).

To support its position the Government quotes extensively from the testimony given by Mr. Tackett (GPB 18-21). An examination of the quoted testimony discloses, however, that Mr. Tackett did not conclude that overburden was an important factor to consider in assessing the prospects of rock failures occurring in the three tunnels of which he was in charge (Azotea, Blanco, and Oso) until near the end of their excavation. In his testimony Mr. Tackett noted that all three of the tunnels were open at the same time (n.353, *supra*). Stated positively, Mr. Tackett's knowledge of the importance of considering overburden in rock tunnels was gained through personal experience in three tunnels excavated prior to Tunnel Nos. 3 and 3A. No basis is perceived for imputing knowledge

so gained to Mr. Sperry or to the other contractor personnel associated with him prior to the time the bid was submitted in September of 1970, since the evidence fails to show that the final construction reports for the tunnels in question were available to the public before the time arrived for the opening of bids.

The Board also notes that in administering the contract for which he was responsible, Mr. Tackett does not appear to have employed the standard now urged upon us by the Government. Testifying upon cross-examination with respect to Blanco Tunnel, Mr. Tackett acknowledged that he had initiated or approved a change order under which the contractor concerned was paid for removing the invert heave even though he considered the invert heave to have been caused by the amount of the overburden and even though the amount of the overburden was known prior to bid submission (n.356, *supra*, and accompanying text).

After noting that the contractor's prebid investigation team included a geologist (Mr. Hayes) and its chief engineer (Mr. McCreight), the Government states that it does not know what the available data revealed to Mr. Hayes with respect to stress induced failures because he did not testify at the hearing (GPB 32). While it is true that Mr. Hayes did not testify, the report he made is in evidence as one of appellant's exhibits. The language employed in that report indicates that he did not anticipate pressures developing

from overburden or from any other cause. Thus, in his report to Mr. McCreight dated Aug. 31, 1970, Mr. Hayes states: "Since no conditions conducive of high pressure or badly fractured, loose ground are likely in this formation no permanent steel rib support requirements are indicated" (AX 1, p. 3).

The observations made by Mr. McCreight long before the hearing are not as specific as those of Mr. Hayes. It is at least highly doubtful, however, that at the time of Mr. McCreight's participation in the prebid investigation, he considered overburden a factor for consideration in evaluating the prospects of fractures and fallout developing in rock tunnels. At the important meeting between representatives of the contractor and the Bureau on Dec. 6, 1970 (AX 74), Mr. McCreight is recorded as having stated that knowledge of stress redistribution occurring whenever a tunnel was driven was unknown to the contractor (n. 28, *supra*, and accompanying text).

Based upon the foregoing discussion, the Board finds (i) that none of the contractor personnel named by the Government as involved in the bid submission had considered the amount of cover over the tunnels in evaluating the prospect of fractures and fallout developing in the rock upon excavation; (ii) that the testimony of the Government witness Tackett shows that the conclusions he reached respecting the relationship existing between the amount of overburden and rock failures were based upon personal

experience in particular tunnels with no evidence that the results of the experience in such tunnels had been communicated to the contractor prior to bid submission; and (iii) that of those witnesses relied upon by the Government to establish a relationship between the amount of overburden and the amount of rock failure likely to be experienced only the appellant's expert, Dr. Heuer, and the Government's expert, Dr. Hilf, were sufficiently well versed in rock mechanics to have predicted the likelihood of rock failures occurring from the information furnished to bidders or available to them and not by reason of personal experience in other bored tunnels. So finding, we conclude that the failure of Mr. Sperry to consider the amount of overburden in preparation of the bid estimate pertaining to Tunnel Nos. 3 and 3A was reasonable in the circumstances obtaining in September of 1970.

c. *Fallout, progress and support in Tunnel No. 1 as shown in Bennett Report*

In the Government's view the appellant is not the only contractor in a machine bored tunnel who encountered the type of rock failures forming the basis for this appeal. Cited in support of this position is the undisputed fact that Mr. Sperry had read the Bennett Report (GX A) pertaining to Tunnel Nos. 1 and 2. According to the report there were reaches in Tunnel No. 1 in which the shales began dropping almost

immediately and other reaches where water seepage caused shale to fall out in large pieces (GPB 17-18, 22-23). Also undisputed is the fact that the San Jose formation in which Tunnel Nos. 1 and 2 were driven is comparable to the Nacimi-ento formation in which Tunnel Nos. 3 and 3A were driven (n.126, *supra*; AX 1).

Particularly germane to this discussion is the following passage from the Bennett report:

The shales reacted the same in both tunnels in that they tried to reach stability. The difference appears in the amount of time it takes the shale to begin air slaking. In either tunnel it would generally take 1 to 2 days to begin falling, even after its initial exposure. However, once exposed, differences occurred. In Tunnel 1 the shale would begin dropping immediately after a new reach was exposed. It was believed that this was due to the compressive effects of the cutterhead. After the mole passed, the shale would almost spring into the tunnel and, unless immediately supported, would continue falling.

(n. 72, *supra*).

In the course of responding to a question posed by the hearing member, Mr. Sperry noted the reference in the report to the "compressive effects of the cutterhead" after which he stated that the gauge cutters on the mole used in Tunnel No. 1 were so designed that they cut at an angle which tended to overstress the rock that was to remain (Tr. 1373-75). Earlier in his testimony Mr. Sperry had stated that the mole used in Tunnel No. 1 was one of the things examined in the prebid investigation (Tr. 36).

Prior to the hearing the Bureau had questioned the contractor with respect to the above-quoted passage from the Bennett report. In its reply the contractor simply assumed that the third sentence in the quotation was in error and that the shale in Tunnel No. 1 began dropping immediately. The answer also assumed, however, that the particles which fell due to the "compressive effects of the cutterhead" would be of the same general size as the muck produced by the machine, *i.e.*, generally 1½ inches or smaller in dimension), and not falling blocks 6 to 8 inches thick and 2 to 3 feet wide as had occurred in Navajo Tunnel No. 3 (nn.126-29, *supra*, and accompanying text).

Although the Government appears to doubt that Mr. Sperry should have been confused by the Bennett report in the area in question (GPB 70-71), it has not even attempted to reconcile the third and fifth sentences in the passage quoted above. The Government attaches a significance to the reference in the Bennett report to the shale dropping immediately which is not merited by anything else in the report or in the record before us. Leaving entirely aside the garbled nature of the language used in the portion of the report quoted above, there is nothing in the report to show why immediate fallout in Tunnel No. 1 attributed by the author of the report to "the compressive effects of the cutterhead" should be equated to the immediate fallout which occurred in Tunnel Nos. 3 and 3A and for which the

claim is made that the strength of the rock was less than the stress on the rock. (*See* n.296, *supra*, and accompanying text.)

Similarly with respect to the reaches in Tunnel No. 1 where the shale fell out in large pieces and that fallout was attributed by the author of the Bennett report to water seepage, we note the testimony of Dr. Heuer that while water had had a part in what had happened in the vicinity of DH 116, it was not primarily responsible for the magnitude of the stresses that had occurred (text accompanying nn.257&58, *supra*). Previously, in the May 1973 report, Dr. Heuer had stated that water had not caused the formation of fractures penetrating deep into the rock and that it was the formation first of cracks in the rock due to overstressing which had provided free water with access to deep within the siltstone/shale material (n.73, *supra*, and accompanying text).

The Government also raises questions as to the rationality of the contractor assuming that rockbolts could be used so extensively in Tunnel Nos. 3 and 3A and on planning to achieve so much greater progress than had been realized in Tunnel No. 1, since the ground conditions in the tunnels were so similar and the contractor in Tunnel No. 1 had experienced so much difficulty in using rockbolts (GPB 23). One weakness in this argument is that the type of support installed depends not only on ground behavior but also on the construction equipment used. For example, the ex-

treme difficulty the contractor had in installing rockbolts in Tunnel No. 1 was attributed by Mr. Sperry to the fact that because of the configuration of the mole used in that tunnel the contractor could not get rockbolts in around the mole and could not get anchorage for their rockbolts (Tr. 107).³⁷⁷ Another weakness in the argument is that it fails to take into account the advance in mole and rockbolt anchor technology that had occurred between the time excavation was completed in Tunnel No. 1 in 1966 (Tr. 777) and the time excavation was commenced in Tunnel No. 3 in mid-May of 1971. The significance of the development of the epoxy resin type rockbolt anchor was attested to by the project construction engineer in a memorandum to the Director, Design and Construction, dated Mar. 9, 1972, in which he states that "the use of rock bolts for support has been satisfactory since the epoxy anchor has been in use" (text accompanying n.47, *supra*).

d. *Contractor's exclusive reliance upon rockbolts despite Government's forewarnings*

The Government strongly questions the contractor's decision to use rockbolts as the exclusive means of supporting the tunnels in the face of the indications in the specifications that approximately 80 percent

of the tunnels would require support other than rockbolts³⁷⁸ (GPB 38, 43, 69). It is even more critical of the contractor's decision to excavate the tunnels to a 20-foot 6-inch diameter using a mole with a fixed cutterhead which in effect precluded the contractor from resorting to any support system for the tunnels other than rockbolts (GPB 28, 39, 54, 63-64). Lastly, the Government charges that in making the decision to rely exclusively upon rockbolts for support and to excavate the tunnels by using a mole with a fixed cutterhead to a diameter of 20 feet 6 inches (*i.e.*, so small a diameter that only rockbolts could be used for support), Mr. Sperry had been unduly influenced by his experience in River Mountains Tunnel, a moled tunnel constructed for the BOR at an earlier time on which Mr. Sperry had been the project engineer (GPB 68-80).

Except for the arguments made by the Government with respect to the River Mountains Tunnel, the most striking aspect of the Government's position in this area is the extent to which it has chosen to ignore the active role the contracting officer or his duly authorized representative played in approving the contractor's plans to rely exclusively upon rockbolts for support

³⁷⁷ As noted by appellant's counsel, the Government has wrongly characterized the testimony as referring to Tunnel Nos. 3 and 3A (ARB 13). In fact, Mr. Sperry testified that the rockbolt grips on the Dresser mole could be tilted forward to support the rock within about 4 to 6 feet behind the dust seal. (*See* n.166, *supra*, and accompanying text.)

³⁷⁸ Government witness Rogert testified that the specifications for Tunnel No. 3 gave the contractor the option to choose rockbolts or other means of support with the approval of the contracting officer (n.9, *supra*, and accompanying text). We note the absence from the record of any evidence indicating that the contracting officer ever found that the conditions in Tunnel Nos. 3 and 3A were unsuitable for the use of rockbolts.

and to excavate the tunnels using a fixed cutterhead mole to a diameter of 20 feet 6 inches. It is clear from the record that the Bureau's approval of the contractor's plan to use only rockbolts in the tunnels for support was based on the provisions of Paragraph 50 of the specifications from which the following is quoted: "Where conditions in the tunnels are suitable for rock bolt supports the contracting officer will approve the use thereof."

It is quite true, of course, as the Government says, that Paragraph 50 did not allow the contractor unfettered discretion in the use of rockbolts and that rockbolts were allowed only where conditions were suitable and upon approval by the contracting officer (GPB 69-70). There is no indication in this record, however, that either the contractor or the Bureau acted as if the contractor had unfettered discretion to use rockbolts. Testifying upon cross-examination, Mr. Sperry acknowledged that the contractor had taken a calculated risk in assuming that all the support problems could be cared for by using rockbolts (n.175, *supra*). While it is clear from the bid submitted that the contractor contemplated using rockbolts for whatever support was required in the tunnels (GX I, p. 48; n.10, *supra*), it is equally clear that the project construction engineer knew that use of rockbolts for support need not be approved unless conditions in the tunnels were determined to be suitable. The contractor was reminded of the contractual limitations upon the use of rock-

bolts in the Bureau's letter of Feb. 2, 1971, in which the project construction engineer stated (i) that whether conditions in the tunnels were suitable for the extensive use of rockbolts would be determined during and following the excavating process and (ii) that where ground conditions in the tunnel were unsuitable for the use of rockbolts other types of support would be required as indicated in Paragraph 50 (text accompanying nn.8&9, *supra*). In the conference between the parties on Dec. 6, 1971, the contractor was given permission to proceed with the rock bolting program but subject to later review (n.34, *supra*, and accompanying text). By Mar. 9, 1972, however, the doubts of the Bureau as to feasibility of using rockbolts as support for Tunnel No. 3 had been resolved in the contractor's favor. In a memorandum to the Director, Design and Construction, on that date, the project construction engineer reviewed the progress made by the contractor since the Dec. 6, 1971, conference after which he stated: "We have found that the use of rock bolts for support has been satisfactory since the epoxy anchor has been in use" (text accompanying n.47, *supra*).

In many respects the actions the parties took involving the contractor's decision to employ a fixed cutterhead with a 20-foot 6-inch bore paralleled those taken in connection with the contractor's rock bolting program. As early as the Nov. 5, 1970, meeting (GX Z), the contractor advised the Bureau of its intention to use a mechanical mole to

January 15, 1981

excavate the tunnels to a diameter of 20 feet 6 inches³⁷⁹ or to 6 inches larger than the "A" line. Mr. Levine testified that on numerous occasions after the Nov. 5 meeting, he expressed concern to Mr. Sperry over the small diameter of the mole because it would only permit the installation of rockbolt type supports. In a letter to the Bureau dated Jan. 19, 1971, however, the contractor reaffirmed its confidence in the 20-foot 6-inch diameter of the bore, stating: "We still believe that this size is adequate for the support that will be required" (n.7, *supra*). In the Bureau's letter to the contractor under date of Feb. 2, 1971, the project construction engineer stated that the proposed excavated diameter appears to be adequate for meeting minimum dimensions for "A" line thickness for rockbolt supported sections but went on to note that the use of steel rib supports would require excavating to a larger diameter if normal tolerance is provided (n.8, *supra*, and accompanying text).

After attending a showing of the Dresser mole (the mole used in Tunnel Nos. 3 and 3A), in Beaumont, Texas, in March of 1971, the concerns of Mr. Levine were assuaged by the impression he formed that the mole exhibited would have a variable size cutterhead. The basis for the impression is not clear. Testifying upon rebuttal, however, Mr. Sperry unequivocally stated

that the Dresser mole used on the project was neither proposed nor discussed as a variable head mole (nn.186&303, *supra*, and accompanying text). By the time that excavation of Tunnel No. 3 commenced in mid-May of 1971, however, Mr. Levine knew that the mole did not have a variable size cutterhead and that it was restricted to a 20-foot 6-inch diameter (n.307, *supra*, and accompanying text). The fact that the contractor was employing a fixed cutterhead mole with a 20-foot 6-inch diameter was known to the Bureau, of course, at the time the contractor was given permission to proceed with the rockbolting program on Dec. 6, 1971, subject to later review, as was true also on Mar. 6, 1972, when the project construction engineer expressed satisfaction with the use of rockbolts for support (nn.34&47, *supra*, and accompanying text).

e. *River Mountains Tunnel*

Whether and, if so, to what extent the contractor's appraisal of the conditions likely to be encountered in Tunnel Nos. 3 and 3A may have been affected by Mr. Sperry's experience in River Mountains Tunnel present questions of a somewhat different nature. Succinctly stated, the Government's position is that in preparing the bid estimate for the instant contract, Mr. Sperry was "bidding River Mountains Tunnel all over again" (GPB 71).

The Government undertook to make a statistical comparison between River Mountains Tunnel on the one hand and Tunnel Nos. 3

³⁷⁹ The Government's expert witness Dr. Hill testified that there was nothing in the specifications against the contractor making the choice that he had made (n.293, *supra*).

and 3A on the other. Using the report Mr. Sperry had prepared on River Mountains Tunnel (GX G), the contractor's bid estimate (GX I), the materials report (GX U), the rate of progress in machine-bored tunnels (GX UUU) and production comparisons in Tunnel Nos. 3 and 3A (AX 91), the Government shows (i) that the rock in River Mountains Tunnel was not only of a different type but that it was also much stronger than the rock in Tunnel Nos. 3 and 3A; (ii) that the former tunnel had significantly less overburden than did the latter tunnels; (iii) that River Mountains Tunnel had a bored diameter of 12 feet whereas Tunnel Nos. 3 and 3A had a bored diameter of 20 feet 6 inches; and (iv) that in the former tunnel the progress achieved by the contractor had averaged 108 feet per working day with only 10 percent of the tunnel requiring support as compared to an anticipated progress of 100 to 120 feet per day in Tunnel Nos. 3 and 3A.

With respect to item (iv), *supra*, the Government asserts that since the tunnels involved in the instant contract are similar to Tunnel No. 1 (n.174, *supra*), the comparison should be between the progress made in Tunnel No. 1 and that made in Tunnel Nos. 3 and 3A. The average progress achieved in Tunnel No. 3 of 52 feet per working day is almost identical to that achieved in Tunnel No. 1 of 51.5 feet per working day, while progress attained in Tunnel No. 3A of 95 feet per working day is almost double that obtained in Tunnel No. 1. The

Government also argues that the course of action followed in River Mountains Tunnel at an earlier time explains the actions of the contractor in failing to consider full circle steel rings for rock support in Tunnel Nos. 3 and 3A and moling these tunnels with only a one-inch tolerance in the invert so that tightts there could be removed without disturbing overhead rock support (GPB 72-73, 78).

In preparing the bid estimate on Tunnel Nos. 3 and 3A, Mr. Sperry was unquestionably influenced to some extent by his experience in River Mountains Tunnel on which he had been the project engineer. Asked by the hearing member to summarize the factors he had considered in disregarding or at least not proceeding on the basis of the Government's estimate that approximately 80 percent of the length of the tunnels would require support other than rockbolts, Mr. Sperry stated that a large factor had been the company's success at River Mountains Tunnel in steering the mole and in supporting the rock with rockbolts. Immediately prior to this testimony and in response to the same question by the hearing member, however, Mr. Sperry had stated: "Well, the main factor was the way we interpreted the rock conditions from what we saw on the job, not only the cores but the topography, the mesa land at the job-site itself and the way that stood and the way it was so massive" (Tr. 1373).

While, according to his testimony, Mr. Sperry's experience at River

January 15, 1981

Mountains Tunnel was a large factor in his decision to disregard the Government's estimate that 80 percent of the tunnel support required would be other than rockbolts, it is clear from the above quoted testimony that it was not the main factor in the decision reached respecting the nature of the support required in Tunnel Nos. 3 and 3A; nor can it be assumed that these were the only two factors which influenced Mr. Sperry's decision in that regard. For example, it appears reasonable to conclude that the manner in which Mr. Sperry interpreted the Government testing provision of Paragraph 50 (discussed, *supra*) would have influenced him toward disregarding the Government's estimate that approximately 80 percent of the support required would be other than rockbolts.

There are other factors to consider, however, in assessing the extent to which the actual bid submitted by the contractor may have been influenced by Mr. Sperry's experience at River Mountains Tunnel. In addition to Mr. Sperry, there were other contractor personnel who actively participated in the prebid investigation and in the preparation of the bid estimate. As to these other persons, the Government has not even alleged that their judgment concerning the bid to be submitted was influenced in any way by Mr. Sperry's experience in River Mountains Tunnel.

In its brief the Government acknowledges that Mr. Sperry's ex-

perience may have influenced only his judgment for it states: "Another piece of information which perhaps was within the exclusive domain of Mr. Sperry's knowledge and upon which he states he relied to a very large extent in estimating this job, was his experience at River Mountains Tunnel where he was the project engineer" (GPB 71). Certainly there is nothing in the report of the company's geologist, Mr. Hayes (AX 1), to indicate that his judgment respecting conditions likely to be encountered in Tunnel Nos. 3 and 3A had been influenced by reason of conditions experienced by Mr. Sperry in River Mountains Tunnel. In fact, the latter tunnel is not even mentioned in the report. There is a discussion, however, of the information disclosed in the Bennett report (GX A) with respect to Tunnel No. 1. In any event, it is deemed highly significant that the three next lowest bidders submitted bids on the common assumption that the tunnels to be driven would be supported virtually throughout with rockbolts (n.10, *supra*).

We find that the decision of the contractor to rely exclusively upon rockbolts for support of the tunnels and to excavate them to a diameter of 20 feet 6 inches using a fixed cutterhead mole were matters within the exercise of the contractor's discretion where, as here, the record is devoid of any finding by the contracting officer, or his duly authorized representative, that conditions

in the tunnel were not suitable for the use of rockbolts.

3. *Conditions Encountered*

In this section we will not attempt to capsule the detailed testimony to which we have previously related in this opinion. We will undertake to give examples of rock failures and fallout with special emphasis upon the locations within Tunnel No. 3 where such failures and fallout occurred according to the reports submitted by the contractor's consultants, as well as endeavoring to highlight the testimony or other evidence considered to be necessary to the conclusions reached. In addition we will (i) describe the phenomenon of rock failure in the language employed by witnesses for the appellant and for the Government; (ii) examine the material differences, if any, between the condition indicated in the contract and those encountered in performance; (iii) relate the efforts made by the Government to investigate the differing site conditions claim; and (iv) consider additional Government's defenses to the claim asserted.

a. *Rock failures and fallout during contract performance*

Moling of Tunnel No. 3 began May 13, 1971, at Station 873+88. Within the first 280 feet of moling a triangular wedge of rock fell from the crown immediately behind the mole's dust shield before the crown bolts could be placed. These wedges resulted from fractures through intact rock propagating to a shale parting at an estimated height of 2

feet above the crown, as shown in photographs 1 and 2 of AX 5. Cracks below springline are also present for most of the distance between Stations 872+25 and 873+00 as shown in photograph 3 of AX 5. Apropos this reach of Tunnel No. 3, the Bureau of Reclamation's geologic tunnel mapping states: "Fallout 0.5' to 2.0' deep, 1' to 4' wide occurred in arch immediately after passage of cutter head of mole" (AX 87(6)).

The 150-foot length of tunnel between Station 871+00 and Station 869+50 contains cracks and spalling in the crown, which developed after the rock bolts, circumferential pans, and chain link fabric were placed. Photographs 5 and 6 of AX 5 show the pans to have buckled with rock slabs being held up by the chain link fabric. Commenting on this reach the project geologist states: "Fallout 0.5' to 2.5' deep, 1' to 4' wide occurred in arch immediately after passage of cutter head of mole" (AX 87(6)).

In the last 3 days of June 1971, the contractor advanced the tunnel an average of 160 feet per day. In July, however, the average rate of tunnel advance was 39 feet per working day. No tunnel advance was even attempted between July 14 and Aug. 20, 1971, when the contractor and its consultants were attempting to find solutions to the problem of rock fallout in Tunnel No. 3. On July 1, 1971, fallout in the arch of from 1 foot to 3 feet deep and from 1 foot to 2½ feet deep occurred at Station 859+00 to 859+20. For July 2 to July 8, 1971,

fallout in the arch was reported of $\frac{1}{2}$ foot to 2 feet deep and 6 feet wide at Stations 858+05 and 808+75 and at Stations 857+45 to 857+86. On July 9 to 12, 1971, fallout in the roof was estimated to be 9 feet above the arch at Stations 856+50 to 856+90, it being noted that for the stretch of tunnel between Stations 855+50 and 856+96 sides fractured by gripper were permitted to ravel before applying shotcrete (AX 87(6)).

At approximately Station 859+40 fallout occurred before the crown bolts could be placed. On the weekend of July 23 to 26, a large roof fall (estimated to be 80 to 100 cubic yards) occurred near the trailing end of the mole, some 30 to 40 feet behind the face. Shale over the crown fell out up to the overlying sandstone and formed a void approximately 6 to 8 feet high by 25 feet long. The void which formed was slightly wider than the tunnel bore. During this time the sidewalls spalled and slabbed badly along the full length of the mole, both ahead and behind the mole gripper plates (AF 77A; AX 5).

Of the approximately 1,735 feet of machine bored tunnel driven prior to the resumption of operations on Aug. 20, 1971, some form of fracturing or rock fall is present in all except an approximately 900-foot length between Station 869+50 and Station 860+50. Photograph 4 of AX 5 shows the condition of the crown in this section of the tunnel. Even after support was placed, problems attributable to

rock failure and fallout sometimes developed. One photograph of the crown at Station 870+50± shows large slabs which spalled after crown support was placed being held by chain link fabric (AX 5, Photograph 5). Another photograph of the crown at the same station shows buckling of pans related to spalling after crown support was placed (AX 5, Photograph 6). This same stretch of tunnel had presented problems as soon as excavated, however, for the project geologist states: "Fallout 0.5' to 2.5' deep, 1' to 4' wide occurred in arch immediately after passage of cutter head of mole" (AX 87(6)).

Not all rock failures or falls, however, were in the arch. This is clear from the picture taken at Station 859+80± showing cracking in the lower sidewall below fan line (AX 5, Photograph 7) and the picture taken at Station 859+40± showing fall and cracking in sidewall, right side (AX 5, Photograph 8). The geologic mapping for Tunnel No. 3 shows fallout from the sidewalls to be $1\frac{1}{2}$ feet deep in the vicinity of Station 859+40 (AX 87(6)).

When driving of the tunnel resumed after the shutdown, progress was very slow with excavation averaging less than 10 feet per day during the balance of August and less than 12 feet per day for the 11 days worked in September.³⁸⁰ On Aug. 25, 1971, the fallout in the

³⁸⁰ On the geologic mappings the project geologist notes that 19 shifts were lost between Sept. 17 and Sept. 28, 1971, due to labor problems (AX 87(5)).

roof was estimated to be 5 feet deep (AX 87(6)). During October progress improved somewhat with an average rate of advance for the 19 days worked being approximately 30 feet per day. In November, however, the average daily rate of advance was less than 25 feet. When on Nov. 5, 1971, the contractor reached Station 847+75 a cave-in at Station 855+60 caused the loss of nine shifts. On Nov. 19, 1971, the contractor stopped tunneling operations at Station 846+02 for 1 week in order to go back and shotcrete and rockbolt between Station 848+00 and Station 855+60 (AX 87(5)). The 20 days worked in December saw the contractor achieving an average daily progress of almost 60 feet per day.

Tunneling conditions improved greatly during January, February, and March of 1972, when average progress achieved per working day for those months was approximately 84 feet, 108 feet, and 81 feet, respectively. In April of 1972, however, serious problems were encountered including soft invert and the average advance plummeted to 31 feet per working day. Some improvement occurred in May when the average daily advance increased to 48 feet per working day. A dramatic increase took place in June when an average progress of 160 feet per working day was achieved. On July 5, 1972, the tunnel was advanced by 259 feet and on the following day 94 feet of tunnel was driven before the inlet portal at Sta-

tion 721+90 was holed through at 8:10 p.m. (AX 87(9)).³⁸¹

All of the photographs involving stationing included in the Sperry-Heuer report (AX 4) relate to excavation of Tunnel No. 3, as is true also with respect to the May 1973 report (AF 77A).

Failures in the arch typically developed immediately behind the cutting head, ahead of the rock bolt installation.³⁸² The time of failure in the walls varied widely. At times, these failures occurred close behind the cutting head, ahead of the gripper plates. Typically, these failures became visible a short distance behind the tunneling machine, over the trailing floor, but fallouts would not occur until some time later, as much as a few days or weeks behind the advancing face. Examples of this type of failure are shown in Figure 6 (Sta. 859+80, shear dis-

³⁸¹ Muling in Tunnel No. 3A commenced on Aug. 18, 1972. During the remainder of the month, the average daily rate of advance was only 37 feet. In September, however, progress greatly improved with an average daily rate of advance of 103 feet. Before hole-through on Oct. 12, 1972, an average daily rate of advance of 143 feet was achieved (AX 87 (7) and (8)).

³⁸² With respect to failures in massive material in the arch, the May 1973 report states:

"In most of the tunnel, fractures developed in the arch immediately behind the cutting head and ahead of the position at which rock bolts could be installed. Spalls and slabs of rock as large as 6 to 8 inches thick and 2 to 3 feet in lateral dimensions were common. (See Figs. 21 and 22.) In some instances, these slabs were removed or allowed to fall before bolt installation. In other cases, the slabs remained in place and bolts were installed through the slabs. In places along the tunnel, the arch remained intact and circular until after the bolts were installed, but fracturing developed later, forming slabs and spalling between bolts." (AF 77A, pp. 39, 40).

placements, July 1971); Figure 20 (Sta. 830+50. Failure in south wall around shaly lens, February 1973); Figure 31 (Sta. 775+70. Wedge-shaped fallout in upper quarter-arches, February 1973); and Figure 33 (Sta. 822+00. Fracturing in north wall, February 1973) (AF 77 A, pp. 40, 41). *See also* Figure 5 of AX 4 showing rockbolt installation and fracturing in arch at heading (Sta. 851+75). Respecting rock failures experienced in the vicinity of Station 851+75, the geologic mappings state: "Fallout in the roof two to three feet deep, 10 to 20 feet wide" (AX 87(5)).

Extensive cracking developed in massive dry materials in the walls and invert of Tunnel No. 3 under the highest cover. Sometimes the cracking was closely spaced and resulted in spalling of approximately rectangular pieces of several inches in size (Figure 24).³⁸² The caption of the photograph reads: "Sta. 850+00. South wall, intense, closely spaced fracturing. Lower wall and invert have moved inward. Invert has been excavated lower to allow invert concrete placement. February 1973" (AF 77A, p. 40). For another illustration of the same type of failure, see the photograph taken at Station 839+00 (AX 4; Fig. 6).

In other cases, however, large slabbing of this class developed, as shown in Figure 28 ("Cracking in lower north wall approximately 270

ft. behind heading, Sta. 845+60, December 9, 1971") and Figure 29 ("Cracking in lower north wall approximately 680 ft. behind, Sta. 849+70, December 9, 1971"). Fractures of this type usually appeared within several hours to a few days behind the advancing face, and continued to grow over a period of days. Raveling of spalls and complete loosening of slabs bounded by these fractures typically developed over a period of days and weeks behind the advancing face. Examples of the growth of these failures are shown in Figure 12 (Sta. 828+80. Large scale slabbing in south wall, February 1973) and in Figure 13 (Sta. 826± Jan. 18, 1972. Initial stages of crack development in lower south wall, approximately 300 feet and 6 days behind heading) (AF 77A, p. 40). *See also* AX 4, Figure 7 (Large scale slabbing in lower sidewalls—Sta. 828+00).

Rock failures in the arch and walls associated with siltstone/shale in the presence of water was also a problem in Tunnel No. 3. In these cases failures in the siltstone/shale were a matter of concern because of their magnitude and the speed with which they developed. Failures of this type developed in both the crown and sidewalls shortly after excavation, ahead of bolt installation, and often ahead of the mole gripper plates. Where the mole was stopped in some situations of this type, fallout in the crown developed several feet behind the cutter head. Siltstone/shale surfaces

³⁸² In the caption the photograph is incorrectly labeled Fig. 25. In the text of the report, however, the photograph is correctly referred to as Fig. 24 (AF 77A, p. 40).

exposed to water continued to soften and slake as long as exposed and unprotected. Examples of this general type of failures are shown in Figure 17 (Sta. 846+00. North wall, arch in sandstone, wall and invert in siltstone/shale, February 1973); Figure 18 (Sta. 780+00. Large wedge-shaped fallout in wall. Coarse sandstone in arch, fine sandstone and siltstone in walls, February 1973); Figure 19 (Sta. 857 looking upstream into area of large fallout near DH116 where water was first encountered in tunnel. Heading was shut down in this area from July 14 to Aug. 20, 1971. Picture taken February 1973); Figure 23 (Approximate Sta. 855, early September 1971. Major failure and fallout in crown at heading); Figure 30 (Sta. 805+10. Fallout in north wall at location of siltstone/shale seam. February 1973); and Figure 32 (South wall, Sta. 769+20. Failures around shale/siltstone lens at Springline. February 1973) (AF 77A, p. 41). A sketch of failure associated with shale in the presence of water is shown in Figure 9 of AX 4. Photographs of such failures included with the report are Figure 10 (Fallout from arch and sidewall in shale overlain by water-bearing sandstone at Sta. 855+37 to 855+60) and Figure 11 (Fallout from sidewall in shale overlain by water-bearing sandstone, Sta. 846+00).

Fracturing in the lower portion of the sidewalls and in the invert became more prominent after the tunnel emerged from under the Harris Mesa and paralleled an edge of the mesa, suggesting high horizon-

tal stresses. (See Figure 27. South wall, Sta. 772+25. Deep-seated fractures dipping down into wall, February 1973.) In some locations of the tunnel, failure developed in the walls ahead of the gripper pads (Figure 16. Cracking in south wall ahead of gripper. Sta. 822+50. Jan. 20, 1972) (AF 77 A, pp. 51, 53).

In most of the length of Tunnel No. 3 between Station 747 and Station 855, the invert had moved into the excavation at some time following excavation. Visual inspection of the tunnel shows a high degree of fracturing in the lower wall throughout the tunnel length with high invert. An example of such an area is Figure 26 (Sta. 810+90. Large scale fracturing in lower south wall. Siltstone/shale material in lower wall has moved inward and is as much as 6 inches inside "A" line. February 1973).

Following excavation, progressive failure developed in the tunnel in different locations. Pans in the arch buckled after installation due to rock movement and failure, as shown in Figure 34 (Sta. 827+15. February 1973) and Figure 35 (Sta. 793+00. February 1973) (AF 77A, pp. 43, 44).

Except for Mr. Mathews all of appellant's witnesses gave stationing for some of the rock failures and fallout to which they testified. According to Mr. Sperry he saw extensive failures in the rib area ahead of the grippers in the vicinity of Station 821+00. These failures were reported by him to Mr. Lincoln and Mr. Rogert of the BOR.

On one Saturday in January of 1972, Mr. Sperry saw a crack in the invert so large he put his arm down as far as the elbow but could not get to the bottom of it as the crack was curved. The crack in the invert also occurred in the vicinity of Station 821+00 (n.173, *supra*, and accompanying text). According to Mr. Sperry, the entries in his diary for late December of 1971 and early January of 1972 (AX 90) show that the arch was coming down but that the support system of bolts and pans was taking the weight (n.188, *supra*, and accompanying text). During the period in question tunnel excavation was proceeding from Station 835+26 to Station 833+00 (AX 87 (5)). An entry from Mr. Sperry's diary for Mar. 24, 1972 (AX 92), shows that on that date some ties were submerged between Stations 790 and 785; that the invert was very wet; and that water was dripping from the bolts over mole (n.189, *supra*, and accompanying text).

Offered in evidence through Mr. Green were eight photographs taken from the contractor's album (AX 16), all of which relate to conditions existing prior to concrete placement and all but one of which (AX 16A showing typical placement of arch forms) were assumed to have been taken on Mar. 17, 1973. This is the date shown on AX 16F, a photograph depicting Tunnel 3 rib tights at Station 781+75. Mr. Green also testified as to concrete failures in the arch in sections of Tunnel No. 3 where the invert concrete had been

removed pursuant to Order for Change No. 1. By the change order the contractor was directed to remove the concrete invert between Stations 812+42 and 824+00 and between Stations 833+00 and 844+46 of Tunnel No. 3 (n.63, *supra*). On cross-examination, however, Mr. Green was unable to recall how much additional concrete had been placed in Tunnel No. 3 by reason of rock failures observed by him (nn.201-03 and accompanying text).

In the great majority of instances, however, testimony identifying rock failures and fallout by station was given by the appellant's expert witness, Dr. Heuer. In addition to the photographs and sketches from the reports discussed above (AX 4, AX 5, and AF 77A) for which specific stationing was given, Dr. Heuer testified extensively with respect to photographs introduced at the hearing as separate exhibits as to which he cited either specific stationing or approximate stationing or the time period in which the photographs had been taken (nn. 245-47 and accompanying text).

There is other evidence of record in which rock failures and fallout are identified by station either specifically or approximately. For example, there is the contractor's letter of June 7, 1973, by which the Bureau was notified of rock fall from the crown of Tunnel No. 3A near the outlet portal.³⁸⁴ It was estimated that 40 to 50 cubic yards of

³⁸⁴ The Bureau's geologic mappings show the outlet portal for Tunnel No. 3A to be at Station 1018+44 (AX 87(8)).

rock had fallen out pulling out or breaking off the rockbolts within the fallout area. The letter also noted that a major portion of the reinforcing steel already in place was severely damaged. Six weeks later the Bureau was notified of the arch heaving in several areas of Tunnel No. 3 between Stations 812+50 and 844+50 (nn.102-05, *supra*, and accompanying text).

b. *Description of rock failure and fallout*

Appellant's expert witness Dr. Heuer testified that the conditions the contractor encountered in Tunnel Nos. 3 and 3A were attributable principally to a shear type of failure which was said to mean that the material has been overstressed³⁸⁵ and deforms in a shearing motion. In the report submitted concerning his initial visit to Tunnel No. 3 on July 16, 1971 (AX 20), Dr. Heuer had noted the presence of fresh fractures in intact rock and the fact that crown fallouts generally occur immediately behind the dust shield, about 4 feet back of face and about 8 feet ahead of the rock-bolt augers.

In order to explain shear type fractures, Dr. Heuer drew six sketches (AX 32-37) showing rock failures in the two common failure modes (shear failure mode and ex-

tension failure mode). Also offered to show fracture around tunnels due to overstressing were AX 38 (extension fracturing) and AX 39 (shear fracturing).

According to Dr. Heuer, one of the distinctive things about a shear fracture is the curved failure surface, while another distinguishing mark is the every fresh appearance of the fracture (a fresh fracture through virgin intact rock). As to the curved failure surface, Dr. Heuer called attention to Figure 5 of AX 4 and to AX 43 and to the fact that in these exhibits can be seen irregular sawtooth surfaces formed in the crown after wedges isolated by shear fractures have fallen into the tunnel. As illustrative of the fresh fractures through virgin rock, Dr. Heuer pointed to AX 22 and to Photograph 2 of AX 5 (Tr. 453-55).

Commenting upon AX 51A and C and AX 52, Dr. Heuer stated that these photographs show that material above a crack has moved inward; there has been a shearing displacement. Describing the effects of a failure observed in a 1½-inch diameter hole drilled radially up into the crown of Tunnel No. 3 at Station 851 on Oct. 26, 1971, and using a sketch to illustrate his testimony (AX 58), Dr. Heuer said that looking up the hole a short distance you see the hole has been offset by a sliding shearing motion along a crack up in the rock.

In his testimony, Dr. Heuer emphasized that the maximum stresses at the tunnel wall occur at the ends of a diameter of a tunnel perpen-

³⁸⁵ In a report to the contractor dated Oct. 2, 1973 (GX Q), a second consulting firm engaged by the contractor states: "[T]he failures were caused by over-stressing—i.e. large in-situ stresses and peaked-up tangential stresses in the tunnel walls with respect to the strength of the rocks involved" (text accompanying n.112, *supra*).

dicular to the maximum stress direction (Tr. 460).³⁸⁶ He did not consider that the rock failures he had described were caused by (i) unusually high stresses in the sense of stresses that were higher than those which might have been anticipated, (ii) stress relief, or (iii) fallouts along joints or bedding planes (nn.250&51, *supra*, and accompanying text).

In Dr. Heuer's view the type of failures to which he had testified had not been indicated in the contract. In this connection he noted that the main problems during excavation was the rapid rate of failure and that there were no provisions in the contract which call for placing support any closer than the contractor had actually installed it. Also noted by Dr. Heuer were the progressive failures after excavation that he had observed and which were charted in the large drawings which had accompanied the May 1973 report (AF 77A).

Queried about the deterioration, disintegration, and fallout which had occurred in the vicinity of DH 116, Dr. Heuer stated that while water had had a part in what happened there, it was not primarily responsible for the magnitude of the failures that had occurred.³⁸⁷ Dr. Heuer also stated that the

water problems at Navajo were more severe than he had seen elsewhere in tunnels.³⁸⁸

With respect to the problems he had described, Dr. Heuer expressed doubt that they would have been alleviated to any great extent if the tunnel had been supported by steel, noting that practically speaking it did not appear that steel sets could be installed any closer to the heading than the contractor had installed the rockbolts.

Drawing a sketch to illustrate his testimony (AX 9), Mr. Sperry described the rock failures and fallout observed by him as characterized by the following special features: (i) The rock falling out always broke to curved surfaces away from the heading; (ii) the failures were through virgin rock unless a parting between different rock types was involved in which case the failures would be through the virgin rock and through the parting; (iii) the failures sometimes occurred along the trailing floor or even down behind the trailing floor, which would be 500 feet, or more, behind the heading; and (iv) there were offsets involving failures in the lower sidewalls.

Mr. Green also drew a sketch (AX 12) to illustrate the type of rock failures observed by him which included: (i) Failures in the arch, (ii) failures on the face of

³⁸⁶ The principle is illustrated in AX 4, Fig. 17 and AF 77A, Fig. 11. Dr. Heuer prefaced his testimony in this area by stating: "[T]he position of the great stress or overstress around the tunnel depends upon the location or the relative magnitude of the horizontal and vertical stresses in the ground" (Tr. 460).

³⁸⁷ Testimony given by Mr. Logan appears to support this view (nn.327-29, *supra*, and accompanying text).

³⁸⁸ Based upon his observations in the two tunnels, Mr. Mathews considered the water conditions in Tunnel No. 3 to be similar to those present in Azotea tunnel. Mr. Mathews had observed very little water in Azotea tunnel (n.272, *supra*, and accompanying text).

the tunnel with typical failures involving rock that had failed 4 or 5 feet above the invert; (iii) failures up to a layer of shale; and (iv) failures observed in the rib section 4 to 5 feet above the invert. Some of the failures in the arch seen by Mr. Green involved failures to bedding planes.³⁸⁹ Some of the failures had curved surfaces and some of the cracks in what appeared to be homogeneous material were considered to be new failures. Failures observed that were not to distinct bedding planes were failures in one material. Failures were observed in the rib section ahead and behind the grippers.

Based on the observations made in the tunnel and the reports reviewed by him, Mr. Mathews concluded that for the most part the rock failures experienced by the contractor in Tunnel No. 3 were due to "geodynamic pressures." These were defined by him as "pressures on the tunnel structure that are mobilized when the stresses from the surrounding rock exceed, exceed its strength" (Tr. 564). Later in his testimony, Mr. Mathews stated that "geodynamic pressures" are exerted all the way around a periphery and in Navajo Tunnel No. 3 it is a matter of record that the bottom did come up (n.270, *supra*). In the course of responding to a question about the relevancy of considering cover in submitting a bid, Mr. Mathews stated that "geodynamic

pressure" is not present at shallow depth (n.273, *supra*).

Mr. Mathews knew that the failures he observed were due to "geodynamic pressures" because he observed the cracking that was described in detail by Dr. Heuer and which he considered to be unique to a failure resulting from geodynamic pressures. Elaborating upon this answer upon cross-examination, Mr. Mathews stated: "Well, it's the shape of the fractures that indicate the reason for the failure * * * these fractures running up on a curved surface that had nothing to do with the bedding planes, that fractured in intact rock" (n.265, *supra*).

Mr. Mathews considered that the occurrence of "geodynamic pressures" in a moled tunnel was a very rare phenomenon. He noted that prior to September of 1970, he had observed the phenomenon only once before and that was in Azotea tunnel. There, however, the fallout did not occur immediately, as it did in Tunnel No. 3 (n.268, *supra*, and accompanying text). Mr. Mathews stated that the failures in Tunnel No. 3 were not the result of defects in the rock but were the result of "geodynamic pressures." Mr. Mathews also stated that the falling rock about which he had testified did not involve homogeneous and isotropic materials.

The term "stress relief" was used by Government witnesses to describe situations where the strength of the rock was less than the pressures on the rock. Commenting upon the terminology employed by

³⁸⁹ According to Dr. Deere one of the problems a contractor using a boring machine should have considered was the difficulties involved in providing rapid support to the weak horizontally bedded rocks (n.109, *supra*).

the witnesses for the appellant and for the Government at the hearing,³⁹⁰ Dr. Hilf observed that Dr. Heuer's term "overstressing" or "stress intensification," Mr. Mathews term "geodynamic pressures" and the term "stress relief" all are referring to the phenomenon of failure where the strength of the rock is less than the stress on the rock (n.296, *supra*).

Dr. Hilf acknowledges that the speed of failure of the rock would be difficult to predict but went on to note that if you have a high stress due to a very high overburden and a very weak rock, it would not take any time at all for the rock to fail once you relieve the restraining pressure. Asked to say what had occurred at Navajo, Dr. Hilf said that he had no reason to doubt Dr. Heuer's testimony that shear fractures or shear failures had occurred and that, if they occurred in intact rock, it was because the tangential stress was greater than the strength (text accompanying n.296, *supra*).

c. Materiality of difference

We have previously discussed the interpretation the contractor placed upon the Government testing provi-

sion of Paragraph 50 of the specifications. Consistent with that interpretation, the contractor anticipated that only superficial deterioration and disintegration would be encountered. Testifying at the hearing, Mr. Sperry stated that some fallout was anticipated in the siltstone, as well as in the contact between two different types of material. Some fallout was also anticipated from water. It was estimated that in some portions of the tunnel the standup time would not be over 50 feet. The bid estimate did include some time for rock support and some delay time, including the fallout anticipated from water. Not anticipated by the contractor, however, was fallout or fractures occurring through virgin rock and in good sandstone or the depth of the fallout experienced in the tunnels (nn.165-68 and accompanying text).

Apparently, as a corollary of this view of what the contract indicated, the four low bidders on the work covered by the instant contract made only token bids for the tunnel support system, causing the project construction engineer to conclude that they planned to use rockbolts (n.10, *supra*). Commenting upon this aspect of the case in the May 1973 report (AF 77A), Dr. Heuer states: "[N]one of the support prices listed by the four low bidders is adequate to cover the cost of installing a support system such as steel ribs, shotcrete, or the Bernold system. Nor are the excavation unit prices submitted by

³⁹⁰ In the early stages of contract performance Dr. Heuer appears to have equated the term "overstressed" with the term "stress relief." In a letter to the contractor dated Nov. 2, 1971, he refers to slabbing as representing "a desirable stress relief" (n.43, *supra*). The use of the latter term by the contractor's personnel appears to have been common during that period for a memorandum pertaining to a conference between the parties on Dec. 6, 1971 (AX 74) states: "[T]he contractor took the position that the sidewall fallouts were almost entirely due to stress relief." (See text accompanying nn.30&31, *supra*.)

these contractors high enough to cover this support installation" (text accompanying n.82, *supra*).

All of the consultants advising the contractor had similar views as to what the contract indicated with respect to rock failures and fallout. In Mr. Mathews' view the contract indicated that the contractor should only have to consider support due to loosening of the ground by which he meant loosening of the ground due to rock defects (text accompanying n.268, *supra*). After referring to the contract specifications, Dr. Heuer says: "[T]hese provisions, however, say essentially nothing about the nature of the anticipated support problem—i.e., rock failures—which were expected except that problems of surface deterioration and disintegration were to be expected" (text accompanying n.130, *supra*). In a letter to the contractor dated Feb. 10, 1974 (n.145, *supra*), Dr. Don U. Deere states: "The emphasis in the specifications was on shallow, surficial disintegration which would require protective coatings and protection from falling rock blocks" (n.150, *supra*).

The Government does not dispute the fact that in performing the contract the contractor encountered shear fractures or shear failures (text accompanying n.296, *supra*). The Government's expert witness Dr. Hilf acknowledged that none of the remedial measures specified in the Government testing provision of Paragraph 50 of the specifications (characterized by him as surficial treatments) would

have prevented the deep failures of the rock in Tunnel Nos. 3 and 3A, as described by Dr. Heuer (text following n.289, *supra*).

The fact that much of the fallout from the crown occurred immediately upon excavation is clear from the views expressed by Government personnel at various times during contract performance. Immediate fallout, particularly from the crown, was either reported or anticipated by the project geologist (n.158, *supra*), a Bureau of Mines geologist (n.24, *supra*), and the project construction engineer (n.311, *supra*, and the accompanying text). The significance of such fallout occurring immediately was emphasized by Dr. Heuer who states: "[T]he major impact of the rock failures experienced in Tunnel No. 3 in increasing Contractor's costs was the fact that rock failures occurred in the crown directly over the machine concurrent with machine advance, and before the rock bolts could be installed" (AF 77A, pp. 69-70).

Instances of immediate fallout in Tunnel No. 3 included a triangular wedge of rock which fell from the crown immediately behind the mole's dust shield within 280 feet of machine boring in from the portal and the fallout from the crown which occurred at approximately station 859+40 before the crown bolts could be placed (text following n.12, *supra*). Not all major fallout occurred immediately, however, as is clear from the large rock fall which took place on July 23 and 24, 1971 (80 to 100 cubic yards), near the trailing edge of the mole

January 15, 1981

and some 30 to 40 feet behind the face (text preceding n.13, *supra*, and accompanying n.88, *supra*).

Severe fallout also occurred in the ribs of Tunnel No. 3. Appellant's witness Green recalls that in one instance the fallout was so severe that he put in over 70 railroad ties as cribbing between the grippers and the rib of the tunnel in order for the grippers to get any kind of bearing on the rib (Tr. 333-34).³⁹¹ Heaving of the invert was a serious problem in Tunnel No. 3 (nn. 62&270, *supra*, and accompanying text).

According to Dr. Heuer, the major significance of the rock fallout was in disruption of the heading advance. The heading advance was said to have been slowed by fallout from the crown, by equipment damage from falling rock, by mucking of fallen material from under the mole and by the installation of the extra rockbolts which were required (AF 77A, p. 59).³⁹² See also Mr. Green's testimony at Tr. 344-47 as to the effect of rock fallout and failure upon the contractor's operation.

d. *Government Investigation of Differing Site Conditions Claim*

Mr. Logan, chief geologist for the Bureau of Reclamation, visited Tunnel No. 3 during contract performance on three occasions. Of

³⁹¹ "Fallouts from the walls were so severe on occasion that the tunnel advance was stopped while rock bolts (and sometimes shotcrete) were installed" (AF 77A, p. 60).

³⁹² "[A]reas of large and continuous rock failure and fallout about the tunnel required the greatest concentration of rock bolts and resulted in the slowest heading advance" (AF 77A, p. 59).

particular interest to the Board is the testimony he gave with respect to his first and second visits. The first visit took place on Sept. 14 and 15, 1971. The results of this visit were reported by Mr. Logan to the Director of Design and Construction, in a memorandum dated Oct. 4, 1971 (AX 82).

The purpose of the visit, as stated in the report, was to conduct a geologic examination of tunnel conditions relating to slow progress of excavation (n.22, *supra*). In the testimony given at the hearing, however, Mr. Logan stated that the purpose of the visit had been to observe the geologic conditions in the vicinity of DH 116 in order ascertain the facts so that with respect to any claim submitted the BOR would have factual information on which to base a judgment as to settlement of the claim, insofar as the geologic aspect was concerned. According to the report, the examination had been directed toward outlining programs which the project geologic personnel should pursue in compiling data on the contractor's claim of changed conditions. The report also refers to proposed programs of data collection based on six "findings" developed during the field examination.

Mr. Logan acknowledged upon cross-examination that the six "findings" had been made by him and that they were not factual. He stated that the programs outlined were to determine whether the "findings" that had been developed during the field examination were

correct or not. As to each "finding" Mr. Logan was asked whether the geologic data compiled by the project personnel subsequently had shown the particular "finding" to be correct. He testified that the data so compiled supported "findings" 1, 2, and 4; that such data partially supported "finding" 3; and that with respect to "findings" 5 and 6, he was unable to say whether these "findings" had been confirmed as correct by data compiled by the project geologic personnel. (See text accompanying nn.335-38, *supra*.)

In reviewing this testimony by Mr. Logan, we find it at least surprising that in an official report of travel he should have used the term "findings" to describe conclusions reached by him which he acknowledged were not factual. It is clear that the programs of data collection outlined for the project geologic personnel could as easily—and more properly—have been stated as questions to be answered rather than as "findings" to be confirmed. We say "more properly" because relating the programs of data collection to questions posed would have obviated the danger of project geologic personnel being influenced in the conclusions they reached by opinions expressed by the chief geologist for the Bureau which he had termed "findings."

Even more surprising was the cavalier attitude displayed by Mr. Logan toward the programs of data collection outlined for the project personnel in order to determine whether the "findings" he had developed during a 2-day field exami-

nation were correct. Upon cross-examination, Mr. Logan acknowledged that he did not know whether factual geologic data prepared by the project geologic personnel had confirmed as correct finding 5 ("the slow rate of progress, due primarily to mechanical failures, is promoting excessive rock failure through delays in establishing artificial arch support and in allowing the accumulation of water at the cutterhead to become a problem of machine operation") or finding 6 ("geologic conditions encountered in the tunnel to date do not differ from that portrayed by the specifications document").

Although interrogated about his apparent indifference to validating the "findings" he had made (n.337, *supra*), Mr. Logan offered no explanation for his failure to follow up with the project geologic personnel to see what data they had prepared in these important areas relating to the changed conditions claim. Whatever the reason for lack of followup, it does not appear to have been due to lack of time since Mr. Logan's initial visit to Tunnel No. 3 occurred in mid-September of 1971 and excavation in Tunnel No. 3 was not completed until July of 1972 with excavation of Tunnel No. 3A not being completed until October of that same year.

Mr. Logan's second visit to Tunnel No. 3 took place on Mar. 23 and 24, 1972, when the tunnel face was at approximately Station 782+0. During this visit, Mr. Logan observed failures in the sidewalls of the tunnel and bent pans and some

cracking of the rock all along some of the crown, as well as water and muck in the invert. It was on this occasion that Mr. Logan rode in the cab of the mole and consequently was able to observe the tunnel from that vantage point.

Mr. Logan attributed many of the failures he observed in the sidewalls to the action of the grippers. It was his testimony that the artificial stress exerted by the grippers against the sidewalls consolidated the rock at least half an inch, causing streams of water to pour down the leading and trailing edge of the grippers. Interrogated about this testimony, Mr. Logan stated that he did not see any rockbolts in the arch of the tunnel when he observed the action reported of the grippers; that he did not remember seeing any water above spring line; that the material was dry above the grippers prior to gripping; and that the material appeared to be dry ahead of the grippers (n.339, *supra*, and accompanying text).

Offered in evidence upon rebuttal was an entry from Mr. Sperry's diary for Mar. 24, 1972 (AX 92), from which the following is quoted: "Some ties submerged between Stations 790 and 785. Invert very wet. Bolts over mole again dripping water. Told CRP to drill drain holes between pans." Concerning this entry Mr. Sperry stated that the instruction was issued to the tunnel superintendent to avoid having the water dripping from the rockbolt holes conducted by the steel pans (attached to the rockbolts) to the

ribs where it would run down the ribs causing the mole grippers to slip to some extent. When the water ran down the ribs, it sometimes ran onto the top of the gripper pads and if the grippers were extended the water had no place to go except to conduct itself to the leading or trailing edge of the grippers and run down there (n.189, *supra*, and accompanying text).

In a number of important respects the testimony offered by Mr. Logan varies from that given by Mr. Sperry. Mr. Logan could not recall seeing any rockbolts in the arch of the tunnel when he observed the action reported of the grippers, while in his diary for Mar. 24, 1972, Mr. Sperry refers to the "[b]olts over mole again dripping water." As previously noted, Mr. Logan could not recall seeing any water above springline. He also testified that the material was dry above the grippers prior to gripping and that the material appeared to be dry ahead of the grippers. According to Mr. Sperry, however, the instruction issued to the tunnel superintendent to drill drain holes between the pans was for the purpose of having the water drip down on the invert rather than having it run down the ribs of the tunnel. This action was taken to avoid having the water dripping from the rockbolt holes conducted by the steel pans to the ribs where it would run down the ribs causing the grippers to slip to some extent.

With respect to the questions raised by the above discussion, we

have resolved the conflicts in the testimony offered by Mr. Logan and that given by Mr. Sperry by accepting the testimony of Mr. Sperry. In so deciding, we have given controlling weight to the fact that Mr. Sperry's testimony is supported by a contemporaneous entry in his diary and to the further fact that Mr. Logan was not recalled as a witness to refute Mr. Sperry's unequivocal testimony in the areas in question.

e. Other Government Defenses

We have previously noted the principal arguments advanced by the Government with respect to the proper interpretation to be given the Government testing provision of Paragraph 50 of the specifications and the effect to be given to the contract drawings, showing full circular steel ribs as one of the contemplated means of support for the tunnels. We leave aside for the present the arguments the Government has made with respect to quantum (*e.g.*, damages to the rock attributable to the grippers, contractor's responsibility for many, if not all, of the tights and inadequacy of the mole and laser target system).

In its posthearing brief the Government acknowledges that in the specifications it did not attempt to quantify the effects of stress relief in the area where the tunnels would be bored. This was said to be the result of there being no standard test for testing a core for stress relief (GPB). Later in the brief the Government refers to Mr. Mathews

as being preoccupied with problems associated with predicting "how much relief" would occur in rock which was subjected to stress relief or "geodynamic pressure," after which it notes Mr. Mathews' statement that he had no ideas to how much relief one would have had to allow in Navajo 3 to use steel supports satisfactorily. Immediately thereafter the brief states:

[O]f course, the Bureau did not know either and made no quantitative representations as to "how much relief" would occur. Mr. Mathews and Dr. Hilf both alluded to the fact that there is no practical way to quantify stress relief or geodynamic pressure. The point is, the Bureau did indicate to the contractor the amount of overburden, the weak nature of the rock, and that "movement of the surrounding materials" would occur, that the materials would deteriorate or disintegrate rapidly when stress relieved, and that 80 percent of the tunnel could require a support system other than rock bolts.

(GPB 57-58).

Quantifying stress relief or "geodynamic pressure" present in the areas through which the tunnels were to be excavated may have been difficult or even impossible. The record before us suggests, however, that being able to quantify the amount of stress relief or "geodynamic pressure" present in an area to be excavated is not the only way to alert a contractor to the likelihood of encountering problems of the sort which confronted the contractor in Tunnel No. 3. We note, for example, the excerpt from the specifications for the VAT Tunnel

which is essentially the same as the Government testing provision of Paragraph 50 of the instant contract but with additional language warning prospective contractors of possible fracturing due to overloading and extremely short standup time (nn.191-92 and accompanying text).

Another argument advanced by the Government concerns the fact that the contractor was actually paid for excavating more material than was actually removed from the tunnels either by excavation or rock failure (GPB 4, 37-38). Cited in support of this position are GX LLL, GX MMM, and GX NNN, as well as the testimony of Mr. Dalen at Tr. 1105 to 1117. The Government says it has difficulty comprehending a claim for an equitable adjustment based on a theory of a differing site condition when on the average the difficulties to which the contractor refers occurred within the pay lines established by the contract. As appellant's counsel has observed, however, the claim is not based upon the volume of material excavated but upon the behavior of rock attributed to shear failures through intact rock (ARB 15).

D. Decision

1. *Contract Indications* *Ruling upon evidentiary inferences* *sought by appellant*

The appellant asserts that the Board should draw inferences adverse to the Government by reason of the failure to have its project con-

struction engineer testify in important areas³⁹³ and by reason of the failure to call as witnesses two Government employees who attended the hearing.

With respect to the testimony given by the project construction engineer, the Board notes that he gave no significant testimony with respect to what the contract indicated and none at all with respect to conditions normally inhering in work of this character or even the conditions actually encountered in Tunnel Nos. 3 and 3A. As to this the appellant asserts that had Mr. Levine testified with respect to the conditions encountered by the appellant in the tunnels, that testimony would have revealed that those conditions differed materially from those indicated in the contract and from those generally recognized as inhering in work of that character. At the very least, according to the appellant, the Board is entitled to and should draw that inference from the Government's failure to have its project construction engineer testify about the subject of this appeal (AOB 52-53).

The two Government employees who attended the hearing but did not testify are identified in appellant's brief as Mr. Kenneth Cooper, project geologist, and Mr. J. S.

³⁹³ Although Mr. Levine did testify, he gave little or no testimony in the critical areas involved in this appeal. This could not be attributed to lack of knowledge since he was the project construction engineer throughout contract performance, as well as being the authorized representative of the contracting officer throughout such period.

Dodd, head of the rock mechanics division or head of geology in 1974. Noting that Mr. Cooper was in Tunnel Nos. 3 and 3A frequently enough to have mapped the geology, on almost a daily basis, for the Bureau's official geology drawings of the tunnels (AX 87), appellant's counsel asks: "As with Bert Levine, why didn't Mr. Cooper testify about the subject of this Appeal, a subject with which he was most familiar and, of all of the Government employees, the most qualified? Who better than Mr. Cooper to describe the rock conditions encountered?"

Immediately thereafter appellant's counsel asserts that the unexplained failure of the Government to call Messrs. Cooper and Dodd as witnesses supports an inference that had they testified they would have testified adversely to the Government's defense in this case, citing *Wingate Construction Co.*, ASBCA No. 9913 (Dec. 30, 1965), 65-2 BCA par. 5298, at pp. 24, 923-24, and cases there cited (AOB 53).

Denying that an adverse inference should be drawn against the Government because of its failure to call Messrs. Cooper and Dodd as witnesses, Government counsel distinguishes the *Wingate* case on the ground that there it was the contractor who had the burden of proof and who failed to call witnesses to support his claim, while in this case the Government, in the posture of a defendant, was not required to call any witnesses, let alone any specific witnesses. Government counsel states: "It was for the

Government to judge which evidence of Appellant's it deemed necessary to refute and by which means" (GPB 89). While the Government has not specifically addressed the adverse inferences the appellant asserts should be applied by reason of the Government's failure to have Mr. Levine testify in key areas, the arguments that Government counsel advances are broad enough to encompass the situation involving Mr. Levine and we shall so treat them in ruling upon the questions presented.

In the comparatively early case of *Thermo Nuclear Wire Industries*, ASBCA No. 7806 (July 9, 1962), 1962 BCA par. 3427, the rule for invoking the inferences the appellant seeks to have applied in this case was stated in the following terms at page 17,557:

There is a rule of law that if a witness is not called who could extend help to the trier of the facts, and said witness is under the control of the party who does not call him, and there is no explanation made as to why said witness was not called, an inference can be drawn by the fact finder that if the witness had been called, or the evidence presented, the testimony would have been unfavorable to the party who could have called him.

[1] While there may be circumstances in which the determination of whether to invoke an inference adverse to the interest of one of the parties will turn on the question of where the burden of proof lies, we do not consider it necessary to predicate our ruling on that ground in this case. Here the Government's decision to question Mr. Levine in

only very limited areas and the decision not to call Messrs. Cooper and Dodd as witnesses are considered to be reconcilable with the theories on which the Government's case was tried. Succinctly stated, the Government's principal defense is that no differing site conditions were encountered because the Government testing provision of Paragraph 50, the showing of full circular steel rib as an authorized form of support on a contract drawing and the Government's estimate that approximately 80 percent of the support required for the tunnels would be other than rockbolts, were contract indications which placed the contractor on notice of the conditions later encountered in Tunnel Nos. 3 and 3A. Another principal defense interposed by the Government for which a considerable amount of evidence was offered was that a second category differing site condition had not been encountered.

Under the theories relied upon by the Government in presenting its case, the evidence to be offered through Messrs. Levine, Cooper, and Dodd may have been seen as cumulative of testimony offered by others considered to be better qualified (*e.g.*, the extensive testimony given by Dr. Hilf as to what the contract indicated) or in a better position to give credible testimony concerning the second category differing site condition claim (*e.g.*, not only did Mr. Tackett testify at length with respect to the conditions encountered in tunnels exca-

vated prior to Tunnel Nos. 3 and 3A but it was with respect to these prior tunnels that the Government made a concerted effort to show that the contractor should have known of the conditions encountered in them by reason of the final construction reports allegedly available to prospective bidders prior to September of 1970).

Also for consideration is the fact that the appellant could have adduced testimony from all three of the Government witnesses if it had chosen to do so. It is a long-established rule in board practices that either party may call a person under the control of the other party without making the person so called its witness for the purposes of impeachment. This is a common practice among the several boards and has been recognized by the Court of Claims. *See*, for example, *Charles T. Parker Construction Co. v. United States*, 193 Ct. Cl. 320, 332 (1970).

Since the failure of the Government to elicit testimony from Mr. Levine in significant areas and its failure to call Messrs. Cooper and Dodd as witnesses can be explained by the theories on which the Government's case was tried and since, in any event, the appellant could have called all three of such Government employees without making them its witnesses for the purposes of impeachment, the Board finds that the Government's failure to examine one of its witnesses in certain areas and its failure to

call as witnesses other Government employees attending the hearing will not support an inference that had the one witness been examined in areas as to which he did not testify or had the other Government employees named been called as witnesses, the testimony they would have given would have been adverse to the Government.

Resolution of Substantive Question

We now turn to consideration of the question of what the contract advertised for bids indicated in the context of the "Differing Site Conditions" clause. Resolution of this question will entail consideration of the 14th paragraph of Paragraph 50 of the Specifications, Drawing No. 11 (809-D-330) and the Government's estimate that 80 percent of the support required for the tunnels would be other than rockbolts.

The importance the Government attaches to the cited specification provision is evident from its post-hearing brief in which the Government testing provision is quoted and discussed at pages 36 and 37 as well as being discussed or referred to at pages 39-43 and pages 46 and 58. Since the appellant also places great reliance upon the same provision to support its case, the full text of the paragraph in question is quoted below:

Government testing indicates that many of the sandstones, shales and siltstones to be excavated will deteriorate or disintegrate rapidly when exposed to air or water or when stress relieved or a combination of the three. The contractor shall be responsible for providing a clean, undisturbed surface for placement of the lining. He may accomplish this by applying protective coatings under Para-

graph 54, installing subinvert tunnel protection in accordance with Paragraph 60, by dewatering in accordance with Paragraph 51, or by removing any deteriorated or disintegrated material back to clean, undisturbed surfaces in accordance with Paragraph 59. If protective coatings or subinvert concrete is not installed, removal of substantial amounts of deteriorated or disintegrated materials is expected.

(AF 1, Specifications, par. 50).

The Government argues that Paragraph 50 should not be construed to mean that the effects of air, water or stress relief or a combination of the three are limited to the surface of the excavation; that it would be absurd to limit the phrase "deteriorate or disintegrate" to a surficial condition; and that in reading the contract as a whole it would be absurd to think that the Government was preoccupied with only surficial problems when one considers the fact that the Government forwarned the contractor that 80 percent of the tunnel was estimated to require support systems other than rockbolts (GPB 42-43). Pointing to the undisputed fact that one of the methods of support provided for in the contract (Drawing No. 809-D-330) was the use of full circle steel rings, the Government notes Dr. Hilf's testimony that the full steel rings would have supported the tunnel in even worse conditions than were encountered and Mr. Mathews' as knowledge upon cross-examination that full steel rings with lagging would have supported the tunnel (GPB 51, 52). The Board also takes note of the fact that Paragraph 50 says that the

tunnels here involved are to be constructed to the requirements of the machine bored sections as shown on Drawing No. 11 (809-D-330).

Asserting that the language quoted above from Paragraph 50 clearly indicates that only surficial deterioration or disintegration was contemplated, the contractor points out that the remedial measures specified therein involve only surficial treatments, as was acknowledged by the Government's expert witness Dr. Hilf upon cross-examination. With respect to the use of full circle steel rib support, the Board notes that the text of all four paragraphs pertaining to support only provide for support of the roof and sides of the tunnels. As to the type of support authorized by the specifications, the Board also notes that where conditions in the tunnels were suitable for the use of rockbolts, the contracting officer was to approve their use.

From the arguments advanced by the parties in support of their respective positions and the wide disparity in the bids received in response to the invitation for bids under which the instant contract was awarded, it appears to the Board that there is considerable merit in the position of both parties viewed as of the time of the opening of bids. While we cannot be certain about the matter, it appears likely that generally speaking the higher bidders interpreted the contract specifications and drawings along the lines now urged upon us by the Government, while the contractor

and the next three lowest bidders interpreted the same documents in the manner now contended for by the appellant.

The fact that full circle steel rib was approved for use as a means of support for the tunnel is not any indication, of course, of the extent to which its use might be required. We note, for example, that bidders having a mole equipped with a variable size cutterhead may have contemplated that very little, if any, of the tunnel would require the use of full circle steel ribs for support and, consequently, submitted only token bids for such support, contemplating the use of rockbolts throughout virtually the entire length of the tunnels. Other bidders may have considered that full circle steel ribs for support would be required only if anchorage for half circle steel ribs could not be obtained.

In any event, it appears that the aggregate effect of Paragraph 50 only specifying remedial measures suitable for surficial treatment, the language in the text of the specification paragraphs dealing with support not referring anywhere to full circle steel ribs, and the same paragraphs only providing in the text for support for the roof and sides of the tunnels may have caused the four lowest bidders to conclude that the use of full circle steel ribs was not contemplated to any significant degree. With respect to the Government's estimate that 80 percent of the support required would be other than rockbolts, we deem it sufficient

to note that this was clearly not a contract requirement, as was acknowledged to be the case by Government witness Rogert in his testimony.

As to these several matters, a number of questions have been generated by the specification provisions and by the Government's role in administering the contract in this case for which no answers considered satisfactory to the Board are to be found in the record before us. If, as the Government's expert witness Dr. Hilf testified, the reason for including the Government testing provision in Paragraph 50 was to alert bidders to difficulties experienced by contractors on earlier tunnels for the Bureau of Reclamation and if, as appellant's witness Mathews testified, major fallout had occurred in Azotea Tunnel attributed by him to "geodynamic pressure" prior to the opening of bids on the instant contract, why did the paragraph designed to alert bidders to what difficulties might be expected specify remedial measures for deterioration and disintegration suitable only for surficial treatment?

If what Mr. Mathews termed "geodynamic pressure" is exerted all the way around a periphery of a tunnel and if, except for the use of a different terminology, Dr. Hilf agrees with this appraisal, then why in the text of the four paragraphs of the specifications dealing with support, did the Bureau restrict support to the roof and sides of the tunnels?

In a number of important respects the arguments advanced by the Government concerning the effect to be given (i) to the Government testing provision of Paragraph 50; (ii) to its estimate that 80 percent of the tunnels would require support other than rockbolts; and (iii) to the including of full circle steel ribs as an authorized means of support, all fail to take into account the extent of the Government's involvement in matters which it now characterizes as "absurd." Based upon the evidence of record, it appears to be clear that at the time the bids were opened the Government knew that the contractor as low bidder, and the next three lowest bidders as well, all contemplated supporting the tunnels by relying virtually entirely upon rockbolts. Yet with such knowledge in its possession at the time bids were being evaluated (October 1970), it recommended that award be made to the contractor as low bidder, supporting its recommendation by noting that although the bid submitted was one third lower than the engineer's estimate, the company was experienced and well qualified.

In February of 1971 the Bureau advised the contractor by letter that the proposed excavated diameter of 20 feet 6 inches appeared to be adequate for meeting minimum dimensions for "A" line thickness for rockbolt supported sections but that use of steel rib supports would require excavating to a larger diameter if normal tolerance was to be

January 15, 1981

provided, noting in the same letter that whether conditions in Tunnel Nos. 3 and 3A were suitable for an extensive use of rockbolt support must be determined during and following the excavating process. In mid-May of 1971, knowing that the contractor would be excavating with a boring machine having a 20-foot 6-inch diameter bore and a fixed cutterhead, the Bureau raised no objection to the contractor proceeding with excavation of Tunnel No. 3. When the job was shut down for 5 weeks in mid-summer of 1971, the Bureau issued no instructions to the contractor to discontinue the rockbolting program in order to cope with the differing site condition which the contractor contended had been encountered. Although during the important conference between the parties in early December of 1971, it appears that serious consideration was given to requiring the contractor to resort to the use of full circle steel ribs support wherever difficulty was experienced in developing adequate anchorage, the Bureau's decision was to allow the contractor to continue with its rockbolting program subject to later review. The review followed and by the first week in March of 1972, the project construction engineer was in a position to report to the Chief, Design and Construction that some 5,334 feet of Tunnel No. 3 (over one third of the length of the tunnel) had been satisfactorily supported by rockbolts.

By the above comments we are not implying that the Bureau was

derelict in making the award to the contractor or in authorizing it to continue with its rockbolting program. As to the making of the award to the contractor as low bidder, it would no doubt have been extremely difficult not to do so where the next three lowest bidders submitted bids predicated almost entirely upon the use of rockbolts as support for the tunnels.

With respect to the contractor being allowed to continue with the rockbolting program even after the notice of differing site conditions was received, it appears that the Government was confronted with the choice of either permitting the contractor to proceed with the support system upon which its bid had been based or else directing the contractor to take whatever action was required to modify the boring machine to make the use of full circle steel rib support feasible without knowing whether the contractor would be in a position to install the full circle steel rib any closer to the heading than the contractor was installing the rockbolts. In this connection we note that while Dr. Hilf testified that the use of full circle steel rib would have supported the tunnels in even worse conditions than had actually been encountered and that full circle steel rib had been included as a means of supporting the tunnels in order to cover any contingency, he never addressed the question of whether the full steel rings, if installed, would have been more effective than the

rockbolting program eventually developed by the contractor; nor is there any indication in his testimony that Dr. Hilf gave any consideration to how costly it would have been for the contractor to use full circle steel rib support for all the major rock failures encountered to which appellant's witnesses had testified. Certainly there is nothing in this record to warrant concluding that the mere depicting of full circle steel rib support on a contract drawing gave the Bureau carte blanche authority to require its use wherever and whenever the Bureau considered the use of such a support system to be preferable.

Our purpose in summarizing the principal events surrounding the contractor's decision to support Tunnel Nos. 3 and 3A entirely with rockbolts utilizing a boring machine with a 20-foot 6-inch bore and a fixed cutterhead has been to highlight the pervasive nature of the Bureau's involvement in those decisions about which it was kept fully informed and as to which it had contractual authority to withhold its approval if conditions in the tunnels were not found suitable for the use of rockbolts.

[2] The Government asserts that the Government testing provision of Paragraph 50, the Government's estimate that 80 percent of the support required for the tunnel would be other than rockbolts, and that the including of full circle steel rib as an authorized support on the contract drawings, all negate any contract indications that the deterioration and disintegration in

the tunnels would be only surficial in nature. To support its position to the contrary, the appellant relies upon the fact that the remedial measures outlined in the Government testing provision of Paragraph 50 only provide surficial treatments for the deterioration and disintegration referred to therein and to the fact that the text of the four specifications dealing with support only provide for support for the roof and sides of the tunnels.

Although with respect to the question presented the contract appears to be susceptible to more than one reasonable interpretation, the Board finds the contract to have indicated that the deterioration and disintegration of rock encountered in driving the tunnels would be primarily of a surficial nature, capable of being remedied by the application of surficial measures, and that the use of full circular steel ribs for support would not be required to any significant degree. In reaching this conclusion, the Board has given great weight to the fact that this appears to have been the interpretation placed upon the contract in the disputed area by the four lowest bidders, as evidenced by the fact that all of them made only token bids for the tunnel support systems, indicating that they planned to use rockbolts. In support of this holding, we call attention to the decision in *WPC Enterprises, Inc. v. United States*, 163 Ct. Cl. 1, 6, 7 (1963), from which the following is quoted:

[T]he Government, as the author, has to shoulder the major task of seeing that

within the zone of reasonableness the words of the agreement communicate the proper notions—as well as the main risk of a failure to carry that responsibility. If the defendant chafes under the continued application of this check, it can obtain a looser rein by a more meticulous writing of its contracts and especially of the specifications.

[3] A question has also been raised by the parties as to whether a first category differing site condition must be established by showing misrepresentation or at least a positive representation or whether it can be shown by inference. Clause 4 of the General Provisions describes a first category differing site condition as involving “subsurface or latent physical conditions at the site differing materially from those indicated in this contract.” Addressing this question in the case of *Foster Construction Co. A. v. United States*, 193 Ct. Cl. 587, 593 (1970), the Court stated:

[F]or this part of the Changed Conditions Clause to apply, it is not necessary that the “indications” in the contract be explicit or specific; all that is required is that there be enough of an indication on the face of the contract documents for a bidder reasonably not to expect “subsurface or latent physical conditions at the site differing materially from those indicated in this contract.”

See also our decision in *PHL Contractors*, IBCA-874-11-70 (Oct. 23, 1973), 80 I.D. 667, 688, 73-2 BCA par. 10,293, at 48,600-01. In this regard we note that all of the cases cited by the Government in its posthearing brief—including *Parker Construction Co. v. United States*, 193 Ct. Cl. 320 (a sec-

ond category changed conditions case)—were decided prior to the issuance of the *Foster* decision. The decision in *Foster* is considered to be dispositive of the question presented and together with our decision in *PHL* was relied upon by the Board for the finding made above with respect to what the contract indicated.

2. Conditions Encountered

a. Conditions encountered in Tunnel No. 3.

In order to prevail upon its differing site conditions claim the appellant must show that in driving the tunnels with which we are here concerned, it encountered what it has described as shear failures through virgin rock with resulting problems and that the conditions so encountered were materially different than those indicated in the contract. Underscoring one aspect of the shear failure encountered, appellant’s counsel states: “These curved failure surfaces through intact, virgin rock would be a distinctive feature of shear failures due to overstress—i.e., due to a stress state (stress difference) which is high with respect to the rock strength” AOB 22).

Under “Discussion,” *supra*, and earlier in this opinion, we have examined a number of shear failures and fallouts encountered in driving Tunnel No. 3 with citations to the stations involved being given in most instances. According to appellant’s proof shear type failures occurred in the arch, in the walls and

in the invert of Tunnel No. 3. Sometimes they occurred immediately upon excavation. At other times they involved progressive failures which took place days, weeks and even months after excavation had occurred. Also included as part of the differing site conditions claim for which some proof was offered is the additional work involved in connection with the placement of concrete in the arch and in the invert as a result of the inward movement of the tunnel attributed to shear failure due to overstress.

The evidence offered by the appellant shows shear failures due to overstress in diverse situations including (a) *in the arch*: Fallout in the siltstone and shale extending several feet above the crown to more competent sandstone, fractures in the arch at the heading, major failure and fallout in crown and heading, shearing offsets in lower quarter arch, pans having buckled after installation, and tight. (b) *In the sidewalls*: Extensive failure in the ribs ahead of the grippers, and fractures above and below the fan line angling back into wall isolating a wedge behind the fan line. (c) *In the invert*: Movement into tunnel some time after excavation requiring the removal from the invert of additional material in order to provide the specified thickness for the concrete lining, and large crack in invert. (d) *In the arch and sidewalls*: Fallout from the arch and sidewalls in shale overlain by water bearing sandstone, and failure in the sidewalls of tunnel showing bent pans and some cracking of the rock

along the crown. (e) *In the sidewalls and invert*: Failure in massive dry material, and closely spaced fractures in the lower walls and invert which has moved inward.

Although failures in the arch typically developed immediately behind the cutting head of the mole, ahead of the rockbolt installation, there were notable exceptions. For example, the largest fallout in Tunnel No. 3 of 80 to 100 cubic yards occurred during the period of July 23-26, 1971, some 9 days after the shutdown on July 14, 1971. Dr. Heuer attributed the magnitude of the fallout in the vicinity of DH 116 to overstressing (shear failure due to overstress) of the rock causing fractures or cracks to form in the material which allowed the water to get back into the mass of shale or siltstone. Concerning the effect of such action Dr. Heuer states: "The whole mass of rock shale or siltstone material was deteriorating and disintegrating and the fall was not a surficial process" (Tr. 505-06; cf. n. 73, *supra*). Government counsel did not cross-examine Dr. Heuer in this area and the testimony he gave with respect to the cause of the large fallout occurring in the vicinity of DH 116 is uncontradicted.

From the reports in evidence it is clear that Dr. Heuer considered that the areas of continuous and most disruptive fracture and fallout in the arch during excavation, and the most extensive progressive failure after excavation, correlate closely with the area of maximum depth of cover over the tunnel and pre-

sumed maximum rock stresses (AF 77, p. 52). Appellant's witness Mathews considered that "geodynamics pressure" (as used by Mr. Mathews the term is equivalent to Dr. Heuer's term "overstressing"), is not present at shallow depth and that for any given type of rock it would be necessary to be down to some depth before the "geodynamic pressure" would develop (n. 273, *supra*).

According to Dr. Heuer one distinctive thing about a shear failure is the curved failure surface, while another is the very fresh appearance of the fracture (a fresh fracture through virgin intact rock). Illustrative of this fresh fracture through virgin intact rock are AX 22 and photograph 2 of AX 5. Mr. Mathews agreed that it is the shape of the fractures that indicates the reason for the failures, adding that these fractures running up on a curved surface had nothing to do with bedding planes and that they involve fractures in intact rock (n. 265, *supra*).

In Dr. Heuer's opinion the failure of rock due to overstressing in the shear mode which he had described had not been indicated in the contract and these shear type failures could not have been resolved or solved or prevented by the surficial measures enumerated in the Government testing provision of Paragraph 50 or by any other measures authorized by the contract including full circular steel ribs.

All of the appellant's percipient witnesses expect Mr. Mathews sup-

ported some of their testimony with sketches and photographs. In the case of Dr. Heuer there were a number of sketches and a great number of photographs. A total of 85 photographs pertaining to Tunnel No. 3 were either offered by the appellant at the hearing or had been included as part of reports made earlier by the appellant which are in evidence. For almost three quarters of the photographs exact or approximate stationing was given. Some 74 of the photographs were used by Dr. Heuer to support the testimony he gave respecting the shear fractures encountered in Tunnel No. 3.

While Messrs. Sperry, Green, and Mathews gave important testimony in limited areas on the question of liability, the appellant has relied very heavily upon the testimony of Dr. Heuer to establish its case. At the hearing Dr. Heuer emphasized characteristics associated with the failure of rock due to overstressing in the shear mode (hereafter simply overstressing or shear type failures) including (i) the typically immediate failure in the arch following excavation; (ii) the two hall marks of shear failure—the curved failure surface and the fresh fracture in intact rock; and (iii) the significance of the amount of cover over the tunnel. These same features had been stressed in the reports authored or co-authored by Dr. Heuer (AX 4; AX 5; AF 36; and AF 77A).

All of these characteristics are singled out for mention in Dr. Heuer's handwritten report of July 17, 1971 (AX 20), concerning his ini-

tial visit to the tunnel on the preceding day from which the following fragmentary remarks are quoted: (i) "crown fallouts generally occur immediately behind dust shield, about 4' back of face"; (ii) "most striking was the fact that fractures generally cut through 'intact' rock, generally with 'curved' or 'dished' failure surfaces"; (iii) "breach occurred through fresh rock, not along joints"; and (iv) "[d]epth of cover over No. 3 is typically 400 ft. or less, but one length of $\pm 4,000'$ reaches 1,170 ft. of cover." In the same report Dr. Heuer notes the instances of progressive failure that he had observed in Tunnel No. 3, stating: "Shear movement and buckling of pans in many places has occurred after bolts and pans were placed. * * * [S]hear displacement low on sidewalls with crumpling and shearing in crown—16" wide sheet metal pans (on rock bolts) in arch show buckling due to compressive movements, some have occurred recently, far behind heading." Shear failures occurred not only in shale but also in sandstone, as is clear from the report: "[S]hear fractures were visible in sandstone, showing off set approaching 1" (nn.237-239, *supra*, and accompanying text).

A comparison of what Dr. Heuer said in his various reports (*e.g.*, May 1973, AF 77A) and what he said from the witness stand 3 years later with what he observed on his initial visit to Tunnel No. 3 in mid-July of 1971, reveals that throughout the entire period he has given

the same analysis as to the principal cause of the rock failures encountered in Tunnel No. 3 and has cited the same type of objective evidence to support his findings as to the cause of the failures. Over the years the analysis has been refined and extended as one might expect. For example, the relationship between cover and rock failures was expressly stated in the report forwarded to the project construction engineer on Dec. 27, 1971, from which the following is quoted: "[S]upport problems may be expected when the depth of cover (expressed in feet) approaches one-half the unconfined strength of the ground (expressed in psi)" (AF 36, III-6).

In other areas of admittedly much less importance, Dr. Heuer has not always shown the same consistency. Since we are here concerned with the extent to which we will accept the evidence offered by Dr. Heuer in various areas, we shall briefly examine the positions he has taken on other matters as a witness, at conferences or in correspondence with a view to determining their consistency and also their merit in the light of other evidence of record.

At the hearing Dr. Heuer undertook to say what the term "stress relief" meant to him (n.250, *supra*, and accompanying text). Dr. Heuer was not asked about and consequently gave no testimony with respect to his letter to the contractor dated Nov. 2, 1971, concerning Tunnel No. 3 in which he stated:

"The slabbing represents a desirable stress relief and will not result in overall instability of the tunnel if proper support is installed to prevent unchecked progressive deterioration of the tunnel excavation (n.43, *supra*). A little over a month later he attended a conference on Dec. 6, 1971, at which the contractor personnel are recorded as taking the position that "the sidewall fallouts were almost entirely due to stress relief" (text accompanying n.30, *supra*). As late as Jan. 31, 1973, the contractor was still saying that the contract documents did not indicate that "rock displacements of the magnitude encountered as a result of stress relief could be anticipated" (n.64, *supra*).

It is possible, of course, that Dr. Heuer and Mr. Mathews simply adopted and used the term "stress relief" because that was the term the Government was using to refer to rock failures and that the question of whether that usage was proper in a technical sense did not become a matter of real concern until the question of the interpretation to be placed upon the Government testing provision of Paragraph 50 became an issue of paramount importance. In any event, it is not necessary to resolve the question of whether the term "stress relief" or "geodynamic pressure" or "overstressing" or "stress intensification" is the proper term to apply to the rock failures which occurred, since, as the Government's expert witness Dr. Hilf observed with respect to such terms, "all are referring to the phenom-

enon of failure where the strength of the rock is less than the stress on the rock" (n.296, *supra*).

With respect to the question of whether the rock encountered in the tunnels was homogeneous and isotropic, there appears to be somewhat similar inconsistencies. Neither of these terms is used by Dr. Heuer in the report submitted on his initial visit to Tunnel No. 3. The language of the report appears to rule out any possibility that the rock could be characterized as either isotropic or homogeneous (n.237, *supra*). These terms are not used in Dr. Heuer's report of September 1971 (n.15, *supra*), but in his report of December 1971, the term "homogeneous" is used to describe ground said to approximate that in which Tunnel Nos. 3 and 3A are to be driven (n.36, *supra*). The description of the ground given in a paper co-authored by Dr. Heuer and Mr. Sperry (AX 4) which was prepared early in 1972, appears to completely negate the view that the ground through which Tunnel No. 3 had been driven up to that time could be characterized as either homogeneous or isotropic (n.142, *supra*).

At the hearing Dr. Heuer testified that because of the relatively flat dip of the structure of the beds, any time you had a section that was relatively homogeneous and isotropic that would continue for a long distance in the tunnel with no interbedding of any other material and that an example of homogeneous and isotropic materials in the tunnel would be sections consisting of pure

sandstone (text preceding n.260, *supra*). Appellant's witness Mathews stated flatly that the falling rock he had testified about did not involve homogeneous and isotropic materials (text following n.270, *supra*).

The Government's expert witness Dr. Hilf questioned whether the rock involved in Tunnel No. 3 could be isotropic with regard to strength because of the very nature of the deposition (n.279, *supra*, and accompanying text). Although Dr. Hilf also acknowledged that an intact sandstone and an intact shale could be possibly near homogeneous, there is no testimony by Dr. Heuer where he explicitly states that he considers the shale encountered in Tunnel No. 3 to have been homogeneous and there is no evidence in the record indicating that any significant amount of the portions of the tunnels designated as the claim reaches were composed of pure sandstone.

On this record the Board concludes that there is insufficient evidence in the record to support a finding that any significant portion of the claim reaches of the tunnels were composed of material which could be properly characterized as either isotropic or homogeneous in nature.

In the Sperry/Heuer report (AX 4) the authors state that most of the mole down time could have been expected from a prototype piece of equipment operating in such unexpectedly adverse conditions. In an earlier draft of the report, however,

the authors had stated "[m]ost of the mole downtime could be expected of a prototype piece of equipment" (n.100, *supra*). As it appears that the earlier draft of the Sperry/Heuer report (GX YYY, III-2) was prepared prior to the time Dr. Heuer was thinking of a claim presentation (n.248, *supra*), the Board accepts the earlier version of the report as a more accurate appraisal of the principal cause of mole down time.

While not involving any inconsistency in the positions taken by Dr. Heuer during the course of or following contract performance, we shall also undertake to examine (i) the question of the weight to be accorded to the large drawings which accompanied the May 1973 report (AF 77A), and as to which Dr. Heuer testified; (ii) the extent to which the water encountered in Tunnel No. 3 can properly be said to have been greater than should have been anticipated; and (iii) the extent to which, if any, failures of the rock in the tunnels can be considered to have been failures to bedding planes.

Testimony given with respect to the large drawings pertaining to the tunnels which accompanied the May 1973 report (AF 77A), consisted of that given by Mr. Sperry involving rock failures during excavation of Tunnel No. 3 (below the profile) and that given by Dr. Heuer concerning progressive failures after excavation in Tunnel Nos. 3 and 3A (above the profile). The line of demarcation between the testimony given by Mr. Sperry and that given

by Dr. Heuer was related to the fact that Mr. Sperry had left the job before the events reflected in what is shown on the drawings above the profile had occurred.

It was Mr. Sperry's testimony that what was shown below the profile on the drawings pertaining to Tunnel No. 3 (Drawing Nos. R2093 and R2094) was a kind of summary of the excavation progress and the conditions encountered during excavation. The value to be attached to this portion of the drawings is questionable on two principal grounds. First, if what is shown is, in fact, a summary, a question arises as to the failure to introduce into evidence or at least make a proffer of the records on which the summary is based. Secondly, and more importantly, the approach followed on the drawings of simply dividing rock failures into four categories (major distress, continuous fallout, intermittent or moderate fallout, and little to no fallout) is of little assistance to fact-finding where it is undisputed that rock failures encountered in the tunnels included not only those attributed to the claimed differing site conditions but to those of a surficial nature as well which the contractor should have anticipated and provided for in its bid.

Somewhat similar considerations apply to the rock failures and fallout shown above the profile for Tunnel Nos. 3 and 3A as to which Dr. Heuer testified. While Dr. Heuer testified that the bar chart shown on the drawings (Drawing Nos. R2093, R2094, and R2095) was

based on notes taken by him during a visit to the tunnels on Feb. 2 or 3, 1973, the notes on which the bar chart were based were neither offered nor proffered in evidence. We note, moreover, that although the data shown on the drawings with respect to high invert requiring removal of tightts was said to have been furnished to Dr. Heuer by the contractor (n.249, *supra*), the data on which this portion of the drawings was based is not in evidence.

In the course of the hearing appellant's counsel noted that the absence of work papers to support a document offered in evidence goes to its weight rather than to its admissibility (n.365, *supra*). We are of the same view. In assessing the weight to be given to these drawings, the Board has taken into account the fact that while the testimony given with respect to them by Mr. Sperry was of a minimal nature and only somewhat more extensive by Dr. Heuer, there are many things shown in the drawing (particularly the details shown above the profile) which are corroborated by other testimony and a number of exhibits (especially the photographs) in evidence. In these circumstances we consider the drawings to be of some probative value and they will be taken into account in reaching our decision.

Dr. Heuer testified that the water problems encountered at Navajo were more severe than he had seen elsewhere in tunnels. Appellant's witness Mathews testified, however, that the water conditions he had

observed in Tunnel No. 3 were similar to those he had seen earlier in Azotea tunnel and that he had observed very little water in Azotea tunnel (n.272, *supra*, and accompanying text). Appellant's witness Sperry testified that he had anticipated that some water and moisture would be encountered in the tunnels and that the bid estimate had included some delay time for the fallout anticipated from water (text accompanying n.167, *supra*). On this evidence the Board finds that the water problems encountered in the tunnels were not usually severe and that they had been anticipated and provided for in the bid estimate.

Testifying with respect to the causes of the rock failures he had described, Dr. Heuer stated that the failures were not due to fallout along joints and bedding planes, although he acknowledged that there were places in the tunnels where fractures forming in intact rock would propagate back into virgin rock around the tunnel until they intersected a nearly horizontal bedding plane terminating there. Photographs 1 and 2 of AX 5 and Figure 2.14, pages 2-28 of AX 38 were said to illustrate this type of situation (text accompanying nn.251 & 252, *supra*). Appellant's witness Green testified, however, that some of the arch failures that he had seen in the tunnels involved failures in bedding planes (text preceding n.196, *supra*).

We do not consider that the apparent difference between the testimony of Dr. Heuer and that of Mr. Green in this area is difficult to re-

concile. The latter had been in Tunnel Nos. 3 and 3A some five or six times as often as Dr. Heuer (nn.196 & 243, *supra*) and thus had had many more opportunities to observe various types of rock failures. We note, moreover, that bedding planes in a machine bored tunnel are indistinct and often difficult to discern (n.181, *supra*).

We also note here Mr. Green's testimony with respect to the reminding of the arch essentially throughout the reach where Order for Changes No. 1 applies. In addition, we note his testimony in which he was unable to recall how much additional concrete had been placed in Tunnel No. 3 (nn.202 & 203, *supra*, and accompanying text).

An important exhibit offered by the appellant on rebuttal was the geology drawings (mappings) of the tunnels made by the project geologist (AX 87). While the parties are apart on the question of what these drawings show with respect to the amount of rock failure attributable to overstraining or stress relief, the Government has conceded that 900 feet of Tunnel No. 3 involved fresh fractures and the drawings themselves show that immediate fallout and fresh fractures occurred in another 450-foot stretch of Tunnel No. 3 not involved in the Government's concession (nn.155-59, *supra*, and accompanying text).

*Defenses Offered by Government
Respecting Conditions Encountered in Tunnel No. 3*

In the decision from which the instant appeal was taken, the con-

tracting officer says that the Government had been unable to verify Mr. Sperry's report of failures through intact rock or the report of other contractor personnel concerning rock failures. Appellant's counsel offers the following comment: "[T]he Findings of Fact is dated December 31, 1974 which is a year and one-half after Mr. Cooper completed his drawings (Exhibit 87) which showed extensive fracturing of the type reported by Appellant" (n.157, *supra*).

The inability of the contracting officer to verify reports by Mr. Sperry and other contractor personnel of rock failures as described by them cannot be reconciled with the record before us. The record shows that at the time boring of Tunnel No. 3 commenced (May 13, 1971), the project geologist reported fall-out in the arch; that within 3 weeks of that date, he was reporting fall-out of from .5 feet to 2.0 feet deep and from 1 foot to 4 feet wide occurring in the arch immediately after passage of the cutterhead of the mole (AX 87(6)); that prior to mid-November of 1971 a Bureau of Mines geologist was saying that roof support in Tunnel No. 3 would have to be effective within minutes after the tunnel roof was exposed (n.24, *supra*); and that in the geology progress report forwarded to the Director, Design and Construction under date of Jan. 26, 1972 (AX 69), the project construction engineer refers to fallout in Tunnel No. 3 occurring immediately after excavation removed the underlying

rock support (n.311, *supra*, and accompanying text). One of these reports (AX 69) was made directly to the contracting officer. All of them were presumably forwarded to him in the normal course of keeping him advised as to the progress on the project.

The Government made comparatively little effort to controvert the appellant's evidence with respect to the conditions encountered in Tunnel No. 3. The extensive testimony given by Dr. Heuer pertaining to the numerous photographs taken of that tunnel was not refuted by any Government witness; nor was Dr. Heuer cross-examined with respect to any of the photographs to which he testified. The Government only offered four photographs in evidence pertaining to Tunnel No. 3 (GX YY; GX FFF; GX GGG; and GX HHH).

The Government's expert witness Dr. Hilf said he had no reason to doubt Dr. Heuer's testimony that shear fractures had occurred since he was not there (*i.e.*, not in Tunnel Nos. 3 or 3A during construction). While the Government purports to place some reliance upon the testimony offered by Mr. Tackett and Mr. Logan, such reliance is considered to be misplaced. As appellant's counsel has noted, Mr. Tackett, gave no testimony as to the conditions encountered in Tunnel Nos. 3 and 3A since he was never in either tunnel during construction. Mr. Logan was in Tunnel No. 3 during construction, but the testimony he gave was of marginal

value to the Government. While Mr. Logan unequivocally stated that the conditions encountered in Tunnel No. 3 were not materially different than had been indicated in the contract, it appears that this appraisal may have been based upon the interpretation the Government had placed upon the Government testing provision of Paragraph 50, an interpretation which the Board has rejected. Even if this were not the case, we would give little weight to Mr. Logan's testimony for the reasons previously discussed (*i.e.*, his indifference to what evidence had been compiled by the project geologic personnel to support a nonfactual "finding" he had made that the conditions encountered did not differ from those indicated in the contract; and his demonstrably faulty recollection as to what conditions had existed in Tunnel No. 3 on the occasion of his second visit to the tunnel on Mar. 23 and 24, 1972).

As has been previously noted, the Government's defense against the differing site conditions claim has been largely devoted to showing (i) that the specifications and drawings indicated that the appellant would encounter the conditions claimed to represent the differing site conditions and (ii) that a category two differing site condition had not been encountered. In addition, the Government made a serious effort to show that many of the contractor's difficulties stemmed from choices that it had made (*e.g.*, use of a prototype mole with a 20-foot 6-inch diameter bore and a fixed cutter-

head), or involved matters within its control (*e.g.*, failure to keep the mole on line and grade; gripper caused failures). Except for the category two differing site conditions claim, we have treated these matters previously, noting that some of them will be considered in detail when we reach the portion of this opinion concerned with quantum.

Findings

Based upon the above discussion and upon the record made in these proceedings, the Board makes the following summary findings with respect to the nature of the rock failures and fallout encountered by the contractor in Tunnel No. 3 in the course of excavation and in connection with the placement of concrete in the arch and in the invert of the tunnel:

1. Failures of rock due to overstressing (shear type failures around the periphery of the tunnel due to overstress) occurred in the arch, in the walls and in the invert of various portions of the tunnel, with such failures sometimes occurring virtually immediately upon excavation (typically in the arch) but at other times involving progressive failures which took place days, weeks, and even months after excavation occurred.

2. Inward movement of the perimeter of the tunnel attributable to overstressing resulted in the lowering of the arch in the area of the tunnel where invert concrete had been removed and replaced pursuant to Order for Changes No. 1 (n.

67, *supra*), and in a significant amount of the invert moving into the excavated portion of the tunnel, necessitating subsequent re-mining of the arch and of the invert to provide the required thickness of the final concrete lining.

3. Rock failures and fallouts due to overstressing occurred in intact rock in shale overlain by water bearing sandstone and also in massive dry materials.

4. The magnitude of the fallout in the vicinity of DH 116 was due to the rock being overstressed (shear type failures) causing fractures and cracks to form in the material adjacent to the tunnel perimeter upon excavation which allowed the water to penetrate deeply into the mass of shale and siltstone with the resultant deterioration, disintegration and massive fallout.

5. One of the distinctive features about a shear fracture is the curved failure surfaces, while another is the very fresh appearance of the fractures (a fresh fracture through virgin intact rock).

6. Support problems caused by overstressing of the rock in the tunnel could be expected where the depth of the cover (expressed in feet) approaches one-half of the unconfined strength of the ground (expressed in psi).

7. Rock failures about the periphery of the tunnel due to overstressing were not of a surficial nature but rather involved deep seated failures as evidenced by cracking, slabbing, loosening, and fallout of

the rock in patterns recognizable as shear type failures.

8. The rock failures and fallout attributable to overstressing (shear type failures) could not have been prevented from occurring by utilizing the remedial measures specified in Paragraph 50 of the Specifications (*e.g.*, applying a surficial protective coating such as nonstructural shotcrete) or by resorting to the support measures authorized elsewhere in the contract including the use of full circular steel ribs.

9. Resort to full circular steel ribs as support for those portions of Tunnel No. 3 in which rock failures and fallout due to overstressing had occurred would have been economically prohibitive for those bidders (one of whom was the contractor) who had submitted bids predicated upon the use of rockbolts and, if used, would have resulted in a poorer quality of rock mass about the tunnel than was achieved by the pretensioned rockbolt system used by the contractor.

10. Some of the rock failures and fallouts that occurred in Tunnel No. 3 were caused by conditions which the contractor should have expected to encounter including (a) rock failures due solely to water, (b) fallout to bedding planes, (c) sinking of boring machine in zones of soft and wet shale, and (d) failures due to action of the grippers.

[4] Having found above that in various portions of Tunnel No. 3 the contractor encountered rock failures and fallout due to over-

stressing (shear type failures) which were not of a surficial nature and having previously found the contract to have indicated that the deterioration and disintegration encountered in the tunnels would be primarily of a surficial nature, the Board now finds and determines that in driving Tunnel No. 3 the contractor encountered conditions materially different from those indicated in the contract.

b. Conditions encountered in Tunnel No. 3A

While the costs pertaining to Tunnel Nos. 3 and 3A have been combined in the claim submitted (AX 10; AF 77; AX 84; and corrected AX 84), the proof submitted by the appellant as to the conditions encountered in the two tunnels has been almost entirely restricted to the conditions which obtained in Tunnel No. 3.

Of appellant's witnesses only Dr. Heuer and Mr. Green were in Tunnel No. 3A during construction. Except for the May 1973 report (AF 77A), all of the reports authored or co-authored by Dr. Heuer (AX 4; AX 5; AX 20; and AF 36) were completed prior to the time excavation in Tunnel No. 3A commenced. All 22 of the photographs included in AF 77A relate to conditions in Tunnel No. 3. None of the numerous photograph introduced by the appellant at the hearing were identified as pertaining to Tunnel No. 3A.

The geology drawings for Tunnel No. 3 included in AX 87 provide some corroboration for appellant's claims with respect to the conditions

encountered in that tunnel. The geology drawings for Tunnel No. 3A (AX 87(7) and AX 87 (8)), however, provide no corroboration for appellant's claim of rock failures and fallout due to overstressing having occurred in that tunnel. While the drawings do refer in the remarks column to 11 cases of fallout (10 from the roof and one from the sidewall), the project geologist does not note any instances of fallout from the roof having occurred immediately upon removal of the underlying support for the rock; nor does he note any instances of freshly fractured rock having been observed (n. 160, *supra*).

The references to Tunnel No. 3A in the May 1973 report are of a perfunctory or conclusory nature. (AF 77A, pp. 26, 32, 38, 44-45, 52, 54-55, 58-59). The three large drawings which accompanied the report (Drawings Nos. R2093, R2094, and R2095) have bar charts above the profile which are labeled "Progressive Failure After Excavation." Dr. Heuer testified that the bar charts are based on notes he made when he visited the tunnels on Feb. 2 or 3, 1973. None of the numerous photographs taken on Feb. 6 or 7, 1973, to illustrate conditions obtained in early February of 1973 pertain to Tunnel No. 3A; nor is there any other evidence in the record to support the categories of rock failures shown on the bar chart for Tunnel No. 3A (Drawing No. R2095).

There are other factors limiting the probative value of Drawing No. R2095. Noted by the Board is the absence of any testimony from

either Dr. Heuer or Mr. Sperry as to what is shown below the profile on Drawing No. R2095. As to what is shown above the profile for "Areas of High Invert Requiring Removal of Tights Before Invert Concrete Placement," we note that the appellant has made no claim for additional costs related to placement of concrete in the invert of Tunnel No. 3A apparently in recognition of the fact that all of that tunnel was moled high (n. 183, *supra*).

An estimated rock fall of from 40 to 50 cubic yards occurred in Tunnel No. 3A on June 4, 1973, within the reinforced section of the tunnel near the outlet portal (n.101, *supra*). No testimony was elicited from appellant's witnesses with respect to such fallout, however, even though Mr. Green was still on the project at the time of the fallout and continued on the project until the tunnels were completed. The fact that the fallout occurred within the reinforced section of the outlet portal militates against attributing the fallout to overstressing (shear type failure) around the periphery of the tunnel, since the cover in that area (AF 1, Drawing No. 809-D-323) is less than 100 feet and Table I of GX U shows the lowest strength of rock in Tunnel No. 3A to be 300 psi. See statement in report forwarded by the project manager's letter dated Dec. 27, 1971, in which it is stated that support problems may be expected when the depth of cover (expressed in feet) approaches one-half the unconfined strength of the ground (expressed in psi) (AF 36,

III-6). See also the testimony of Mr. Mathews in which he states that "geodynamic pressure" (overstressing) is not present at shallow depth and that rock which is loosened because of defects in the rock is independent of the depth of cover (n.273, *supra*).

According to the appellant the overstress rock failures caused delay to and increased the cost of performing the three basic tunnel construction operations (excavation, invert concrete, and arch concrete). The delays to and factors increasing the cost of invert concrete are said to be described at Tr. 347-48, with those relating to arch concrete being described at Tr. 353-65 (AOB 54). The appellant is not making a claim related to invert concrete in Tunnel No. 3A but is making a claim related to placement of concrete in the arch of Tunnel No. 3A. The testimony of Mr. Green at Tr. 353-65 is of no assistance to appellant in this regard, however, since all of the specifics of that testimony including the exhibits covered thereby pertain to the difficulties relating to the placement of concrete in arch of Tunnel No. 3 (*e.g.*, see n.201, *supra*, and accompanying text).

[5] Applying the criteria the appellant has advanced for recognizing rock failures and fallout due to overstressing (shear type failures) about the periphery of a tunnel (typically the immediate fallout in the arch; the curved failure surfaces; the new fractures and a minimum depth of cover), the Board is unable to find that in

driving Tunnel No. 3A the appellant encountered rock failures and fallout attributable to such a cause. Having previously found the contract to have indicated that the deterioration and disintegration to be encountered in driving Tunnel Nos. 3 and 3A would be primarily surficial in nature, susceptible to being remedied by the application of surficial measures and there having been no showing that in driving Tunnel No. 3A the appellant encountered rock failures and fallout due to overstepping (shear type failures) around the periphery of the tunnel—necessitating support of a nonsurficial nature—the Board now finds and determines that the appellant has failed to establish a first category differing site conditions claim with respect to that portion of its claim pertaining to Tunnel No. 3A.

[6] As the appellant has also submitted a second category differing site conditions claim with respect to Tunnel No. 3A, we now turn to consideration of that question. According to the appellant the conditions in Tunnel Nos. 3 and 3A were unknown in bored tunneling work for the following reasons: (i) Dr. Heuer had done an extensive literature survey which had failed to disclose any description or documentation of shear failure modes due to overstepping in intact rock in any kind of tunnel; (ii) the four lowest bidders on the job had all bid prices for excavation and support which could not have covered the cost of installing a support system such as

steel ribs, shotcrete, or the Bernold system; (iii) although Dr. Heuer could have predicted theoretically that overstepping and fractures would occur, he could not have predicted, even theoretically, how fast they would occur; and (iv) if Mr. Mathews had been estimating the job for the contractor in 1970, he would not have expected the development of geodynamic pressure (overstress) (ARB 6, 7).

A showing that the appellant encountered rock failures and fallouts due to overstepping (shear type failures) around the periphery of the tunnel is necessary for the proof of its second category differing site conditions claim. Since the appellant has failed to make such a showing with respect to the rock failures and fallout encountered in Tunnel No. 3A, the Board finds and determines that the appellant has failed to establish a second category differing site conditions claim with respect to the portion of its claim pertaining to that tunnel.

Part III—Quantum

A. Discussion

Still to be determined is the amount of the equitable adjustment to which the appellant is entitled under the "Differing Site Conditions" clause (General Provision No. 4) of the contract by reason of our finding that the conditions it encountered in Tunnel No. 3 differed materially from those indicated in the contract. As the Court of Claims has said, the starting point for the calculation of the

amount of an equitable adjustment is a computation of the contractor's cost of performing the extra work resulting from a changed condition. *Boyajian v. United States*, 191 Ct. Cl. 233, 248 (1970). The Court of Claims has also held that the amount of the equitable adjustment to which the contractor is entitled as a result of a changed condition is "the difference between what it cost it to do the work and what it would have cost it if the unforeseen conditions had not been encountered" and that "[t]he amount of an equitable adjustment for a changed condition is thus not based upon the contractor's original estimate." *Roscoe-Ajax Construction Co. v. United States*, 198 Ct. Cl. 133, 142 (1972).

The first question we have to confront is whether the resort by the appellant to what it has described as "reference reaches" and "claim reaches" for proof of the amount of the equitable adjustment to which it is entitled is reasonable in the circumstances present here.

The claim for in situ rock failures in Tunnel Nos. 3 and 3A was presented on the basis of using "claim reaches" and "reference reaches" to calculate the amount of the equitable adjustment sought (AF 77).³⁹⁴

³⁹⁴ The "claim reach"/"reference reach" approach for determining the amount of a claim was first used in connection with the DH 116 claim (nn.50&51, *supra*, and accompanying text). It is noteworthy that a portion of Tunnel No. 3 identified as the reference reach for the DH 116 claim on Apr. 22, 1972 (AF 50), became part of the claim reach for excavation in May of 1973 (AF 77, "In Situ Rock Stress Cost Evaluation," p. 1).

In justification for so proceeding, appellant's counsel states:

The claim reaches are those sections of Tunnels No. 3 and No. 3A in which differing site conditions or the effects thereof were encountered. The reference reaches are those sections in which the conditions encountered did not differ materially from those indicated in the contract or normally inhering in work of this character.

* * * * *

Because of the fact that these Tunnels were miled with the same equipment and crews throughout their entire length (Tr. 305, 308-309), it is possible to determine what it would have cost in the claim reaches if the unforeseen conditions had not been encountered. What it cost to do each foot of work in the reference and claim reaches is known. In the claim reach in Tunnel No. 3, had differing site conditions not been encountered, the cost per foot would have been the same as it actually was in the reference reach.

(AOB 54-55).

Exhibit 84 contains a summary of the costs incurred by Appellant in the reference and claim reaches which are identified by stations and dates on the first three pages of "Navajo 3 and 3A Progress Tabulation" which is in the front of Exhibit 10. From the actual cost of each claim reach is subtracted what it would have cost if the unforeseen conditions had not been encountered, i.e., the per foot reference reach cost multiplied by the number of feet in the claim reach. The difference, plus profit, is the equitable adjustment to which Appellant is entitled.

(AOB 56).

We submit that the actual cost per foot in the reference reaches taken from Appellant's books of account are in evidence and that by simply applying those costs to the footages in the claim reaches, the amount of the equitable adjustment to

which Appellant is entitled is readily determined. (ARB 24-25).

The above summary presupposes that there is evidence in the record showing who selected the reference and the claim reaches used in the computations, the bases for selecting them, and the linear feet of each type of reach involved in the selection for the three basic operations into which driving the tunnels has been divided, *i.e.*, tunnel excavation, place invert concrete and place arch concrete. Addressing this aspect of the claim, appellant's counsel states: "Mr. Green did not determine the reference and claim reaches (Tr. 272); Mr. Sperry did (Tr. 1311, 1337)" (ARB 24).

Upon examination of the cited transcript references, however, we find that while Mr. Sperry testified that he selected the reference reach for excavation (n.194, *supra*, and accompanying text), he did not testify that he had selected the claim reach for excavation. In regard to Tunnel No. 3A, we note that excavation in the claim reach of that tunnel did not begin until Sept. 1, 1972 (AX 10, "Navajo 3 and 3A Progress Tabulation"), and that Mr. Sperry left the project in late August of 1972.

Mr. Sperry also testified with respect to what is shown on a schedule captioned "Navajo Tunnels No. 3 & 3A Production Comparisons" dated Apr. 12, 1973 (AX 91). The schedule was described by Mr. Sperry as a sort of summary of work that he had done while at A. A. Mathews, Inc., in 1973, in con-

junction with report No. 1856 (the May 1973 report (AF 77)). The comparisons made in AX 91 only pertain to excavation, however, and the only reference and claim reaches given therein are for that operation. Here again, Mr. Sperry's testimony only refers to the selection by him of the reference reach for excavation (Tr. 1311-15).

There is nothing in the record to indicate that Mr. Sperry did any work related to the establishment of reference reaches or claim reaches after the submission to the Bureau of report No. 1856 (AF 77) in May of 1973. Some 6 months after the submission of the May 1973 report, contractor personnel were still deliberating upon the basis to be used in establishing reference and claim reaches for all three of the basic operations involved in driving the tunnels (n.135, *supra*). In a memorandum written from one company official to another in the San Mateo office under date of Dec. 26, 1973, subject: "Navajo Irrigation Project Claims," the author states that "[a] reference reach will be chosen for each of the contract bid items of tunnel excavation, arch concrete tunnel lining, and invert concrete tunnel lining" and that "[t]he entire tunnel length, except for a start-up period, will represent the claim reaches" (GX L, pp. 1, 2).

Neither Mr. Sperry nor any other of appellant's witnesses testified to having selected the reference reaches and the claim reaches upon which the amounts claimed for invert concrete and arch concrete in Tunnel Nos. 3 and 3A are based.

While the linear feet involved in the reference and claim reaches for invert concrete and arch concrete are shown in AX 10 ("Navajo 3 and 3A Progress Tabulation"), no witness for the appellant testified that he had determined that specific reaches of the tunnels were reference reaches and other specific reaches were claim reaches for the two operations involved.

A "Navajo 3 & 3A Progress Tabulation," did accompany the May 1973 claim submission (AF 77). Commenting upon what is shown therein with respect to arch concrete, the "In Situ Rock Stress Cost Evaluation" (AF 77) states at page 4: "Lines 12 through 19 of the Progress Tabulation show actual and projected details of this operation. These figures will be revised upon completion of arch concreting."

Mr. Green testified that the "Navajo 3 and 3A Progress Tabulation" included in the front of AX 10 was part of the claim submitted to the Bureau in February of 1974. As the progress tabulation was not included as an enclosure to the claim letter of Feb. 6, 1974 (AF 112), the document was presumably furnished to the Government in the negotiation conference of Feb. 7, 1974 (AF 114). Mr. Green noted that the tabulation shows the rate of advance in the reference reaches for each of the three basic operations involved in constructing the tunnels. Upon cross-examination he stated that various personnel had had input in determining the stretches of the tunnels considered

"reference reaches" and "claim reaches" but that the determination of these reaches did not involve a decision that he had personally made (nn.206-11, *supra*), and accompanying text).

The appellant having failed to offer any evidence to show who selected the claim reach involved in the computation of the amount claimed for excavation in the claim submitted and having failed to offer any evidence to show who had selected either the reference or the claim reaches involved in the computation of the amounts claimed for "Place Invert Concrete" and "Place Arch Concrete" (AX 10; corrected AX 84), the Board finds and determines that no adequate basis exists for accepting the reference reach/claim reach approach in determining the equitable adjustment to which the appellant is entitled by reason of the differing site conditions found to have been encountered in Tunnel No. 3. Before undertaking to determine what other basis for an equitable adjustment may be proper in the circumstances of this case, it would appear to be advisable to separately consider the claims for the three basic operations involved in constructing the tunnels, namely, "Tunnel Excavation," "Place Invert Concrete," and "Place Arch Concrete," as well as the quantum defenses the Government has raised with respect to the claims asserted.

1. Tunnel Excavation

This is by far the most important claim from a dollar standpoint, as

can be seen comparing the \$1,297,305 of direct costs claimed for this item, with the direct costs claimed for "Place Invert Concrete" and "Place Arch Concrete" of \$160,715 and \$661,185 respectively (corrected AX 84; n.1, *supra*). Most of the testimony at the hearing related to the claim for excavation. This is not surprising since Dr. Heuer and Messrs. Sperry, Mathews, and Green all testified as percipient witnesses with respect to the claim for excavation, while only Dr. Heuer and Mr. Green gave testimony concerning the "Place Invert Concrete" and the "Place Arch Concrete" claims. Many of appellant's important exhibits (AX 4; AX 5; and AX 20) cover time periods when only tunnel excavation had been undertaken. Most of the quantum defenses the Government has raised only relate directly to the claim for tunnel excavation.

Where, as here, the contractor has failed to segregate costs, the problem is to determine the extent to which the additional costs claimed to have resulted from the differing site conditions can be properly attributed to that cause and not to other causes. Preliminary to finding that the contractor had encountered a differing site condition in Tunnel No. 3, the Board found that the rock failures and fallout the contractor experienced were due to overstressing (shear type failures) which failures manifested themselves in the arch, the sidewalls, and the invert of the tunnel. Clearly the costs related to overcoming the differing

site conditions are recoverable as part of the equitable adjustment. The Government contends, however, that a substantial portion of the claimed costs are not attributable to the differing site conditions assuming there is one. We now turn to consideration of the arguments advanced by the Government with respect to quantum.

a. *Gripper Caused Failures*

Several months after the claim was submitted and again at the hearing, the Government raised a question as to the extent to which rock failures and fallout in the sidewalls were due to the pressure exerted by the grippers of the mole. At the conference on Dec. 6, 1971, the Government took the position that the action of the grippers was largely responsible for the fallout in the sidewalls of Tunnel No. 3 (text accompanying n.30, *supra*). At the hearing Mr. Logan attributed much of the fractured rock shown in the photograph taken on Jan. 11, 1972, near Station 831+25 (GX GGG) to the pressure exerted on the sidewalls by the gripper of the mole. He also testified that a photograph taken at Station 856+03 on Sept. 2, 1971 (GX HHH), shows some of the failures of the rock that is occurring beneath the gripper pads. Mr. Logan was of the opinion that gripper pressure had contributed to the rock failures he had observed at Station 782+00 in March of 1972 (nn.339-41, *supra*, and accompanying text). According to the project geologist, the sidewalls fractured by the grippers at

Stations 855+50 to 856+80 were permitted to ravel before shotcrete was applied (AX 87(6)). Rock fractures in the sidewall from Stations 826+00 to 829+00 were believed by Mr. Levine to have been triggered by the gripper pressure of the mole on the shale (text accompanying n.311, *supra*).

Appellant's witnesses also testified to rock failure which they attributed to the grippers. Mr. Sperry saw evidence of gripper caused failures of rock in different places one of which was at Station 847+00 (Tr. 134-36). Mr. Green also reported seeing some rock failures in the ribs of the tunnel that he considered to have been caused by the grippers (n.197 *supra*). Spalling at springline shown in a photograph (AX 21) was attributed by Dr. Heuer to the action of the grippers (Tr. 403).

The gripper caused failures to which we have referred occurred in widely separated areas of Tunnel No. 3. The Board finds that such failures were not attributable to the differing site conditions, but were rather a consequence of the contractor having chosen to use a hard rock prototype mole to excavate the relatively weak rock involved in Tunnel No. 3.

b. *Inadequate Guidance System*

The Government has made a concerted effort to show that the guidance system used by the contractor was inadequate for keeping the boring machine (mole) on line and grade. It quotes from GX M to show that using the guidance sys-

tem employed by the contractor it would be possible for the boring machine to rotate about the laser beam (GPB 65). Upon cross-examination Mr. Sperry acknowledged that it would be possible for the mole to be driven with the target system used so that the mole would actually rotate around the laser beam. He was unable to say from his experience, however, as to whether this had ever happened (n.184, *supra*).

The testimony to which we have referred and GX M establishes that utilizing the guidance system employed by the contractor the mole could rotate about the laser beam. This was admitted to be the case by Mr. Sperry. The fact that something is possible does not mean, of course, that it has happened or that it ordinarily does happen. In this case no witness testified to the mole rotating around the laser beam. Absent such testimony or other evidence of record, there is no basis upon which the Board may conclude that it ever did.

[7] Perhaps realizing the somewhat nebulous nature of the evidence offered in this area, the Government has called the Board's attention to GX AAA-1 through AAA-24 asserting that they contain voluminous references to the problem the contractor was having in keeping the mole on line and grade (GPB 66). With respect to this exhibit, the Board notes that it consists of 24 volumes with literally thousands of handwritten pages of reports by Government inspectors

concerning what transpired each work day, many of which involved working three shifts.

If the purpose of calling attention to so voluminous an exhibit is to suggest to the Board that it should review the documents involved with a view to finding what support may exist for the Government's position in this area, there appears to be a considerable amount of confusion as to the responsibilities of counsel and those of the Board with respect to voluminous documents offered and received in evidence. In the event that counsel considers that information contained in a voluminous exhibit either proves or may be of assistance in proving a particular point, it is incumbent upon counsel to specifically cite the portions of the voluminous exhibit relied upon by page number, by date, or by other appropriate reference. This presupposes, of course, that a summary of the particular portions of the voluminous exhibit relied upon has not been offered and received in evidence at the hearing as a separate exhibit. Absent specific citations to a voluminous exhibit or to an appropriate summary thereof in evidence, the Board will not undertake to determine the content of a voluminous exhibit in particular areas before reaching its decision. It may, of course, refer to the voluminous exhibit to verify information contained in other exhibits in evidence (*e.g.*, confirm that an event occurred at a particular time or in a particular place).

[8] Lastly, the Government seeks to bolster its position by referring

to and quoting from GX BBBB, an exhibit which was offered by the Government but which was not received in evidence. With respect to this exhibit, Government counsel states:

[T]he Government made an offer of proof on the exhibit and maintains that the exhibit should have been admitted into evidence on the basis that Mr. Mercer was the field engineer on the job and that the diary is identified as his diary and is presumably a record kept in the ordinary course of business. The document, moreover, was obtained by the Government during discovery proceedings from the contractor's own files.

(GPB 66).

GX BBBB was not received in evidence because the witness by whom the Government sought to introduce the exhibit failed to identify it (Tr. 1353-56). Concerning the offer of proof, the hearing member stated: "The Board will not consider that exhibit in reaching its decision, but it will be part of the record incident to the offer of proof" (Tr. 1356).

The Board finds that the hearing member properly refused to admit GX BBBB in evidence on the ground that it had not been identified by the witness through whose testimony its admission was being sought. A document is not identified within the meaning of the rules of evidence simply because counsel for the Government identifies the proffered document as having been obtained in discovery proceedings from the contractor's own files.

The substantive arguments made by Government counsel in the offer of proof and in the Government's

posthearing brief have not been addressed by the Board in this opinion since no consideration has been given to the content of GX BBBB in reaching our decision. Incident to the offer of proof, GX BBBB will be retained as a part of the record in this case for consideration upon review of our decision if that materializes.

c. Rock Failure to Bedding Planes—Failures Due Solely to Water

As the Government has noted in its brief, witnesses have testified that they observed fallout associated with fresh fracturing attributed to overstressing and that they had also observed fallouts at bedding planes which were attributed to other causes (GPB 86). The contractor's consultants, Dr. Don U. Deere, Dr. Andrew H. Merritt, and Dr. Ron Heuer were all agreed that some slabbing to pre-existing bedding planes could have been anticipated (n.162, *supra*). The project manager anticipated fallout at the contact between two different types of materials and some of the arch failures, observed by Mr. Green involved failures to distinct bedding planes (n.168, *supra*; Tr. 329-30). The Board finds that in excavating Tunnel No. 3 the contractor experienced some rock failures to bedding planes; that such failures were of a surficial nature, that they had been anticipated; and that they had been provided for in the bid estimate.

The information furnished by the Government clearly indicated that some water would be encountered in Tunnel Nos. 3 and 3A (n.117, *supra*; AF 77, p. 26). The bid estimate did include some time for rock support, some delay time including the fallout anticipated from water (text accompanying n.167, *supra*). Some of the disintegration and deterioration encountered in Tunnel No. 3 was due to water (Tr. 503). Mr. Mathews considered that the water conditions he observed in Tunnel No. 3 were similar to those he had seen earlier in Azotea Tunnel where he had observed very little water (n.272, *supra*, and accompanying text). Rock failures and fallout due to water are not included among the four ultimate facts on which the contractor's in situ stress claim is based (text accompanying n.162, *supra*). The Board finds that the rock failures and fallout encountered in Tunnel No. 3 due solely to the presence of water were not caused by the differing site conditions but rather represented conditions which should have been and were anticipated by the contractor as is evidenced by provision therefor in the bid estimate.

d. Tunnel Advance Slowed by Soft Invert—Mole Downtime

Soft invert was encountered in Tunnel No. 3 on Apr. 21, 1972, with the mole sinking about 6 inches below grade. Manipulation of the mole cutterhead for repairs on April 22 caused it to settle still further and

the mole was 24 inches low when advance was resumed on April 24. The mole was steered upward and attained grade by the end of the day shift on April 25. It began to settle again on the graveyard shift on Apr. 26, however, and continued to sink until it reached 34 inches below grade on Apr. 29. By May 4, 1972, the thickness of siltstone/shale below the invert had begun to decrease and the mole was steered back up to grade. During this 2-week period, the tunnel advanced only 198 feet from Station 771+18 to Station 769+20 (AX 87(2)). The slow advance in this stretch of Tunnel No. 3 was due to the weak siltstone/shale material in the tunnel invert not providing adequate bearing capacity to support the mole and allow for corrective steering measures to get the mole back up to grade (AF 77A, pp. 37-8).

In a report to one of the unsuccessful bidders on Tunnel Nos. 3 and 3A, a portion of which is quoted in the letter to the contractor dated Oct. 2, 1973 (GX Q), Dr. Deere refers to a number of problems a contractor using a hardrock mole to excavate the tunnels could expect to encounter including difficulties in thrusting the machine if the bottom is soft or the sidewalls are composed of slabby shale and/or very weakly cemented sandstone (GX Q, pp. 6-7).

The Board finds that the delays to tunnel advance caused by the contractor encountering soft invert in a 198-foot stretch of Tunnel No. 3 were not attributable to the differing site conditions; that such delays

were rather due to the contractor having chosen to use a hardrock prototype mole to excavate the relatively weak rock of which most of Tunnel No. 3 was composed; and that the contractor rather than the Government must bear the consequence of this exercise of its business judgment.

With respect to the causes of mole downtime, the Government contrasts what was said about the subject in the Sperry/Heuer report (AX 4) at p. 543 ("Most of the mole downtime could have been expected from a prototype piece of equipment operating in such unexpectedly adverse conditions") with what was said in an earlier draft of that report (GX YYY) ("Most of the mole downtime could be expected of a prototype piece of equipment"). Thereafter, Government counsel states:

In comparing these two exhibits it becomes perfectly obvious that the authors, who were both witnesses at the hearing, revised their supposedly disinterested report to include a phrase which attributes mole downtime to "unexpectedly adverse conditions." It is, of course, no surprise that this added language just so happens to gratuitously lend support to a theory of a differing site condition occurring in the tunnel.

(GPB 62-63).

We find that most of the mole downtime was the result of the contractor using a prototype piece of equipment. We further find, however, that various parts of the mole and its ancillary equipment were damaged by falling rock caused by overstressing (shear-type failures) and that significant portion of the

mole downtime is attributable to such falling rock (*i.e.*, was caused by the differing site conditions).

e. *Installation of Shield on Mole—Use of Shotcrete as Protective Coating*

At a meeting with representatives of the contractor on Dec. 6, 1972, the project construction engineer pointed out instances of the contractor's lack of preparation for handling some of the problems encountered. Among the items mentioned were the contractor's delay (i) in installing a shield for the mole and (ii) in proceeding with shotcreting because shotcreting equipment was not available (n.53, *supra*).

In a letter written under date of Dec. 7, 1970, to the attention of the project construction engineer, Mr. Sperry submitted for approval a description of the contractor's anticipated excavation and rock support methods. One of the rock support methods described involved the use of a shield about 7 feet long to support the excavated back between the cutterhead and the support installation area (n.6, *supra*). Over 7 months later, Mr. Mathews was categorically stating that "[a] shield or some other device which will support the crown between the dust shield and the rock bolt installation area must be designed and installed." Some 9 months after Mr. Sperry's December letter, Dr. Heuer was saying that "the use of the partial shield will permit steady, if retarded, progress

through areas having weak rock in the tunnel arch" (n.19, *supra*). A shield was not installed, however, until Oct. 5, 1971 (n.53, *supra*).

Testifying at the hearing Mr. Sperry stated that when the contractor started moling a shield was not considered necessary since the rock had enough stand-up time and the rockbolt grips were up close to the dust seal and that they could be tilted forward to support the rock within about 4 to 6 feet behind the dust seal (Tr. 167). Addressing the question of how the rock failures and fallouts slowed down progress, Mr. Sperry stated that just as soon as the arch was excavated the failures started to occur and that what fell on the mole buckets did not bother much but that the rock that fell behind the dust seal of the mole came down and piled up on the part of the mole where the contractor later put a shield (text accompanying n.172, *supra*).

Not addressed by Mr. Sperry in his testimony was the question of why a shield for the Dresser mole was considered necessary in December of 1970, but was not considered necessary when the contractor started moling in May of 1971; nor has any explanation been offered as to why after the major fallout in mid-July of 1971, it took the contractor 5 weeks to decide upon the shield to be ordered (GX H (8/19/71)). It is noted that when in early December of 1970 the Bureau was advised of the plan to use a 7-foot shield as part of the rock support program, the contractor knew that

it would be using a Dresser mole for excavation of the tunnels (n.3, *supra*).

The Board finds that the Bureau was entitled to rely upon the contractor's representation that the Dresser mole to be used in excavating the tunnels would be equipped with a 7-foot shield to support the excavated rock between the cutter head and the support installation area; that the contractor delayed ordering the shield in question for over 8 months after it had proposed its use to the Bureau in December of 1970; and that from the time moling began on May 13, 1971, until the shield was installed on Oct. 5, 1971, excavation progress was delayed and costs were increased by the absence of the shield.

The contractor's delay in proceeding with a shotcreting program follows a somewhat similar, if less egregious, pattern of delay. The May 1973 report (AF 77A), points out that it could reasonably be concluded from the contract documents that the deterioration and disintegration to be expected would be mainly of a surficial nature which could be prevented by such means as applying a surficial protective coating such as non-structural shotcrete (n.81, *supra*, and accompanying text). In a letter to the contractor dated July 24, 1971, Mr. Mathews stated that shotcrete was the logical medium to prevent shale from raveling between rockbolts since it would adhere to wet surfaces. In a report dated Sept. 17, 1971, Dr. Heuer noted that while a latex compound might be sufficient

in dry areas, shotcrete should be applied in wet areas (n.17, *supra*, and accompanying text).

The use of shotcrete to prevent surficial deterioration was again stressed by Dr. Heuer in the report transmitted with the contractor's letter of Dec. 27, 1971 (n.45, *supra*, and accompanying text). The Government's witness Mr. Logan considered that a protective coating of shotcrete would have protected against air slaking since it would protect the surficial material on the tunnel by maintaining a uniform moisture content (n.343, *supra*).

The May 1973 report refers to the initial plans for the use of shotcrete as a protective coating in areas of most severe surface slaking (AF 77A, p. 29). Mr. Sperry testified that he considered shotcrete for protective coatings when he prepared the bid estimate and that some money was included in the bid estimate for that item. The explanation offered by Mr. Sperry for no shotcrete plant being on the job when moling was started in mid-May of 1971, was that the contractor was experimenting with latex coatings, a new type of coating and that it was not felt that shotcrete would be needed. In the event that shotcrete were needed, however, Mr. Sperry considered that it could be obtained in time without delaying the progress of the work (Tr. 167-69).

Review of the record discloses that bids were opened on Sept. 22, 1970; that the instant contract was awarded on Oct. 23, 1970; that moling in Tunnel No. 3 began on May

13, 1971; that the job was shutdown from July 14, 1971, to Aug. 20, 1971; that it was not until the first day of the shutdown that the decision was made to go to shotcrete (GX H (7/14/71)); and that shotcreting did not begin until the following month (GX H).

In his testimony, Mr. Sperry said that he had given up on the use of protective coatings as they had not worked at DH 116 (Tr. 114). Review of the portion of Mr. Sperry's diary in evidence discloses, however, that shotcrete was still being used or planned for use in November of 1971 (GX H (11/10/71; 11/29/71)). The statement by Mr. Sperry that he had given up on the use of shotcrete as a protective coating because it had not worked at DH 116 appears to manifest confusion on Mr. Sperry's part as to either the nature of the rock failures and fallouts which occurred in the vicinity of DH 116 or the limited circumstances when protective coatings of shotcrete may be usefully applied.

If, as Dr. Heuer testified and as the Board has found, the deterioration and disintegration which occurred in the vicinity of DH 116 was not of a surficial nature, then the fact that applications of protective coatings of shotcrete did not prevent the deterioration and disintegration which occurred there would appear to have no bearing on the question of whether protective coatings of shotcrete should be applied to remedy surficial deterioration and disintegration occurring elsewhere in the tunnels. It is clear

that not only the appellant's expert witness Dr. Heuer, but also Mr. Mathews and Mr. Logan, considered that the use of a protective coating of shotcrete would be helpful in preventing or arresting surficial deterioration or disintegration. In such circumstances, the use of protective coatings of shotcrete was considered to be imperative if the surfaces to which they were to be applied were wet. None of these witnesses indicated in their testimony or elsewhere in the record that a protective coating or shotcrete would prevent rock failures and fallout due to overstressing as we have found occurred in the vicinity of DH 116.

The Board finds that the failure of the contractor to procure the equipment required for the application of protective coatings of shotcrete within a short time after the award of contract (i) delayed the contractor in preventing or reducing surficial deterioration or disintegration where encountered from the start of moling in May of 1971, until the equipment was obtained in August of 1971, and (ii) increased the costs of tunnel excavation.

2. *Place Invert Concrete*

In the May 1973 claim submission ³⁹⁵ the contractor asserted that

³⁹⁵ AF 77, letter transmitting claim dated May 18, 1973. Mr. Sperry left the job at the end of Aug. of 1972. Invert Concrete Start Up work began on Oct. 30, 1972, with Arch Concrete Start Up work beginning in Tunnel No. 3 on Feb. 13, 1973, and in Tunnel No. 3A on June 16, 1973 (AX 10, "Navajo 3 and 3A Progress Tabulation").

the concrete invert heave between Stations 812+50 and 844+50 was an integral part of the differing site conditions claim. The claim included an estimated cost to repair invert heave in the amount of \$526,700 and an estimated additional cost to place invert concrete of \$115,220. Subsequently, by Amendment No. 1 to Part 1 of Order For Changes No. 1, dated Apr. 1, 1974, the amount due under the contract was increased by the lump sum of \$565,838 to cover the increased costs incurred to remove and replace the concrete invert between Stations 812+42 and 824+00 and Stations 833+00 and 844+46 of Tunnel No. 3 (n.67, *supra*). The amount presently claimed for placing invert concrete is in addition to what the contractor has previously been paid for removing and replacing the concrete invert in Tunnel No. 3 under the terms of Order For Changes No. 1.

Major delays during the placing of the invert concrete were said to have been caused by the rock in the invert of Tunnel No. 3 rising and encroaching inside the "A" line, necessitating that it be removed by spading, ripping, and blasting. (AF 77. "In Situ Rock Stress Cost Evaluation," p. 2). The inward movement of the lower walls and invert following excavation required remining in order to achieve the specified thickness of concrete tunnel lining (AF 77A, p. 3).

The Bureau surveyed Tunnel No. 3 at various times during excava-

tion in order to check on the alignment to which the tunnel was being excavated. Prior to constructing the tunnel concrete lining, the contractor had hired the firm of Lawrence A. Brewer and Associates, Inc., to independently check the tunnel profile. In report No. 1856 (AF 77), Dr. Heuer states that the inward movement of the lower side-walls and invert cannot be explained as a reaction to water but were caused by rock failures and subsequent movements due to over-stressing. He also states that these large scale failures of overstressed rock are not due to simple surficial deterioration, disintegration and loosening in the presence of air or water since many of them occurred in portions of the tunnel in which water was not present (AF 77A, pp. 42, 57, 61-62).

The portion of Tunnel No. 3 designated as a claim reach for invert concrete comprises the 8,593 feet of Tunnel No. 3 from Station 769+35 to Station 855+28 (AF 77, "In Situ Rock Stress Cost Evaluation," p. 2). As has been previously noted, however, the contractor was paid under Order For Changes No. 1 the sum of \$565,838 for removing and replacing the concrete invert between Stations 812+42 and 824+00 and Stations 833+00 and 844+46, all of which are within the designated claim reach.

In Report No. 1856, Dr. Heuer states that the results of the surveys made by the BOR and by Brewer are shown on Drawing Nos. R2093 and R2094, and that both surveys indicated that the invert of Tunnel

January 15, 1981

No. 3 was high and within the "A" line throughout most of the 10,800-foot tunnel length from Station 747+00 to Station 855+00 (AF 77A, p. 42). The fact that the invert was high and within the "A" line in various stretches of the tunnel does not necessarily mean that all of the high invert was due to inward movement of rock because of overstress. This is acknowledged by the contractor in the May 1973 claim submission from which the following is quoted:

[T]he startup of invert concreting was characterized by several equipment design problems from the inlet portal to Sta. 752 and by removal of invert tights caused by excavating too high from Sta 752 to Sta 768. There was no appreciable stress induced invert encroachment in this reach.

(AF 77, "In Situ Rock Stress Cost Evaluation," p. 2).

At the hearing, Dr. Heuer testified as to a graph on Drawing Nos. R2093 and R2094 labelled "Invert Elevations Relative to Line A." In connection therewith, he noted that a horizontal line is designated as the "A" line, that a solid line is labelled "Brewer Survey" and a series of small circles connected by dashed lines is labelled "Owner Survey." Concerning this last item, Dr. Heuer stated:

[T]his is the survey of the invert elevation performed to my understanding by the Bureau of Reclamation Survey people. Copies of that data were given to me by the contractor. Just above the line, above this graph is shown at what time the owner made the survey of different reaches of the tunnel.

(Tr. 469).

The graph shows that the Bureau made some nine different surveys commencing in October of 1971 and concluding in August of 1972, while the Brewer survey occurred in September of 1972. In some instances results of the two surveys are shown to be identical or to correspond quite closely. In the many instances where the two surveys differ, the Brewer survey shows the invert to be higher and in a substantial number of cases materially higher than the BOR survey. The drawings also show the number of inches the invert was high above the caption "Areas of High Invert Requiring Removal of Tights Before Invert Concrete Placement."

While the graph unquestionably shows the Brewer survey as indicating that the invert was high and within the "A" line throughout most of the 10,800-foot tunnel length from Station 747+00 to Station 855+00, the Board is unable to conclude that the graphs also indicate this to be true with respect to the BOR surveys. Based upon our review of the graph in question, the Board finds the BOR surveys to have indicated high invert for approximately 5,000 feet of Tunnel No. 3 consisting of the reaches between Stations 847+00 and 833+00; between Stations 822+00 and 807+00; between Stations 789+00 and 784+00; and between Stations 768+00 and 752+00. Some 1,600 feet of the high invert so shown (Stations 768+00 to 752+00), however, represents in-

vert the contractor has admitted was excavated high, while another 2,104 feet of the high invert reflected in the BOR surveys was paid for under Order For Changes No. 1. There still remains 1,296 feet of high invert indicated by the BOR surveys as shown on the graphs in Drawing Nos. R2093 and R2094 (AF 77A) for which no payment has been made and as to which the contractor has made no admission of fault.

The Government did not cross-examine Dr. Heuer as to the testimony he gave in this area. No Government witness undertook to controvert or even to address what is shown by the graphs on Drawing Nos. R2093 and R2094 with respect to what the BOR surveys had found to be high invert. The BOR surveys portrayed on the graphs were made by Bureau personnel over the period indicated. Report No. 1856 and the accompanying drawings with the graphs showing high invert (AF 77A) were in the possession of the Government some 3 years prior to the hearing. The accuracy of what was shown on those graphs respecting the BOR surveys in question could have been and presumably were checked against the surveys in the possession of the Government by personnel qualified to do so. Absent any testimony controverting what is portrayed on the drawings as the result of the various BOR sur-

veys³⁹⁶ or other countervailing evidence in the record, the Board finds and determines that there is 1,296 feet of high invert shown on the graphs on these drawings which resulted from inward movement of the rock due to oversteering (*i.e.*, were caused by the differing site condition) in the identified reaches of Tunnel No. 3 for which the contractor has not been previously compensated.

3. *Place Arch Concrete*

In the May 1973 claim submission the contractor states: "Delays encountered during arch concreting of Tunnel 3 were caused by removal of stress induced encroachment of the tunnel ribs and arch, by placing of additional concrete in fallout voids caused by the high in situ rock stress, and by replacing heaved invert concrete" (AF 77, "In Situ Rock Stress Cost Evaluation," pp. 3-4). The same view is expressed by Dr. Heuer in report No. 1856 in which he states:

Additional difficulties resulted from maintenance of the tunnel excavation in the problem zones, and from the need to remine "tights" prior to placement of both invert and arch concrete in areas where the rock surrounding the tunnel moved inward and encroached upon the "A" line at some time after excavation.

³⁹⁶ No comparable weight has been given to what is shown on the drawings with respect to the Brewer survey or the Spider survey since in regard to such surveys (i) the drawings are considered to be simply summaries of documents not in evidence; (ii) the testimony of Dr. Heuer with respect to them was of a very general nature; and (iii) there was no Government involvement.

(AF 77A, p. 60).

In support of the "Place Arch Concrete" claim, the appellant relies principally upon the testimony of Mr. Green. According to Mr. Green the failures observed by him in Tunnel No. 3 that delayed arch concreting consisted of the following: (1) The additional concrete that had to be used behind the forms due to overbreak outside the bored diameter of the tunnel; (2) fallout that occurred ahead of concrete placement which was quite severe and which required cleaning before the forms could be set; (3) fallout that continued after the forms were set which had to be cleaned out before the concrete could be pumped behind the arch forms; and (4) damage to utility lines ahead of the arch concrete placement which had been caused by fallout and which had to be repaired before the contractor could proceed with the arch concrete placement (Tr. 352-53).

Mr. Green also testified with respect to a number of photographs offered in support of the arch concrete claim. According to Mr. Green one of the photographs (AX 16A) showed a typical placement of the arch forms. Two of the photographs (AX 16B and 16H) show damage to utility lines ahead of the arch concrete placement. Four photographs (AX 16D, E, F, and G) show tight spots present in Tunnel No. 3 as evidenced by the red letters on the ribs showing the amount of ad-

ditional excavation in inches that had to be made prior to arch concrete placement in order to get the required thickness of concrete behind the arch forms. One of the photographs (AX 16F) was identified by Mr. Green as having been taken on Mar. 17, 1973, at Station 781+75. Based upon the course normally followed in assembling the contractor's job progress photo album, Mr. Green considered that all of the photographs of AX 16 except AX 16A (showing the arch forms) were taken on the same date and in the same general area. Also identified by Mr. Green was a picture of a tight removal car (AX 17) and a picture of a high car used by the engineers to check and mark tight spots (AX 18) (Tr. 354-63). It was Mr. Green's testimony that the arch of Tunnel No. 3 was essentially remained throughout the area where Order for Changes No. 1 applied (n.63, *supra*). Describing what was entailed in such work, Mr. Green stated:

[I]t was quite dangerous to remove these rock bolts, and to relieve the bearing under the bearing plate, we removed the rock bolts, remove the tight spots, and then install another rock bolt, was quite time consuming, and quite dangerous for a miner under an area he was relieving the support he had there.

(Tr. 364-65). Mr. Green was unable to recall how much additional concrete had to be placed within the forms because of the rock failures and disintegration that he had observed in the tunnel (n.203, *supra*).

The large drawings which accompanied the May 1973 claim submission (AF 77A) lend no support for the "Place Arch Concrete" claim since the drawings are based upon Dr. Heuer's observations in the tunnels on Feb. 2 or 3, 1973 (n.249, *supra*). At that time and for more than 5 weeks thereafter, the contractor was still involved with the Arch Concrete Start Up Phase of the work (AX 10, "Navajo 3 and 3A Progress Tabulation," p.2). The geologic drawings made by the Bureau's project geologist do contain information which can be used, however, as at least a basis for an estimate. At the outset we note that the 900 feet of Tunnel No. 3 that Government counsel acknowledges involved "Fallout Associated With Freshly Fractured Rock" pertained to the roof of the tunnel (n.155) and that another 450 feet of Tunnel No. 3 not involved in the Government's concession also related to fallout in the roof (n.158, *supra*). Other fallout in the roof not reflected in either of these calculations are shown in geologic drawings for specific stretches of Tunnel No. 3.

In the Government's posthearing brief counsel raises a question as to how the claim reach for concrete can extend into the reference reach for excavation and vice versa (GPB 94). Since we have not accepted the claim reach/reference reach approach as a proper basis for an equitable adjustment, no useful purpose would be served by addressing this question. It is not correct to say, however, as the Government does at the same place, that

there has been no testimony concerning what the differing site condition consisted of as it related to concrete other than difficulties encountered in chipping tightts in both the invert and the arch. As we have noted Mr. Green testified not only with respect to tightts in Tunnel No. 3 but also in regard to placing additional concrete in the forms because of rock failures and disintegration that he had observed, although he was unable to say how much concrete had been so placed. He also testified as to damage to utility lines ahead of the arch concrete placement which had been caused by the fallout.

As has been noted above, it also appears that the Government has overlooked the fact that the appellant's claim for arch concrete clearly includes a claim for "placing of additional concrete in fallout voids caused by the high in situ rock stress." The geologic drawings made by the Bureau's project geologist provides some evidence of the extent of fallout for which additional concrete was unquestionably required to fill the voids resulting from the fallout.

Based upon Mr. Green's uncontradicted testimony the Board finds that the arch of Tunnel No. 3 was essentially remined throughout the area where Order For Changes No. 1 applied (n.63, *supra*), and that the stretch of the Tunnel No. 3 involved in such remining totaled 2,304 feet. Also for consideration is the 900 feet of fallout the Government has acknowledged was associated with fresh fractures (n.155,

supra), and an additional 450 feet of fallout related to fresh fractures shown on the geologic drawings made by the project geologist (n. 158, *supra*). Based on these figures, the Board finds and determines that 3,654 feet of Tunnel No. 3 involved rock fallout attributable to over-stressing (shear type rock failures), necessitating the incurrence of substantial additional costs in preparing the tunnel for (or in proceeding with) the placement of the arch concrete.

Accounting Records

One of the problems confronting the appellant at the time of the hearing was the fact that Mr. Mike Eldridge (the accountant in charge of project accounting for Tunnel Nos. 3 and 3A during contract performance) was out of the country and consequently not available to testify (n.205, *supra*, and accompanying text). In an attempt to overcome this difficulty, testimony was elicited from Mr. Thomas W. Green (an engineer who had collaborated with Mr. Eldridge on some aspects of the accounting data as well as preparing the backup for the amounts claimed in limited areas) and from Mr. Thomas Case Stone, the accountant in charge of project accounting at the time of the hearing who had reviewed the work papers prepared by Messrs. Eldridge and Green and made various calculations based thereon such as undertaking to determine the costs incurred in the reference reaches

for the three basic operations (n. 217, *supra*, and accompanying text).

This make-shift arrangement proved to be unsatisfactory in a number of ways. For example, the testimony given by Mr. Green was interpreted by Mr. Stone to mean that nothing had been included in the claim as operating expenses for equipment used on the second and third shifts (n.210, *supra*). When he took the stand initially Mr. Stone testified that to come up with the claim reach equipment cost they had had to add the company's second and third shift operating expenses for that item (Tr. 796). This and other changes made by Mr. Stone in AX 10 were reflected in AX 77, an exhibit described by him as a digest of the work papers included in AX 10. Later, however, Mr. Stone testified that the conclusions he had drawn from Mr. Green's testimony were in error and the amounts claimed for equipment operating expenses in the work papers as prepared by Mr. Eldridge had included allowances for the second and third shifts. At the same time he noted that the amount claimed for equipment ownership had been understated by the amount of the third shift and that giving effect to these changes would necessitate revising AX 77 (Tr. 970-73). The necessary changes subsequently made in AX 10 are shown separately in AX 85. A digest of the working papers included in AX 10 as revised is included in the record as AX 84 (Tr 1068-73). Exhibit AX 84 was sub-

sequently revised further as evidenced by a corrected AX 84 (n.l. *supra*).

At the time of the hearing Mr. Stone had been employed by the contractor for less than 17 months. He had had no connection with the project during contract performance. Upon cross-examination Mr. Stone was unable to say whether the equipment costs for the claim had been computed in accordance with the provisions of Paragraph 17 of the contract pertaining to idle time or whether the equipment referred to on page G 3.2 of AX 85 was operating (Tr. 1084-85); nor could Mr. Stone say whether the costs of correcting tightness in the tunnel had been segregated on the basis of whether it involved corrective work for which the contractor was responsible (Tr. 1090-94).

The Government asserts that the figures shown in AX 10 were made up after the fact and bear no relation to a differing site condition. Cited in support of these statements is Mr. Stone's testimony that he had not even attempted to tie the costs data in AX 10 to the contractor's ledgers (GPB 91). According to appellant's counsel, however, the appellant did keep detailed cost ledgers from which the actual costs in the claim reaches and in the reference reaches were extracted and placed in AX 10 and AX 11 (ARB 24). Mr. Green's testimony at Tr. 211-12, 215, and 218 is cited as supporting evidence.

The evidence of record indicates that most of the costs included in the claim were extracted from appel-

lant's books. This was not true, of course, with respect to the amount claimed for equipment operating expenses or equipment ownership costs. In accordance with the provisions of Paragraph 17 of the contract, such costs were computed on the basis of applying AGC rates (Tr. 821-23, 1084-85).

The question of whether and, if so, to what extent the costs incurred by the appellant can be attributed to the differing site conditions is one of the principal questions in this case. While the costs claimed by the appellant have been frequently revised, there is no evidence in this record indicating that the costs shown in AX 10 were made up after the fact. There is nothing in the testimony of Mr. Gaylor Hay (the Government's principal witness with respect to quantum) to indicate that the costs claimed by the contractor were not supported by the cost records made available to him. Listed in Mr. Hay's travel report (GX VVV) as among the principal facts emerging from a study of the contractor's records was the fact that the contractor's costs of performing the original contract work would exceed the estimated costs by more than \$3,600,000 (nn. 367 and 369, *supra*, and accompanying text).

Mr. Stone's testimony that he had made no attempt to tie the claimed costs to the contractor's records is consistent with his testimony in other areas. As Mr. Stone viewed his assignment, it was to determine costs for the reference reaches on the same basis as had been employed by Messrs. Eldridge and Green in

January 15, 1981

determining the costs in the claim reaches (n.215, *supra*). In preparing the costs for a reference reach Mr. Stone or one of his assistants simply took the ledger balance for a particular item as recorded in the work papers (AX 10) and prorated the amount to the period covered by performance in that reference reach (Tr. 792-94).

In the letter to the BOR dated Feb. 27, 1974, the contractor asserted that it had contemplated completing the work within 700 calendar days (n.143, *supra*). The amount claimed for Roman Numeral VIII of \$826,361 is based upon completing the contract by Oct. 9, 1972 (AX 10, Work Paper O; text accompanying n.223, *supra*). This date fails to give any recognition to the contractor's responsibility for its protracted delay in providing a shield over the mole or obtaining the necessary equipment for applying protective coatings of shotcrete or coping with the problems caused by soft invert discussed above; nor does it take into account the numerous instances where the contractor was delayed because of routine maintenance, needed repairs, strikes, or other labor problems (AX 87).

Additional Factors for Consideration

Contrasting the appellant's position with what is characterized as the Government's ambivalence, counsel states: "Appellant has consistently maintained both the existence of the rapid, shear fractures through intact rock and the position

that these were changed conditions (E.g., Appeal File Exhibits 19 and 77; Exhibits 5 and 20)" (ARB 22).

This assessment by appellant's counsel attributes a basic consistency to appellant's actions which the record shows can only properly be attributed to Dr. Heuer. As to the exhibits cited, we note that the initial claim letter of July 29, 1971 (AF 19), says nothing at all about "the existence of the rapid, shear fractures through intact rock." The Board has previously noted that Dr. Heuer's analysis of the nature of the difficulties encountered in Tunnel No. 3 is basically the same in his handwritten report of July 17, 1971 (AX 20), his report of May 1973 (AF 77A) and his testimony at the hearing. We note, however, that insofar as the record discloses, the Government does not appear to have been apprised of either the handwritten report of July 17, 1971 (AX 20), or of Dr. Heuer's report of Sept. 17, 1971 (AX 5), until they were introduced as appellant's exhibits at the hearing.

Within appellant's organization there appears to have been a pronounced reluctance to accept. Dr. Heuer's analysis as a sound basis for the claims asserted. Although the claim for rock failures in Tunnel Nos. 3 and 3A attributed to the relief of in-situ stresses was presented by the contractor's letter of Jan. 31, 1973 (n.64, *supra*, and accompanying text), the contractor continued to articulate an entirely different basis for the DH 116 claim

long after the filing of the claim for in-situ rock stress failures (nn.55-61, *supra*, and accompanying text). In fact, it was not until at the May 1976 hearing that the DH 116 claim was finally abandoned (n.223, *supra*).

The home office of the appellant at San Mateo, California, appears to have evidenced even less regard for the determinations purportedly made by Mr. Sperry respecting reference reaches and claim reaches. Months after the May 1973 claim submission (AF 77) showing claim reaches and reference reaches, the corporate officials concerned at San Mateo were using the future tense in referring to the establishment of reference reaches for the three basic operations involved in tunneling (nn.132-37, *supra*, and accompanying text).

Many of the problems encountered in Tunnel No. 3 can be traced to the procrastination of Mr. Sperry with respect to the installation of a partial shield over the mole and the delay in ordering the equipment required for applying protective coatings of shotcrete to the exposed surfaces of rock to prevent surficial deterioration, particularly from water. In this connection we note that the Navajo Indian Irrigation Project for Tunnel Nos. 3 and 3A was the first project on which Mr. Sperry was the project manager and that prior to September of 1970, he had had experience in only one bored tunnel (AX 88).

As has been previously noted, in a letter dated Dec. 7, 1970, Mr.

Sperry had proposed the use of a shield about 7 feet long over the mole which was not installed, however, until Oct. 5, 1971. Also noted was the fact that although the bid submitted in September of 1970 included some money for a protective coating of shotcrete, it was not until the major fallout in mid-July of 1971, that the shotcrete equipment was even ordered. It is clear that the protracted delays by Mr. Sperry in proceeding with the execution of the contractor's own plans materially increased the cost of contract performance and that the increases in costs so caused can not be attributed to the differing site conditions encountered.

One of the principal points made by the Government with respect to quantum is the lack of reference to stationing which has characterized appellant's claim presentation (GPB 81-88). While the case as stated by the Government is somewhat overdrawn (Dr. Heuer and Messrs. Sperry and Green all related their testimony—at least to some extent—to stationing), it is nonetheless true that the appellant's presentation leaves much to be desired from the standpoint of showing the precise stretches of the tunnels forming the basis of the claims which were affected by the differing site conditions. For example, the portion of Mr. Sperry's diary in evidence (GX H) is not of material assistance to the appellant in this regard.

It is true, however, that numerous photographs showing rock failures

of the type upon which the differing site conditions claims are predicated—identified by station—are (i) included in the record (*e.g.*, AX 4, AX 5, and AF 77A) or (ii) were introduced at the hearing (nn. 245&46, *supra*, and accompanying text). In addition, the want of stationing in the reports or in the testimony is supplied in part by the geologic drawings made by the project geologist during the course of contract performance (nn. 155, 158&59, *supra*, and accompanying text). Also for consideration in this regard is the failure of the Government witnesses (notably the project construction engineer) to controvert what is shown on the BOR surveys as depicted on Drawing Nos. R2093 and R2094 (AF 77A).

Another factor we have taken into account in undertaking to assess the disparate positions of the parties has been the apparent reluctance of Bureau personnel above the project level to fully investigate the contractor's claim of differing site conditions with a view to determining the facts present in the case upon which an informed judgment respecting the merits of the claims could be made. Inexplicable to the Board is why Mr. Logan would have shown no interest in ascertaining whether the project geologic personnel had confirmed as correct some of his findings and particularly his findings No. 6 (“(6) geologic conditions encountered in the tunnel to date do not differ from that portrayed by the specifications

document”), when, according to his testimony, that is what he had commissioned the project geologic personnel to do (nn.334-38, *supra*, and accompanying text).

Even less responsible is the fact that in a decision rendered on Dec. 31, 1974, the contracting officer should say that the Government had been unable to verify reports by contractor personnel of failure through intact rock (AF 10, p. 12), since it is presumed that at the time the decision was being prepared the contracting officer had access to the geologic drawings (AX 87) which clearly show the contractor to have encountered fallout associated with freshly fractured rock (nn.155&158, *supra*, and accompanying text), as has been conceded by the Government with respect to at least 900 feet of Tunnel No. 3 (GPB 85-86). Long before the project geologist had completed the drawings, however, a Bureau of Mines geologist had expressed the opinion in writing that roof support in Tunnel No. 3 would have to be effective within minutes after the tunnel roof was exposed behind the cutter head (n. 24, *supra*, and accompanying text). Almost 3 years before the contracting officer had been advised by the project construction engineer of fallout in Tunnel No. 3 occurring “immediately after excavation removed the underlying rock support” (text accompanying n.311, *supra*).

For the contracting officer to say in the face of such evidence that the Government had been unable to

verify reports by contractor personnel of "failures through intact rock" is highly indicative of a mind set against addressing seriously the question of whether the conditions encountered in Tunnel Nos. 3 and 3A differed "materially from those indicated in this contract" or whether they constituted "unknown physical conditions at the site, of an unusual nature, differing materially from those ordinarily encountered and generally recognized as inhering in work of the character provided for in this contract" (General Provision No. 4).

The Government asserts that the contractor bid in anticipation of making a tremendous profit on rockbolts (GPB 80). In support of this statement the Government refers to a graph appearing on the contractor's bid estimate (GX I). Assuming, *arguendo*, that the graph can properly be interpreted in the manner suggested by the Government, we note that the contractor's expectations would have to be realized in circumstances where in Bidding Schedule Nos. 2 and 2A of the Invitation For Bids the Bureau had prescribed both the quantity of rockbolts to be used and the price to be paid therefor (AF 1; Tr. 183-84). Irrespective of the contractor's expectations, however, it appears to be clear that the differing site conditions claim has been presented as a cost claim and that in such circumstances only the costs actually paid for rock bolts would be included in the base upon which the 10 percent profit sought is predicated (ARB 20-21).

In the posthearing brief Government counsel says: "[W]e think Mr. Stone's testimony speaks for itself as totally inadequate to explain the figures in Exhibit A-10 and how they were arrived at. We do know, however, they were made up after the fact and bear no relation to a differing site condition" (GPB 91).

From this somewhat enigmatic statement, it is not clear whether it is intended to imply that the costs actually incurred in performing the contract were allocated to claim reaches and reference reaches in an arbitrary fashion after the fact or if a question is being raised as to whether the figures on which the claim is based are themselves inflated. If the former meaning is the correct interpretation of the quoted statement, then the Board's findings that the claim reach/reference reach approach is not a proper basis for determining the amount of the equitable adjustment makes the question presented moot. If it is intended to present the latter question for our consideration, however, we can only say that the evidence of record including the testimony given by the Government's witness, Gaylor Hay, tends to support the appellant's position that the excess costs incurred in performing the contract were somewhat greater than the amount of the claim asserted.

[9] The Board takes this occasion to note, however, that it seriously questions the wisdom of the Government not arranging for the audit of multi-million dollar claims

January 15, 1981

apparently advanced in good faith by reputable contractors (n.3, *supra*), rather than proceeding on the supposition (as appears to be the case here) that it will be successful in resisting the claim on the merits. Securing audits will not only facilitate the examination of witnesses with respect to quantum but are likely to prove useful in establishing a basis for agreeing upon stipulations narrowing the issues in quantum areas or affording a basis for arriving at a settlement prior to the hearing, while it is in progress or after it has been concluded. Assuming a Government auditor familiar with the costs principles applicable to Government contracts had audited the costs in this case, it is likely the report would disclose how much was included for (i) business entertainment expenses and (ii) company-type advertising (n. 225, *supra*) and with respect to equipment costs whether costs involving idle time had been prepared in accordance with Paragraph 17 of the contract and whether particular equipment was operating (text accompanying n.232, *supra*).

B. Decision

The reference reach/claim reach approach having been found to be unacceptable as a measure for determining the amount of the equitable adjustment due the contractor in this case, we turn to consideration of other possible bases for arriving at an equitable adjustment. According to appellant's counsel, AX 84 contains a summary of the costs in-

curred by the appellant in the reference and claim reaches (AOB 56). The claim may therefore be treated as having been presented on a modified total cost basis.

Respecting claims presented on a total cost basis, the Court of Claims has stated: "This method of proving damage is by no means satisfactory, because, among other things, it assumes plaintiff's costs were reasonable and that plaintiff was not responsible for any increases in cost." *F. H. McGraw & Co. v. United States*, 131 Ct. Cl. 501, 511 (1955). Amplifying upon this appraisal in a later case, the Court of Claims stated: "The acceptability of the method hinges on proof that (1) the nature of the particular losses make it impossible or highly impracticable to determine them with a reasonable degree of accuracy; (2) the plaintiff's bid or estimate was realistic; (3) its actual costs were reasonable; and (4) it was not responsible for the added expenses." *WRB Corp. v. United States*, 183 Ct. Cl. 409, 426 (1968).

[10] We need not consider whether the first three conditions stated in *WRB* have been satisfied since it is clear that the last condition has not been met. Based upon the evidence of record discussed in Part III A of this opinion, the Board finds that the manner in which the appellant proceeded both before and after encountering the differing site conditions accounts for a very substantial part of the added costs for

which claim has been made. The total cost method is therefore not acceptable as a basis for the equitable adjustment in this case.

On a number of occasions the Board has been confronted with a question of determining the amount of an equitable adjustment where, as here, the total cost method has been found to be unacceptable, the contractor has failed to segregate costs and the Government has been found to be liable for at least some part of the costs incurred.

In all of such cases the Board has determined the amount of the equitable adjustments by resorting to what has been described as the jury verdict approach. Cases in this category over a 15-year span include the following: *Lincoln Construction Co.*, IBCA-438-5-64 (Nov. 26, 1965), 72 I.D. 492, 502-04, 65-2 BCA par. 5,234 at 24,587-88, *aff'd on reconsideration*, 73 I.D. 49, 66-1 BCA par. 5,343; *Power City Construction & Equipment, Inc.*, IBCA-490-4-65 (July 17, 1968), 75 I.D. 185, 200-06, 68-2 BCA par. 7,126 at 33,022-26; *Ray D. Bolander Co., Inc.*, IBCA-331 (Mar. 30, 1970), 77 I.D. 31, 39-40, 70-1 BCA par. 8,200 at 38,133-34; *JB&C Co.*, IBCA-1020-2-74 and IBCA-1033-4-74 (Sept. 28, 1977), 84 I.D. 495, 582, 77-2 BCA par. 12,782 at 62,154-55; and *A&J Construction Co., Inc.*, IBCA-1142-2-77 (Dec. 28, 1978), 85 I.D. 468, 480-92, 79-1 BCA par. 13,621 at 66,788-94.

Appellant's claim for an equitable adjustment for the differing site conditions said to have been encountered in Tunnel Nos. 3 and

3A has been submitted in the amount of \$3,849,560 (n.1, *supra*). We have found, however, that no differing site conditions were encountered in Tunnel No. 3A. Consequently, before undertaking to determine the equitable adjustment to which the appellant is entitled by reason of the differing site condition encountered in Tunnel No. 3, we must first determine the amount by which the consolidated claim (corrected AX 84) should be reduced by reason of our denial of the claim asserted for excavation and for placing arch concrete in Tunnel No. 3A. We have previously noted that simply adding the figures in corrected AX 84 would result in a claim of \$4,004,341 rather than the amount of the claim as asserted of \$3,849,560 (n.1, *supra*). An examination of the exhibit discloses that the amount claimed for "profit" on the base items (corrected AX 84, Roman numerals IV through X) is understated by \$2,206 (10 percent of \$3,373,652 is \$337,365 and not \$335,159), while the amount claimed for "Bond Premium on Increased Contract Amount" is overstated by \$132,626 (\$3,711,017 x .004 is \$14,844 as contrasted with the \$147,470 shown on corrected AX 84), resulting in a net understatement in the claim according to these computations of \$24,361 (\$4,004,341 less \$130,420 (\$132,626 - \$2,206) is \$3,873,921 as compared to the claim asserted of \$3,849,560).

According to our calculations the claim properly computed—

January 15, 1981

after apportioning costs between the three basic operations ("Tunnel Excavation," "Place Invert Concrete," and "Place Arch Con-

crete,") and allocating the direct and indirect expenses, as well as profit between the two tunnels—as follows:

Claim for	Consolidated Claim	Tunnel No. 3	Tunnel No. 3A
Tunnel Excavation.....	\$2, 371, 840	\$2, 064, 488	\$307, 352
Place Invert Concrete.....	294, 095	294, 095	
Place Arch Concrete.....	1, 208, 958	918, 448	290, 510
	\$3, 874, 893	\$3, 277, 031	\$597, 862

From the consolidated claim of \$3,874,893, there must be deducted the amount of \$597,862 allocated to the disallowed claims pertaining to Tunnel No. 3A ("Tunnel Excavation"—\$307,352; "Place Arch Concrete"—\$290,510) leaving a balance claimed for Tunnel No. 3 of \$3,277,031 comprised of the amounts allocated to "Tunnel Excavation" (\$2,064,488), "Place Invert Concrete" (\$294,095), and "Place Arch Concrete" (\$918,448).

In determining the amount of the equitable adjustment for the differing site conditions encountered in Tunnel No. 3, the Board has considered the detailed findings it has made with respect to rock failures due to overstressing (shear type failures). Earlier in the opinion we have noted the generally unsatisfactory nature of the evidence respecting the frequency and scope of the rock failures attributed to the differing site conditions, particularly with respect to the "Place Invert Concrete" and "Place Arch Concrete" claims. As we have previously noted, the portion of Mr. Sperry's diary in evidence is not of material

assistance to the appellant in this regard.

Apparently in an effort to overcome the weakness stemming from the absence of sufficient stationing references showing the extent of the differing site conditions encountered, the appellant conceived of the novel approach of presenting the claim on the basis of designating some stretches of the tunnels as claim reaches and other stretches of the tunnels as reference reaches. To have any validity, it would have been necessary for the appellant to show that in long stretches of the tunnels, the materials encountered were largely homogeneous and isotropic in nature. This it has failed to do. For this doctrinaire approach to proof of differing site conditions to succeed, it would also have been necessary for the appellant to show that the person selecting the claim reaches and reference reaches was highly qualified in the field of rock mechanics and had had extensive experience in tunneling work and particularly in bored tunnels. While we have grounded our decision in this area on the fact that neither Mr.

Sperry nor anyone else testified to having selected the claim reach for "Tunnel Excavation" and no one testified to having selected either the claim or the reference reaches for the "Place Invert Concrete" and "Place Arch Concrete" claims, we take this occasion to note that there is nothing in the record to show that during the period in question Mr. Sperry had either the expertise or the experience to have qualified him to select reference reaches and claim reaches as a basis for establishing the equitable adjustment to which the contractor was entitled by reason of having encountered differing site conditions.

Nevertheless, the appellant did offer in evidence numerous photographs showing that it had encountered rock conditions in Tunnel No. 3 of the type on which its differing site conditions claim is based. With respect to such photographs and in other areas, Dr. Heuer gave extensive and detailed testimony in support of the differing site conditions claim. In regard to Dr. Heuer's testimony concerning the conditions actually encountered in Tunnel No. 3, the Government offered no countervailing evidence. The appellant was also materially assisted in the proof of its case, particularly in the area of quantum, by the geologic mappings made by the Bureau's project geologist (AX 87), and to some extent by the failure of the Government to controvert what the large contractor drawings pertaining to Tunnel No. 3 showed with respect to the various surveys the Bureau had made of the invert.

In addition, we have noted the inexplicable failure of Mr. Logan to proceed with a serious investigation of the differing site conditions claim and the apparent mind set of the contracting officer against addressing seriously the question of whether the contractor had encountered differing site conditions in the course of constructing the tunnels even to the extent of denying facts in his possession or with which he is charged with knowledge. While there are a number of difficult questions in this case, the material facts bearing upon the conditions encountered in Tunnel No. 3 are for the most part undisputed, as is evidenced by the Government's failure to controvert the factual evidence offered by the appellant in this area at the hearing.

The Board has previously noted, however, the contractor's failure to segregate cost and the problem presented in attempting to determine the extent to which the additional costs claimed to have resulted from the differing site conditions can properly be attributed to that cause and not to other causes. Here the problem is compounded by the marked tendency the contractor has shown to attribute to the differing site conditions all delays to contract performance irrespective of their origin and its failure to adhere to measures in the course of performing the contract either recognized as necessary or desirable in its bid estimate or when submitting its rock support program to the Bureau for approval.

January 15, 1981

In Part III A of this opinion, we have discussed at length various ways in which performance of the contract was seriously delayed and costs greatly increased by causes which cannot be attributed to the differing site conditions the contractor encountered in Tunnel No. 3. In summary, these causes of delay or increased costs include the following: (i) delays for which, insofar as increased costs are concerned, the contractor is responsible without regard to fault (*e.g.*, strikes and other forms of labor unrest (wildcat strikes)); maintenance and repair of equipment, as was the case with respect to most of the mole downtime; (ii) difficulties which should have been accepted as a normal cost of doing business where, as here, the contractor chose a prototype hard rock mole to bore tunnels in relatively weak ground (*e.g.*, rock failure attributable to the pressure from the grippers; delays incident to encountering soft invert); (iii) rock failures that should have been and were anticipated (*e.g.*, failures to bedding planes; failures due solely to action of water); (iv) impediments to contract performance resulting from protracted delays by the contractor in implementing its own plans (*e.g.*, failure to provide partial protective shield over mole for 10 months after the Bureau was notified that such action was contemplated; failure to secure equipment required for applying protective coatings of shotcrete to surfaces of Tunnel No. 3 until after major fallouts in the tunnel had occurred in mid-July of 1971, even though

the bid submitted in September of 1970 included an allowance for such protective coatings; and (v) difficulties which should have been anticipated in coping with rock failures in local areas of the tunnels where the existing patterns for the use of rockbolts would probably prove to be ineffective without regard to the problems related to the differing site conditions which could not have been anticipated.

On the basis of the record before us, it is not possible to determine with mathematical precision the extent to which the differing site conditions encountered in Tunnel No. 3 delayed contract performance or increased the costs thereof; nor can any such determination be made with respect to the various factors enumerated above which we find, however, did contribute very substantially to the delayed performance and increased costs involved in performing the contract. Based upon our review of the entire record, as well as our findings made with respect thereto and the inferences drawn therefrom, and weighing the evidence present in the case as best we can, the Board finds and determines that the equitable adjustment to which the contractor is entitled by reason of encountering differing site conditions in Tunnel No. 3 is in the amount of \$1,500,000.

Summary

1. The Board finds the appellant to have encountered differing site conditions in Tunnel No. 3 and further finds that by reason thereof the appellant is entitled to an equitable

adjustment of the contract price in the amount of \$1,500,000.

2. The Board finds that no differing site conditions were encountered in Tunnel No. 3A and consequently denies the claim asserted by the appellant in connection therewith calculated to be in the amount of \$597,862 ("Tunnel Excavation"—\$307,352; "Place Arch Concrete"—\$290,510).

3. The appeal is otherwise denied.

Administrative Judge

APPENDIX

Contract No. 14-06-D-7054

Specifications No. DC-6849

IBCA-1068-4-75

GENERAL PROVISIONS

(Construction Contract)

4. DIFFERING SITE CONDITIONS

(a) The Contractor shall promptly, and before such conditions are disturbed, notify the Contracting Officer in writing of: (1) Subsurface or latent physical conditions at the site differing materially from those indicated in this contract, or (2) unknown physical conditions at the site, of an unusual nature, differing materially from those ordinarily encountered and generally recognized as inhering in work of the character provided for in this contract. The Contracting Officer shall promptly investigate the conditions, and if he finds that such conditions do

materially so differ and cause an increase or decrease in the Contractor's cost of, or the time required for, performance of any part of the work under this contract, whether or not changed as a result of such conditions, an equitable adjustment shall be made and the contract modified in writing accordingly.

(b) No claim of the Contractor under this clause shall be allowed unless the Contractor has given the notice required in (a) above; provided, however, the time prescribed therefor may be extended by the Government.

(c) No claim by the Contractor for an equitable adjustment hereunder shall be allowed if asserted after final payment under this contract.

TUNNEL CONSTRUCTION

50. CONSTRUCTION OF TUNNELS, GENERAL

Construction of tunnels as used in these specifications include the excavation by tunneling methods, supporting the tunnels, placing of concrete lining, and other related work for the tunnel sections between Stations 721+81.33 and 874+29.90 and between Stations 985+32.33 and 1018+44.67, including the closed transitions and reinforced portal sections at the inlet and outlet ends of the tunnels.

Construction of tunnels does not include open-cut excavation, backfill, or compacting backfill within the above stations.

The location of the tunnel portals may be moved, at the direction of the contracting officer, to accommodate the conditions encountered during excavation operations. If the tunnel portals are moved all stations or elevations of portal structures and limits of tunnel construction will be changed accordingly.

The tunnels shall be supported where conditions encountered are such as to require support. Approved types of support are shown on the drawings.

Where conditions in the tunnels are suitable for rockbolt supports the contracting officer will approve the use thereof. Rockbolts shall be furnished and installed in accordance with the provisions of Paragraph 58 and payment therefor will be made at fixed unit prices as prescribed therein. No payment will be made for rockbolts used in conjunction with supported sections described below in this paragraph.

Where the ground conditions in the tunnels are such that the use of supports is required, the contractor may at his option use either shotcrete support or structural-steel supports or an approved combination thereof, or steel reinforcement sheets and shotcrete support. Regardless of whether shotcrete support or structural-steel supports or an approved combination thereof, or steel reinforcement sheets and shotcrete support is used, payment will be made for supporting the tunnels on the linear-foot basis for the actual lengths of the tunnels supported as approved by the contracting officer. Reaches of the tunnels with approved structural-steel supports placed at 6-foot centers or less will be considered for payment purposes as supported reaches of the tunnels. Payment for furnishing and installing tunnel support system will be made at the unit prices per linear foot bid therefor in the schedules which prices shall include the costs of furnishing all materials and placing shotcrete for tunnel support, the costs of furnishing all materials and placing structural-steel supports, or the costs of a combination shotcrete and structural-steel supports, or the cost of placing steel reinforcement sheets and shotcrete support.

Where shotcrete or steel reinforcement sheets are used for tunnel support, measurement, for payment, of furnishing and installing tunnel support system will be made for the actual length of tunnel supported with shotcrete or steel reinforcement sheets. Where structural-steel supports are used, measurement, for pay-

ment, of furnishing and installing tunnel support system in each reach of supported tunnel will be the distance between end supports plus 4 feet.

Shotcrete support shall be in accordance with Paragraph 55. Structural-steel tunnel supports shall be in accordance with Paragraph 56. Steel reinforcement sheets shall be in accordance with Paragraph 56A.

Nothing contained in these specifications shall prevent the contractor, at his own expense, from erecting such amounts of temporary supports as he may consider necessary, or from using more rock support bolts, more or heavier structural-steel supports, or greater thicknesses of shotcrete for support than the minimum required structural-steel sections of minimum thickness of shotcrete support. Nothing in these specifications shall be construed to relieve the contractor from sole responsibility for the safety of the tunnels or from liability for injuries to or deaths of persons or damage to property.

Under Schedule Nos. 1 and 1A the tunnels are to be excavated by drilling and blasting methods and constructed to the requirements of the horseshoe sections as shown on Drawing Nos. 12 (809-D-194) and 13 (809-D-227).

Under Schedule Nos. 2 and 2A the tunnels are to be constructed to the requirements of the machine-bored tunnel sections as shown on Drawing No. 11 (809-D-330).

Waterstops at each end of the tunnels shall be furnished and placed in accordance with Subparagraph 97b. and payment therefor will be made under either Schedule Nos. 1 or 2 and either Schedule Nos. 1A or 2A.

The piezometer installation in Tunnel No. 3 shall be installed in accordance with the drawings and Paragraph 65 and payment therefor will be made under Schedule No. 3 as therein provided.

Government testing indicates that many of the sandstones, shales and siltstones to be excavated will deteriorate

or disintegrate rapidly when exposed to air or water or when stress relieved or a combination of the three. The contractor shall be responsible for providing a clean, undisturbed surface for placement of the lining. He may accomplish this by applying protective coatings under Paragraph 54, installing subinvert tunnel protection in accordance with Paragraph 60, by dewatering in accordance with Paragraph 51, or by removing any deteriorated or disintegrated material back to clean, undisturbed surfaces in accordance with Paragraph 59. If protective coatings or subinvert concrete is not installed, removal of substantial amounts of deteriorated or disintegrated materials is expected.

No direct payment will be made for protective coatings placed in the tunnels, and the costs thereof shall be included in the unit prices bid in the schedules for other items of work. If the contractor elects not to apply protective coatings or subinvert concrete on these surfaces the following provisions shall apply:

a. Immediately before placing concrete in the tunnel lining all loose disintegrated rock shall be removed to clean, undisturbed surfaces at no additional cost to the Government.

b. No payment will be made for any volumes of tunnel excavation or concrete lining greater than those shown in the tabulations on Drawings No. 12 (809-D-194) and No. 11 (809-D-330) regardless of whether or not the removal of loose and disintegrated material is outside the "B" lines.

Where protective coating of the excavated surfaces is to be applied the contractor may use the material specified for "shotcrete for tunnel supports" in lieu of the material specified for "shotcrete for protective coatings": Provided, That no direct payment will be made therefor and the costs thereof shall be included in the unit prices bid in the schedule for other items of work as prescribed in Subparagraph 54e.

SELECTION OF THE PROPER LEGAL INSTRUMENT (CONTRACT, GRANT OR COOPERATIVE AGREEMENT) UNDER FEDERAL GRANT AND COOPERATIVE AGREEMENT ACT OF 1977 (P.L. 95-224) TO BE USED IN FUNDING CONSTRUCTION OF RECREATION FACILITIES AUTHORIZED UNDER THE FEDERAL WATER PROJECT RECREATION ACT OF 1965 (P.L. 89-72)

M-36931

January 19, 1981

Federal Grant and Cooperative Agreement Act of 1977: Use of a Contract

Under sec. 4 of the Federal Grant and Cooperative Agreement Act, 41 U.S.C. 501 (1976), a contract would not be used to transfer funds from a bureau to a state for the purpose of constructing recreational facilities on Government owned land when the transaction is accompanied by a long term lease of the land to the State because the principal purpose of the relationship is for the benefit of the state and not "for the direct benefit or use of the Federal Government."

Federal Grant and Cooperative Agreement Act of 1977: Selection of instrument

Secs. 5 and 6 of the Federal Grant and Cooperative Agreement Act require an agency to use a grant or cooperative agreement and not a contract whenever, as in the instant matter, the principal purpose of the relationship between the agency and the state is the transfer of money, property or services or anything of value to a state or local government or other recipient to accomplish a public purpose of support or stimulation authorized by a Federal statute, rather than acquisition by purchase, lease, or barter, of property or services for direct benefit or use of the Federal Government.

or disintegrate rapidly when exposed to air or water or when stress relieved or a combination of the three. The contractor shall be responsible for providing a clean, undisturbed surface for placement of the lining. He may accomplish this by applying protective coatings under Paragraph 54, installing subinvert tunnel protection in accordance with Paragraph 60, by dewatering in accordance with Paragraph 51, or by removing any deteriorated or disintegrated material back to clean, undisturbed surfaces in accordance with Paragraph 59. If protective coatings or subinvert concrete is not installed, removal of substantial amounts of deteriorated or disintegrated materials is expected.

No direct payment will be made for protective coatings placed in the tunnels, and the costs thereof shall be included in the unit prices bid in the schedules for other items of work. If the contractor elects not to apply protective coatings or subinvert concrete on these surfaces the following provisions shall apply:

a. Immediately before placing concrete in the tunnel lining all loose disintegrated rock shall be removed to clean, undisturbed surfaces at no additional cost to the Government.

b. No payment will be made for any volumes of tunnel excavation or concrete lining greater than those shown in the tabulations on Drawings No. 12 (809-D-194) and No. 11 (809-D-330) regardless of whether or not the removal of loose and disintegrated material is outside the "B" lines.

Where protective coating of the excavated surfaces is to be applied the contractor may use the material specified for "shotcrete for tunnel supports" in lieu of the material specified for "shotcrete for protective coatings": Provided, That no direct payment will be made therefor and the costs thereof shall be included in the unit prices bid in the schedule for other items of work as prescribed in Subparagraph 54e.

SELECTION OF THE PROPER LEGAL INSTRUMENT (CONTRACT, GRANT OR COOPERATIVE AGREEMENT) UNDER FEDERAL GRANT AND COOPERATIVE AGREEMENT ACT OF 1977 (P.L. 95-224) TO BE USED IN FUNDING CONSTRUCTION OF RECREATION FACILITIES AUTHORIZED UNDER THE FEDERAL WATER PROJECT RECREATION ACT OF 1965 (P.L. 89-72)

FROM: Solicitor

SUBJECT: Selection of the Proper Legal Instrument (Contract, Grant or Cooperative Agreement) under Federal Grant and Cooperative Agreement Act of 1977 (P.L. 95-224) to be used in Funding Construction of Recreation Facilities authorized under the Federal Water Project Recreation Act of 1965 (P.L. 89-72)

SUMMARY

The Regional Solicitor, Rocky Mountain Region, has requested us to issue an opinion to clarify some of the questions that have been raised regarding the application of the Federal Grant and Cooperative Agreement Act of 1977¹ (herein-

after, "the Act") to funding construction under the Federal Water Project Recreation Act of July 9, 1965² (hereinafter P.L. 89-72). The Act states that it is "An Act to distinguish Federal grant and cooperative agreement relationships from Federal procurement relationships, and for other purposes." The Senate Report³ which is a part of the legislative history of the Act states that "the Federal Grant and Cooperative Agreement Act of 1976 is an initial step to eliminate ineffectiveness and waste resulting from confusion over the definition and understanding of legal instruments used to carry out transactions and reflect basic relationships between the Federal Government and non-Federal entities."

The purpose of this opinion is to provide guidance to the Water and Power Resources Service in assisting it to make the proper selection of the legal instrument to be used in funding construction under P.L. 89-72. It is also our desire to discuss and interpret the Federal Grant and Cooperative Agreement Act of 1977 in a general manner so that the other bureaus and offices will have some guidance in making the proper policy determinations for selection of

² P.L. 89-72, 79 Stat. 213, 16 U.S.C. 4601-12, *et seq.*

³ Senate Report No. 95-449, p. 2, Sept. 22, 1977, 95th Cong., 1st Sess.

¹ P.L. 95-224, Feb. 3, 1978, 92 Stat. 3, 41 U.S.C. 501 *et seq.*

the appropriate legal instrument to carry out their programs.

To summarize what follows, it is my opinion that funding to the States for construction of recreational facilities at water projects is essentially an assistance type transaction with no substantial involvement between the executive agency acting for the Government and the States. Consequently, the use of a grant agreement would be appropriate in the instant matter.

II. Background

A. Federal Water Project Recreation Act of July 9, 1965: Generally—

P.L. 89-72 is the current authority under which the Water and Power Resource Service arranges for development and administration of outdoor recreation and fish and wildlife enhancement facilities. In order to encourage non-federal public bodies to administer, operate, maintain and replace such facilities, the Federal agency having administrative jurisdiction may bear 50% of the separable cost of a project allocated to recreation facilities and 75% of the separable cost of a project allocated to fish and wildlife enhancement facilities. Such facilities and appropriate project lands then may be leased to the non-federal public body which agrees to administer them.

B. Federal Grant and Cooperative Agreement Act of 1977: Generally—

Sec. 4 of the Act requires each federal agency to use a procurement

contract as the legal instrument for the relationship between the agency and a State whenever the *principal purpose* of the instrument is the acquisition, by purchase, lease, or barter, of property or services for the *direct benefit or use of the Federal Government*.

Secs. 5 and 6 of the Act require the agency to use a grant or cooperative agreement whenever the *principal purpose* of the relationship between the agency and a State is the transfer of money, property, or services or anything of value to the State to *accomplish a public purpose of support or stimulation authorized by a federal statute*, rather than acquisition by purchase, lease or barter, of property or services for direct benefit or use of the Federal Government.

The Act distinguishes between cooperative agreements and grants by requiring a determination of whether or not substantial involvement is anticipated between the executive agency and the State. If substantial involvement is anticipated, a cooperative agreement is to be used to accomplish the public purpose of support. If no substantial involvement is anticipated, then a grant agreement should be executed to accomplish the public purpose of support or stimulation authorized by the federal statute.⁴

The Act itself does *not* authorize any federal agency to execute or participate in any procurement,

⁴ For illustration of substantial involvement, see OMB interpretation of the Act contained at 43 FR 36863.

(CONTRACT, GRANT OR COOPERATIVE AGREEMENT) UNDER FEDERAL GRANT AND COOPERATIVE AGREEMENT ACT OF 1977 (P.L. 95-224) TO BE USED IN FUNDING CONSTRUCTION OF RECREATION FACILITIES AUTHORIZED UNDER THE FEDERAL WATER PROJECT RECREATION ACT OF 1965

(P.L. 89-72)

January 19, 1981

grant or cooperate agreement. That authority must be found in some other source. But sec. 7(a) of the Act does provide that ". . . each executive agency authorized by law to enter into contracts, grant or cooperative agreements, or similar arrangements is authorized and directed to enter into and use types of contracts, grant agreements, or cooperative agreements as required by this Act."

The determinations to enter into a procurement contract, cooperative agreement or grant are policy determinations to be made by the executive agency involved. Federal agencies have the flexibility to determine whether a particular transaction or class of transactions is procurement or assistance and, if assistance, whether it is of the nature suitable for a grant or a cooperative agreement. The agency's primary mission should influence its determination of whether the transaction is procurement or assistance, and the extent of its involvement. The classification of the transaction will become a public statement for public and Congressional review of how the agency views its missions, its responsibilities, and its relationship with the non-federal public body.

III. Interpretation of the Federal Grant and Cooperative Agreement Act of 1977 and Its Applica-

tion to the Federal Water Project Recreation Act of July 9, 1965.

The Water and Power Resources Service and individual States, or subordinate public bodies of States, from time to time contemplate construction of recreational and fish and wildlife enhancement facilities at federal water projects. The non-federal entities will provide a portion of the separable project costs (a minimum of 50% of recreational facilities and a minimum of 25% of fish and wildlife enhancement facilities), and all of the costs of operation, maintenance and replacement of those facilities after they are constructed. Those facilities and the project land on which they are constructed may be leased by the federal agency to a non-federal public body for the period during which they are administered by it.

With that type of arrangement, the principal purpose of the instrument is not the acquisition by purchase, lease, or barter of property or services for the *direct benefit or use of the Federal Government*. Consequently, a procurement contract would not be appropriate. The principal purpose of such a transaction is the allocation of value to the non-federal entity to accomplish a *public purpose of support* authorized by federal statute, rather than acquisition by purchase, lease or barter of property or services for the

direct benefit or use of the Federal Government. Because there is to be no substantial involvement of the federal agency in the administration of those facilities, a grant rather than a cooperative agreement would be the appropriate vehicle for accomplishing the public purpose of support.

The Office of Management and Budget has stated that:

Consistent with the purposes of Pub. L. 95-224, agencies are encouraged to maximize competition among all types of recipients in the award of grants or cooperative agreements, in consonance with program purposes.⁵

This policy would not affect those programs wherein Congress has authorized the agencies to enter into cooperative agreements or grants with states. Thus, competition would not be required in the instant matter.

Any additional inquires relative to this decision or related problems should be addressed to the Associate Solicitor, Division of General Law.

CLYDE MARTZ,
Solicitor.

BRYNER WOOD

52 IBLA 156

Decided *January 21, 1981*

Appeal from decision of the Utah State Office, Bureau of Land Management,

⁵ *Ibid.*

dismissing protest against consummation of State exchange. U-13925.

Affirmed as modified.

1. Federal Land Policy and Management Act of 1976: Exchanges—State Exchanges: Effect of Application

State exchange applications pending on Oct. 21, 1976, may be processed under sec. 8(c) of the Taylor Grazing Act, 43 U.S.C. § 315g(c) (1970), only if the state had complied with all the requirements necessary to vest rights to the exchange in the state; all other applications must be processed under sec. 206 of the Federal Land Policy and Management Act of 1976.

2. Federal Land Policy and Management Act of 1976: Exchanges—State Exchanges: Generally

A protest against approval of a state exchange application is properly dismissed where the exchange is shown to be in the public interest under sec. 206 of the Federal Land Policy and Management Act of 1976, and it is immaterial that the protestants may be permittees or licensees of the selected lands whose grazing privileges would have been lost upon completion of the exchange, in that neither a licensee nor a permittee has a vested right in the land covered by the license or permit and such land is available for selection by a state.

APPEARANCES: Bryner Wood, *pro se.*

OPINION BY
ADMINISTRATIVE JUDGE
BURSKI

INTERIOR BOARD OF
LAND APPEALS

Bryner Wood, hereinafter appellant, has appealed from a decision of the Utah State Office, Bureau of

Land Management (BLM), dismissing appellant's protest of a proposed state exchange.

On Feb. 11, 1971, the State of Utah filed application U-13925, under sec. 8 of the Taylor Grazing Act of June 28, 1934, 48 Stat. 1272 (1934), *as amended*, 43 U.S.C. § 315g (1970), 43 CFR Part 2210, to exchange certain lands described therein.¹

On Feb. 29, 1980, appellant, through his attorney, filed a protest against the approval of the exchange stating:

1. The Protestant is the owner of a Bureau of Land Management Grazing Permit granted by the Bureau of Land Management, which permit is of long standing, having previously been given to the Protestant's parents. The permit is currently active and in use and has been used actively for several years.

2. That the Protestant is dependent in part for his livelihood [*sic*] on the continued use of said grazing permit.

3. That the Protestant and his predecessors in interest have held and/or used said grazing permit for more than thirty years.

4. That it is unreasonable and unfair to terminate the Protestant's continued right to and use of said grazing permit.

By a decision dated Mar. 25, 1980, BLM dismissed appellant's protest on the grounds that field reports showed that the subject lands were primarily valuable for occupancy or agriculture, and also, that the loss

of the lands would not interfere with the administration or value of the remaining lands in the district for grazing purposes.

[1] Sec. 8(c) of the Taylor Grazing Act, *as amended*, 43 U.S.C. § 315g(c) (1970), provided that the Secretary of the Interior shall proceed with an exchange, once any state has applied for it, "at the earliest practicable date and * * * [shall] cooperate fully with the State to that end." It has been held that the terms of sec. 8(c) are mandatory and that the Secretary must allow a proper state's application if the state otherwise meets the requirements of that section. *Donald L. Williams*, A-29033 (Dec. 13, 1962); *C O Bar Livestock Co.*, A-28498 (Sept. 18, 1961); *L. P. Chastain*, A-27101 (Apr. 27, 1955); *Joseph William Krall*, A-27029 (Feb. 4, 1955); *Clyde H. Ault*, A-27125 (Jan. 26, 1955).

There were, however, certain requirements which a state was obligated to meet before its rights could be deemed to have vested. If, as here, the selected lands were in a grazing district, no exchange was authorized "unless the lands offered by the State in such exchange lie within such grazing district and the selected lands lie in a reasonably compact body which is so located as not to interfere with the administration or value of the remaining land in such district for grazing purposes." 43 U.S.C. § 315g(c) (1970). This, however, was not the

¹ All sec. 17, and W ½ sec. 20, T. 35 S., R. 17 W., Salt Lake meridian, Utah, containing 960 acres; in exchange for offered lands described as: S ½ SE ¼ sec. 9, S ½ SW ¼ sec. 10, W ½ W ½ sec. 15, all sec. 16, and E ½ NE ¼ sec. 21, T. 33 S., R. 18 W., Salt Lake meridian, Utah, containing 1,040 acres.

only requirement. The regulations, specifically 43 CFR Subpart 2203, required, *inter alia*, that a state submit a properly executed deed of conveyance of the offered property, and certificates showing that the offered property had not been encumbered, executed by the proper state officer, and the recorder of deeds. It was only upon the completion of *all of these steps* that approval of the state exchange became ministerial.

Thus, in *State of California*, 60 I.D. 322 (1949), *supplemented*, 60 I.D. 428 (1950), Solicitor White expressly held that an exchange application which had been filed on Feb. 19, 1942, was properly rejected on the basis of a reclamation withdrawal which did not occur until Nov. 6, 1947, precisely because the State had not completed the application process. The deficiencies in that case were failure to publish notice of the application, failure to execute a deed of conveyance of the offered property, and failure to provide certificates of nonencumbrance. The decision expressly noted that

as the State of California had not, prior to November 6, 1947, fully complied with all the requirements prescribed by section 8 of the Taylor Grazing Act, as amended, and the supplementary Departmental regulations, the State did not have on that date any vested rights in the selected lands, so as to prevent the withdrawal order of November 6, 1947, from being effective."

Id. at 328.

The question of when the state's right to an exchange vests is of some real import, since sec. 705(a) of the

Federal Land Policy and Management Act of 1976 (FLPMA) expressly repealed sec. 8(c) of the Taylor Grazing Act. In *Junior L. Dennis*, 40 IBLA 12 (1979), this Board held that the passage of FLPMA deprived the Department of authority to accept donations of land under the Act of July 14, 1960, 43 U.S.C. § 1364 (1970), which had also been repealed by FLPMA. In that case, two citizens who sought to donate land to the United States had signed and delivered a deed to the United States, which was duly recorded prior to the passage of FLPMA. Nevertheless, the Board, noting the repeal of the Act, held that a donation under the Act of July 14, 1960, *supra*, could only be consummated by a formal acceptance of the gift by the State Director, which had not occurred until June 28, 1978. The Board rejected the contention that the acceptance by the State Director could relate back prior to the repeal of FLPMA, noting that

utilization of the legal fiction of relation back would be justified if either the Department had the authority, subsequent to the enactment of FLPMA, to accept donations of land under the Act of July 14, 1960, which it did not, or, alternatively, if the Department's actions were ministerial, which they were not.

Id. at 16. Inasmuch as it is clear that authority to allow state exchanges under sec. 8(c) of the Taylor Grazing Act did not survive FLPMA, the only possible way in which allowance under sec. 8(c) can be justified requires a finding that

the actions of the Department in approving the same were ministerial.

The critical question, then, is whether the State's right to the exchange had vested as of Oct. 21, 1976. The case file discloses that much of the field work was not completed until 1979, and that as of Oct. 21, 1976, there had been no publication of the application, no deed of conveyance had been executed, and there had been no certificate of non-encumbrance provided. Thus, under *State of California, supra*, it is clear that the rights of the State had not vested as of the critical date and the application must therefore be processed under the aegis of sec. 206 of FLPMA.²

Sec. 206 of FLPMA, unlike sec. 8(c) of the Taylor Grazing Act, does not require approval of all state exchanges. Under sec. 8(c) of the Taylor Grazing Act, *supra*, allowance of a state exchange was not dependent upon a determination by the Secretary of the Interior that the exchange was in the public in-

terest. See *Solicitor's Opinion*, M-36178, 61 I.D. 270 (1954). Sec. 206 of FLPMA, on the other hand, clearly provides that an exchange may be approved "where the Secretary concerned determines that the public interest will be well served." See sec. 206(a) of FLPMA, 43 U.S.C. § 1716(a) (1976). Thus, under sec. 206, a finding that the exchange is in the public interest is a prerequisite of its allowance. The record is replete with evidence of the public benefits which would flow from this exchange. Indeed, the State Office made a finding that it would benefit the public interest, even though it felt that no such finding was required. We hold that the requirements of sec. 206 of FLPMA have clearly been met.

[2] One Robert Holt, a stranger to the record, disputes appellant's contention that he (appellant) is the owner of the grazing permit covering the selected lands which are the subject of this appeal. The dispute is of little moment since it has been previously determined that even where protestants held grazing licenses or permits from the BLM, this fact would not alter the situation since a licensee or permittee does not have a vested right in the land covered by the license or permit and such land is available for selection by a state. *State of Utah*, A-25710 (Jan. 30, 1950).

Accordingly, pursuant to the authority delegated to the Board of Land Appeals by the Secretary of the Interior, 43 CFR 4.1, the decision of the Utah State Office,

² We note that Organic Act Directive (OAD) 77-17 supports the processing of the instant application under sec. 8(c) of the Taylor Grazing Act. The rationale of that directive, however, is premised on a concept of relation back to the date of the application. Such a concept might have vitality when the sole remaining actions required are ministerial, but as noted above, rights to the State vest, and thus subsequent action becomes ministerial, only upon completion of various regulatory procedures which had not been accomplished herein. In any event, OAD's while providing guidance to BLM on many matters, are binding neither on this Board nor on the general public. Cf. *Milton D. Feinberg*, 37 IBLA 39, 85 I.D. 380 (1978) sustained (*On Reconsideration*), 40 IBLA 222, 86 I.D. 234 (1979).

Regulations implementing sec. 206 were recently promulgated on Jan. 6, 1981. See 46 FR 1634 (Jan. 6, 1981).

Bureau of Land Management, is affirmed as modified and the case files are remanded for further action consistent with the views expressed herein.

**ESTATE OF GLENN F. COY
RESOURCE SERVICE CO., INC.**

52 IBLA 182

Decided January 26, 1981

Appeal from decision of the Wyoming State Office, Bureau of Land Management, canceling oil and gas lease W-56373.

Affirmed in part, vacated in part, and remanded.

1. Oil and Gas Leases: Applications: Generally—Oil and Gas Leases: Applications: Sole Party in Interest—Oil and Gas Leases: First-Qualified Applicant

When an individual files an oil and gas lease offer through a leasing service under an agreement where the leasing service is authorized to act as the sole and exclusive agent to negotiate for sublease, assignment or sale of any rights obtained by the offeror; where the offeror is required to pay the leasing service according to a set schedule, even if the offeror negotiates the sale; and where such agency to negotiate is to be valid for 5 years, the leasing service has an enforceable right to share in the proceeds

of any sale of the lease or any interest therein, and any payments of overriding royalties retained. Such an agreement creates for the leasing service an "interest" in the lease as that term is defined in 43 CFR 3100.0-5(b), and the offeror is required to disclose this interest at the time of filing under 43 CFR 3102.7.

2. Oil and Gas Leases: Applications: Generally—Oil and Gas Leases: Applications: Sole Party in Interest—Oil and Gas Leases: Cancellation

The Department has authority to cancel leases administratively where the lease was granted pursuant to an underlying offer which violated the Departmental regulation requiring an offeror to disclose, at the time of filing, the existence of all parties holding interests in the offer.

3. Administrative Procedure: Generally—Appeals—Rules of Practice: Generally—Rules of Practice: Appeals: Generally—Words and Phrases

"Service." Where BLM sends a copy of its decision to an adversely affected party at his address of record on Sept. 21; where additional information containing the party's more recent address is filed with BLM on Oct. 5; and where BLM receives the mailed copy back as undeliverable on Oct. 16 but does not mail another copy to the more recent address, BLM has not mailed a copy to the party's last address of record, and there is no "service" under 43 CFR 1810.2. Where BLM has never served a copy of its decision on an adversely affected party, the time for this party to appeal has never commenced, and the decision is not effective *per* 43 CFR 4.21(a).

4. Oil and Gas Leases: Applications: Generally—Oil and Gas Leases: Assignments or Transfers

Where no application for BLM's approval of a transfer of any interest in an offer and lease (if issued) has ever been filed,

January 26, 1981

BLM should issue the lease, if appropriate, to the offeror only.

5. Oil and Gas Leases: Applications: Generally—Oil and Gas Leases: Assignments or Transfers—Regulations: Generally

The regulations controlling transfer of oil and gas interests were amended on June 16, 1980, and the amended regulations govern where the interest holder has not sought approval of a transfer of his interest prior to this date. Under these amended regulations, BLM cannot consider any application for approval of a transfer of a lease interest until after the lease is issued.

APPEARANCES: Thomas W. Ehrmann, Esq., et al. for the Estate of Glenn F. Coy and Resource Service Co., Inc.

*OPINION BY
ADMINISTRATIVE
JUDGE STUEBING*

*INTERIOR BOARD OF LAND
APPEALS*

Glenn F. Coy, now deceased, filed a simultaneous noncompetitive oil and gas lease drawing entry card offer (DEC) on parcel WY 192 in the July 1976 drawing in the Wyoming State Office, Bureau of Land Management (BLM). This DEC was drawn with first priority, and, effective Nov. 1, 1976, BLM issued oil and gas lease W 56373 to Coy.

On Sept. 21, 1979, BLM rejected the DEC's of Gene Paul James and G. R. Strange, which had been drawn with second and third priorities, respectively, in the drawing for this parcel. The recited basis for doing so was that the lease had

been issued to Coy, the first qualified offeror. The decision rejecting James' DEC was sent to the address on his offer card, which probably was his leasing service's address.

On Oct. 5, 1979, Geosearch, Inc. (Geosearch), filed a protest against the continued validity of Coy's offer. Geosearch alleged that Fred Engle, d.b.a. Resource Service Co., Inc. (RSC), had had an interest in Coy's offer at the time it was filed, and that he had not disclosed this interest as required by 43 CFR 3102.7.

Geosearch based its standing to protest on its asserted interest in the second-drawn offer of Gene Paul James, stemming from an agreement dated Aug. 1, 1979, purportedly assigning it such an interest. Significantly, Geosearch's protest papers, filed on October 5, contain a copy of this agreement, which bears a different address for James than that on his card, to wit: 2420 Poloma Vista, Las Vegas, Nevada 89121. Moreover, a telephone number was included.

On Oct. 16, 1979, BLM received back the copy of the decision rejecting James' second-drawn offer which it had mailed to him earlier. The Postal service had marked it "Returned to sender. Addressee unknown." BLM did not attempt to remail this decision to James' address as indicated on his agreement with Geosearch.

BLM, pursuant to Geosearch's protest, notified Coy on Oct. 16, 1979, that it required further evi-

dence concerning any agreement between him and RSC. On Nov. 13, 1979, Coy responded, enclosing a copy of this agreement. On July 17, 1980, BLM issued its decision canceling Coy's lease because this agreement gave Engle an interest in Coy's offer for this parcel, and because Coy had not disclosed this interest when he filed his offer, as required by 43 CFR 3102.7. BLM also held that it need not consider James' second-drawn offer, as it had rejected this offer on Sept. 21, 1979, and he had not appealed this decision. As Geosearch took its asserted interest from James, BLM held, it had no cognizable interest in the matter. BLM concluded that the lands in the canceled lease would be relisted in the simultaneous system.

Coy and RSC filed a timely appeal of BLM's decision insofar as it canceled Coy's lease. Neither James nor Geosearch appealed, but there is no indication in the record that they were ever served with a copy of BLM's decision.¹

[1] The agreement between Coy and Fred Engle is the familiar service agreement which we have considered numerous times. *D. R. Weedon, Jr.*, 51 IBLA 378 (1980); *Donald W. Coyer (on Judicial Remand)*, 50 IBLA 306 (1980); *Frederick W. Lowey*, 40 IBLA 381 (1979); *Alfred L. Easterday*, 34 IBLA 195 (1978); *Sidney H. Schreter*, 32 IBLA 148 (1977); *Lola I. Doe*,

31 IBLA 394 (1977). We have also considered similar arrangements between other leasing services and their clients, *Gertrude Galauner*, 37 IBLA 266 (1978); *Marty E. Siwt*, 36 IBLA 374 (1978). This agreement gave Engle the exclusive right to negotiate for sublease, assignment or sale of any lease rights obtained by Coy, and an entitlement to a specific share of the proceeds of any sale and of any retained overriding royalties, whether or not arranged by Engle, for 5 years. This enforceable right was an "interest" as defined by 43 CFR 3100.0-5(b) and existed at the time Coy filed his offer, so that he was required to disclose it under 43 CFR 3102.7. *Ibid.* As noted in BLM's answer to appellant's statement of reasons, "The very fact that RSC believes that it has an interest in the Coy lease sufficient to give it standing to appeal the BLM decision admits as much."

[2] Cancellation is mandated by 43 CFR 3102.7 here. BLM has the authority to cancel a lease administratively where it discovers, subsequent to issuance, that the lease was granted in violation of regulations governing applications to lease. *Boesche v. Udall*, 373 U.S. 472 (1963). Specifically, it is proper for BLM to cancel a lease where it discovers that there was an undisclosed interest holder at the time the offer was filed. *D. R. Weedon, Jr., supra*. We have also held it proper to cancel leases where other defects in the offer are discovered after issuance. *Robert A. Chenoweth*, 38 IBLA 285

¹ Although Geosearch is named as a party to the decision, the record contains only one return receipt card evincing service, and it is from BSC.

January 26, 1981

(1978) (insufficient filing fee); *Norman Monath*, 32 IBLA 392 (1977) (failure to pay advance annual rental); *W. H. Bird*, 72 I.D. 287 (1965) (offer card filed pursuant to improper scheme giving increased chance of success in the drawing); and *B. F. Sandoval, Jr.*, A-29975 (June 12, 1965), (failure to submit agency statements with offer card). In *McKay v. Wahlenmaier*, 226 F.2d 35 (D.C. Cir. 1955), the Court held that the Secretary must cancel an oil and gas lease issued in violation of a regulation of the Department.

Appellants Coy and RSC² argue that BLM may not cancel this lease by retrospectively applying the rule in *Lola I. Doe, supra*, as this offer was filed prior to the issuance of this decision. Appellants contend that the rule in *Doe* makes a "great leap forward" from prior Departmental regulation and adjudications as to what constitutes an "interest" under 43 CFR 3100.0-5(b) and 3102.7. Accordingly, they argue, the rule in *Doe* should not be applied retrospectively, citing *Safarik v. Udall*, 304 F.2d 944 (D.C. Cir. 1962); *Runnells v. Andrus*, 484 F. Supp. 1234 (D. Utah 1980); *Gertrude H. D'Amico*, 39 IBLA 68 (1979); and *A. M. Shaffer*, 73 I.D. 293 (1966). We conclude that these cases are of no comfort to appel-

lants, as the circumstances here are materially different.

It is true that *Doe* was the first case to come before the Board in which BLM had discovered that a leasing service's agreement with its clients gave it an enforceable right to share in the proceeds of its clients' offers. However, the rule in *Doe* was not, as appellants suggest, a departure from any well-established Departmental principles, so that there is no basis for limiting its application to future cases. *Gertrude D'Amico, supra*. To the contrary, it has consistently been Departmental policy that anyone who, at the time an oil and gas lease offer is filed, has a legally enforceable entitlement to share in the proceeds from any sale of the lease must disclose this interest at this time, or the offer is void. The reason for this rule is to prevent unqualified persons from avoiding disqualification by using "straw men" to act for them so as to hide their identities and the fact of their disqualification. Disqualifying factors which a person might attempt to hide in this manner include lack of citizenship, status as a Departmental employee (*Hill v. Williams*, 59 I.D. 370 (1947)), holding maximum acreage of oil and gas leases in a particular state (*John H. Trigg*, 60 I.D. 166 (1948)), or having violated the rule against multiple filings by making another competing offer for the same parcel. Moreover, the Government is entitled to know the identities of persons who have acquired or who

² RSC's standing to participate in this appeal apparently flows from the interest created by the Feb. 27, 1976, agreement with Coy, as it has not alleged that there has been any other subsequent agreement giving it any interest, or that there is any other basis for appearing.

seek to acquire interests in Federally owned lands and/or minerals. *W. H. Gilmore*, 41 IBLA 25, 30 (1979); *see H. J. Enevoldsen*, 44 IBLA 70, 86 I.D. 643 (1979).

The first statement of this policy came on July 23, 1926, 51 L.D. 504 (1926), concerning drawings for canceled oil and gas prospecting permits, which were the predominant vehicle for initiating leases at that time:

On June 3, 1926, in considering a protest filed as the result of a drawing held in accordance with Circular No. 929 (50 L. D. 387), upon the cancellation of an oil and gas prospecting permit the Department directed that—

Hereafter parties desiring to file applications for participation in drawings of this kind be required to allege that they are filing in their own interest and not in the interest of any other person or persons, association, or corporation; or to show clearly in whose interest if not in their own exclusive interest.

It must be stated in each application that the applicant files the same in good faith for his or its own benefit, and not directly or indirectly in whole or in part in behalf of any other person or persons, association, or corporation, or if made in the interest of any other person or persons, association, or corporation, a full disclosure thereof must be made, accompanied by a showing of the qualifications of all the interested parties. Any such application filed that does not meet the above requirements will not be allowed to participate in the drawings when held.

Any applicant who fails to disclose any and all interests other than his own which shall tend to give an advantage in the drawing, will forfeit any claim to a return or repayment of moneys tendered with his application and subject the permit, in the event that one is awarded to him, to cancellation for fraud. [Italics supplied.]

In 1946, the Department promulgated the first regulation requiring disclosure of all parties in interest to the offer. 43 CFR 192.43 (1946). The regulation was first adopted in its present form on Apr. 21, 1961, 26 FR 3422, first codified at 43 CFR 192.42(e)(3)(iii) (1961), providing as follows:

(e) Each offer, when first filed, shall be accompanied by:

* * * * *

(3)(iii) A signed statement by the offeror that he is the sole party in interest in the offer and the lease, if issued; if not he shall set forth the names of the other interested parties. If there are other parties interested in the offer a separate statement must be signed by them and by the offeror, setting forth the nature and extent of the interest of each in the offer, the nature of the agreement between them if oral, and a copy of such agreement if written. Such separate statement and written agreement, if any, must be filed not later than 15 days after the filing of the lease offer. All interested parties must furnish evidence of their qualifications to hold such lease interest.

This regulation is presently set out at 43 CFR 3102.7.

Moreover, on June 13, 1970, the Department promulgated a regulation defining an "interest" at 43 CFR 3100.0-5(b) as follows:

An "interest" in the lease includes, but is not limited to, record title interests, overriding royalty interests, working interests, operating rights or options, or any agreements covering such "interests." Any claim or any prospective or future claim to an advantage or benefit from a lease, and any participation or any defined or undefined share in any increments, issues, or profits which may be derived from or which may accrue in any manner from the lease based upon or

January 26, 1981

pursuant to any agreement or understanding existing at the time when the offer is filed, is deemed to constitute an "interest" in such lease.

The appellants argue that these regulations are unclear and cite the rule in *A. M. Shaffer, supra*,³ as a basis for excusing their noncompliance. We reject this argument. As we observed in *D. R. Weedon, Jr., supra*, no one who held or granted the exclusive right to participate in a precise share of any proceeds from the sale or assignment of the lease and from any proceeds derived from retained overriding royalties could possibly entertain any serious doubt that such a right constituted an "interest" within the context of 43 CFR 3100.0-5(b) and 3102.7. Nor could one doubt that long-standing Departmental policy and regulation required the disclosure of the existence of such an interest at the time the offer was filed. In fact, it is difficult to imagine a more demonstrable form of an "interest" than a written contract guaranteeing a person a share of the proceeds from any sale of the lease, plus a specific share of the proceeds accruing thereafter to overriding royalties retained by the client.

The other cases cited by appellants, *Runnells v. Andrus, supra*,

³ *A. M. Shaffer, supra*, involved a good-faith attempt by a filing agent to comply with the regulations. The agent, who had no interest in the offer, incorrectly complied with the regulation requiring disclosure of all interested parties and allowing 15 days to file an interest statement instead of complying with the slightly different agency-statement regulation requiring the filing agent to submit an agency statement with the offer. The Department held that the regulations did not clearly prohibit this procedure and declined to reject the offers.

and *Safarik v. Udall, supra*, involve situations where a party was following a procedure which had apparently been sanctioned previously by official Departmental decision, so that it was unfair to work a change in procedure without prior notice. The present case is materially different, as the Department had issued no decision condoning a failure to disclose a vested contractual right extant at the time of filing of the offer, or holding that a right such as that created by Engle's contract did not constitute an "interest."⁴ In the absence of such a decision, there was no reasonable basis for Engle and his clients to believe that this practice was beyond the scope of the regulations, which clearly provide otherwise.

BLM was unaware of the nature of the relationships between Engle and his clients until the protest against Doe's offer brought it to light in 1976. Until this time, no case had arisen in which there was an undisclosed interest created by contract between a leasing service and its clients. BLM and this Board

⁴ Previous to the filing of Coy's offer, the Department had considered two leasing service contracts and determined that they did not create enforceable interests which must be disclosed. In *John V. Steffens*, 74 I.D. 46 (1967); and *R. M. Barton* (5 cases), 9 IBLA 243 (1973), 9 IBLA 70 (1973), 7 IBLA 68 (1972), 5 IBLA 1 (1972), and 4 IBLA 229 (1972), it was held that no interest had vested in the leasing service because its entitlement to any lease proceeds was expressly at the client's option and because he was free not to exercise the option. This ruling was followed in *D. E. Pack*, 30 IBLA 166, 84 I.D. 192 (1977). In contrast, Engle's entitlement vested immediately on formation of his agreement with his clients.

each found that the contract created an undisclosed interest, reaching a result consistent with well-established Departmental policy. In these circumstances, it works no injustice to apply the result of this decision to this case, rather than prospectively. *Retail Wholesale and Department Store Union v. NLRB*, 466 F. 2d 380, 390 (D.C. Cir. 1972).

We note that this case does not present the question of the validity of a purported amendment and disclaimer of this interest by Engle. This offer was filed in July 1976, well before the filing of this amendment and disclaimer in January 1977. Thus, this document, even if legally effective, does not apply to Coy's offer, and references to this document in BLM's decision are inapt.

[3] We cannot affirm BLM's holding in its decision of July 17, 1980, that James' second-drawn offer need not be considered because it had been previously rejected by decision dated Sept. 21, 1979.⁵ BLM's decision rejecting James' offer has never become final, owing to BLM's failure to serve him with it.

"Service" of a decision may be made on a person either by delivering a copy to him or by sending the document by certified mail to his address of record in BLM. 43 CFR 1810.2. BLM did send a copy to James' only address of record on September 21, but this copy was returned on October 16 as undeliver-

able. However, in the interim, on October 5, Geosearch had filed its protest, which included a new address for James as of August 1979. BLM apparently did not notice this information.

The inclusion of this information in the protest was adequate to inform BLM of James' address of record. Where, as here, the question of whether a person's address of record is correct arises due to the return of mail as undeliverable, BLM should examine the case record thoroughly to see if it contains an updated address. By failing to send another copy of its September 21 decision to James at the address indicated in this protest, BLM failed to send a copy to his last address of record and so failed to serve him.

A person who wishes to appeal a decision adversely affecting him to this Board must do so within 30 days after he is served with the decision. 43 CFR 4.411(a). As James was never served, he may still file a notice of appeal of this decision. Furthermore, James' offer is still viable, as BLM's decision of Sept. 21, 1979, which rejected it has never become final because James may still file an appeal from this decision. 43 CFR 4.21(a); *Geosearch, Inc.*, 51 IBLA 59, 61 (1980).

Normally, we would remand to BLM to mail a copy of the September 21 decision to James' last address of record. However, BLM's subsequent decision canceling Coy's lease has eliminated the basis for the September 21 decision, i.e., that the issuance of the lease to a senior offeror justified rejection of the

⁵ We make this determination on our own initiative in the absence of participation by either James or Geosearch in view of the uncertainty as to whether these parties were served with copies of BLM's decision.

January 26, 1981

second-drawn offer. Accordingly, on remand, BLM should vacate the decision of Sept. 21, 1979, and adjudicate James' offer in lieu of relisting this parcel.

[4] Finally, we note that Geosearch does not have a presently cognizable interest in James' offer.⁶ As we held in *D. R. Weedon, Jr.*, *supra* at 387, Geosearch has never applied to BLM for approval of a transfer of any interest in James' offer or lease (if issued) as described in 43 CFR 3106.3-4. While the protest filed on Oct. 5, 1978, does contain a copy of a private agreement between it and James, it is not on proper form, does not contain the required fee or transferee's statement, and does not request approval of such a transfer. 43 CFR 3106.2, 3106.3-4. In any event, BLM could not have approved of such a request, as, at the time the protest was filed, Geosearch had not established its qualifications to hold a lease (43 CFR 3106.1-2) or filed the required interest statement (43 CFR 3106.1-4). *See Newton Oil Co.*, A-30453 (Nov. 30, 1965).

Nothing in the record shows that Geosearch has subsequently submitted a proper application for approval of such an assignment. An assignment of whatever interest an oil and gas lease offeror may hold is ineffective until it is approved by BLM. *See William G. Beanland*, 21 IBLA 66 (1975); *Amoco Produc-*

tion Co., 16 IBLA 215 (1974). Thus, in the absence of an approved application, BLM may not issue this lease to anyone other than James, if his offer is found to be valid.

[5] The regulations governing transfers recently have been amended and now provide that no offer may be transferred or assigned prior to issuance of the lease. 43 CFR 3112.4-3 (1980).⁷ As Geosearch failed to seek approval of this transfer prior to June 16, 1980, the effective date of this change, it now falls under these provisions. Thus, BLM cannot consider an application for approval of a transfer until after the lease issues. Accordingly, BLM should consider the merits of James' offer and, if appropriate, issue the lease to him, and not in any part to Geosearch. Following issuance, BLM may consider an application for assignment of James' lease (if issued).⁸

Therefore, pursuant to the authority delegated to the Board of

⁷ This regulation provides as follows:

"No application, offer, lease or interest therein may be transferred or assigned prior to issuance of the lease as evidenced by the signing of the lease by the authorized officer on behalf of the United States as provided in § 3112.4-2 of this title. No agreement or option to transfer or assign such application, offer, lease or interest therein shall be made or given prior to the effective date of the lease or 60 days from the applicant's receipt of priority, whichever comes first. The existence of such an agreement or option shall result in disapproval of the subsequent assignment.

⁸ As the issue is not presented for resolution, we do not comment on whether BLM may properly exercise its discretion not to approve this assignment (if it is submitted for approval after issuance of the lease) because it was not submitted for approval within 90 days of execution of the assignment by the parties. 43 CFR 3106.3-1.

⁶ Again, we make this determination on our own initiative in the absence of participation by Geosearch. It is unnecessary to delay our ruling on the question of Geosearch's present interests in order to allow it to appear, as Geosearch has appeared and argued this identical question in *D. R. Weedon, Jr.*, *supra*.

Land Appeals by the Secretary of the Interior, 43 CFR 4.1, the decision appealed from is affirmed in part, vacated in part, and remanded.

ANNE POINDEXTER LEWIS

Administrative Judge

MARY PATRICIA ANNE
NEWMAN GIBSON ET AL

52 IBLA 216

Decided *January 30, 1981*

Appeals from decisions of the Nevada State Office, Bureau of Land Management, rejecting Indian allotment applications. N-25501, etc.

Affirmed.

1. Act of February 8, 1887—Indian Allotments on Public Domain: Lands Subject to—Patents of Public Lands: Effect

The effect of the issuance of a patent is to transfer legal title from the United States and to remove the land from jurisdiction of the Department of Interior. Where BLM's records show lands have been patented, an Indian allotment application filed under the General Allotment Act of Feb. 8, 1887, for such lands is properly rejected.

APPEARANCES: Each appellant named in the Appendix, *pro se*.

OPINION BY
ADMINISTRATIVE
JUDGE LEWIS

INTERIOR BOARD OF LAND APPEALS

The persons listed in the appendix hereto have appealed from decisions of the Nevada State Office, Bureau of Land Management (BLM), rejecting their applications filed for Indian allotments on alleged public lands in Clark County, Nevada, pursuant to sec. 4, Act of Feb. 8, 1887, *as amended*, 25 U.S.C. § 334 (1976). Because of the similarity of issues and the obvious relationship among these appellants, the Board, *sua sponte*, has consolidated the appeals for consideration.

On each application form the applicants checked "no" in response to the question whether the land was occupied by the applicant or the minor child. All applicants, except in N-25506, stated that there were no improvements on the land. In N-25506 the applicant stated that there were improvements on the land, but does not describe these improvements. In response to the question, "Do you or the minor child claim a valid bona fide settlement?" all applicants checked "no."

BLM rejected applications N-25501, N-25504, and N-25505 because the applicant had failed to submit certification from the Commissioner of Indian Affairs that he was eligible for an Indian allotment as required by 43 CFR 2531.1(b) and 43 CFR 2531.1(d) when he was filing on behalf of a minor child.

BLM rejected all the applications in issue because the lands requested in the applications have been transferred from Federal ownership and

January 30, 1981

are not subject to entry under the public land laws.

In her statement of reasons, Mary Patricia Anne Newman Gibson presents the following contentions:

This claim was not filed under the 4th Section of the Act of Feb. 8-1887 only. But also under 43 U.S. Code 190, (Act of July 4-1884 C 180 Sec 1 Stat. 96) 43 U.S. Code (Act of March 3-1875 C 131 and 15, 18 Stat. 420) Section 4 of the Act of Feb. 8-1887 (24 Stat. L 388) as amended by the Act of Feb. 28-1891 (26 Stats. L 794) and the act of June 25-1910 (36 Stats. L 855 Et. Seq where applicable and in pari materia with my tribes' treaty commitments with the United States of America) Said rights being reserved to me under the Indian Citizenship Act because of my Indian Descent under the act of June 2-1924 (43 Stats. 253) See 8 U.S.C. 1401 25 U.S.C. 332, 334, 345, 346, 190, 337, 43 U.S.C., 190, 189, etc.

It seems most of them are being overlooked. They are all recorded on this claim.

See—*Choats v. Trapp* 224 U.S. 413 (1912) [?]

See—U.S.C.A. Const. Amend. 5.

The appeals of the other applicants present essentially the same arguments. Cathy Sue Slowey and Phyllis L. Slowey Evans also refer to Part 3, 43 CFR 2212.² Further, these two applicants state that BLM did not notify them in its decisions that they had the right to appeal.

First, we note that BLM should have notified the applicants in its decisions that they had the right to

appeal. However, we do not feel that the applicants were prejudiced by this omission as they did in fact appeal and their appeals are being considered by the Board in this decision.

The case files in N-25339, N-25493, N-25501, N-25502, N-25504, N-25505, N-25506, and N-25613 contain a copy of patent No. 1133536, issued Dec. 28, 1951, by the United States to the Husite Co. for certain lands including the lands sought by appellants. The remaining 5 case files contain a copy of patent No. 1137526 issued Jan. 27, 1953, by the United States to the same company for certain lands including those sought by appellants.

[1] In a case in which Federal officers have acted within the scope of their authority, a patent for land once issued passes beyond the control of the Executive Branch of Government. *Germania Iron Co. v. United States*, 165 U.S. 379 (1897); *United States v. State of Washington*, 233 F.2d 811 (9th Cir. 1956). The effect of the issuance of a land patent is to transfer the legal title from the United States. *Robert Dale Marston*, 51 IBLA 115 (1980); *Federal-American Partners*, 37 IBLA 330 (1978); *State of Alaska*, 35 IBLA 140 (1978); *Basille Johnson*, 21 IBLA 54 (1975). Appellants have not asserted that the patents involved were improperly issued.

The Department has held where BLM's records show lands have been patented, the United States does not have title to them, and an Indian allotment application for such lands is properly rejected.

¹ We note that the Indian allotment case reported at 224 U.S. 413 is *Heckman v. United States*. *Choate v. Trapp* appears at 224 U.S. 665.

² 43 CFR Subpart 2212 deals with miscellaneous state exchanges.

Maudra June Underwood Lentell, 49 IBLA 317 (1980); *Anquita L. Kluentner*, A-30483 (Nov. 18, 1965). Since the above discussion is dispositive of these appeals, it is unnecessary to reach the issue of appellants' eligibility to file the applications.

The authority cited by appellants is not in point because the instant cases involve lands which had been transferred from Federal ownership at the time appellants' applications were filed.

Therefore, pursuant to the

authority delegated to the Board of Land Appeals by the Secretary of the Interior, 43 CFR 4.1, the decisions appealed from are affirmed.

TOR'S OPINION M-36893 OF
AUG. 2, 1977, AND ITS SUPPLE-
MENT OF NOV. 19, 1979, UPON
THE SAME SUBJECT): THE
"UNCLAIMED, UNDEVELOPED"
ISSUE***

M-36893 (Supp. II)

January 8, 1981

**Coal Leases and Permits: Permits:
Generally**

Limitation of a coal prospecting permit to "unclaimed, undeveloped" lands restricts it to lands without valid, vested rights, existing at the time of issuance of the permit, which are adverse to the prospecting permit which is sought, and any preference right lease which may be earned pursuant to such a permit.

A prospecting permit may be issued for coal for which there is no valid, adverse claim at the time of issuance, notwithstanding the existence then of nonadverse claims, entries or leases.

Issuances of a prospecting permit is presumed to be regular if no valid, adverse interest appeared in the land office records at the time of issuance of the permit.

**Phosphate Leases and Permits:
Permits**

Limitation of a phosphate prospecting permit to "unclaimed, undeveloped" lands restricts it to lands without valid, vested rights, existing at the time of issuance of the permit, which are adverse to the prospecting permit which is sought, and any

preference right lease which may be earned pursuant to such a permit.

A prospecting permit may be issued for phosphate for which there is no valid, adverse claim at the time of issuance, notwithstanding the existence then of nonadverse claims, entries or leases.

Issuance of a prospecting permit is presumed to be regular if no valid, adverse interest appeared in the land office records at the time of issuance of the permit.

**Multiple Mineral Development Act:
Generally**

No mining claim located after the effective date of the Multiple Mineral Development Act can be adverse to any prospecting permit for coal or phosphate. No such claim renders the land unavailable for a prospecting permit for coal or phosphate under the restriction of prospecting permits to lands which are "unclaimed, undeveloped."

**SUBJECT: The Effect of Mining
Claims on Secretarial Authority
to Issue Prospecting Permits and
Preference Right Leases for Coal
and Phosphate (Modifying Solic-
itor's Opinion M-36893 of Au-
gust 2, 1977, and its Supplement
of November 19, 1979, upon the
same subject); The "Unclaimed,
Undeveloped" Issue**

In view of continuing uncertainties regarding the status of certain pending applications for preference right coal leases pursuant to 30 U.S.C. § 201(b) (1970), we have reviewed the Solicitor's Opinion M-36893 of Aug. 2, 1977, 84 I.D. 442, and its Supplement of Nov. 19,

*Not in chronological order.

1979, 86 I.D. 627, collectively referred to as the "prior Opinion," together with two memoranda from the Director, Bureau of Land Management, to Acting Assistant Secretary, Program Development and Budget, dated Feb. 18, 1977, and to the Solicitor, dated Apr. 29, 1977. I have concluded, for the reasons stated herein, that:

1. The conclusions of the prior Opinion must be limited to conflicts with valid, unpatented mining claims that are adverse to or in conflict with the interest sought or obtained by a prospecting permit or preference right lease; and

2. The prospecting permit and preference right lease must be presumed to be regular in the absence of evidence of adverse claim in the federal land office at the time of issuance of the permit.

Much of the discussion in the prior Opinion, and the opposing comments of the Bureau of Land Management in its two 1977 memoranda, dealt with whether or not the statutory reference to "unclaimed" land meant land which was not subject to *any* valid mining claims or other claims which could ripen into full ownership of land (the conclusion of the prior Opinion), or only to coal claims pursuant to the 1873 Coal Lands Act, 17 Stat. 607, 30 U.S.C. §§ 71-76 (the BLM view).¹

¹ The statutory provisions for prospecting permits for phosphate upon "unclaimed, undeveloped" land were not enacted until 1960. Pub. L. 86-391, § 1(a) 74 Stat. 7, 30 U.S.C. § 221(b). The BLM dismissed the restriction as a "borrowed nullity," without legal meaning, at most only applicable to Coal Lands Act entries on lands to be covered by phosphate permits.

It was acknowledged in both analyses that there is nothing in the legislative history of either the Mineral Lands Leasing Act of Feb. 25, 1920, c. 85, 41 Stat. 437, or the 1960 phosphate amendments, PL 86-391, 30 U.S.C. § 211(b) and (c), indicating *any* Congressional thought or purpose for the "unclaimed, undeveloped" restriction. Each analysis then engages in supposition to support its conclusion, and the various procedural ramifications that follow that conclusion. The result, in my opinion, is that any such specific legislative intent is not ascertainable and may never have existed.

A grant by the United States of any rights in the public lands pursuant to the Mineral Lands Leasing Act is subject to all then vested, accrued rights. Prior to that Act, under the General Mining Law of 1872 a person who located and properly maintained a valid mining claim based upon discovery of any valuable mineral, other than coal, could obtain a fee patent which included *all* minerals. Acquisition of fee title to lands known to be valuable for coal, or the development of coal deposits, was pursuant to the Coal Lands Act of 1873. Although the Minerals Lands Leasing Act removed certain additional minerals from application of the General Mining Law, so that location of mining claims could not be based upon them, nevertheless a patent of a mining claim based upon a locatable mineral would include the minerals subject to the Mineral Lands Leasing Act (until enact-

FOR COAL & PHOSPHATE

January 8, 1981

ment of the Multiple Mineral Development Act of 1954, 30 U.S.C. §§ 521-531).

The Mineral Lands Leasing Act provided new means of establishing rights to produce the minerals subject to it—leases, and prospecting permits by which preference right leases might be earned.² Of the three types of deposits for which prospecting permits could be issued originally (coal, oil and gas, and sodium), the “unclaimed, undeveloped” language was made applicable only to coal. The threshold question is why? What was it about coal that distinguished it?

After acknowledging the absence in the legislative history of any indication of why Congress included the language as an express restriction only upon prospecting permits for coal, the prior Opinion presumed and concluded that the legislative purpose was to prevent the use of information gained from any existing claims or development, for any mineral, to assist in obtaining preferential rights to coal leases. I find it difficult to accept the premise that Congress had such a specific and special purpose, without some suggestion of it in the extensive his-

toric material surrounding the enactment of the Act. Furthermore, I am unable to perceive any basis in law or presumed legislative intent to differentiate between coal, oil and gas, and sodium, in imputing that purpose to Congress.

I find the arguments by the BLM in its two 1977 memoranda to be more persuasive, although it is concluded that there is no express legislative history to support its position. Yet the absence of recorded express Congressional consideration seems more consistent with the BLM premise that the language was simply for protection of the existing rights of coal land claimants than with the supposition that Congress had a more elaborate and affirmative motive.

But why was coal alone the subject of the restrictive language? And as prior vested rights are protected by law generally, why would it be necessary to use such language to preserve existing claims—must not there be some other purpose? And why was the reference to “undeveloped” included with “unclaimed”—does not that suggest some other intent in the use of the restrictive words? In the absence of any expression of Congressional direction upon or before enactment of the Mineral Lands Leasing Act, it is not possible to answer those questions conclusively. But I think the explanation by the BLM set forth below is the more plausible one.

² Although the Act originally provided for leasing of coal, oil and gas, phosphates, sodium, and oil shale, prospecting permits were authorized only for coal, oil and gas and sodium. Other minerals later became subject to leasing pursuant to the Act—sulphur in Louisiana (1926), potassium (1927), and sulphur in New Mexico (1932), each with provisions for prospecting permits but without the “unclaimed, undeveloped” language. 30 U.S.C. §§ 271-276, 281-287.

Prior to enactment of the Mineral Lands Leasing Act, of the three minerals to be put under its prospecting permit-lease system, *only* coal was *not* subject to the General Mining Law and to location of mining claims. It was only coal for which there was an independent statutory basis for development and acquisition of mineral lands. Although it may not have been necessary to safeguard then existing coal rights under the Coal Lands Act by specific reference when Congress authorized prospecting permits for coal pursuant to the new Mineral Lands Leasing Act, it is reasonable to assume, as the BLM did, that some express recognition of vested coal interests was advisable. The language may have been included simply to avoid any question of whether or not coal prospecting permits could be issued for lands on which there already existed either pending applications for coal entry (30 U.S.C. § 71) or persons in actual possession of opened and improved coal mines whose claims for them were timely filed (30 U.S.C. §§ 72, 73). For either type of lawful coal entry, the entryman was required to make submissions to the government by which it became informed of such claims or interests, unlike unpatented mining claims for other minerals under the General Mining Law. Thus it was appropriate for the government to ascertain the existence of Coal Lands Act entries before issuing a coal prospecting permit under the Mineral Lands Leasing Act. There was no feasible procedure to make a like

determination with regard to unpatented mining claims under the General Mining Law prior to enactment of Section 314 of the Federal Land Policy and Management Act of 1976, 43 U.S.C. § 174.

However, I can not accept the BLM's 1977 contention that the "unclaimed, undeveloped" restriction upon prospecting permits is limited to Coal Lands Act entries. Although they may have been in the immediate contemplation of the legislation draftsmen in 1919 or 1920, it is my opinion that any prospecting permit pursuant to the Mineral Lands Leasing Act, whether for coal or any other mineral, must be subject to all vested rights in the land which existed at the time of issuance of the permit. That is true whether or not there is any express reference to them in the Act or in the permits themselves.

The prior Opinion concentrates upon the "unclaimed" issue, although it does give attention to the term "undeveloped." I do not consider that the two words are independent as used in the Act. The restriction is not "unclaimed" *or* "undeveloped" land, nor even "unclaimed" *and* "undeveloped" land. The words are separated merely by a comma. Grammatical structure and punctuation are not conclusive in statutory or other legal construction, but I am of the opinion that as they appear the two words are probably used jointly only for the purpose of generally recognizing vested rights. Inasmuch as some real physical development has always been necessary for the validity

of any form of claim under the General Mining Law and the Coal Lands Act, the use in tandem of the two words may have only indicated that the restriction was limited to lands subject to bona fide claims, those creating vested rights, as distinguished from mere record filings.

I do agree with the conclusion in the prior Opinion that only *valid* mining claims removed land from the "unclaimed" category. However, I do not believe that there is any separate basis of exclusion of land that has been "developed" without regard to whether or not it is "claimed."³ In my opinion, it is the existence of adverse valid, vested claims or rights at the time of issuance of prospecting permits which is determinative. The fact that unauthorized development may have occurred, or that development took place under some earlier authorization or entitlement which had been extinguished at the time of issuance of a prospecting permit, or that it was for some other mineral, would not have made land unavailable for a prospecting permit—even for coal.

In my opinion, the long history of interpretation and application of the statutory restriction by the BLM and its predecessor, the Gen-

eral Land Office, which is described in the BLM's 1977 memoranda, must be given serious weight in a current analysis. The interpretation of a statutory directive by the administrative agency charged with its application, without Congressional objection, for several decades, is authoritative if not conclusive. Furthermore, the spirit and reasoning of *Bryant et al. v. Yellen et al.*, — U.S. —, 65 L. Ed. 2d 184 (1980), and *Andrus v. Shell Oil Co.* — U.S. —, 64 L. Ed. 2d 593 (1980), strongly suggest that an administrative construction and application of long duration may become conclusive upon the Department. The practice, or policy, of the BLM is consistent with the obvious Congressional policies to (i) allow, even encourage or require, independent development of different minerals, and (ii) eliminate by the Multiple Mineral Development Act of 1954, and its predecessors at 30 U.S.C. §§ 284, 274 and 502, the conflict of rights by which one form of entry, claim or development, for one type of mineral, precluded all others.

The enactment in 1960 of PL 86-381, which amended the Mineral Lands Leasing Act to allow prospecting permits for phosphate, creates an apparent enigma. That authorization does contain the same restriction to lands "unclaimed, undeveloped." It is unlikely that it was meant to apply only to the Coal Lands Act or entries made pursuant

³ Sec. 73 of 30 U.S.C. allowed a coal entryman 60 days after entry and improvement pursuant to § 72 in which to make his filing with the manager of the district land office. That might be considered to be a period in which the land is "developed" before it is "claimed," and such an entryman would be protected against issuance of coal prospecting permits to others during that time.

to it. There is no reference to it in the legislative history of the 1960 amendment, and the BLM's explanation that it was "borrowed indiscriminately and without thought" from provisions applicable to coal may be valid, based upon our own informal intradepartmental inquiries. In practice since 1960 the BLM has treated that restriction as "virtually meaningless," although it has taken the position that a phosphate prospecting permit, or a preference right phosphate lease, can not be validly issued for lands subject to a valid phosphate mining claim.⁴

Accordingly, it is my conclusion that the limitation of coal and phosphate prospecting permits to "unclaimed, undeveloped" lands restricts them to lands without existing, valid, vested rights which are legally adverse to the prospecting permit which is sought, and any preference right lease which might be earned pursuant to that permit. The determination is to be made as of the date of issuance of the permit. Thus, for example, any mining claim located prior to the effective date of the Multiple Mineral Development Act would be adverse to any prospecting permit issued after such location, if the claim was valid at the time of issuance of the permit. No mining claim located after that effective date would be adverse because it could not "ripen" into ownership of the mineral which is subject to the prospecting permit issued pursuant to the Mineral Lands Leasing Act.

Deposits of a mineral as to which there is a prior adverse right may not be considered in ascertaining entitlement to a preference right lease; and, of course, no such lease may be validly issued for the lands themselves which are subject to the adverse interest. However, a prospecting permit may be properly issued for a mineral for which there is no valid adverse claim, notwithstanding the existence of non-adverse claims, entries or leases based upon other minerals or authorizations. Prior or existing "development" which is not an incident or basis of an adverse interest does not preclude proper issuance of a prospecting permit.

It is my further conclusion that as to procedures for verifying the "unclaimed, undeveloped" status of land, the method attributed to *Roos v. Altman*, 54 I.D. 47 (1932), and discussed but distinguished in the 1979 supplement of the prior Opinion, 86 I.D. at 635-636, is the most appropriate. Although a prospecting permit may not be validly issued for lands for which there is an adverse interest, or other legal impediment, the issuance of a permit should be presumed to be regular if no interest to the contrary appeared in the land office records at the time of permit issuance, until and unless it is proven to have been improperly issued. The general practice of the Department discussed in the 1979 supplement of prior Opinion, for leases issued or to be issued pursuant to the Mineral Lands Leasing Act, is appropriate for processing of preference right lease applications made pursuant to prospecting permits under that Act.

SUPPLEMENT TO SOLICITOR OPINION NO. M-36914, ON
FEDERAL WATER RIGHTS OF THE NATIONAL PARK SERVICE,
FISH & WILDLIFE SERVICE, BUREAU OF RECLAMATION AND THE
BUREAU OF LAND MANAGEMENT
January 16, 1981

The burden of identification and resolution of conflicting adverse claims may be placed upon the permittee/applicant, such as by prosecution of private contest proceedings or use of provisions of Sec. 527 of 30 U.S.C. However, if no indication of any such vested, adverse claim is presented, then, in the absence of affirmative challenge, the preference right lease may be issued if otherwise proper. Such issuance is at the risk of the lessee that actual adverse interests may exist. Upon a later showing that at the time of issuance of the permit, the lease may be cancelled as to the land in conflict by the BLM upon its own motion or in accordance with advice or protests by others, as described in the 1979 supplement, 86 I.D. at 636.

To the extent it is not inconsistent with the opinions and conclusions expressed herein, the prior Opinion remains in force and effect.

SUPPLEMENT TO SOLICITOR OPINION NO. M-36914, ON FEDERAL WATER RIGHTS OF THE NATIONAL PARK SERVICE, FISH & WILDLIFE SERVICE, BUREAU OF RECLAMATION AND THE BUREAU OF LAND MANAGEMENT*

M-36914 (Supp.)

January 16, 1981

Taylor Grazing Act: Generally—Federal Land Policy and Management

Act: Generally—Water and Water Rights: Federal Appropriation

Neither FLPMA nor the Taylor Grazing Act authorizes appropriation of water or provide an independent statutory basis for claims for water uses inconsistent in any way with the substantive requirements of state law.

Water and Water Rights: State Laws—Water and Water Rights: Federal Appropriation

The United States should comply with the substantive and procedural provisions of state law when acquiring and appropriating water except

1. where Congress or the Executive has reserved land or water for particular Federal purposes;
2. where Congress has clearly mandated that unappropriated water on the public lands is reasonably required for a Federal program or purpose and that water cannot be acquired in a manner conforming to all substantive requirements of state law;
3. the United States is entitled to a priority date as of its historic date of first use where water has been used historically for consumptive beneficial uses recognized by state law but without having conformed to procedural requirements prescribed by state law.

To: Secretary

From: Solicitor

SUBJECT: Supplement to Solicitor Opinion No. M-36914, on Federal Water Rights of the National Park Service, Fish & Wildlife Service, Bureau of Reclamation and the Bureau of Land Management

*Not in chronological order.

Introduction

The Solicitor's Opinion No. M-36914 of June 25, 1979 (herein called the "opinion") made a comprehensive analysis of the nature and extent of Federal rights to use water on lands administered by the National Park Service, Fish and Wildlife Service, Bureau of Reclamation (now the Water and Power Resources Service) and the Bureau of Land Management. It defined and characterized the reserved water rights those agencies may assert under various statutes, executive orders, and Secretarial orders. It also discussed other forms of water rights assertable by Federal agencies, including rights initiated by application of water to beneficial use for congressionally authorized or mandated purposes.¹

Concerns were raised regarding the exact nature, basis and character of the right of the Federal Government to appropriate water for specific purposes authorized or required by Act of Congress. In response to those concerns, the Secretary, following consultation with the governors of the seventeen western states, opted not to implement certain provisions of the Opinion dealing with Federal non-reserved water rights outlined therein except (i) when the agencies receive specific approval determined on a case-by-case basis, from the appropriate Assistant Secretary, or the Secretary to assert such a right, or (ii) when required

to submit all claims for water rights in the course of litigation.²

The President's Water Policy Implementation Task Force Report on Federal Non-Indian Water Rights thereafter appearing in June 1980 has raised questions about the Report's relationship with the Opinion and the Secretarial instruction. Further uncertainty appears to exist within agencies of the Interior Department regarding (i) the steps that should be taken pursuant to the President's Directive of June 6, 1978, to expeditiously identify, establish and quantify federal water rights; and (ii) the legal basis and procedures to be used for assertion of non-reserved water rights in on-going adjudication proceedings and in negotiations with the states consistent with the Solicitor's Opinion, the Secretary's instruction of Feb. 4, 1980 and the Task Force Report.

To clear up such uncertainties, I am issuing this supplement to the Opinion.³ To the extent the Opinion is inconsistent with this supplement, it is modified and superseded hereby.

I. Federal Water Rights Defined

Water Rights assertable by Federal agencies fall into the following categories:

² This decision of the Secretary was announced in a letter of Feb. 4, 1980 to Governors Matheson of Utah and Herschler of Wyoming.

³ This supplement does not affect or apply to any water right(s) that may be claimed by or on behalf of any Indian or Indian Tribe. This supplement is also not intended to modify or supersede any portion of the Opinion numbered M-36914 of June 25, 1979 dealing with the reserved water rights of the non-Indian land management agencies in the Department.

¹ Pages 15-18, 86 I.D. 574-78 and 64-71, 86 I.D. 611-16. This right has become commonly known as the Federal non-reserved water right.

SUPPLEMENT TO SOLICITOR OPINION NO. M-36914, ON 255
 FEDERAL WATER RIGHTS OF THE NATIONAL PARK SERVICE,
 FISH & WILDLIFE SERVICE, BUREAU OF RECLAMATION AND THE
 BUREAU OF LAND MANAGEMENT
 January 16, 1981

1. A water right created expressly or by implication through the reservation of land, measured by the needs of water to fulfill the specific purposes of the reservation and subject to all rights which have vested under State law prior to the effective date of the reservation; this is the commonly recognized federal reserved water right discussed at length in the Opinion.⁴⁷
2. A water right initiated either (i) by application or other appropriate act prescribed by State law; or (ii) by the historic use of water on public lands for consumptive beneficial uses. This right is limited to quantities of water required for beneficial uses recognized by state law. Its priority date is fixed by applicable state law in all cases except for historic consumptive beneficial uses of water not heretofore perfected by permitting or other procedural requirements of state law, in such cases, for reasons discussed herein, the priority date vests as of the historic date of first use.
3. A right to use such unappropriated water arising on the public lands of the United States as may be reasonably required for Federal purposes expressly or impliedly mandated by the Act of Congress. Such right dates from the date of the Act if the Act is self-executing or from the date of implementing administrative action if the

Act contemplates implementation by administrative action. The legal basis for this right is set out in this Supplemental Opinion.

4. Water rights that are acquired by the United States through purchase, exchange, condemnation or gift.

II. Federal Non-Reserved Water Rights—Legal Basis and Nature

Except where Congress has reserved land or water for particular federal purposes, Federal agencies should, as a matter of policy, acquire water rights in accordance with the substantive and procedural provisions of state law. There are two limited exceptions to this legal policy.

The first situation is where water has been used historically by federal agencies for consumptive beneficial uses recognized by State law but without conforming to the filing, permitting, or other administrative procedures prescribed by state law. Most, if not all, of these uses are *de minimus* or small in quantity and have long been integrated into the regimen of water use and development in the watershed. Unappropriated water is and has been historically available for uses on the public lands, as recognized in *United States v. Rio Grande Dam and Irrigation Co.*, 174 U.S. 690 (1899), notwithstanding any past failure of the United States to conform to procedures prescribed by state law for the initiation of water rights.

⁴⁷In the future it is my opinion that most federal water rights will be founded on appropriation or purchase. As to federal reservations created in the future, this office strongly supports the recommendations of the Non-Indian Reserved Water Rights Task Force that, as a matter of policy, reservations of land created by Executive action to be placed under the administration and management of this Department contain a specific provision as to whether or not reserved water rights are to be claimed to meet the purposes of that reservation. If such a policy is not mandated Government-wide by Executive Order, it should be adopted as a requirement by this Department.

The second situation is where a legal basis exists for asserting a federal right to use water in a manner not conforming to all substantive requirements of state law. Federal claims in such cases may be founded on Federal supremacy if and where clearly mandated by Act of Congress. Such claims may also be supported by the dominion the United States has and continues to exercise over unappropriated waters arising on the public lands.

Only the foregoing two situations are encompassed by the non-reserved water right theory detailed in the Opinion. Water right claims thereunder assuredly will be limited in number, limited in impact and are clearly supported by the following principles:

1. The United States acquired dominion over Western lands ceded from foreign powers and not previously disposed of, together with waters on, under or flowing through such lands.⁵

2. Article IV, sec. 3 of the Constitution vested Congress with sole authority over the management and disposition of such waters; those which are not disposed of by Act of Congress remain under the dominion of the United States.⁶

3. By certain general statutes in

the mid 1800's⁷ Congress authorized private persons, through compliance with local laws and customs, to appropriate non-navigable water on the public domain; and by enabling acts providing for the admission of western states to the Union, it conferred jurisdiction on the states to dedicate such waters to public use and permit their appropriation in accordance with state law. In no such act, however, did the Congress relinquish its right to exercise future dominion over unappropriated water on public land to the extent it was needed from time to time for Congressionally authorized uses upon such lands nor could any such act or state constitution divest the United States of its right by Federal supremacy to use water arising on public domain lands for Federal purposes subject, of course, to all prior vested rights.⁸ In other words, Congress retains the right to otherwise provide for future use of presently unappropriated water.

4. As stated by the Supreme Court in *United States v. Rio Grande Dam and Irrigation Co.*, *supra*, the right of the state to establish its own system of water law is limited by two exceptions, the first of which is the right of the United States as a land owner to demand the continued availability of water for use on its own property; the second ex-

⁵ *Borah Consolidated, Ltd. v. Los Angeles*, 296 U.S. 10 (1935); See, Opinion pgs. 1-15. See, also Solicitor Opinion M-33969 (Nov. 7, 1950), "Compliance by the Department with State Law Concerning Water Rights".

⁶ *United States v. Grand River Dam Authority*, 363 U.S. 229, 255 (1960); Cf. *Kleppe v. New Mexico*, 426 U.S. 529, 539-41 (1976).

⁷ Act of July 26, 1866, § 9 (14 Stat. 253), re-enacted as § 2339, R. S. (43 U.S.C. § 661, 1946 ed.); Act of July 9, 1870, § 17 (16 Stat. 218), re-enacted as § 2340, R.S. (43 U.S.C. § 661, 1946 ed.); and the Act of Mar. 3, 1877, § 1 (43 U.S.C. § 321, 1946 ed.)

⁸ *Winters v. United States*, 207 U.S. 564 (1908); *Arizona v. California*, 373 U.S. 546 (1963); *Cappaert v. United States*, 426 U.S. 128 (1976); *United States v. New Mexico*, 438 U.S. 696 (1978); *Kleppe v. New Mexico*, 426 U.S. 539 (1976); *Federal Power Commission v. Oregon*, 349 U.S. 435 (1955); F. Trelease, *Federal-State Relations in Water Law* 147 (Legal Study No. 5 prepared for National Water Commission, Sept. 7, 1971).

January 16, 1981

ception is the navigation servitude. This statement has been reiterated by the Court consistently through the years. *California v. United States*, *supra* at 662.

5. Notwithstanding express directives in sec. 8 of the Reclamation Act of 1902 for the United States to comply with State water law, the Supreme Court has recognized the right of Congress to mandate particular uses in excess or in derogation of provisions of state law. *Id.* Dicta in *New Mexico v. United States*, *supra*, at 702, 709 n. 16, 718 n. 24 and *California v. United States*, *supra*, at 654, 657-658, 670 n. 23, sometimes cited for a contrary conclusion, related only to substantive compliance with State law in cases where the use is not mandated by Act of Congress and is only incidental to the purpose of a statutory authorization or directive.

6. Neither the *New Mexico* case nor any other case has precluded the exercise of a Federal right for failure in the past to meet the filing, permitting and other procedural requirements of State law.

7. Whether a particular paramount Federal purpose is mandated by act of Congress rests on the reasonable interpretation of the Act and its legislative history.

Without cataloging the presence or absence of such mandated uses under all major statutes dealing with land management issues for Departmental agencies, I do believe it is appropriate to readdress Congressional intention under

FLPMA⁹ and the Taylor Grazing Act.¹⁰

As to FLPMA, it is clear, as the 1979 Opinion noted, that FLPMA authorizes a wide range of land management activities that require the use of water, *i.e.*, livestock grazing, habitat and food for fish, wildlife, and domestic animals, timber production, recreation and mining to name a few. However, FLPMA does not authorize or otherwise mandate the Department to appropriate or otherwise utilize water outside state recognized beneficial use concepts for the broad general purposes outlined as management objectives in the Act. To the contrary, sec. 701 (g), 43 U.S.C. § 1701 (g), states:

Nothing in this Act shall be construed as limiting or restricting the power and authority of the United States or—

(1) as affecting in any way any law governing appropriation or use of, or Federal right to, water on public lands;

(2) as expanding or diminishing Federal or State jurisdiction, responsibility, interests or rights in water resource development or control;

Reading FLPMA as a whole and paying special attention to sec. 701 (g), I conclude that FLPMA does authorize appropriation of water for land management uses but does not give an independent statutory basis for claims for water uses inconsistent in any way with the substantive requirements of state law. The same analysis and conclusion is

⁹ 43 U.S.C. § 1701 *et seq.*

¹⁰ 43 U.S.C. § 315a *et seq.*

equally applicable to the Taylor Grazing Act. To the extent the Opinion M-36914 of June 25, 1979, is inconsistent with these conclusions it is withdrawn.

This opinion was prepared with the assistance of Gary Fisher, Special Assistant to the Associate Solicitor for Energy and Resources and John R. Little, Jr., Regional Solicitor, Denver, Colorado.

EUGENE V. VOGEL

52 IBLA 280

Decided *February 9, 1981*

Appeal from decision of the Oregon State Office, Bureau of Land Management, rejecting application for right-of-way for water diversion project. OR 18527.

Set aside and remanded.

1. Federal Land Policy and Management Act of 1976: Generally—Federal Land Policy and Management Act of 1976: Rights-of-Way

The standard of review in the case of a right-of-way application for a water diversion project is whether the decision demonstrated a reasoned analysis of the factors involved, with due regard for the public interest. A decision to reject such an application will not be affirmed where the record lacks sufficient reasons to support it.

2. Federal Land Policy and Management Act of 1976: Rights-of-Way

Rejection of a right-of-way application for a water diversion project will not be

affirmed where the record does not support a finding that approval would be incompatible with BLM's timber management plan; that it would adversely affect wildlife; or that it would result in a cumulative adverse impact contrary to the public interest.

APPEARANCES: Eugene V. Vogel,
pro se.

OPINION BY ADMINISTRATIVE JUDGE HARRIS

INTERIOR BOARD OF LAND APPEALS

Eugene V. Vogel has appealed from a decision of the Oregon State Office, Bureau of Land Management (BLM), dated Apr. 26, 1979, rejecting his application for a 10-foot right-of-way, OR 18527, for a water diversion project to be located on lot 7, sec. 29, T. 38 S., R. 7 W., Willamette meridian, Josephine County, Oregon. Appellant filed his application pursuant to sec. 501 (a) of the Federal Land Policy and Management Act of 1976 (FLPMA), 43 U.S.C. § 1716(a) (1976).

The project, intended to provide water in the amount of 0.085 cubic feet per second (cfs) for irrigation and domestic use,¹ would consist of a dam in the bed of a small unnamed spring tributary of the McMullin

¹The original water rights permit from the State of Oregon entitled appellant to appropriate 0.080 cfs for irrigation and 0.005 cfs for domestic use. However, appellant has advised the Board that he is abandoning his right to appropriate irrigation water, and is having his permit changed to allow only 0.005 cfs for domestic use.

Creek² and a collection pool connected by approximately 530 feet of 1-inch diameter underground plastic pipe to a 1,000-gallon concrete storage tank. Approximately 400 feet of pipe would lead from the storage tank to the edge of appellant's property, situated in sec. 32, T. 38 S., R. 7 W., Willamette meridian, Josephine County, Oregon.

BLM's reasons for rejection of appellant's application were that the project (1) would conflict with its timber management plan because it would require extra cost and care to protect appellant's facilities, (2) would result in a lack of water for wildlife during the summer months, and (3) might establish a precedent contrary to the public interest in view of the potential for newly constructed homes on adjacent private land and associated increased water consumption. These reasons were based on an Environmental Assessment Record (EAR) and a land report prepared by BLM resource specialists.

In his statement of reasons for appeal, appellant contends, in regard to timber management, that an underground 1-inch diameter pipe

would present "little or no obstacle to timber management" and that the storage tank would be situated in such a way as to present "the least obstacle to road building and logging." Furthermore, he indicates a willingness to release BLM in writing from any liability for injury to his pipe or tank caused by BLM authorized logging operations. In regard to wildlife, appellant contends that there is adequate water in the area for wildlife in the form of several springs and the East Fork of the McMullin Creek, but he states that he would be willing to design the project so as to provide "a preliminary tank for wildlife before the water flows into my holding tank or else a second tank for wildlife which catches the overflow."

With respect to water use by other homeowners he indicated he had no knowledge whether others would apply for similar installations, but he felt most of the other private property in the area had the East Fork of the McMullin Creek running through it.

[1, 2] The Secretary or his duly authorized representative has the discretion to accept or reject a right-of-way application for a water diversion project filed under sec. 501 of FLPMA, *supra*. *Stanley S. Leach*, 35 IBLA 53 (1978). The standard for review of a decision rejecting an application is whether the decision represents a reasoned analysis of the factors involved with due regard for the public interest. Where no sufficient reason exists to disturb such a decision, it will be af-

² In appellant's permit from the State of Oregon, and in his application to the Department, the source of water is described as a spring. We assume for the purpose of this decision that the spring does not fall within the scope of the withdrawal by Executive order of Apr. 17, 1926, preserving for general public use and benefit unreserved public lands containing springs or waterholes needed or used by the public for watering purposes. 43 CFR 2311. A determination that land is not embraced within the withdrawal would be necessary before any right-of-way could be granted affecting a spring on public lands.

firmed. *Stanley S. Leach, supra*; *Jack M. Vaughan*, 25 IBLA 303 (1976). In this case there is sufficient reason.

The record does not support a finding that appellant's proposed water diversion project is incompatible with BLM's timber management plan. The land report states that the timber management plan for this area called for a three-stage partial cut program. The first entry was made in 1973, when logging roads were built into the area. The second cutting "is not in the Medford District's five year timber sale plan at this time, but will probably be made within ten years." A logging road which ends near the proposed site of the storage tank may be extended to cross the site in order to reach land to the east. Although the land report states that "plans for timber management in the area * * * would require extra cost and care to protect [appellant's] facilities," that remark is neither substantiated nor explained. A 1-inch plastic pipe buried a foot underground should not pose any significant problem. Also, the storage tank could be placed at a point along the route of the pipe, including on appellant's land, so as not to conflict with any future logging operations. Moreover, appellant has declared his willingness to locate his storage tank so as to present the least obstacle to road building and logging and to release BLM in writing from any liability. There does not appear to be any reason why such a release could not be accepted.

The area, identified as part of crucial deer winter range, supports

populations of black tailed deer, and a variety of small mammals such as squirrels and rabbits, and birds. Both the EAR and land report concur that appellant's proposed project would probably result in a lack of water for such wildlife during the summer months, although the impact to their habitat would be minimal. However, as pointed out above, appellant has offered to devise a project to provide adequate water for wildlife. There is no evidence that a system could not be set up which would be compatible with wildlife use. In addition, the entire stream flow is not to be diverted to appellant's exclusive use. He now intends to use only 0.005 cfs for his domestic use.

BLM stated in its decision that allowance of the right-of-way will "set a precedent contrary to the public interest in that the cumulative effect of granting similar applications in the area would be significant and adverse." The basis for that statement appears to be the Board decision in *Stanley S. Leach, supra*, in which we held that BLM properly rejected a right-of-way application for a pipeline to convey water from a spring on public lands to private lands where it had determined that the overall effect of granting similar applications in a given area would be adverse to the public interest and allowance of one application might establish a precedent contrary to the public interest.

However, in the *Leach* case the State Department of Fish and Game had filed a protest with the State Water Board objecting to Leach's request to appropriate 1,200 gallons of water per day from a

spring on public land. In this case the State had approved appellant's water appropriation with no apparent objection. In addition, in *Leach* there was no offer to take steps to attempt to insure adequate water for wildlife. There was mention of overflow from Leach's tank. Overflow does not guarantee water for wildlife, especially in times of shortage. On the other hand, appellant's offer to build a preliminary tank for wildlife indicates a willingness to put a priority on wildlife use. Also the EAR indicates there would be no significant impact on water quality from construction of this facility; there are no rare or endangered species known to exist in the area; no cultural or historic resources; and no public interest in the proposal.

Given the facts in this case, the *Leach* rationale is not dispositive. BLM cannot reject a request for use of the public lands solely on the basis that the granting of a right might result in a deluge of similar applications by others. See *East Canyon Irrigation Co.*, 47 IBLA 155, 169 (1980). Under that reasoning, no one would ever be allowed to make any use of Federal land or its resources, no matter how innocuous the effect of such use, because the cumulative effect of numerous people making the same use of the same land would be undesirable and contrary to the public interest.

Each application for a discretionary use deserves to be treated on its own merits. The record of this case plainly establishes that it will not have any significant adverse effect

on the land or any of the resource values. The allowance of this application does not by any means mandate the allowance of every similar future application regardless of the consequences. FLPMA declared that it is the policy of the United States that management of the public lands be on the basis of multiple use. Sec. 102(a)(7), 43 U.S.C. § 1701(a)(7) (1976). The granting of this application would be in keeping with this stated policy.

Accordingly, pursuant to the authority delegated to the Board of Land Appeals by the Secretary of the Interior, 43 CFR, 4.1, the decision appealed from is set aside and the case remanded to BLM for issuance of the right-of-way with appropriate stipulations.

UNITED STATES

v.

AIMEE MARION BOWAN (EDEN-
SHAW) AND PHYLLIS JOSE-
PHINE KIMBALL

8 IBIA 218

Decided February 12, 1981

Appeal from order by Chief Adminis-
trative Law Judge L. K. Luoma in

Alaska Native Disenrollment contest requiring the Bureau of Indian Affairs to retain appellees on the roll of beneficiaries of the Alaska Native Claims Settlement Act, 43 U.S.C. §§ 1601-1628 (1976).

Reversed.

1. Indian Tribes: Alaskan Groups—Alaska Native Claims Settlement Act: Aboriginal Claims—Alaska Native Claims Settlement Act: Enrollment

The provisions of the Alaska Native Claims Settlement Act defining the class of persons entitled to share in benefits under the Act are not ambiguous so as to require reference to the legislative history to determine whether persons becoming United States citizens after Dec. 18, 1971, the effective date of the Act, are entitled to be enrolled.

2. Alaska Native Claims Settlement Act: Enrollment—Administrative Practice—Statutory Construction: Administrative Construction

Interpretation of the Alaska Native Claims Settlement Act by the Bureau of Indian Affairs contemporaneous with the enactment of the statute and continued over the succeeding 9 years is relevant to a determination of the application to be given to the statute. The Agency refusal to enroll persons who were not United States citizens on Dec. 18, 1971, the effective date of the Act, is a reasonable application of the Act and of Departmental regulations implementing the Act, and gives the language of the statute (43 U.S.C. § 1604 (1976)), its common and ordinary meaning.

APPEARANCES: Carol Shapiro, Esq., for appellees; Bruce Schultheis, Esq., Anchorage Regional Solicitor's Office, for appellant.

**OPINION BY
ADMINISTRATIVE JUDGE
ARNESS**

**INTERIOR BOARD OF
INDIAN APPEALS**

*Procedural and Factual
Background*

On Feb. 26, 1980, the Bureau of Indian Affairs (BIA), U.S. Department of the Interior, appealed from a determination by the Department's Chief Administrative Law Judge that appellees Aimee Marion Bowen and Phyllis Josephine Kimball (contestees below) should remain enrolled as Alaska Natives under the Alaska Native Claims Settlement Act, the Act of Dec. 18, 1971, 85 Stat. 688 (hereinafter ANCSA), 43 U.S.C. §§ 1601-1628 (1976) (further references to U.S.C. are to 1976 edition). Appellees are sisters who were born prior to 1934 in Canada, the daughters of a Canadian father and an American mother. Both parents were members of the Haida Tribe of Indians. The appellees' father was born in Masset, British Columbia, as were appellees. Appellees' mother was born at Hydaburg, Alaska.

The family moved to Hydaburg in 1940. Appellees' father did not become a United States citizen; however, appellees obtained United States citizenship by naturalization in 1974. Both women are married to American citizens. They were enrolled as Alaska Natives for the purpose of obtaining benefits under ANCSA in 1973 based upon applications which represented them both

February 12, 1981

to be American citizens. Appellees explain their representations concerning nationality were based upon a belief encouraged by their parents that they enjoyed dual citizenship. The easy access given them between the United States and Canada when they travelled between the two countries is cited by them as support for their past belief they were Americans, although they now no longer contend they were American citizens before naturalization in 1974.

Issue on Appeal

The issue to be resolved on appeal concerns whether the Chief Administrative Law Judge correctly found that acquisition by appellees of United States citizenship after Dec. 18, 1971, the effective date of ANCSA, does not preclude their enrollment for benefits as Alaska Natives.

Discussion and Decision

Following an analysis of contestees' circumstances, the factfinder below correctly applied United States law respecting determination of contestees' nationality, holding

[a]s their father was born in Canada to a Canadian father and was never naturalized as a U.S. citizen, contestees cannot claim derivative citizenship through him. Nor can they claim citizenship by birth to a U.S. citizen mother because the statute expressly provides for derivative citizenship through fathers only. Although Congress amended the law in 1934 by granting citizenship rights to foreign-born children of citizen mothers (*see* 48 Stat. 797), contestees cannot benefit from

the amendment as it was specifically made prospective only (*see Montana v. Kennedy*, 366 U.S. 308 (1961); *Lee Chuck Ngow v. Brownell*, 152 F. Supp. 427 (1957)). [Act of February 10, 1855, 10 Stat. 604.]

(Decision dated Jan. 31, 1980, at p. 4).

The opinion continues on to conclude that ANCSA is ambiguous concerning whether the Act limits benefits only to persons who were citizens on Dec. 18, 1971. The opinion thus questions whether Congress intended to create a definite, closed class of beneficiary or an open-ended classification capable of continuing enlargement, and proceeds to find in an analysis of the legislative history of the Act an interpretation which permits contestees to share in the benefits conferred by the statute based upon considerations of equity. This determination and the legislative analysis stated for its rationale are erroneous and require reversal.

a. The statute is not ambiguous

If a statute is unambiguous its legislative history is irrelevant. *United Air Lines v. McMann*, 434 U.S. 192, 199 (1977). ANCSA defines "Native" at 43 U.S.C. § 1602 (b) as one entitled to share in the benefits of the Act who is "a citizen of the United States who is a person of one-fourth degree or more Alaska Indian * * * Eskimo, or Aleut blood, or combination thereof." At sec. 1604(a) the Secretary is required to prepare a roll of all Natives "born on or before, and who are living on, December 18,

1971." The roll of eligible Natives must be prepared within 2 years from the effective date of the Act.

The Act is intended, according to the statutory declaration of purpose, to benefit only Natives who are "citizens of the United States or of Alaska" (43 U.S.C. § 1601(c)). ANCSA repeals all prior Alaskan Indian allotment authority, except that pending applications for allotment may be approved provided the applicants shall not then be eligible to receive benefits under ANCSA (43 U.S.C. § 1617). ANCSA also revokes prior Indian reserves (43 U.S.C. § 1618(a)) unless an election is made to retain prior reservations in lieu of benefits offered by ANCSA (43 U.S.C. § 1618(b)).

Dec. 18, 1971, is established by 43 U.S.C. § 1617 as the ending date for purposes of elections to be made under ANCSA. One must choose between benefits available under ANCSA or the earliest allotment statutes as of that date; moreover, the eligibility must, of necessity, depend upon the status of the Native concerned upon the date of the Act.¹ Thus, the Act provides at 43 U.S.C. § 1617(a), "[n]o Native covered by the provisions of this chapter, and no descendant of his, may hereafter avail himself of an allotment." At sec. 1617(b), provision is made that any allotments elected to be taken in lieu of benefits under the Act must be offset against the land grant provided under ANCSA. In light of the foregoing, ANCSA

clearly establishes Dec. 18, 1971, as the day upon which agency administration of the Act's provision is to turn.

A subsequent Act amending ANCSA, the Act of Jan. 2, 1976, 89 Stat. 1145, refers to and approves the Departmental regulations respecting enrollment and administration of the Departmental regulations by the Secretary. The 1976 amendment extends the time for enrollment, but specifically limits enrollment to "those Natives * * * who would have been qualified if the * * * [extended] deadline had been met." The thrust of the statutory language throughout ANCSA (*as amended*) is directed by deadlines which focus on the effective date of the Act for all purposes of enforcement of the Act's provisions.

The opinion below, finding the Act to be ambiguous, postulates an equitable basis for permitting enrollment of appellees based upon their claim of aboriginal title. While considerations respecting aboriginal title are the common unifying thesis of ANCSA (as the opinion appealed from observes), all prior claims of any nature based upon such title are extinguished by the Act, whether compensated or not. *United States v. Atlantic Richfield Co.*, 435 F. Supp. 1009 (D. Alaska 1977); *Koniag v. Kleppe*, 405 F. Supp. 1360 (D.D.C. 1975), *aff'd in part, rev'd in part*, 580 F.2d 601 (1978), *cert. denied*, 99 S. Ct. 733 (1979)). The decision below assumes, however, that compensation is required for every type of claim

¹ *Dwight Tevok (Deceased)*, 29 IBLA 160 (1977) (*rev'g prior decision*, 22 IBLA 296 (1975)).

which may be based upon aboriginal title regardless whether the claim is cognizable under ANCSA.² This thesis, which is at the center of the holding requiring appellees to be enrolled under ANCSA, is at odds with the holding in *Tee-Hit-Ton Indians v. United States*, 348 U.S. 272 (1955), and a series of earlier cases which establish the principle that aboriginal title is subject to extinguishment without compensation at the will of Congress.³ These cases remain a correct statement of American law on this point. Since claims based upon aboriginal title are not compensable of right, and since nothing outside the terms of the statutory grant entitles appellees to share in the benefits created by ANCSA, the fact that appellees were not qualified on account of citizenship to be enrolled prevents their retention on the rolls.⁴

² The decision also opines that correctness of determination of claims is subordinate to speed in settling them. ("Congress was obviously not too concerned about the extent to which Natives could actually prove their claims" (Decision dated Jan. 31, 1980, at p. 5).) This finding is contrary to the logic of judicial determinations mandating due process administrative standards in ANCSA determinations which are binding upon the Department. *Cf. Koniag v. Andrus*, 580 F.2d 601, 609 (D.C. Cir. 1978).

³ *Cf. United States v. Santa Fe Pacific R. Co.*, 314 U.S. 339 (1941). Thus, prior to ANCSA there was conflict concerning whether aboriginal title in Alaska was extinguished by the treaty of cession or later acts or whether it continued until ANCSA. *Cf. Miller v. United States*, 159 F.2d 997 (9th Cir. 1947), and *Tlingit and Haida Indians of Alaska v. United States*, 177 F. Supp. 452 (Ct. Cl. 1959). Contrary to the assumption implicit in the opinion below, there was not consensus on the question whether Native titles survived transfer of Alaska to United States control.

⁴ As the Court points out in *Koniag v. Kleppe*, above, at 405 F. Supp. 1364-5, the Act establishes a sort of quid pro quo—all claims

b. Contemporaneous and practical interpretation of the Act bars contestees claims

The BIA contends that the continued and contemporaneous administration by that agency of ANCSA through the application of implementing Departmental regulations indicates the interpretation properly to be given to the statute in practice. It has apparently been BIA policy to regard the Departmental regulations appearing at 25 CFR Part 43h as limiting the class of beneficiaries entitled to enrollment under ANCSA to a closed group fixed by the Dec. 18, 1971, effective date. It is an axiom of statutory construction that long continued contemporaneous and practical interpretation of a statute by the executive officers charged with its administration is entitled to consideration when determining the statutory meaning. *Palmore v. United States*, 411 U.S. 389 (1973). It is also true that the interpretation of an act made by the agency charged with enforcement of the statute is considered to be an appropriate means to demonstrate that the agency interpretation embodies the common and ordinary meaning of the law. *Oil Shale Corp. v. Morton*, 370 F. Supp. 108 (D. Colo. 1973). The agency position here is a reasonable interpretation consistent with the internal logic of the Act and the common and ordinary meaning of

are extinguished in exchange for benefits under the Act for qualified claimants and corporations. Citizenship is a crucial factor in the determination of qualification for individuals.

the words of section 1604. It is inconsistent with the language of ANCSA to permit enlargement of the beneficiary class by naturalization while excluding native American children born after the effective date of the Act, and yet to use the December effective date (or enlargements of that date permitted by amendment) to determine all other claims under the Act. The Act does not contemplate the creation of an ever-expanding enrollment by naturalization of newly qualified members who will become entitled to share in the fixed estate created by Congress for Native Alaskans.⁵

Pursuant to the authority delegated to the Board of Indian Appeals by the Secretary of the Interior, 43 CFR 4.1, the decision appealed from is reversed. Appellees are not Alaska Natives as defined by ANCSA and are not entitled to enrollment for benefits under the Act. Agency officials of the BIA charged with enforcement of Departmental regulations respecting enrollment are directed to take appropriate action to disenroll appel-

lees consistent with this opinion, which is final for the Department.

Administrative Judge

I CONCUR:

WM. PHILIP HORTON

Chief Administrative Judge

LAKE COAL CO., INC.

3 IBSMA 9

Decided February 17, 1981

Petition by the Office of Surface Mining Reclamation and Enforcement (OSM) for review of the July 15, 1980, summary decision of Administrative Law Judge Tom M. Allen, in Docket No. NX 0-111-P, vacating Notice of Violation No. 79-2-47-12 on grounds related to the timing of OSM's answer to Lake Coal Company's petition filed pursuant to 43 CFR 4.1150-4.1152.

Reversed and remanded.

1. Surface Mining Control and Reclamation Act of 1977: Administrative Procedure: Generally—Surface Mining Control and Reclamation Act of 1977: Civil Penalties: Hearings Procedure

Under 43 CFR 4.1153 OSM has an absolute right to submit an answer to a petition within 30 days of its receipt of a copy of the petition. After that time, an Administrative Law Judge has discretion to regulate the scope of OSM's answer in a manner reasonably related to any prejudice suffered by the opposing party as a result of OSM's delay.

⁵ Cf. 43 U.S.C. § 1601(b) (1976). The reference to the legislative history of the Act in the decision below seeks to find a basis for enrollment in the provisions of the Act which extinguish whatever aboriginal title remains in Alaskan Natives or Native groups. This rationale assumes the existence of such title, an assumption not justified by the Act, prior decisions, or the legislative history. ANCSA extinguishes whatever aboriginal title remains; it does not recognize such title, nor does the legislative history indicate any intent to do so. (See H.R. Rep. Nos. 3100, 7039, 7432, and 92-10, 92d Cong., 1st Sess. May 3, 4, 5, 6, and 7, 1971; H.R. Rep. 92-523, 92d Cong., 1st Sess. reprinted in [1971] U.S. Code Cong. & Ad. News 2198; Conf. Rep. 92-746 reprinted in U.S. Code Cong. & Ad. News 2253.)

2. Surface Mining Control and Reclamation Act of 1977: Administrative Procedure: Generally—Surface Mining Control and Reclamation Act of 1977: Civil Penalties: Hearings Procedure

When an answer is filed by OSM after the time prescribed in 43 CFR 4.1153 but before any claim of prejudice from the delay is raised by the petitioner, it is an abuse of discretion for an Administrative Law Judge to issue, *sua sponte*, a summary decision in favor of the petitioner on the basis of presumed prejudice to the petitioner.

APPEARANCES: Charles P. Gault, Esq., Office of the Field Solicitor, Knoxville, Tennessee, Marcus P. McGraw, Esq., Assistant Solicitor for Enforcement, and Marianne O'Brien, Esq., Division of Surface Mining, Office of the Solicitor, Washington, D.C., for the Office of Surface Mining Reclamation and Enforcement; Forrest E. Cook, Esq., Whitesburg, Kentucky, for Lake Coal Co., Inc.

*OPINION BY INTERIOR
BOARD OF SURFACE
MINING AND
RECLAMATION APPEALS*

The Office of Surface Mining Reclamation and Enforcement (OSM) has petitioned the Board, pursuant to 43 CFR 4.1270, for review of a summary decision issued by the Hearings Division vacating Notice of Violation No. 79-2-47-12. The summary decision was based on OSM's failure to answer, within the 30-day period specified in 43 CFR 4.1153, the petition of Lake Coal Company (Lake) for review of the

notice and a proposed civil penalty. We reverse that decision and remand the case for further proceedings.

Background

An inspection of the Ned's Branch surface coal mine, permitted to and operated by Lake Coal Company, Inc., in Letcher County, Kentucky, was conducted by OSM on Oct. 30, 1979. Following this inspection a notice of violation was issued to Lake in which were alleged eight violations of the Surface Mining Control and Reclamation Act of 1977 (Act)¹ and the Department's initial program regulations.² A notice of a proposed civil penalty based on the notice of violation was subsequently issued to Lake by OSM.

A conference to review the proposed civil penalty assessments was held by OSM, pursuant to 30 CFR 723.17, on Feb. 12, 1980. This review was concluded formally by a letter to Lake from the Assessment Conference Officer, dated Apr. 11, 1980, by which Lake was advised that the original proposed assessments had been affirmed in some respects and revised in others.

By petition filed with the Hearings Division on May 5, 1980, accompanied by full payment of the proposed assessment, Lake requested a formal hearing on the fact of the alleged violations and the amount of the proposed civil pen-

¹ Act of Aug. 3, 1977, 91 Stat. 445-532, 30 U.S.C. §§ 1201-1328 (Supp. II 1978).

² 30 CFR Chapter VII, Subchapter B.

alty assessment, in accordance with 30 CFR 723.18 and 43 CFR 4.1150-4.1152. In an amendment to its petition, filed May 19, 1980, Lake asserted that the OSM inspector who issued the notice failed to present credentials prior to the inspection and that the descriptions of the alleged violations were insufficient to put Lake on notice of the actual conditions and locations of the alleged violations.

On July 14, 1980, OSM filed with the Hearings Division both a motion to dismiss Lake's petition and an answer to the petition.³ One day later the summary decision vacating the notice of violation was issued, without any intervening filing by Lake concerning the timing of OSM's motion/answer. The Administrative Law Judge rejected any consideration of OSM's answer, because it was filed within the 30-day period specified in 43 CFR 4.1153 and Lake was presumed to have been prejudiced by the delay. Consequently, Lake's allegations in its petition were accepted as facts unrebutted by OSM.

Discussion

[1] We determined in *Addington Brothers Mining, Inc.*, 2 IBSMA 90, 87 I.D. 186 (1980), that the language of 43 CFR 4.1153 is directory

³ In support of dismissal of Lake's petition OSM asserted that it was not filed within the time specified in 43 CFR 4.1107. The Administrative Law Judge did not rule on this motion; nor does the Board do so by this decision. We note, however, that because the last day of the 15-day filing period for Lake under 43 CFR 4.1151(b) was a Saturday, OSM's claim apparently is incorrect. See 43 CFR 4.22(e).

in nature. Under that provision OSM has an absolute right to submit an answer to a petition within 30 days of its receipt of the petition. After that time the Administrative Law Judge has discretion to regulate the scope of OSM's answer in a manner reasonably related to prejudice suffered by the opposing party as a result of OSM's delay.⁴

[2] While in *Addington* the Board did not in terms express a requirement that any sanction for noncompliance with 43 CFR 4.1153 must be preceded by objection from the opposing party, it did emphasize that an Administrative Law Judge "may receive an answer, without sanctions, at any time prior to a suitable motion by the petitioner." 2 IBSMA at 93, 87 I.D. at 188. Further, in *Badger Coal Co.*, 2 IBSMA 147, 87 I.D. 319 (1980), a subsequent decision concerning the comparable time limitation set forth at 30 CFR 723.18(b), the Board expressly indicated that responsibility for objecting to a delay by OSM and for demonstrating actual prejudice resulting from that delay lies with the opposing party. 2 IBSMA at 152, 87 I.D. at 321.

In the instant case OSM's answer was filed without any objection by Lake to its timing. Moreover, the only prejudice considered to have resulted from OSM's delay was that

⁴ Conceivably prejudice might be demonstrated that could not be remedied by regulation of the scope of OSM's answer. Under this circumstance, it may be appropriate to terminate the proceeding by a summary decision against OSM.

presumed by the Administrative Law Judge,⁵ unsupported by a showing of actual prejudice by Lake.⁶ A mere presumption of prejudice from OSM's noncompliance with 43 CFR 4.1153 is not adequate under the Board's prior decisions to warrant a sanction against a late answer.

In accordance with the foregoing the decision below is reversed and this case is remanded for further proceedings consistent with this decision.

MELVIN J. MIRKIN
Administrative Judge

NEWTON FRISHBERG
Administrative Judge

WILL A. IRWIN
Chief Administrative Judge

⁵In this regard, the Administrative Law Judge stated:

"It would appear that the holding of \$4,900 of petitioner's funds during a time of national recession would certainly be the basis for a finding of disadvantage where the Act provides only 6 percent interest or interest at the Department of Treasury rate if that sum is ordered returned to the petition[er], where that same amount of money may perhaps earn a higher interest rate if invested in other certificates of deposit which are advertised daily in the newspapers. It is also a disadvantage to be deprived of one's capital for any excessive period of time, and therefore I find that any unreasonable delay in the hearing of the issues created by the pleadings occasioned by the respondent failing to answer in compliance with the requirements of 43 CFR 4.1150 *et seq.* amounts to the rights of this petitioner being prejudiced thereby, and the answer is not considered" (Summary Decision of July 15, 1980, at p. 2).

⁶Indeed, before the Board Lake did not put forth any factual basis for a finding of prejudice. In its brief, Lake merely characterized the decision below as a reasonable exercise of discretion vested in the Administrative Law Judge.

WILLIAM FRANCIS RICE
3 IB SMA 17

Decided February 19, 1981

Appeal by the Office of Surface Mining Reclamation and Enforcement (OSM) from the July 9, 1980, summary decision of Administrative Law Judge Tom M. Allen in Docket No. NX 0-187-R vacating Cessation Order No. 80-2-29-5 and Notice of Violation No. 80-2-29-18 on the ground that OSM failed to file its answer in accordance with 43 CFR 4.1165.

Reversed and remanded.

1. Surface Mining Control and Reclamation Act of 1977: Administrative Procedure: Generally—Surface Mining Control and Reclamation Act of 1977: Hearings: Procedure

Although an Administrative Law Judge has discretion to take appropriate action to correct the late filing of an answer in a proceeding to review a notice of violation or a cessation order, except in extreme circumstances it is not appropriate to vacate the notice or order.

APPEARANCES: Courtney W. Shea, Esq., Office of the Field Solicitor, Knoxville, Tennessee, Mark Squillace, Esq., and Marcus P. McGraw, Esq., Assistant Solicitor for Enforcement, Division of Surface Mining, Office of the Solicitor, Washington, D.C., for the Office of Surface Mining Reclamation and Enforcement.

OPINION BY THE INTERIOR
BOARD OF SURFACE
MINING AND RECLAMATION
APPEALS

The Office of Surface Mining Reclamation and Enforcement

(OSM) has appealed the July 9, 1980, summary decision of Administrative Law Judge Tom M. Allen vacating Cessation Order No. 80-2-29-5 and Notice of Violation No. 80-2-29-18. We reverse that decision and remand the case for further proceedings.

*Factual and Procedural
Background*

On Apr. 18, 1980, inspectors for OSM issued a notice of violation to William Francis Rice for several alleged failures to comply with the Surface Mining Control and Reclamation Act of 1977¹ and the initial program regulations and a cessation order "for opening and developing a site for surface coal mining operations without a permit."² On Apr. 25, in accordance with 30 CFR 722.15, an informal minesite review hearing was held at the site in Johnson County, Kentucky. Robert McKenzie, the OSM minesite hearing officer, sustained violation 2 of the notice of violation and the cessation order in a letter dated Apr. 30, 1980. The letter was accompanied by a minesite hearing report dated Apr. 25, 1980.

By letter dated May 15, 1980, and filed with the Hearings Division on May 19, 1980, Rice requested a hearing before an Administrative Law Judge, enclosed a copy of the April 30 letter, and asked that the transcript of the minesite review hearing be made a part of the ad-

ministrative record. This letter was docketed as Docket No. NX 0-187-R and assigned to Administrative Law Judge Allen on May 22, 1980. On June 5, 1980, the Administrative Law Judge sent a letter to Rice informing him that his letter of May 15 did not conform to the requirements of 43 CFR 4.1164 and requiring an amendment of the application within 10 days of receipt of the letter.³ On June 16, 1980, Rice filed an amended application with the original of the minesite hearing transcript.

On July 9, 1980, 23 days after the filing of Rice's amended application, the Administrative Law Judge, sua sponte, issued a summary decision vacating both the notice of violation and the cessation order on the grounds that OSM's failure to file its answer within 20 days in accordance with 43 CFR 4.1165 amounted to "an abandonment of its prosecutorial posture." The Field Solicitor received this decision on July 14, 1980; on the same date her answer was mailed.⁴ The answer was filed with the Administrative Law Judge on July 17, 81

³ The Administrative Law Judge sent a copy of his letter to the OSM Field Solicitor in Knoxville.

⁴ As to this coincidence, OSM states:

"Despite the coincidence of dates, the answer of OSM was not filed in response to the dismissal by the Administrative Law Judge. The lateness of the Answer was due to a severe backlog of typing, and a mistake in calendaring receipt of the Amended Application. The mistake was discovered Friday, July 11. When the responsible attorney returned from three days of hearings, the Answer was typed and sent out Monday, July 14." (OSM Brief at 2, n. 1).

¹ Act of Aug. 3, 1977, 91 Stat. 445, 30 U.S.C. §§ 1201-1328 (Supp. II 1978).

² OSM Brief at 2. See *Claypool Construction Co., Inc.*, 2 IBSMA 81, 87 I.D. 168 (1980).

days after the filing of Rice's amended application for review.

OSM filed a notice of appeal on Aug. 7, 1980, and, after receiving an extension of time, a brief on Sept. 10, 1980. Rice did not file a brief.⁵

Discussion

In *Addington Brothers Mining, Inc.*, 2 IBSMA 90, 87 I.D. 186 (1980), we held that 43 CFR 4.1153 entitles OSM to file an answer within 30 days of receipt of a copy of a petition for review of a proposed civil penalty and that, after that time, an Administrative Law Judge has discretion to regulate the scope of a late answer in any reasonable manner and to receive a late answer, without imposing sanctions, any time before the filing of a motion by an opposing party. In that case the regulation read: "OSM *shall have 30 days* from receipt of a copy of the petition within which to file an answer." (Italics added.) In this case 43 CFR 4.1165 reads that OSM "*shall file an answer within 20 days* of service of a copy of" an application for review. (Italics added.) The Administrative Law Judge held that "there is a vast difference

between the language of 4.1153 and 4.1165" and that the latter "leaves no doubt that the instructions of the regulations are mandatory."

[1] It is true that the language of these two regulations is different. However, both the nature of a pleading and the consequences of its tardiness must be considered in determining what constitutes reasonable regulation by an Administrative Law Judge. Both in proceedings to review notices of violation or cessation orders and to review proposed civil penalties, the answer is in effect the third pleading. The notice of violation or cessation order, and accompanying notice of proposed civil penalty assessment in a civil penalty proceeding, constitutes the first pleading. An application or petition for review is the second pleading and the one that principally joins the issues. OSM's answer, the third pleading, is usually merely an iteration of the facts underlying the issuance of the notice of violation or cessation order, as well as a denial of applicant's or petitioner's allegations. As such its tardiness matters little to either the applicant's ability to prepare its case or the Administrative Law Judge's ability to conduct a hearing. Occasionally, where an application or petition for review alleges matters not contained in the notice of violation or cessation order, *e.g.*, that an inspector did not present credentials properly, OSM's answer will contain responses important to focussing the issues. Where this is so, a tardy

⁵ Rice did, however, file a motion to strike OSM's brief on the grounds that it had objected to an extension of time for its filing and that the brief had been filed 3 days after the extended deadline ordered by the Board. OSM was granted a 4-day extension, from Sept. 8 to 12. OSM filed its brief on Sept. 10, not Sept. 15, as Rice asserts. (Rice's response to the motion for an extension was filed Sept. 15.) Rice's motion to strike is denied.

answer may disadvantage the applicant or inconvenience the Administrative Law Judge. As we said in *Addington, supra*, in these circumstances an Administrative Law Judge may take appropriate corrective action. If it would not disadvantage an applicant, the Administrative Law Judge could postpone the hearing, segregate the contents of the tardy answer that go beyond those of the notice of violation for a separate hearing, or order a more definite statement. But the relief fashioned must address the prejudice shown and may not, except in extreme circumstances, include vacating a notice of violation or cessation order. See *Badger Coal Co.*, 2 IBSMA 147, 87 I.D. 319 (1980).

Thus, it was inappropriate for the Administrative Law Judge to vacate the notice of violation and the cessation order in this case. That decision is reversed and the case is remanded to the Hearings Division.

WILL A. IRWIN

Chief Administrative Judge

ADMINISTRATIVE JUDGE
FRISHBERG CONCURRING:

I concur. The regulations provide no penalties or sanctions resulting from the failure to answer within 20 days. 43 CFR 4.1165-70. In construing apparently mandatory statutory language, the Solicitor of this Department concluded:

When no consequences attach to failure to comply, when no penalty is imposed for delay, and when there are no negative words restraining the doing of

the Act after the time specified * * * the courts will deem the statute directory merely. [Citing *Diamond Match Co. v. U.S.*, 181 F. Supp. 952 (Cust. Ct. 3rd Div. 1960); *Fort Worth National Corp. v. Federal Savings & Loan Insurance Corp.*, 469 F.2d 47 (5th Cir. 1972).]

Solicitor's Opinion, M-36876, 81 I.D. 316, 322 (1974).

As stated by the Fifth Circuit Court: "A statutory time period is not mandatory unless it both expressly requires an agency or public official to act within a particular time period *and* specifies a consequence for failure to comply with the provisions." (Citations omitted; italics added.) *Fort Worth, supra* at 58. On the same page the court quoted the following language in *Diamond Match, supra* at 958-59, with approval:

[a]s a general rule, a statute which provides a time for the performance of an official duty will be construed as directory so far as the time of performance is concerned, especially where the statute fixes the time for convenience or orderly procedure. * * * Statutes fixing the time for performance of acts will ordinarily be held directory where there are no negative words restraining the doing of the act after the time specified and no penalty is imposed for delay.

To the same effect, see *Usery v. Whittin Machine Works, Inc.*, 554 F.2d 498, 501 (1st Cir. 1977); *Marshall v. Local U.* 1974, *Int. Ass'n of Mach.*, 558 F.2d 1354, 1357 (9th Cir. 1977).¹

¹ But cf. *Tri-state Bancorp. v. Bd. of Gov. Fed. Res. Sys.*, 524 F.2d 562, 565 (7th Cir. 1975), where the court distinguished *Fort Worth* and held the statute to be mandatory because it provided a consequence for failure to act within the prescribed time.

February, 19, 1981

The cases referred to above are concerned with statutory language. The same rationale applies to the interpretation of regulatory language. In *Tagala v. Gorsuch*, 411 F.2d 589 (9th Cir. 1969), the court considered a peremptory dismissal by the Bureau of Land Management of this Department of a late-filed statement of reasons under the following regulatory language:

If the notice of appeal did not include a statement of the reasons for the appeal, such a statement *must be filed* * * * within 30 days after the notice of appeal was filed. Failure to file the statement of reasons within the time required will subject the appeal to summary dismissal. [Italics added.] ⁽²⁾

The court reversed and remanded to the Department for the exercise of its discretion as to whether the appeal should be dismissed or the late filing accepted, following the holding in *Pressentin v. Seaton*, 284 F.2d 195, 199 (D.C. Cir. 1960). There the court had before it the same language. It stated:

Certainly rules are made to be followed; that is the essence of the rule of law. But the rule now before us was not a peremptory rule. It did not unequivocally provide that upon a late filing of the statement the appeal would be dismissed. It said that under such circumstances the appeal would be "subject to" dismissal. It left the door wide open to a consideration of circumstances. The situation is a familiar one in the courts, where the timely filing of notices of ap-

peals is jurisdictional and cannot be extended or excused, but the timely filing of subsequent briefs is frequently excused, the time extended, and other measures taken to preserve the substance of the adjudicatory process.

In the case before us it is not a notice of appeal or an opening brief that was filed late, but an answer to an application for review. The language of 43 CFR 4.1165, providing that OSM "shall file an answer within 20 days" of service of such application, was designed to aid "orderly procedure." *Diamond Match, supra*. I do not believe the Secretary intended that it be used to thwart "the substance of the adjudicatory process." *Pressentin, supra*.

NEWTON FRISHBERG

Administrative Judge

CONCORD COAL CORP.

3 IBSMA 26

Decided February 19, 1981

Appeal by the Office of Surface Mining Reclamation and Enforcement (OSM) from the Aug. 4, 1980, summary decision of Administrative Law Judge Tom M. Allen in Docket No. CH 0-288-R that vacated OSM's enforcement action against Concord Coal Corp., on the ground that OSM failed to comply with 43 CFR 4.1165 (a).

Reversed and remanded.

1. Surface Mining Control and Reclamation Act of 1977: Administrative

² 43 CFR 1842.5-1 (1968). The same language appears in the present regulations at 43 CFR 4.412, except that appeals regarding public lands are now filed with the Board of Land Appeals instead of the Director of the Bureau of Land Management.

Procedure: Generally—Surface Mining Control and Reclamation Act of 1977: Hearings: Procedure

A determination by an Administrative Law Judge, *sua sponte*, that an application for review is not in compliance with 43 CFR 4.1164 relieves OSM of its obligation to answer the application, and, unless otherwise ordered, OSM is entitled to the full 20 days prescribed in 43 CFR 4.1165(a) to answer an amended application.

APPEARANCES: Harold Chambers, Esq., Office of the Field Solicitor, Charlestown, West Virginia, Mark Squillace, Esq., Jay Pendergrass, Esq., and Marcus P. McGraw, Esq., Assistant Solicitor for Enforcement, Division of Surface Mining, Office of the Solicitor, Washington, D.C., for the Office of Surface Mining Reclamation and Enforcement.

**OPINION BY THE INTERIOR
BOARD OF SURFACE
MINING AND RECLAMATION
APPEALS**

This appeal was brought by the Office of Surface Mining Reclamation and Enforcement (OSM) from the Aug. 4, 1980, decision of the Hearings Division that vacated Notice of Violation No. 80-I-107-42 on the ground that OSM abandoned its prosecutorial posture against Concord Coal Corp. (Concord) by failing to answer Concord's application for review of the notice within the 20-day period prescribed in 43 CFR 4.1165(a). We reverse that decision and remand the case for further proceedings.

Background

On June 20, 1980, Concord filed an application for review of Notice

of Violation No. 80-I-107-42 with the Hearings Division.¹ By a letter dated June 30, 1980, the Administrative Law Judge informed Concord and OSM that Concord's application was not in compliance with 43 CFR 4.1164. Concord was instructed to amend its application within 15 days to avoid dismissal of its case. No reference was made in the letter to either an obligation on the part of OSM to answer Concord's original application or to an acceptable time for an answer by OSM to any amended application by Concord.

On July 24, 1980, Concord filed an amended application for review and, on July 28, 1980, requested temporary relief. A summary decision vacating OSM's enforcement action against Concord was issued on Aug. 4, 1980, because OSM had failed to answer Concord's original application within 20 days of receiving it, in accordance with 43 CFR 4.1165(a). OSM filed an answer and a motion to dismiss Concord's applications for review and temporary relief on Aug. 5, 1980.

A notice of appeal from the summary decision was filed by OSM on Sept. 4, 1980. OSM submitted a brief in support of its appeal; Concord did not reply.

Discussion

[1] OSM was relieved of any ob-

¹ The notice was issued to Concord following an inspection of the Concord Nel mining operation in Logan County, West Virginia, by OSM pursuant to the Surface Mining Control and Reclamation Act of 1977 (Act of Aug. 3, 1977, 91 Stat. 445-532, 30 U.S.C. §§ 1201-1328 (Supp. II 1978)). The notice alleged a failure by Concord to transport and place spoil material in accordance with the Department's initial program regulations at 30 CFR 715.15 (a) (7), (a) (8), and (b) (7).

ligation to respond to Concord's original application for review when the Administrative Law Judge determined, *sua sponte*, that the application was not in compliance with 43 CFR 4.1164.² In accordance with 43 CFR 4.1168 it was incumbent upon the Administrative Law Judge, in conjunction with his granting Concord leave to amend its defective application, to instruct OSM when to answer an amended application.³ The lack of such instruction could be properly viewed by OSM as indicating that it would be allowed the full 20 days provided under 43 CFR 4.1165(a) to answer.

OSM received Concord's amended application on July 24, 1980; therefore, OSM should have been allowed to file its answer on or before Aug. 13, 1980. The Administrative Law Judge issued his summary decision on Aug. 4, 1980, prior to the running of this time limitation.⁴

For the foregoing reasons the summary decision below is reversed and the case is remanded. OSM's

² Letter of Administrative Law Judge Tom M. Allen, dated June 30, 1980, to Kenneth W. Matheny.

³ 43 CFR 4.1168(b) provides: "Upon receipt of an initial or amended application for review or *subsequent to granting leave to amend*, the administrative law judge shall issue an order setting a time for filing an amended answer if the judge determines that such an answer is appropriate." (*Italics added.*)

⁴ Apart from the more particular failure of the Administrative Law Judge in this case to allow OSM a full 20 days from service of the amended application to answer, as provided in 43 CFR 4.1165, it was improper for him to vacate enforcement action on the basis of a late answer by OSM absent, at least, a showing of prejudice to the opposing party to justify such action. See *William Francis Rice*, 3 IBSMA 17, 88 I.D. 269 (1981). There was no showing of prejudice to Concord in this case.

answer, its motion to dismiss Concord's application for temporary relief, and its motion for a summary decision shall be accepted as having been timely filed with the Hearings Division on Aug. 5, 1980. Further proceedings in this case shall be suspended, however, pending the Board's decision in *Concord Coal Co.*, IBSMA 81-5.

WILL A. IRWIN

Chief Administrative Judge

NEWTON FRISHBERG

Administrative Judge

MELVIN J. MIRKIN

Administrative Judge

HOLLAND LIVESTOCK RANCH AND JOHN J. CASEY

52 IBLA 326

Decided February 19, 1981

Appeal from a decision of Administrative Law Judge Dean F. Ratzman finding appellants liable for willful and repeated grazing trespasses and revoking certain of appellants' grazing privileges for a period of 8 years.

Affirmed.

1. Administrative Procedure: Burden of Proof—Administrative Procedure: Decisions—Administrative Procedure: Hearings—Evidence: Burden of Proof—Evidence: Sufficiency

After holding a hearing pursuant to the Administrative Procedure Act, an Administrative Law Judge may properly find that an individual has committed a graz-

ing trespass if that finding is in accordance with, and supported by, reliable, probative and substantial evidence.

Where the evidence as to specific trespass indicates that, of a number of cattle counted, some were located on intermingled private land, but there were no barriers, either natural or artificial, which would have prevented the cattle on private land from going onto the public land, it is proper to find that all cattle counted would tend to consume forage at a rate proportional to the ratio of forage available on private and public lands. The burden then shifts to the grazing license to rebut this presumption.

2. Grazing Permits and Licenses: Trespass—Trespass: Generally

In determining whether grazing trespasses are "willful," intent sufficient to establish willfulness may be shown by proof of facts which objectively show that the circumstances do not comport with the notion that the trespasser acted in good faith or innocent mistake, or that his or her conduct was so lacking in reasonableness or responsibility that it became reckless or negligent.

3. Administrative Procedure: Hearings—Evidence: Generally—Grazing Permits and Licenses: Hearings—Hearings

Settlement agreements compromising prior trespasses may be considered an admission of liability only where, by the terms of a settlement, liability is admitted. Where, however, liability has been initially determined in a Departmental adjudication, such a determination is properly considered in a subsequent hearing. As probative of the issue of "repeated" violations, absent a stipulated settlement which *expressly* vacates the factual determinations made in the prior adjudication.

APPEARANCES: Thomas L. Belautegui, Esq., Johnson, Belaustegui &

Robison, P.C., Reno, Nevada, for appellants; Burton J. Stanley, Esq., U.S. Department of the Interior, Office of the Regional Solicitor, Sacramento, California, for the Bureau of Land Management.

OPINION BY ADMINISTRATIVE JUDGE BURSKI

INTERIOR BOARD OF LAND APPEALS

This appeal arises from the decision of Administrative Law Judge Dean F. Ratzman, dated Feb. 14, 1980, directing Holland Livestock Ranch and John J. Casey to pay \$1,400 for willful and repeated trespasses, plus \$2,870.90 for impoundment costs, and revoking appellants' grazing privileges for a period of 8 years.¹

The decision below involves a number of trespasses in the Buffalo Hills Allotment, the Granite Mountain Fire Rehabilitation Closure Area of the Buffalo Hills Allotment, and the Wild Horse Closure Area of the Buffalo Hills Allotment. Appellants own, lease, or control areas of private land that intermingles with certain public lands.

The issues set out by appellants on appeal are as follows:

A. Whether the finding of trespass by the Administrative Law

¹ Holland Livestock Ranch is a co-partnership composed of three corporations: Bright-Holland Co., Maremont-Holland Co., and Nemeroff-Holland Co. John J. Casey owns a controlling interest in all three.

February 19, 1981

Judge was supported by substantial evidence in the record.

B. Whether the decision was erroneous as a matter of law.

C. Whether the evidence of record shows that willfulness was established in the record.

D. Whether reliance upon certain prior "trespasses" to establish "repeatedness" was proper.

The issues that are pertinent in our resolution of the case at bar will be discussed with respect to the findings and conclusions of the decision appealed from the pertinent arguments presented by the appellants in their briefs.

We adopt, in its entirety, Judge Ratzman's summary of facts as follows:

A stipulation entered into by the parties (Exhibit 1) covered a number of matters. In the stipulation it is agreed that the following brands and earmarks were registered to Holland Livestock and/or John J. Casey. A circle on the left rib and hip combined with an earmark consisting of a split left split right; combination TF brand on the left hip and a spade brand on the left hip and left rib both used in conjunction with an earmark consisting of a split right ear and a cropped left ear.

The stipulation describes activities of James G. Hansen, a BLM Range Technician, who counted 127 cattle within the Granite Mountain Fire Rehabilitation Closure Area on July 19, 1977. Of these cattle one cow had a circle brand on the left hip, five cows displayed a combination TF brand on the left hip, and 36 cows had a spade brand on the left hip. These cattle were either on public lands or private lands with unrestricted access to public lands in the closure area. In addition Mr. Hansen saw on August 23,

1977, a cow and a calf with spade brands on the left hip and eight cows and three calves with cropped left split right earmarks, all on public lands or private lands with unrestricted access to public lands. He also observed 106 cows, six bulls and 38 calves on August 23 and 24, 1977, but was unable to identify them.

Work by BLM employee Brad Hines described in the stipulation is as follows: He discovered 78 cows and five bulls with a spade brand on the left hip, and a cow with a combination TF brand on the left hip, on public lands or on private lands with unrestricted access to public lands on September 14, 1977. Forty unidentifiable cattle were also found.

The stipulation sets forth that P. Edward Ryan, a BLM Natural Resource Specialist, saw two cows with spade brands on the left hip and two cows with cropped left split right earmarks in the Granite Mountain Fire Rehabilitation Closure Area on January 17, 1978. The cattle were on public lands or on private lands with unrestricted access to public lands. On January 18, 1978, he found 39 cows and four bulls with a cropped left split right earmark and two cows with a spade brand on the left hip, in the Squaw Valley area and on the west side of the Smoke Creek Desert in the Buffalo Hills Planning Unit. They were on public lands or private lands with unrestricted access to public lands. Although 192 cattle were seen on January 17 and 18, 1978, Mr. Ryan was able to identify only 49 of them.

Mr. Ryan also found two cows with a spade brand on the left hip and 35 cows with cropped left split right earmarks in the Granite Mountain Fire Rehabilitation Area on January 25, 1978. On the next day he discovered a cow with a spade brand on the left hip and 20 cows with a cropped left split right earmark in the Squaw Valley and Smoke Creek Desert area. A total of 167 cattle were discovered on those days but only 58 were identified. All the cattle were on public lands

or private lands with unrestricted access to public lands in an area closed to grazing.

The next part of the stipulation states that Michael S. McClellan, a BLM Natural Resource Specialist, saw 13 cows with a spade brand on the left hip and 23 cows with a cropped left split right earmark on March 8, 1978, in the Buffalo Hills Allotment on public lands or on private lands with unlimited access to public lands. None of the cattle were ear tagged. On March 9, 1978, 250 head of cattle were observed in the Buffalo Hills Planning Unit. On that day Mr. McClellan could identify 44 cows having a spade brand on the left hip and six with cropped left split right earmarks. These cattle were found on public lands. No ear tags were found on these cattle as required by respondent's grazing license.

A memorandum, dated June 22, 1978, from Ron Hall, a BLM Natural Resource Specialist, was also admitted into evidence. Ex. 1-A. The events discussed in the memorandum relate to the impoundment of 74 cows, bulls and yearlings, and 15 calves on June 13, 1978, from public lands or private lands with unrestricted

access to public lands. A brand inspection was also made the following day June 14, 1978. A total of 123 cows, bulls and yearlings, and 24 calves were impounded on that day. Mr. Casey arrived on June 14 to claim all the animals. Notice was given to him not to place any untagged cattle above the Crutcher Canyon drift fence. The cattle were released to Mr. Casey and he drove them toward the Squaw Valley Ranch. The next day, June 15, 1978, BLM employees discovered 59 cattle (17 were untagged) immediately north of the Crutcher Canyon drift fence. On June 16, 1978, Mr. Casey was seen moving cattle toward the Crutcher Canyon drift fence.

As has been indicated, Exhibit 1 [-A] covers the actions of five BLM employees in finding and impounding Casey cattle in the period June 13 through June 15, 1978. An itemized list of the impoundment costs involved in this contest, totaled \$2,870.90 Ex. 1-B. An outline of the percentage of lands in Federal ownership in comparison to private ownership was also entered into the record. This outline disclosed the following percentages in the Closure Areas of the Buffalo Hills Allotment:

1. Summary of Acreage Carrying Capacity in the Granite Mountain Rehabilitation Closure Area.

Ownership	Acres	Percent of total	AUMs	Percent of total
Public Land-----	39, 120	85	3, 481	60
J. Casey Land (unfenced)----	7, 220	15	2, 311	40
	46, 340	100	5, 792	100

2. Summary of Acreage and Estimated Carrying Capacity in the "Horse" Closure Area.

Ownership	Acres*	Percent of total	Est. carrying capacity*	Percent of total
Public Land-----	159, 219	95	11, 387	96
Unfenced Private-----	9, 170	5	453	4
Total-----	168, 389	100	11, 840	100

* These figures exclude the playa of the Smoke Creek Desert.

February 19, 1981

Brad Hines, the Supervisory Range Conservationist for the BLM in the Sonoma-Gerlach Resource Area, testified he is familiar with the Buffalo Hills Planning Unit. Tr. 11. He identified grazing licenses issued to the respondent during 1977, 1978 and 1979. Ex. 6 and 7. There are three users in the Buffalo Hills Allotment. Tr. 13.

On July 15, 1977, Bob Neary and Brad Hines flew over the Closure Area and found 70 to 80 cattle in the burn Closure Area of the Buffalo Hills Allotment. A ground count was made on July 19, 1977 by James Hansen. Tr. 15. Another ground count was made on August 23, 1977. On September 14, 1977, Mr. Hines conducted a ground surveillance and identified 84 cattle with Mr. Casey's brands or earmarks in the Granite Mountain Fire Rehabilitation Area. Mr. Hansen made a ground count on August 23 and August 24, 1977 and identified 91 cattle in that area. Tr. 17.

A Notice of Trespass was sent to Mr. Casey by certified mail but was returned unclaimed. Ex. 8, Tr. 18. Mr. Casey's record address is 2905 South Virginia Street, Reno, Nevada.

Prior to January 17, 1978, an aerial survey disclosed there were 200 cattle in the closed areas of the allotment. Another ground count was made by Ed Ryan on January 25 and 26, 1978. Tr. 24. On April 26, 1978 a ground count was made, while on June 2, 1978 an aerial flight over the area was made. Tr. 25. A Trespass Notice was sent to Mr. Casey, January 16, 1978, but was returned unclaimed. Ex. 9.

A Notice of Closure of Federally Owned or Controlled Lands to Livestock Grazing (Ex. 10) was published in the Review-Miner, a weekly newspaper published in Lovelock, Nevada, in May 1978. The ban against grazing in the Horse Closure Area commenced on April 30, 1978. Mr. Hines personally informed Mr. Casey about the closure before it went into effect. Tr. 31. A certified letter notifying Mr. Casey of the closure was sent to him but was returned unclaimed. Ex. 11, Tr. 32.

On September 14, 1977, Mr. Hines met Jeanie Hunt, an employee of Mr. Casey, on the Granite Ranch when he was in the vicinity counting cattle. Tr. 33. Ms. Hunt informed Mr. Hines that there were no cattle north of the Granite Ranch. However, a subsequent count on the same day revealed there were 124 cattle belonging to Mr. Casey north of that ranch. Tr. 34.

With respect to alleged trespasses occurring in January, 1978, Mr. Hines made a phone call to Ms. Hunt on January 13, 1978 and told her that all livestock in the burn closure area were considered to be in trespass and that they should be removed. Tr. 35. On January 19, 1978, Mr. Casey contacted Mr. Hines and asked for a license to graze 200 cattle, which was the approximate number of cattle found in trespass. Mr. Casey was told where his cattle were and that any cattle in the burn closure area were in trespass. Mr. Hines refused to grant Mr. Casey's request. Tr. 35.

At a later meeting with Mr. Casey in Gerlach, Nevada, on June 6, 1978, Mr. Hines notified Mr. Casey that the cattle left on the range during a seven day period (the Bureau had agreed not to impound trespassing cattle in that period) were considered in willful trespass. Tr. 37. The explanation given by the latter for the continued trespasses was that he could not find any help to assist him in removing the cattle.

Mr. Chet Conard, District Manager of the BLM Winnemucca District, testified he received a phone call from Mr. Casey on June 12, 1978. At that time, Mr. Casey stated he had just rounded up approximately 300 head of livestock from the closed area and that there was no need to make further aerial inspections. Tr. 50. Mr. Conard informed Mr. Casey that the seven day extension granted to round up the trespassing cattle had expired. Tr. 50.

Dave Boyles, a horse wrangler with the BLM, was in the Granite Fire Rehabilitation Closure Area from June 6 through June 13, 1978. Tr. 56. He found cattle there at that time but neither Mr. Casey nor any of his employees were seen in the area. Tr. 57. While riding along the

Crutcher drift fence, Mr. Boyles found several gates open that allowed cattle to cross into the closed area. Tr. 60. Openings in parts of the fence were also found. He counted 54 head of cattle on June 8 and 9, and impounded an estimated total of 137 on June 13, 1978. Tr. 66. No evidence was found to indicate the additional cattle came through openings in the fence or through open gates that he inspected. Tr. 67.

Mr. Ron Hall, a Wild Horse Specialist with the BLM, was also in the Buffalo Hills Allotment on June 6 through 13, 1978. He identified 54 cattle with Casey brands and earmarks on June 8 and 9. Tr. 69. Neither Mr. Casey nor any of his employees were seen in the area removing cattle during that time. Mr. Casey signed a statement acknowledging that all the cattle impounded on June 13 and 14, 1978, belonged to him. Ex. 12, Tr. 70.

Michael Scott McClellan, a Natural Resource Specialist for the BLM, talked to Mr. Casey on March 8, 1978 at a location north of the Deep Hole Ranch. Cattle were seen scattered throughout the surrounding area. Mr. Casey admitted the cattle belonged to him. Tr. 73. The cattle were not eartagged, which violated a requirement in effect at that time. Mr. Casey stated he turned cattle out of Deep Hole Ranch himself because of muddy conditions at that ranch, and asserted that most of the land up to the Clear Creek Ranch belonged to him. Tr. 76. The land between the ranches is unfenced. Tr. 76. Mr. McClellan concluded that Casey cattle were in trespass and personally served Mr. Casey with a Trespass Notice on March 9, 1978. Ex. 13.

George Cramer, an employee of Mr. Casey during 1978, was not assigned responsibilities in controlling cattle in the closure area. Tr. 30. He moved cattle from Squaw Valley to above the Crutcher fence on two occasions. Tr. 40. The first time was around June 9, 1978. Tr. 31. Several days later he moved the same cattle. Tr. 32. Perhaps 100 head of cattle were moved a quarter of a mile above the fence the second time. Tr. 34. He be-

lieves the cattle could have returned through open gates along the fence. Mr. Casey worked with Mr. Cramer on both occasions when the cattle were moved.

On cross-examination, Mr. Cramer testified that Mr. Casey instructed him to keep the cattle above the Crutcher drift fence. Tr. 43. However, some cattle would stray down to the area below the fence. Mr. Cramer split his duty among several of the ranches belonging to Mr. Casey. Tr. 44. He would ride over to the burn closure area about once a month to search for cattle. The area was relatively empty of cattle. Every time he came back to the Fly Ranch he found the gates open. Tr. 66. He also helped repair and maintain fence at that property.

Mr. Cramer's estimate of the number of cattle moved on June 10, 1978, was 500. Tr. 49. He did not attempt to lock any of the gates that were left open, because he had concluded that it "would do no good." Tr. 53.

Mr. John J. Casey, the respondent, testified that his principal residence in 1978 was in Gerlach. Tr. 55. He uses his motel in Reno as a clearinghouse for all the mail he receives. He is there once a month. He stated that he has asked the BLM to send mail on an unrestricted basis so that his employees could pick it up. Tr. 56. He has had "manager problems," and conceded that in some instances the mail has not been properly handled. He believes that he was granted an extension of time to remove cattle which included June 13, 1978. Tr. 57. He testified that he was continuously in the closure area near Squaw Valley from June 6 to 13 removing cattle. Tr. 58. Mr. Casey contends he had ten persons help him remove cattle during that time. However, he could not provide the names of some, or state exactly how long each of them assisted him. Tr. 59. He believes that the cattle impounded after being found in the closure area walked back across the cattle guard into that area. He saw cattle doing so. Tr. 61. A gate along the Crutcher fence was found knocked down. Tr. 62.

Mr. Casey estimated he had 15 people, full or part-time, assist him in caring for his cattle in January through July, 1978. Tr. 67. They helped with branding and generally assisted in keeping the cattle in the proper areas. Tr. 69. They also shut any open gates that they found. Tr. 70. Mr. Casey believes he owns 10,000 acres of unfenced land in the Granite Mountain Fire Rehabilitation Closure Area and another 10,000 acres of unfenced land in the Horse Closure Area. Tr. 71.

During cross-examination, Mr. Casey said that he has had problems with horses breaking down gates and hunters leaving gates open. Tr. 76. He has known about these problems since 1970. In order to correct these problems, he has removed gates and replaced them with sections of fence. Tr. 76. When asked whether he was doing enough to keep cattle out of closed areas, Mr. Casey replied, "I sure am not." Tr. 79. He believes that to reduce trespassing he must remove 99 percent of the gates from the fences, and persuade the Bureau to remove wild horses. Tr. 79. He contends that he removed ten gates in 1977 and through June, 1978. In addition, he asserted that he has offered to place padlocks on the gates but did not receive cooperation from the Bureau. He will not install cattle guards because he believes they are ineffective. Tr. 80.

Mr. Casey blames his difficulties in receiving mail from the BLM in the last five or six years on a practice by the agency of transmitting it with instructions for restricted delivery. In his view the Bureau does not want him to receive some mail (he has asserted that the Bureau is trying to put him out of business). He also believes that at times his employees have been at fault in not picking up the mail. He denied that he has instructed his employees to reject certified mail from the BLM. On the other hand, several certified letters from the BLM, sent May, 1979, were exhibited to Mr. Casey at the hearing. Ex. R-2. These letters were sent unrestricted delivery

and both were returned unclaimed. Mr. Casey explained the reason for not receiving the certified letters on the need for someone to go to the post office to get them, and his understanding that "there's a lot of times when she can't get away." Tr. 90.

The respondent believes he removed 400 to 500 cattle from the closure areas in the period June 6 to 13, 1978. Tr. 92. He contends the majority were removed from his fields or other privately owned lands. He bases his opinion on estimates he has made using the odometer in a pickup truck. Tr. 94. Moreover, he maintains he was on the range every day from June 6 to 13, 1978, rounding up cattle. In regard to the cattle impounded on June 13, 1978, Mr. Casey stated they were all above the Crutcher drift fence prior to that day. He indicated that 147 cattle could negotiate the cattle guard in one hour. Tr. 96.

Mr. Casey is aware that there is unrestricted access to public lands from unfenced lands he owns. Tr. 97. He contends that he tries not to use his privately owned unfenced lands. Tr. 98. He does not obtain exchange of use permits because he believes they are issued on an inequitable basis. Although he moved cattle from Deep Hole to Clear Creek in March, 1978, the cattle were not ear-tagged nor was a trailing permit sought. Mr. Casey testified that it was not his intention to go on public land at that time. Tr. 101. His position is that he is unable to control cattle trespass because there are so many gates in the area. Despite this, he will try to keep cattle out of closed areas. Tr. 103. He stated that he has done everything within reason to keep cattle where they belong. Tr. 105.

According to Mr. Casey, the cattle enter the closed area because the feed is a lot better there. In addition, some of the cattle were raised in the closed area. Tr. 107. He conducts no regular program of fence inspection in the trespass areas. Before the closing of the areas he did not have problems with trespassing cattle. He

has 1300 head of cattle on the area under consideration at the present time. Tr. 109. He asserts that the only effective way of keeping cattle from finding their way through the fence and getting into the closure area would be to patrol the fence continuously. Tr. 110. The Crutcher drift fence is approximately 15 miles long. Mr. Casey believes locking the gates would be ineffective since people would cut down a part of the fence to get through. Tr. 111.

Andrew Fleming Jackson testified that at times three of his children worked on Mr. Casey's ranch from June 1977 to June 1978. He is aware of the gate problem on the Granite Mountain drift fence and the Crutcher Canyon drift fence. Tr. 115. Andrea Jackson testified she helped Mr. Casey move his cattle a couple of times in the period June 1977 to June 1978. Tr. 120. She and her brothers were not paid for their help. She has seen some of Mr. Casey's cattle in the burn area. Tr. 122.

A notice of Closure of the Granite Mountain Fire Rehabilitation Area, effective June 24, 1975, was published in the Review-Miner in Lovelock, Nevada, June, 1975. Ex. 4. This notice was also published in June, 1975 in the Nevada State Journal.

Grazing licenses issued to Mr. Casey in 1977 and 1978 were entered into the record. Ex. 6 and 7. These licenses state:

"Livestock use is not authorized in the area of the Granite Mountain Rehabilitation Project, described as that area south of the Granite Mountain Drift Fence.

* * * * *

"Only cattle bearing BLM issued ear tags will be authorized to graze on the Buffalo Hills Allotment after 3-1-78."

A Winnemucca Grazing District Advisory Board recommendation, concurred in by the BLM District Manager, placed maintenance responsibility for the Crutcher Canyon seasonal fence on Holland Livestock Ranch (owned by Mr. Casey) on April 30, 1968. Ex. 22d.

On appeal, appellants argue that "[i]n all prior proceedings between the parties, whenever a trespass has been found, it has been based upon direct evidence of actual trespass. In this proceeding, however, the Government seeks to establish the alleged trespass solely upon the *Access Theory*." Appellants contend that a presumption of trespass is not applicable in the instant case.

[1] Appellants misapprehend the nature and function of what they term the "access theory." The access theory is not a rule of positive law which requires a finding of trespass from the mere recitation that the grazing animals had "unrestricted access to" public lands. Rather, it is a rebuttable presumption which is drawn after the fact of unrestricted access is shown.

In *Home Insurance Co. v. Weide*, 78 U.S. (11 Wall.) 438, 441 (1870), the United States Supreme Court defined a presumption to be "an inference as to the existence of a fact not actually known, arising from its usual connection with another which is known." As such, presumptions "place upon the adverse party the burden of offering further evidence in the sense that a verdict will be directed against him if he does not, but they do not affect the ultimate burden of proof, as to the preponderance of the evidence required." *Sowizral v. Hughes*, 333 F.2d 829, 833 (3d Cir. 1964) quoting *Prosser on Torts*, § 41, at 197 (2d ed. 1955).

Thus, "creation of a presumption is inevitably designed to affect the

burden of proof by shifting it from the party possessed of the procedural device to his adversary." *Brown v. Oklahoma Transportation Co.*, 588 P.2d 595, 601 (Okla. App. 1978). The effect of this shift is that "if proof of the basic facts are introduced into evidence, the presumed fact is also taken to be proved in the absence of evidence to the contrary." *State v. Jones*, 88 N.M. 107, 537 P.2d 1006 (1975). *Accord*, *Connizzo v. General American Life Ins. Co.*, 520 S.W.2d 661, 665 (Mo. App. 1975).

The presumption which arises from the presence of cattle on intermixed Federal and private lands is premised on the realization that "[a]s the boundaries between the Federal Range and private lands [are] of a legal rather than a physical nature it strains the credibility to believe that the animals grazing would respect the same." *Midland Livestock Co.*, 10 IBLA 389, 402 (1973). It is common knowledge that an unrestrained hungry cow will migrate to an area where forage is available. *See Alton Morrell and Sons*, 72 I.D. 100 (1965).

We reject appellant's assertion that the presumption herein is a substitute for actual factfinding, where "substantial" evidence of a reliable nature is required. The stipulation agreed to in Exhibit 1 sets out the facts and brings this case clearly within the scope of the presumption as delineated in *Bureau of Land Management v. Babcock*, 32 IBLA 174, 183-84, 84 I.D.

475, 479-80 (1977). The Board noted in *Babcock*, *supra*, that:

Appellant's land is included in an allotment with federal land. Within the allotment, no physical barriers separate the private land from the federal land. In the absence of any effective restraint, appellant's cattle were free to graze throughout the allotment. In the absence of evidence to the contrary, as we indicated, it is therefore reasonable to conclude that of the total forage consumed by appellant's cattle, federal forage comprised the same percentage as it comprised of the total forage available in the allotment, i.e., 33 percent.

32 IBLA at 184, 84 I.D. at 480.

This same presumption has been used to calculate damages in other grazing trespass cases involving allotments with mixed Federal and private lands. *See, e.g., Nick Chournos*, A-29040 (Nov. 6, 1962); *J. Leonard Neal*, 66 I.D. 215 (1959).

Appellants assert that the Government's reference to the decision in *Holland Livestock Ranch v. United States*, United States District Court, District of Nevada, Order and Summary Judgment, Civil No. R-79-78 BRT, Aug. 7, 1979, is inaccurate to the extent that it suggests affirmance of the "access" theory of trespass.

The District Court in *Holland Livestock Ranch v. United States*, *supra*, affirmed the "access theory of trespass" when it granted order and summary judgment for the Government. The order stated that:

The court having read and considered the administrative record lodged with the court, the testimony taken at the time of the hearing on the preliminary injunction and the memoranda of points and

Authority submitted by the parties here-to and good cause appearing therefore.

* * * * *

It is Further ordered and adjudged that Defendants motion for Summary Judgment be and the same is hereby granted.

It is well settled that a motion for Summary Judgment lies whenever there is no genuine issue as to any material fact. It may be made on the pleadings or the record or it may be supported by affidavits. The motion strikes at the heart of the claim. Clearly, if the decision below is premised on an erroneous theory of law, the decision will be set aside. By the grant of summary judgment in *Holland Livestock Ranch v. United States, supra*, the Court not only affirmed the result of the prior Board decision in *Bureau of Land Management v. Holland Livestock Ranch*, 39 IBLA 272, 86 I.D. 133 (1979), it also affirmed, perforce of logic, the legal theory upon which the Board's decision was based. That legal theory included the presumption of trespass arising from unrestricted access.

The stipulation which was entered into evidence, as well as the testimony of the BLM employees, clearly established a basis upon which to utilize this presumption. It then became appellants' obligation to show either that the underlying predicate of the presumption (*i.e.*, unrestricted access) did not, in fact, exist, or alternatively that other factors, such as the presence or absence of springs or forage, or supervision by appellant or his em-

ployees of the cattle's movements *rebutted* the presumption.

We note that, on appeal, appellants argue that this case is different from the other cases previously decided by the Board which involved the access presumption. Thus, they argue that the forage was superior on the private lands, that the greater bulk of the available water was on private lands, and that fences impaired access to Federal lands. Accordingly, they contend that any presumption which may arise was effectively overcome by their testimony and evidentiary submissions. We do not agree.

Concerning forage, for example, Exhibit 3 indicates that appellants' forage was 40 percent of the total in the Granite Mountain Fire Rehabilitation Closure Area and 4 percent of the total in the Buffalo Hills Horse Closure Area. These figures only include the carrying capacity of appellants' unfenced lands, a point to which we will return later. Suffice it to note that, while an insignificant amount of available forage on the Federal range would certainly undercut any presumption based upon unimpeded access, percentages of 60 and 96, respectively, are clearly above any level where this concern might be deemed relevant. Further, it is important to point out that the percentage of forage available on private lands is utilized in computing the amount of trespass assessed.

With respect to water sources, we note that while Casey did testify that 95 percent of the waters in the Squaw Valley area were located on

February 19, 1981

his private lands, this answer was stricken by Judge Ratzman (2 Tr. 72-73). Moreover, Orthophoto Quad maps submitted after the close of the hearing indicate that over the entire two closure areas, 59 percent of the water resources are located on public lands, 34 percent are on appellants' lands and 7 percent are on other privately held lands. Admittedly, these figures suffer from two infirmities. They are not site specific to the areas of the trespasses and they do not relate to the quantity of available water at any specific source. Nevertheless, it was appellants' responsibility to introduce evidence that would establish the existence of water sources such as would overcome the presumption of trespass. This they did not do.²

Finally, as regards the question of access to the Federal range from fenced privately held land, appellant is apparently arguing that the cattle which were trespassed were actually located on privately fenced lands in which the gates were either open or destroyed or where the fence itself was cut. The Government strongly disputes this contention and argues that none of the cattle trespassed were located within the privately fenced areas. Our reading of the record supports the Government's view.

The testimony relating to open gates and cut fences related not only to the fences located on appellants' privately owned lands, it clearly

also referred to the Crutcher Canyon Drift Fence and the Granite Mountain Drift Fence (1 Tr. 60-65, 67; 2 Tr. 26, 33-34, 48, 50). The stipulation entered as Exhibit 1 repeatedly used the expression, "These cows [or cattle] were observed on public lands or private lands with unrestricted access to public lands in an area closed to grazing." Had the cattle been located on fenced lands, even fenced lands with open gates or cut segments, the cattle would not have *unrestricted* access to Federal lands. At the beginning of the first hearing counsel attempted to define precisely what was meant by the stipulation. The following colloquy ensued:

MR. LEE: Your Honor, we have agreed to this stipulation, and we have agreed to clarify for the record specifically what certain language means so that there is no confusion from your standpoint, or perhaps later at an appellate level, as to what is intended specifically by the language that basically concludes each paragraph, starting with the trespasses. And I think the first time it appears is on page 2, commencing at line 5, where it states, "These cattle were observed on public lands or private lands with unrestricted access to public lands in an area closed to grazing."

Now, that phrase is repeated throughout the stipulation by means of identifying the location where the cattle were observed. It is our intention that this—regardless of what the syntax may be or the phrasing—that the language specifically is to mean that the cattle were observed in the general area described, which is comprised of or consists of both public and private lands, and that no attempt was made to determine whether the cattle were on public or private lands; but that where the cattle were lo-

² Orthophoto Quad maps 2 and 6, however, do indicate the presence of a number of water sources located on Federal lands within the Squaw Valley area.

cated in that area, they had unrestricted access to public lands that were within the closure area. Is that correct, Burt?

MR. STANLEY: That's correct. In further clarification, *the language here is perhaps to cover the factual situation set forth in the Babcock case and in IBLA's decision in the John Casey case, the latest one.*

JUDGE RATZMAN: This was the last February—

MR. STANLEY: That's correct. I'll be putting that into evidence, Your Honor. Which basically said that the access theory of trespass is a viable one.

JUDGE RATZMAN: This was Judge Sweitzer and Judge Luoma being considered at the same time by the Board.

MR. STANLEY: That's correct.

JUDGE RATZMAN: Yes. I'm familiar with that. Is there anything other than that respecting Exhibit 1 and the attachments?

Exhibit 1 is received in evidence pursuant to stipulation of the counsel in this case. And the receipt will be subject to the reservation expressed by Mr. Lee, which in effect is a clarification of the general area and a relation to definitive statements made about the law, which will be applied to such areas. And it will be a matter for me to look at the cases and for counsel to address the matter in briefs, as far as how it would be applied in the case. [*Italics supplied.*]

(1 Tr. 5-6).

The two cases to which the Government's attorney adverted are *Bureau of Land Management v. Babcock*, *supra*, and *Bureau of Land Management v. Holland Livestock Ranch*, *supra*. Both of these cases involved situations in which the trespassing cattle were not on fenced private lands. See *Bureau of Land Management v. Babcock*, *supra* at 184, 84 I.D. at 480; *Bureau of Land Management v. Holland Livestock Ranch*, *supra*

at 282-86, 86 I.D. at 138-40. Thus, it seems clear that the Government was not attempting to trespass animals which were either on appellants' private fenced lands or north of the two drift fences, even where the fences had open gates or missing sections.

Moreover, if the Government was attempting to trespass such animals, Exhibit 3, which computes the relative percentages of the forage available on both the Federal and private lands would have been drafted to include the forage available on the privately fenced areas, in determining the proportional rate that the forage could be presumed to have been consumed by the trespassing cattle. Exhibit 3 actually expressly excluded the privately owned lands that were fenced from its computational base.

The discussions at the two hearings concerning the condition of the various fences were not designed to justify the trespassing of cattle which were observed within fenced lands. Rather, there were attempts to explain how the cattle came to be on the Federal range or on unfenced private lands. Thus, we find that the question of the condition of the fences is not relevant herein to the applicability of the presumption which arises from unrestricted access.

We find, therefore, that the evidence adduced at the hearing clearly supports Judge Ratzman's determination that the trespasses did in fact occur.

[2] We must now examine the nature of the trespasses. Appellants

argue that the "willfulness" of the trespasses was not established in this case. The quantum and nature of the evidence required as a prerequisite to a finding of "willfulness" has been examined in a number of prior decisions.

In determining whether grazing trespasses are willful, intent sufficient to establish willfulness may be shown by proof of facts which objectively show that the circumstances do not comport with the notion that the trespasser acted in good faith or innocent mistake, or that a licensee's conduct was so lacking in reasonableness or responsibility that it became reckless or negligent. *Herrera v. Bureau of Land Management*, 38 IBLA 262, 267 (1978); *Eldon Brinkerhoff*, 24 IBLA 324, 337, 83 I.D. 185, 190, (1976). *J. Leonard Neal, supra* at 215.

Where the number of cattle grazing on the Federal range exceeds the number allowed by license and such excess is attributable solely to a permittee's lack of control over his cattle and lack of diligence in taking corrective action after being informed by the Bureau of Land Management that the excess existed, a finding of willful trespass is warranted. *Cesar and Robert Siard*, 26 IBLA 29 (1976). The repetitive nature of grazing trespasses coupled with a negligent failure of permittee to take corrective action supports a finding of willful trespass. *Calvin C. Johnson*, 35 IBLA 306, 315 (1978).

Appellants argue that both Casey and his former employee Cramer testified to difficulties in keeping the gates closed and to their attempts to restrain appellants' cattle from entering into the closure areas. There is, indeed, much testimony by Casey relating his problems and attempts to rectify them. We note, however, that Judge Ratzman, who had heard all of the evidence, clearly did not believe Casey's testimony. Thus, Judge Ratzman declared:

I find that the respondent's trespasses were willful and repeated over a long period of time. Beginning in July of 1977 and continuing through June of 1978, cattle owned by Mr. Casey were in trespass time after time in areas closed to grazing. Large numbers, at times in the hundreds, were in trespass on the Federal Range. Mr. Casey knew or should have known of the problem, but made no diligent efforts to control his cattle. His cavalier attitude toward his obligations under grazing licenses is exemplified by his failure to establish a reliable method for the receipt of notices transmitted by the Bureau. Despite the shell and pea game that Mr. Casey plays with certified mail, it is clear that in some instances he received information about closed areas and particular trespasses. He was personally notified that there were cattle in trespass in a period beginning June 6, 1978 on a designated closure area. Mr. Casey did not promptly remove all the cattle although he was given an extension of time to do so. Subsequently, a large number of his cattle were impounded. At no time did any BLM personnel during the week after June 6, 1978, see Mr. Casey or any of his employees rounding up and removing cattle from the closure area. If his testimony that he removed four or five hundred cattle (or more) in the second week of

June, 1978, is to be believed, this only magnifies the extent of his trespass. His inability to keep cattle out of the closed areas, and his heavy reliance on volunteer or part-time help indicates the lack of a strong or sustained interest in prevention of trespasses.

Mr. Casey's uncooperative attitude is also exemplified by an occurrence on March 8, 1978. It was discovered at that time he was moving cattle from the Deep Hole Ranch without a trailing permit, and the cattle were not ear-tagged as required by his grazing license.

It is obvious that measures taken by Mr. Casey to remove his cattle from closed areas were ineffective since his own employee, Mr. Cramer, acknowledged that cattle would return to those areas within several days. Mr. Cramer was assigned to several ranches without fulltime assistance from other employees. I must conclude that no real effort was made to maintain control over the respondent's large herd of cattle. Although he was given the opportunity to submit tax records or other documents to establish the nature and duration of employment of persons who were hired to work on his ranch properties during the period in question, Mr. Casey elected to rely upon his general assertions.

The respondent's explanation for the repeated and significant trespasses was that there were a number of open gates on the Crutcher Canyon Drift Fence which allowed cattle to re-enter closed areas. An attempt to shift the blame for any cattle trespasses onto others who may have left gates open must be disregarded. *John E. Walton*, 8 IBLA 237, 238 (1972). He contended also that cattle guards which have been installed do not effectively keep cattle out. However, Mr. Casey has the responsibility of maintaining the Crutcher Canyon drift fence. His attitude seems to be that it is impossible to prevent the trespasses, although he acknowledged that patrolling along the fence would reduce the number of trespassing cattle.

In *Bureau of Land Management v. Holland Livestock Ranch et al.*, 39 IBLA 272, 297 the Interior Board of Land Appeals set forth the history of respondent's trespasses, quoting a portion of a decision of the Chief Administrative Law Judge:

"On January 13, 1956, Respondent's grazing license in the Nevada Grazing District No. 3 was suspended for 3 months. On November 23, 1960, Respondent's licenses were again revoked and future licenses were denied to Respondent in that district. A continuous series of 14 trespass citations and warning letters issued to Respondent for the Susanville District, beginning with 1960 and extending into 1968, were noted and itemized in a decision issued on September 4, 1969. Nine trespass citations, issued in 1969 for the Susanville District, resulted in a suspension of Respondent's grazing privileges for 5 years. Thirty-five additional trespass citations resulted in additional show cause orders which were either closed through offer of settlement or by a November 17, 1971, agreement between Complainant and Respondent. Three trespass citations, issued to Respondent in December 1972 and January 1973, were closed through a monetary settlement at twice the commercial rate. Four trespass citations resulted in a decision issued on January 7, 1974, which asserted monetary settlement against Respondent at twice the commercial rate.

"Nineteen trespass citations were issued from January 17, 1975, through March 19, 1976 in the Susanville and Winnemucca Districts, and one impoundment action was initiated in the Winnemucca District which resulted in a hearing on May 4, 1976.

"Most of the above history is reflected in documents incorporated in the case record in this proceeding (Exhibits 14-21). The Administrative Law Judges in earlier decisions concluded that Mr. Casey failed to control his cattle, was negligent, or had proclivity to ignore range rules not comporting with his personal concepts. I

concluded that he is an incorrigible trespasser upon the public lands."

(Decision at 15-17).

This Board has often noted the great deference which is accorded findings of Administrative Law Judges premised on conflicting testimony. *See, e.g., United States v. Melluzzo*, 32 IBLA 46 (1977), *aff'd, Melluzzo v. Andrus*, No. CIV-79-28-PHX-CAM (D. Ariz. May 20, 1980); *State Director for Utah v. Dunham*, 3 IBLA 155, 78 I.D. 272 (1971). This deference is based on the realization that the trier of fact, who presides over a hearing, has an opportunity to observe the witnesses and is in the best position to judge the weight to be accorded conflicting testimony. *United States v. Chartrand*, 11 IBLA 194, 212, 80 I.D. 408, 417-18 (1973). As was noted long ago in *Creamer v. Bivert*, 113 S.W. 1118, 1120-21 (Mo. 1908):

[O]ne witness may give testimony that reads in print, here, as if falling from the lips of an angel of light, and yet not a soul who heard it, nisi, believed a word of it; and another witness may testify so that it reads brokenly and obscurely in print, and yet there was that about the witness that carried conviction of truth to every soul who heard him testify.

See also First Federal Savings and Loan Ass'n of Fayetteville v. Federal Home Loan Bank Bd., 426 F. Supp. 454 (W.D. Ark. 1977); *Broadcast Music, Inc. v. Havana Madrid Restaurant Corp.*, 175 F.2d 77, 80 (2d Cir. 1949).

Intrinsic to Judge Ratzman's finding of willfulness was his rejection

of Casey's testimony. His findings are amply supported by the record and we will not disturb them here.

[3] Appellants also contend that the Judge erred in finding that the trespasses were "repeated" in nature. Appellants argue alternately that some of the trespasses were too remote in time to be relevant, others (approximately 42) were closed through settlement and compromise and may not properly be considered, and still others have not been finally adjudicated by Federal courts (although final Departmental decisions have issued on these trespasses).

With respect to the 1956 suspension, we think appellants' objection that such occurrences were too remote to be utilized is well taken. We have greater difficulty with the appellants' argument relating to the use of settlement and compromises reached in prior proceedings. Appellants argue that "[w]hatever the terms of those compromises Casey respectfully argues that they are irrelevant and inadmissible in that, the terms being unknown, the risk is too great that Casey will be penalized for conduct which may in fact not warrant punishment" ("Statement of Reasons at 21).

We note that Rule 408 of the Federal Rules of Evidence states:

Evidence of (1) furnishing or offering or promising to furnish, or (2) accepting or offering or promising to accept, a valuable consideration in compromising or attempting to compromise a claim which was disputed as to either validity or amount, is not admissible to prove lia-

bility for or invalidity of the claim or its amount. Evidence of conduct or statements made in compromise negotiations is likewise not admissible.

The notes of the Advisory Committee on Proposed Rules make it plain that this rule encompasses completed settlements as well as offers and negotiations:

While the rule is ordinarily phrased in terms of offers of compromise, it is apparent that a similar attitude must be taken with respect to completed compromises when offered against a party thereto. This latter situation will not, of course, ordinarily occur except when a party to the present litigation has compromised with a third person.

Fed. R. Evid. 408 Note (1976).

Clearly, therefore, the submission of compromise agreements for proof of liability is prohibited in Federal courts. Courts have long noted, however, the general rule that administrative agencies are not bound by the strict rules of evidence. Thus, hearsay evidence is generally admissible in administrative adjudication. *See, e.g., Martin-Mendoza v. Immigration and Naturalization Service*, 499 F.2d 918 (9th Cir. 1974); *Brown v. Gamage*, 377 F.2d 154 (D.C. Cir. 1967).

We do not perceive the general exception recognized by the courts as providing carte blanche to consider any or all evidence that an agency may desire. Rather, we believe the proper test is one which takes into consideration the policy justifications implicit in any rule and applies them given the specific needs and concerns of the agency.

The rationale for the exclusion of offers of settlement (and presump-

tively the settlements themselves) as manifested in Rule 408 rests in the public policy favoring private resolution of disputes and thus avoidance of litigation. *See Overseas Motors, Inc. v. Import Motors Limited, Inc.*, 375 F. Supp. 499, 536-37 (E.D. Mich. 1974). Moreover, one must recognize that often settlements are merely an indication "that peace was bought." *Shipley v. Pittsburgh and Lake Erie R. Co.*, 83 F.Supp. 722, 762 (D. Pa. 1949).

Thus, the policy is one designed to increase the likelihood of amicable settlement of dispute prior to a resort to litigation, be it administrative or judicial. Taking this into consideration, we hold that all evidence relating to unsuccessful offers or negotiations aimed at achieving settlement must be excluded from consideration in agency adjudications. *Accord, Sternberger v. United States*, 401 F.2d 1012, 1017-18 (Ct. Cl. 1968); *Cesar and Robert Siard, supra* at 35.

We are less sanguine of the efficacy of an iron-clad exclusionary rule, however, when we turn to the question of the exclusion of settlement agreements themselves. Questions relating to the exclusion of consummated settlement agreements have generally arisen in the context of an attempt by a third party to introduce proof of a settlement between two other individuals in order to establish the liability of one of the parties signatory to the settlement. Courts have uniformly rejected these attempts. *See, e.g., Jackson v. Shell Oil Co.*, 401 F.2d

February 19, 1981

639 (6th Cir. 1968); *Bratt v. Western Air Lines*, 169 F.2d 214 (10th Cir.), cert. denied, 335 U.S. 886 (1948). It seems obvious that, in any situation involving a multiplicity of parties, the admissibility of actual settlement agreements would work to virtually preclude individual settlements among the various participants. Exclusion in such situations clearly serves the purpose of facilitating settlement of disputes.

The situation which arises in grazing matters, however, partakes of differing considerations. As we have already noted, the past history of a grazing licensee or permittee is of critical importance in determining the permissible level of sanctions imposed for various violations, since a prerequisite to a revocation or a suspension of significant privileges for a period of years is a finding that the trespasses were both willful and repeated. See *Eldon Brinkeroff*, supra at 337, 83 I.D. at 190; *Eldon L. Smith*, A-30944 (Oct. 15, 1968). Total exclusion of all settlement agreements might well result in the refusal of BLM to enter into such arrangements, and thus work the result of actually inhibiting settlement agreements.

As an example, in any specific case BLM might initially determine that a trespass violation was willful. Under 43 CFR 4150.3(a)(2), the grazing licensee would be liable for twice the value of the forage consumed. The parties might subse-

quently agree that the willfulness of the trespass may not have been so clear. Accordingly, the parties would agree to settle the trespass as "nonwillful," the penalty for which is assessed only at the commercial value of the forage. See 43 CFR 4150.3(a)(1). If, however, the mere fact of settlement would preclude BLM from ever utilizing this trespass in the future to show a repeated course of conduct, BLM might well refuse to settle all but the most minor of offenses, and instead proceed to trial.

We agree that the mere fact that a settlement was reached does not, ipso facto, constitute an admission of culpability on the part of the licensee. But we do believe that the documents of settlement are properly admitted to determine the nature of the agreement. Thus, to the extent that an agreement expressly admits liability it is properly considered as probative of the "repeated" nature of subsequent violations. On the other hand, to the extent that the documents expressly deny liability, they may not be utilized as probative of the issue of "repeated" violations.

Applying this formula to the case before us, we find that, to the extent that Judge Ratzman considered the dismissal of the suits filed by the Government in *United States v. John J. Casey*, Civ. No. S 2171 (D. Cal.) and *United States v. John J. Casey*, Civ. No. LV 1713 (D. Nev.) as an admission of liability such action was erroneous. The stipulated consent decree expressly disclaimed

any admission of liability. See Exhibit 18A. However, to the extent that the stipulation entered into by appellants and the Government on Nov. 17, 1971, and subsequent action by then Hearing Examiner Graydon Holt merely altered the penalty assessed in Judge Holt's decision in *Holland Livestock Co.*, California 2-69-1 (SC), his findings of trespass represent a final administrative determination independent of any subsequent settlement arrangement. See Exhibits 17 and 18.

Appellants' attempt to exclude such factual determinations in *Holland Livestock Co.*, California 2-69-1(SC), and in other similar cases is of no avail. The stipulation into which the parties entered could have expressly nullified Judge Holt's findings of trespass. The stipulation clearly did not do so. Moreover, appellants' argument, if carried to its logical conclusion, would compel the exclusion of trespass assessments even where they had been affirmed by a Federal court of appeals and subsequently paid in full. Under appellants' theory, such assessments could not be used as evidence in a subsequent hearing, the reason being that an appellant could always argue that it had "settled" the matter, rather than incur the expense of filing a petition for certiorari with the Supreme Court. We reject such a view. We hold, therefore, that decisions of the Department which become final either by their rendition by this Board or by a failure of appeal from an adverse decision below, unless they are subsequently reversed or vacated, are properly

considered in determining whether repeated trespasses have occurred.

Finally, appellants' argument that it is improper to use decisions of this Board which are on appeal in determining the question of the repeated nature of trespasses must similarly be rejected. Decisions of this Board are final for the Department, 43 CFR 4.1, and fully effective upon their issuance. We recognize that it is always possible that in subsequent judicial review any decision of the Board may be overruled. But until that eventuality occurs, any decision of this Board is presumptively valid. It is true that, should the Board rely on factual findings which are subsequently nullified, subsequent decisions premised on such earlier findings may, themselves, become vulnerable. Nevertheless, the idea that the Board may not give cognizance to its own decisions, on the mere possibility that they may be reversed at some time in the near or distant future, is hereby expressly rejected.

In any event, we find that the evidence adduced in this record before us of the trespasses occurring in 1977 and 1978, would, by itself, support findings of both "willfulness" and "repeatedness."

Judge Ratzman imposed damages of \$1,400 for forage consumed, plus \$2,870.90 for impoundment costs, and revoked appellants' grazing privileges which were attached to the Fly Ranch, Hot Spring Field, Deep Hole Ranch, Great Boiling Springs, Squaw Valley Ranch, Parker Properties, Granite Ranch, Finley Ranch, and Clear Ranch, for

February 19, 1981

a period of 8 years. The evidence in this record clearly supports the assessment of both the damages and impoundment costs. With respect to the suspension of grazing privileges, we are not unmindful of the severity of this penalty. Nevertheless, we must agree with Judge Ratzman that appellants' willful and repeated violation of the grazing laws and regulations have indicated that no lesser action will work a reformation of appellants' operations on the Federal range. The revocation is affirmed in all respects.

Accordingly, pursuant to the authority delegated to the Board of Land Appeals by the Secretary of the Interior, 43 CFR 4.1, the decision appealed from is affirmed for the reasons stated herein.

APPEAL OF SYSTEMS TECHNOLOGY ASSOCIATES, INC.

IBCA-1108-4-76

Decided *February 19, 1981*

Contract No. 68-01-2782, Environmental Protection Agency.

Dismissed.

1. Contracts: Construction and Operation: Modification of Contracts: Duress

Where a termination settlement agreement was reached about 14 months after a decision of the Board in favor of appellant and the facts show that appellant was responsible for almost a year of the delay for refusal to allow Government auditors full access to the contract records, and the agreement was signed by appellant's president in an amount in excess of the amount authorized by appellant's board of directors, the Board finds that appellant failed to show that it entered the agreement because of duress on behalf of the Government.

APPEARANCES: Mr. Edward F. Canfield, Attorney at Law, Casey, Scott & Canfield, Washington, D.C., for Appellant; Mr. Donnell L. Nantkes, Government Counsel, Washington, D.C., for the Government.

OPINION BY
ADMINISTRATIVE
JUDGE LYNCH

INTERIOR BOARD OF CONTRACT APPEALS

In our decision dated Jan. 19, 1978, the appeal from a termination for default was sustained. We found that (1) the Government had frustrated performance by failing to timely buy or extend the lease on computers required for performance, (2) the Government had waived to original delivery schedule, and failed to show that the new schedule established was reasonable under the circumstances then existing, (3) modification No. 5 to the contract was a change order requiring equitable adjustments in sched-

ule and price, and (4) the contract was improperly terminated for default. The contract did not contain an applicable termination for convenience clause, but was remanded for an appropriate equitable adjustment for the changes and "to compensate for * * * [the] termination" under the second sentence of paragraph 11(e) of the default clause.

On Mar. 16, 1979, appellant's president and the contracting officer executed modification No. 15 (AX-66), which authorized the additional payment to appellant of \$1,200,639 and stating that this amount "shall represent an accord and satisfaction with respect to any and all claims either party ever had, has or might have arising under or in conjunction with contract No. 68-01-2782, all modifications thereto and the Interior Board of Contract Appeals decision (IBCA-1108-4-76) dated January 19, 1978." On June 11, 1979, appellant filed this appeal asking that the settlement of all claims dated Mar. 16, 1979, be disregarded on the grounds it was procured by duress, coercion and such arbitrary actions as to be tantamount to fraud and for the Board to determine the amounts properly due appellant. A hearing was held on Oct. 23 and 24, 1979, limited to the issue of whether there exists a binding agreement between the parties on the claims presented in the appeal.

Background

After the issuance of the Board decision sustaining the appeal on

Jan. 19, 1978, appellant sent a telegram on Jan. 30, 1978, to the administrator of the Environmental Protection Agency (EPA), stating that no action had been taken to implement the decision to date (AX-1). An undated response was received by appellant on Mar. 3, 1978, from the director of Contracts Management Division advising that actions had been taken by the contracting officer to schedule and hold a meeting on Feb. 14, 1978, regarding the settlement and that every effort would be made to effect timely settlement upon receipt of appellant's total cost basis termination proposal (AX-2). The notes of the meeting on Feb. 14, 1978, indicate that appellant suggested that the settlement proposal be submitted on a total cost basis (GX-A). By letter dated Mar. 29, 1978, the contracting officer advised that timely settlement cannot be effected without receipt of a termination proposal (AX-6). Concurrently, on Mar. 23, 1978, appellant wrote the Government indicating that proposed constructive change modifications would be submitted shortly (GX-D), and the Government responded on Apr. 5, 1978, to the effect that such claims would be considered by the contracting officer when and if submitted (AX-7).

Under date of May 8, 1978, appellant submitted a termination settlement proposal claiming \$1,330,713 for the completed work and work in process under the termination, \$131,638 for interest, \$1,554,000 for constructive changes compensation, and \$37,500 for settlement costs

February 19, 1981

(AX-8). AX-9 contains the minutes of a meeting of the parties on June 19, 1978, which discloses a basic disagreement over whether the total cost basis or another basis was more appropriate for determining the amounts due appellant. By letter dated June 23, 1978, the contracting officer confirmed the position of the Government that the settlement proposal was required to be on a total cost basis, and advised that a revised settlement proposal would be needed and that the Government auditor required full access to all pertinent contract cost records which had been denied on June 5, 1978 (AX-10).

Appellant responded by letter dated July 6, 1978, pointing out that the Board's decision required an equitable adjustment pursuant to the second sentence of paragraph 11(e) of the default clause, and not a termination for convenience settlement (AX-11). Appellant contended that Part 8 of the Federal Procurement Regulations provides that the procedures set forth therein are not mandatory in the case of an equitable adjustment, but are to be used only as a guide. Appellant re-submitted its previous settlement claim for a total of \$3,053,851, protesting the Government's adherence to the total cost basis; and under the protest agreed to make available to Government auditors the cost records. By letter dated July 13, 1978, the Government renewed its request for a revised settlement proposal on a total cost basis and enclosed a letter of the same date requesting the

auditors to resume the audit (AX-12, 13).

By letter dated Aug. 21, 1978, appellant advised the contracting officer of difficulties with the auditors because of their insistence upon using the contract job cost ledgers which appellant claims were not required to be and were not, in fact, complete under the fixed price contract; but offered all the underlying worksheets supporting the elements of the claim (AX-15). GX-F dated Aug. 23, 1978, transmits to the contracting officer a field audit office report dated Aug. 18, 1978, concluding that "Since the contractor has refused to allow a review which we consider essential, and since the contractor has not submitted an acceptable termination proposal, we cannot provide an opinion of the settlement proposed as submitted." The underlying field audit office letter advises that appellant would provide only schedules of total costs without representing that the schedule was prepared from amounts recorded in the job cost ledger. Additionally, the letter repeats the appellant's position that the most appropriate settlement method would be the application of the percentage of contract completion to the contract amounts (including profit).

By letter dated Aug. 23, 1978, appellant requested the Government to approve the submission of the claim on a basis other than the inventory or total cost basis, citing previous reason given that the equitable adjustment was under the default clause terms and that the fixed price

contract pricing provisions of ASPR (ASPM No. 1) clearly show the distinction between fixed price and cost-reimbursement arrangements (AX-17). By letter dated Aug. 25, 1978, appellant made a Freedom of Information Act (FOIA) request for a copy of the latest audit report furnished the contracting officer (AX-18). The request was denied by the Government by letter dated Sept. 27, 1978, on the grounds that the report did not exist. Subsequent requests for the audit report were denied because of non-existence of the report until it was delivered to the respondent in mid-January 1979. Appellant's request dated Jan. 16, 1979, under the FOIA was denied by letter dated Feb. 7, 1979, on the grounds that the report is an inter/intra-agency document which would not be available under the FOIA to appellant (AX-50). An appeal from this denial was filed by appellant on Feb. 21, 1979, and on Mar. 2, 1979, the audit report was forwarded to appellant as a matter of discretion (AX-59). The report was received by appellant on Mar. 7, 1979.

The basic disagreement over the form of the settlement proposal and access of the Government auditors to the job cost records continued through September 1978. AX-23 is a letter dated Sept. 26, 1978, from appellant to the Government confirming a meeting of Sept. 12, 1978, and stating these differences. This letter also refers to the Government's willingness to consider partial settlement proposals for certain subcontracts and other costs. By let-

ter dated Oct. 4, 1978, appellant transmitted under protest its settlement proposal No. 5 prepared on a total cost basis, and agreed that the audit agency could examine the job cost ledgers. The proposal requested the total additional payment of \$2,718,448. On Oct. 4, 1978, the contracting officer forwarded the revised settlement proposal to the audit agency and requested the audit be reinitiated in view of appellant's willingness to allow examination of the job cost ledgers (GX-R).

Throughout the extended period of disagreement over the form of the settlement proposal and whether the auditors could have access to the job cost records, appellant was under financial pressures from its bank and a principal subcontractor, the Xerox Corporation. In a letter dated Oct. 10, 1978, Xerox agreed to a reduction of its claim by two thirds of \$554,525 (AX-29). Despite appellant's repeated requests and the Government's agreement to consider a partial settlement incorporating the Xerox claim, no partial settlement was agreed to by the Government. By letter dated Jan. 18, 1979, Xerox amended its claim by the addition of \$119,277 in interest charges because of the failure to achieve a timely settlement of the claim (AX-42).

By letter dated Jan. 29, 1979, the contracting officer confirmed telephone conversations regarding the audit report, indicating that the report had been received by respondent and the Government's desire to schedule a negotiation meeting

February 19, 1981

(AX-48). This letter also advised of the Government's understanding that appellant desired a copy of the audit report before agreeing to a negotiation meeting and suggested that appellant seek the report pursuant to an FOIA request. Appellant's response dated Feb. 1, 1979, repeated its desire to have the audit report, but denied that it refused to attend any negotiating meeting based solely on the lack of the report (AX-49). A negotiation meeting was held on Feb. 8, 1979, in which the Government offered a total settlement payment of \$798,952. The meeting is evidenced by minutes of appellant (AX-51), a confirming letter from the contracting officer dated Feb. 9, 1979 (AX-52), and appellant's letter of Feb. 15, 1979 (AX-53). The latter document summarized the wide disparity between the parties on the items of the settlement offer, emphasizing the precarious financial condition of appellant and appellant's belief that the Government was not negotiating in good faith; but rather deliberately delaying a fair settlement in order to profit from the adverse financial condition of appellant. Typical of the supporting arguments of appellant that the Government's strategy was to place it under duress to force a reduced settlement was the Government's position that the Xerox claim should be paid by appellant before settlement. The Government responded by letter of Feb. 16, 1979, disavowing appellant's characterization of the negotiations and

asked that additional negotiation sessions be scheduled (AX-54).

Another negotiation meeting was held on Feb. 22, 1979, as reflected in minutes prepared by appellant (AX-55). A wide range of issues were discussed without significant changes in the positions of the parties on amounts to be allowed. The Government did agree that payment to Xerox would not be required prior to settlement agreement and to work with appellant and Xerox to finalize the amount of the claim. A letter from Xerox dated Mar. 2, 1979, to appellant agreed to waive the interest on their claim only if full payment is made prior to Mar. 16, 1979 (AX-58). The Xerox letter was forwarded to the Government on Mar. 6, 1979, requesting a prompt partial settlement of the subcontract claim (AX-60).

A negotiation meeting held on Mar. 7, 1979, is reported in appellant's minutes (AX-61). The minutes indicate that the parties reached tentative agreements for a partial settlement and/or a total amount for settlement, with the Xerox claim being paid direct by the Government. Two contract modifications were prepared by the Government; one for total settlement of all claims in the amount of \$1,200,639 and the other for partial settlement, excluding the constructive changes, in the amount of \$1,016,871 (AX-65). The modifications were reviewed by appellant's board of directors according to a telegraphic message (AX-63), and a meeting was arranged for the

morning of Mar. 16, 1979. On Mar. 15, 1979, the contracting officer called appellant's representative to advise that the Government would not consider the partial settlement, and that this information was being conveyed to make appellant aware of the change of position prior to the board of director's meeting that evening (AX-64). GX-L dated Mar. 15, 1979, is a letter from appellant's secretary to the contracting officer advising that the Board of directors had resolved to empower its president, Mr. Friedland, to execute a settlement modification in excess of \$1,200,000 as final settlement for all claims under the contract. A final negotiation meeting held on Mar. 16, 1979, is reported in appellant's minutes (AX-77). Mr. Friedland offered a total settlement amount of \$1,800,000 after attempting without success to secure Government consideration of a partial settlement approach. The Government representatives insisted on a total settlement that day for the amount of \$1,200,639 and had come to the meeting with two checks prepared to implement that agreement. After much discussion Mr. Friedland agreed, stating: "The financial condition of the company is such that I can't pursue it much further. We are prepared to accept your offer." Modification No. 15 for the total settlement in the amount of \$1,200,639 was then executed by the contracting officer and Mr. Friedland. One of the Government checks was in the amount of \$554,526 and payable to the Xerox Corporation and the other in the amount of

\$462,345 was payable to the Bank of Virginia, to whom appellant had made an assignment of the monies due under the contract (AX-67, 68). The balance of \$183,768 was paid to appellant on Apr. 18, 1979. A subsequent voucher for interest on the delayed payment to appellant was refused and returned to appellant (AX-69).

Discussion and Findings

Appellant contends that the Government knew of its adverse financial condition and that it deliberately used delaying and deceptive tactics to compel acceptance by a desperate contractor of an unreasonable and arbitrarily low settlement amount. The documentary evidence described above was reviewed in detail at the hearing and there is little dispute between the parties as to the events leading to the settlement agreement signed on Mar. 16, 1979. The primary issue is whether any act of the Government, or various actions taken together, constituted duress to compel appellant's agreement.

The actions of the Government that appear to be central to appellant's claim that the Government used its superior negotiation power to achieve an unconscionable agreement are:

1. The long delay between the Board decision on Jan. 19, 1978, and the actual negotiations of February and March 1979, and the insistence by the Government upon access to the job cost records as part of the audit process.

February 19, 1981

2. The refusal of the Government to provide appellant with a copy of the audit report.

3. The continual discussion of acceptability of partial settlements, but the unwillingness to agree on anything short of a total settlement.

4. The insistence by the Government upon the use of the total cost basis of settlement over other methods preferred by appellant.

5. The question of whether the settlement offers were actually the personal decisions of the contracting officer or decisions of a superior officer hostile to appellant.

In extensive briefs, the parties have discussed at length the many cases dealing with economic duress. The essential elements of economic duress are summarized by Nash and Cibinic in Federal Procurement Law (1969 ed., p. 208) as: (1) A person compels another to assent to a transaction against his will; (2) such assent is induced by wrongfully threatening action the person has no legal right to take; and (3) the threatened action, if taken, will cause irreparable damage to the other person. Each of the actions complained of by appellant must be examined to determine whether such standards are met.

There is no question that serious negotiations between the parties did not occur for over a year after the Board's decision determining the liability of the Government to appellant. During this period, the Government undertook to audit appellant's records, but such audit

activities were suspended because of the refusal to allow the Government auditors to have access to the job cost records. Not until the transmittal of its letter of Oct. 4, 1978, did the appellant agree to permit the examination of the job cost ledgers. Prior to this time, appellant agreed only to provide the underlying worksheets supporting the cost elements of its claim and the schedules of total costs, without representing that the schedules were prepared from amounts recorded in the job cost ledgers. (GX-F). Appellant does not contend that the Government did not have the right to secure an audit of its contract performance costs before entering into settlement negotiations. However, it is clear that by refusing access to the job cost ledgers, appellant was insisting that the Government auditors reconstruct the total job costs from the underlying worksheets or rely on appellant's own summary schedules of costs.

Appellant does not contend that the job cost ledgers were not directly pertinent books and records relating to the contract, but rather, that the ledgers did not reflect its true costs. The right to examine the contract records is not made contingent upon what the contractor considers relevant and reflecting the true cost of performance. The audit of the contractor's records provides the means for the contracting officer to verify that expenditures were actually made in furtherance of contract performance. The auditor's recommendations concerning costs claimed by

the contractor and questioned by the auditor are not binding on the contracting officer. Instead, the differences between claimed costs and those questioned by the auditor are usually the subject of discussion and negotiation between the parties. Appellant insists that certain contract related costs were not recorded on the job cost ledger, and that the fact that such costs were recorded elsewhere in the general ledger, and that this practice accorded with proper accounting for costs on a fixed price contract. What is not clear is the reason why appellant was adamant in refusing access to the job cost ledger from January 1978 to October 1978. With the knowledge that the total costs claimed were not recorded on the job cost ledger, an explanation of added costs recorded in the general ledger could have been provided both to the auditor and later to the contracting officer during settlement negotiations.

By denying the auditor access to the job cost ledger, appellant was, in effect, insisting that the Government perform the audit only in the manner prescribed by it, *i.e.*, reconstruction of the costs from the underlying worksheets. The contract does not permit appellant to determine the means by which the Government should audit. Therefore, we find that the contractor's action to refuse access to the job cost ledger was an unauthorized denial of access to pertinent contract records. The delay in negotiations occasioned by the inability of the Government to complete the audit was therefore the

fault of the appellant and not the Government.

The second action of the Government on which appellant relies is the refusal to provide appellant with a copy of the audit report. In the documentary evidence discussed above, it is clear that the appellant was requesting a copy of the report long before it existed, and the Government so responded to its requests. After the audit report was received in January 1979, the contractor was advised by letter (AX-48), which stated he could seek a copy of the report under the Freedom of Information Act. The audit report is dated Jan. 12, 1979, and was furnished to appellant by letter of transmittal dated Mar. 2, 1979 (AX-59). Consequently, the complaint of refusal to provide appellant with a copy of the audit report actually involves only the 5- to 6-week period between its receipt by the contracting officer and its release to the appellant. Appellant's receipt of the audit report is noted as Mar. 7, 1979, which preceded the final settlement agreement by 9 days. Appellant has not shown that it was actually prejudiced by the lack of the report during the relatively brief period after receipt of it by the contracting officer and the furnishing of a copy to appellant. Having found that the long delay in securing the audit report was, in fact, the responsibility of the appellant, the actual receipt of the report by appellant after availability to the contracting officer renders the question moot.

Thirdly, appellant contends that the Government misled it in discussions concerning the acceptability of partial settlements without the actual intent to agree on anything other than a total settlement amount. The Government counters that the applicable termination settlement regulation (41 CFR 1-8.208-3(c)) requires the contracting officer to promptly examine each subcontract settlement required to be submitted to him and that no settlement agreement had been reached between appellant and its principal subcontractor Xerox. In the minutes of the negotiation meeting of Feb. 22, 1979, appellant's president is seen to have stated that final agreement on interest on the Xerox claim was still needed (AX-55). The record discloses that Xerox reduced its claim from \$1,848,419.73 to \$554,525 in its letter of Oct. 10, 1978 (AX-29). By letter dated Oct. 17, 1978, the Xerox offer was forwarded to the Government requesting the Government to settle this portion of the claim at the subcontractor's proposed amount (AX-30). There is no evidence that appellant agreed with Xerox on the amount claimed, but rather presented the Xerox proposal to the Government for payment. At this time, appellant had recently released its job cost ledgers to the auditors, so that the audit was again being undertaken. It is reasonable that the Government would desire to have the subcontractor claim audited along with other claimed costs. In

fact, note 7 of the audit report indicated that appellant concurred in the reduction of its own claimed costs in the amount \$15,000 for subcontract cancellation charges because such charges were duplicated in the amount claimed by Xerox. Again, the delay in securing the audit has been found to be the responsibility of the appellant.

In the few days prior to actual agreement, the Government prepared documents on a partial settlement basis and on a total settlement basis. The partial settlement proposal was withdrawn by the Government the day before final agreement was reached. Appellant challenges the propriety of withdrawing the partial settlement proposal. The Government defends its action on the basis that the partial settlement proposal did not clearly define what was covered by the settlement and what was not. In these circumstances, when settlement occurred on the following day, the Board questions the propriety of its detailed examination of the active negotiations during the final few days that did produce bilateral agreement. It is sufficient to say that we see no legal obligation on either party not to withdraw a proposal which has not been accepted. Upon closer examination by responsible officials in the Government, the partial settlement proposal was determined not to be in the best interests of the Government. Were this Board or any tribunal to determine that proposed settlements could not be withdrawn before agreement or

acceptance, the alternatives available to the parties in seeking a negotiated agreement would be severely limited.

Appellant also complains that the Government insisted on settlement on a total cost basis only. It should be noted that the total cost basis was first proposed by appellant in the first meeting of the parties and was thereafter insisted upon by the Government. There is little question that the total cost basis is not the favored method for computing equitable adjustments in the contract price. This is so because of the fact that seldom are the costs of the work attributable to the equitable adjustment segregable from the other contract costs; and, the Boards favor any other costing method that will more accurately determine those costs relating only to the equitable adjustment. However, upon a termination settlement, the costs of allowable equitable adjustments and contract costs are merged in the total costs of contract performance, making this method a more desirable and more readily implemented alternative. Appellant does not explain the disadvantages of the total cost method in the resultant impact on the settlement. Presumably, any costing method, properly applied with adequate cost data, would end up with the same result. The methods not favored in a given situation are considered less appropriate only because of the less probable chance of arriving at the true costs. The total cost method is frequently desired by claimants because all performance costs are considered. With the consideration

of all recorded costs in the audit, the only means by which appellant can be prejudiced is by his own inability to show the allocability and allowability of any expenditures. It would appear that appellant opposes the total cost approach in favor of using its own cost summaries and estimates including subjective cost estimates. This approach may well provide a higher claimed amount, but in the instance of recorded costs susceptible to audit, the Board continues to favor the actual costs recorded as opposed to any other method. (*See Brezina Construction Co., Inc.*, IBCA No. 757-1-69 (Aug. 10, 1973), 73-2 BCA par. 10,195.) Appellant cites no authority in support of the contention that the Government did not have the right to require the settlement on a total cost basis. Instead, appellant argues in its brief "[t]hat the government had a legal right to require compliance with Federal Procurement Regulations is irrelevant to this case." Appellant argues that the fact that the Government acts were legal does not mean that the acts are proper, correct, or non-coercive. Appellant relies on the restatement of the Law of Contracts, sections 492 and 493 which defines duress in terms of "any wrongful act" or "any wrongful threat" to compel or induce another to act without his volition or precludes exercise of free will and judgment; and considers the Government's position flawed in its perceived failure to show a coercive act must be illegal to be duress.

In arguing that it need not show the Government's actions were il-

February 19, 1981

legal to constitute duress, we believe there appears an important difference in the views of the parties. The authorities and the cases agree that duress requires the wrongful act or an act one is not legally empowered to take to induce the action of the other party. That is not to say that the wrongful or not legally permissible act is illegal, *per se*. An illegal act is one contrary to law. An act that one may not legally be empowered to take against another party to a contract may simply not be a permissible act under the terms of the agreement, but not illegal, *per se*. Therefore, we must consider the actions of the Government in terms of whether the actions were legally permissible actions under the contract and the applicable regulations, and not to determine whether the actions were illegal actions that could not be taken under any circumstances because of prohibitions of the law. In this context, we find that the Government was legally within its rights under the contract to require that the settlement be presented and concluded on a total cost basis.

The last of the substantive objections of appellant is that the settlement offers were not the personal decisions of the contracting officer, but the decisions of a superior official hostile to appellant. Appellant contends that if the decisions were not those of the contracting officer, the decisions are null and void. It is well established that appellant is entitled to the independent consideration and judgment of the contracting officer of a claim. Here, the

question becomes one of little significance because the contracting officer, Mr. Tate, testified at the hearing and reaffirmed the fact that the amounts negotiated reflected his personal judgment (Tr. 87). The fact that decisions involving substantial amounts of money are required to be reviewed by superiors or by a review committee does not make the decision that of the higher authority approving it. Such reviews are required to assure that contracting officers have complied with the policy and regulations of the agency. No evidence has been submitted to show that the settlement amounts offered and finally accepted were not determined by Mr. Tate. Even with such a showing, Mr. Tate clearly accepted and ratified the final decision by his testimony. In those cases where it is found that the contracting officer did not exercise his independent judgment, the remedy accorded by the Boards is to remand the appeal for the personal consideration and judgment of the contracting officer. Here, the contracting officer testified at the hearing and endorsed the decision, so that even if a remand were otherwise appropriate, the action would be a futile prolonging of the appeal. The contracting officer indicated no inclination to question the settlement amount and his reaffirmation of the decision on remand can be presumed.

Appellant raised numerous other questions in the attempt to have the agreement set aside on grounds of duress, however, in view of our finding that appellant was responsible

for the delay of negotiations for 1 year in refusing access to the contract records for audit, consideration of all the actions complained of during this period would serve no useful purpose. The crucial period of time during which meaningful negotiations occurred was during the 6-week interval from early Feb. 1979 to Mar. 16, 1979. Considering the size of the claim and the substantial difference in the positions of the parties, it appears that an agreement was reached expeditiously, and without deliberate delay by the Government.

However, more importantly, the burden of showing duress is that of the party seeking to avoid the agreement. Appellant was clearly in a precarious financial condition, and this condition was made known to the Government. However, one seeking to avoid an agreement on the grounds of economic duress must show that the other party availed itself of this known condition to coerce the agreement. Here, appellant must be held accountable for extending the negotiating period by withholding its contract records from the auditor in violation of the contract requirements. Whatever additional financial pressures accruing to appellant during that time to sign an agreement it considered unconscionable must necessarily be considered difficulties of its own making. Appellant's action to sign the agreement cannot be viewed as an impulsive pressured action made necessary by improper acts of the Government. The action was the result of the considered and deliberate judgment of the board of di-

rectors on the day before the settlement agreement was executed. Appellant's president went to the meeting on Mar. 16, 1979, empowered by a resolution of the board of directors to settle all claims under the contract for an amount in excess of \$1,200,000 (GX-L). There is not in evidence any similar document by which the board of directors can be seen to authorize this appeal seeking to avoid the agreement reached in accordance with its prior authorization.

We find that appellant failed to prove that the settlement agreement signed by the parties on Mar. 16, 1979, was signed by appellant under duress.

Therefore, the appeal is dismissed.

G. HERBERT PACKWOOD
Administrative Judge

APPEAL OF NERO & ASSOCIATES, INC.

IBCA-1292-8-79

Decided February 19, 1981

Contract No. 52500-CTS-400, Bureau of Land Management.

Denied.

1. Contracts: Disputes and Remedies: Jurisdiction—Contracts: Contract Disputes Act of 1978: Jurisdiction

A claim of mutual mistake asserted under a tree thinning contract is dismissed for

February 19, 1981

want of jurisdiction where the Board finds (i) that it has no authority under the Disputes clause to reform contracts and (ii) that since appellant did not elect to proceed under the Contract Disputes Act of 1978, the Board derives no reformation authority from the Act in this instance.

2. Contracts: Construction and Operation: Changes and Extras—Contracts: Construction and Operation: Drawings and Specifications—Contracts: Disputes and Remedies: Equitable Adjustments

A claim predicated upon defective specifications is denied where assuming *arguendo* that the specifications were defective, the appellant failed to show that it incurred any additional costs by reason of the allegedly defective specifications.

3. Contracts: Construction and Operation: Changed Conditions (Differing Site Conditions)—Contracts: Construction and Operation: Differing Site Conditions (Changed Conditions)

A claim asserted under a Changed Conditions Clause by reason of alleged withholding of material information (first category) is denied where there is no evidence of record indicating that the Government either withheld material information or otherwise misrepresented the conditions the contractor would encounter in performing a tree thinning contract.

4. Contracts: Construction and Operation: Payments—Contracts: Disputes and Remedies Jurisdiction

A claim based primarily upon an overpayment to a contractor is approved where the Board finds the evidence of record substantiates the Government claim and it does not appear that the appellant has ever contested either the fact or the amount of the overpayment

or adjustments related to such overpayment which have the effect of reducing the amount of the Government's claim.

APPEARANCES: Mr. David M. Nero, Jr., President, Nero & Associates, Inc., Portland, Oregon, for Appellant; Mr. William A. Perry, Department Counsel, Denver, Colorado, for the Government.

*OPINION BY
CHIEF ADMINISTRATIVE
JUDGE McGRAW
INTERIOR BOARD OF
CONTRACT APPEALS*

The appellant has taken a timely appeal from the denial by the contracting officer of its claim for additional compensation in the amount of \$84,831.47 and from the demand by that officer for payment to the Government of the sum of \$5,735.62.

On Apr. 3, 1975, the Small Business Administration (hereinafter SBA) entered into the instant contract with the Bureau of Land Management (hereinafter BLM). On the same date it entered into a subcontract with Nero & Associates, Inc., for the performance of the entire work covered by the contract (Appeal File Exh. Nos. 1 and 13).¹ Concerning this arrangement the contract states that the SBA has delegated responsibility for the administration of the subcontract to BLM with complete authority to take any action on behalf of the Government under the terms and conditions of the contract, subject to advance notice of contemplated ac-

¹ Reference to exhibits are to those contained in the Appeal File (hereinafter simply AF followed by the exhibit number or numbers).

tions being required to be given to the SBA in some circumstances not here pertinent. The contract and subcontract contemplated that the subcontractor would have the right to appeal a decision by the contracting officer and it has done so. Depending upon the context, we will sometimes refer to the appellant as the contractor, while at other times the terms used will be subcontractor or simply Nero.

The instant contract called for mechanical precommercial thinning of trees on approximately 1,573 acres of public lands in Coos and Douglas Counties, Oregon.

For performance of the required work, Nero quoted the figure of \$72,315.07.² In a letter to SBA under date of Mar. 11, 1975, Nero states: "In view of the time constraints, it would be greatly appreciated if you would accept our proposal and execute the contract immediately without further negotiations * * *" (AF 8, p. 2). Under the terms of the contract, work was to be completed within 120 calendar days from the date of receipt of the notice to proceed by the contractor. The notice to proceed was received on May 23, 1975, establishing Sept. 20, 1975, as the completion date. The contract work was accepted as complete on Oct. 31, 1975, or 41 days after the scheduled completion date. No actual damages were assessed by the

Government for the delayed performance (AF 1, 3, and 27).

Throughout performance of the work the contractor was plagued by problems with personnel. A month after receiving the notice to proceed on May 23, 1975, only 7 percent of the required work had been done but 25 percent of the contract time had elapsed. Two months later with 78 percent of the contract time having gone by, only 52 percent of the work had been accomplished (AF 17 and 20). Responding to the letter inquiries from the contracting officer, the contractor attributed the delays experienced in performing the contract work (i) to the need to train personnel, (ii) to the efficiency of thinning crews dropping off considerably after a crew member was bitten by a rattlesnake, and (iii) to a limitation of size of the crews that could be employed (AF 18 and 23). In a letter to the contracting officer dated Sept. 18, 1975, the contractor noted that it had experienced a large turnover of personnel and low production until late August and that since then production had been up and crews operating at greater efficiency but it was still experiencing a large turnover of personnel (AF 23).

Another cause for delay was assigned by the contractor in a letter written to BLM under date of July 11, 1975, from which the following is quoted:

² See cost breakdown which accompanied Nero's letter to SBA dated Mar. 11, 1975 (AF 8).

4. A significant factor which has also affected our production was the inadvert-

ent omission of pull back time in our bid proposal. Due to this (oversight) it is taking more time and labor dollars than originally planned. Please be advised that we plan to request a Contract modification as soon as recalculations are completed.

(AF 18, p. 2).

The contractor ceased work on the project on Oct. 31, 1975 (AF 3). During contract performance, BLM had contemplated asserting a claim for actual damages for delayed performance under clause 23 of the "Additional General Provisions." At a conference held on Nov. 11, 1975, however, it was decided that no damages should be levied against the contractor since the contract was basically complete (94 percent) and overall work on the contract had been good (AF 27).

In November of 1975 the Bureau discovered that the contractor had been overpaid the sum of \$6,837.80 (AF 29). This resulted from having included payment for item 6, unit 1 (191 acres @ \$35.80 per acre) in the amount of \$6,837.80 in the fifth partial payment and having included the same item for payment in the same amount in the sixth partial payment (AF 30 and 30A). Although apparently acknowledging that an overpayment in the stated amount occurred, the contractor has refused to honor the Bureau's demand for repayment possibly because of its pending claim (AF 29-35). Giving effect to \$1,000 retained by the Government on a

special payment certificate and adjustments made relating to the required contract work, the Government's claim for overpayment under the instant contract has been reduced to the amount of \$5,735.62 (AF 35).³

By a letter dated May 18, 1976, a law firm retained by the contractor presented the claim for additional compensation now in issue to SBA. The claim letter asserts (i) that after receipt of the request for proposal, employees of the contractor visited the site and estimated the cost of the work to be in the amount of \$86,330.95 (an average price per acre of \$54.88), predicated upon field work sheets reflecting estimated densities ranging from 450 stems per acre to 927 stems per acre; (ii) that BLM representatives reviewed Nero's field worksheets and the estimated densities indicated thereon but made no attempt to question the reasonableness of the

³ The manner in which the Government's claim has been computed is shown in the contracting officer's decision from which the following is quoted:

"Overpayment
The final payment voucher to you shows:

Items 1 through 6	
(Total) -----	\$69,242.53
less Equitable Adjustment (faulty thinning) -----	-1,174.65
less actual cost of BLM pull back as agreed at meeting -----	-209.10
	<hr/> \$67,858.78
Total paid through partial # 6 -----	73,594.40
Total overpayment ---	<hr/> \$ 5,735.62"

(AF 54, p. 3).

estimated densities; ⁴ (iii) that during the course of negotiations with Nero prior to the submission of its bid proposal, BLM represented that it had estimated the cost of the contract work to be approximately \$70,000 to \$74,000; ⁵ (iv) that in these negotiations representatives of BLM indicated to the SBA and to Nero that BLM's interest in entering into an agreement with SBA relative to an 8(a) contract was largely dependent upon Nero's willingness to accept a subcontract consistent with BLM's alleged estimate of the cost of the work; and (v) that based upon these negotiations with BLM and SBA, Nero revised its estimate of the cost of the work and prepared new field work sheets and new estimating detail to reduce its proposal to the level demanded by BLM.

Noted in the letter is the fact that on Mar. 11, 1975, Nero presented its formal proposal in the total sum of \$72,312.94 for an average price per acre of \$45.97 and that it was this proposal which was incorporated into the subcontract

with SBA which was forwarded to Nero for execution on Mar. 31, 1975. The letter asserts that the work required to be performed under the subcontract proved to be more extensive, more difficult, more time consuming, and more expensive than anticipated by Nero with the largest single factor in the additional cost being the density of the stems actually encountered. Another assertion made in the letter is that by actual tree count during performance of the subcontract work the densities averaged approximately 1,700 stems per acre or approximately three times the estimated densities. In completing the work the contractor is said to have incurred costs of approximately \$154,074 and to have been paid the sum of \$69,242.53.⁶ The claimed amount of \$84,831.47 is the difference between the costs allegedly incurred and the payments made (\$154,074—\$69,242.53).

The rationale for the claim asserted is contained in the law firm's letter dated May 18, 1976, from which the following is quoted:

It is the subcontractor's position that, during the course of these discussions and negotiations prior to submission of the proposal, BLM withheld relevant information from Nero and SBA, failed to disclose pertinent information as to the cost of the work about which it had knowledge, or about which it should have had knowledge due to its superior knowledge and expertise, and actively (misled) Nero and SBA with respect to the difficulty and cost of the work. Altern-

⁴ Immediately thereafter the letter states: "We have now learned that the aerial photographs and other information used by the BLM in preparing the contract specifications clearly demonstrate average densities of approximately 1,700 stems per acre, consistent with the density actually encountered" (AF 42, letter dated May 18, 1976, to SBA, p. 4).

⁵ Concerning this estimate the letter states: "We understand that this estimate was confirmed by a certified estimate furnished by BLM to SBA pursuant to the requirements of the 8(a) program. In fact, we now believe that the estimates of the cost of the work actually prepared by BLM prior to negotiations exceeded \$100,000." (See AF 42, letter dated May 18, 1976, to SBA, p. 4.)

⁶ This figure does not include the amount of the overpayment claimed for by the Government.

tively, the parties both to the contract between BLM and SBA and to the subcontract between SBA and Nero were operating under mutual mistake as to the extent and difficulty of the work and the cost of performing the work. In either event the subcontract and contract should be reformed, and Nero is entitled to additional compensation under the subcontract in the amount of \$84,831.47. Alternatively, Nero is entitled to an equitable adjustment of the subcontract, pursuant to the provisions of Article 4 of the General Provisions, (Standard Form 23A),⁷ and other contract provisions, in the sum of \$84,831.47.

(AF 42, letter dated May 18, 1976, to SBA, pp. 1-2).

Responding to the claim letter under date of June 14, 1976, SBA advised the law firm (i) that BLM had given permission to release their price estimate which was enclosed; (ii) that the SBA files contained no information regarding the estimated density or stems per acre to be thinned on the acreage specified in the contract, other than the range of 300 to 9,500 trees per acre set forth in Section I, General Information, Paragraph B of the subcontract; and (iii) that all matters pertaining to the administration of the subcontract (including questions related to possible reformation) had been delegated to BLM. The letter concluded by indicating that further discussions regarding possible increase in the contract

price should be conducted directly with BLM (AF 43).

In a letter to the contracting officer under date of July 13, 1978, concerning a meeting with BLM personnel a day or two earlier, the law firm representing the contractor referred to the requirements and specifications for precommercial thinning and specifically to Section I, Paragraph A ("The contractor will select approximately 300 desirable leave trees per acre and cut competitive trees"), and Section II, Paragraph C ("Approximately 300 vigorous well-formed leave trees per acre conforming to an average 12 x 12 foot spacing will be identified by the contractor") after which it states:

At the time Nero began performing this contract, its employees were instructed by BLM supervisors to space the leave trees such that there would be 12 feet between a given leave tree and any other leave trees. As Mr. Batdorff described this instruction process, the inspectors advised the contractor's employees to take a 12-foot pole and swing it around any given leave tree to insure that the pole does not come in contact with any other leave tree while making its circumference.

(AF 52, letter of July 13, 1978, pp. 1, 2).

Additional arguments in support of the contractor's position were advanced in the law firm's letter to the contracting officer of Aug. 21, 1978. After adverting to the U.S. Department of Agriculture's Miscellaneous Publication No. 255 which

⁷ The General Provisions of Standard Form 23A are not part of the contract terms. The instant contract does include the General Provisions of Standard Form 19 (Rev. 7-73), one which is clause 1, "Changes And Changed Conditions" (AF 1).

had been enclosed with the contracting officer's letter of Aug. 18, 1978, the letter acknowledged that the publication does state that on 12- by 12-foot spacing the average number of trees per acre is 302. This is said to be the necessary result if the trees are cut in a basically square formation with the sides of the squares equalling 12 feet. To obtain this result, however, more than 12 feet must be left between approximately one-third of all trees, as is said to be shown by an illustration enclosed with the letter.

Reportedly acting upon instructions received from the BLM, the contractor's employees cut trees in equilateral triangular formation, each side of the triangle equaling 12 feet, which resulted in there being 12 feet between any given leave tree and the next leave tree but also resulted in 350 leave trees per acre, rather than 302. According to the Aug. 21, 1978, letter, the effect of following the process described by BLM's inspectors was that the contractors' initial thinning work resulted in approximately 350 leave trees per acre, or approximately 17 percent more leave trees per acre than the approximately 300 contemplated by the specifications. Nero's employees were reportedly instructed to rework those areas in which they had left 350 leave trees per acre, resulting in substantial increased costs to Nero (AF 52).

Jim Batdorff, COAR, Coos Bay,

has acknowledged that in the July meeting with contractor personnel the use of a 12-foot pole was suggested as a *guide* that could be used as a "rule-of-thumb" in determining approximate spacing. He also asserts, however, that the basis for payment was approximately 300 vigorous well-formed leave trees per acre conforming to an average of 12- by 12-foot spacing and not on the "pole-spacing." Emphasizing forestry practice and field conditions likely to be encountered, Mr. Batdorff states:

In regards to there being more trees on a 12 x 12 foot spacing based on an equilateral triangular formation than a perfect square—in theory he is correct. However, in forestry it is common practice to assume "spacing" measurements and "acreage" measurements to be "square" and not equilateral triangular. This is enforced by table 20, Miscellaneous Publication No. 255 previously sent to Nero's lawyer. In actuality, field conditions are not as simple and uniform as assumed by Nero's lawyer. Slope must be considered, etc. In all probability under field conditions, spacing would not be an exact "square" or any other describable form including an equilateral triangle. (AF 53).

In the decision from which the instant appeal was taken the contracting officer found (i) there were no discussions involving BLM people prior to the submission of Nero's proposal and there were no representatives of BLM and SBA that met with Nero's personnel to dis-

February 19, 1981

cuss the project prior to the submittal of the bid proposal; (ii) only one proposal was ever received from Nero and that was by letter to Mr. Pells, SBA, dated Mar. 11, 1975, which gave a total price of \$72,315.07; (iii) the BLM's estimate for performing the work was \$78,650 which was not disclosed to Nero prior to award; (iv) as Nero's proposal (\$72,315.07) was only 8 percent under the Government's estimate (\$78,650), there was no reason to question the bid proposal; (v) there is no evidence that more work was required or performed by Nero than was indicated in the contract;⁸ and (vi) the amount owed to the Government, as a result of an overpayment, is the sum of \$5,735.62.

By letter dated Aug. 17, 1979, the contractor timely appealed the denial of its claim for additional compensation, stating:

Our claim, as outlined in our letter dated 18 May 1976, is confirmed and continued. Further, we expect to show, via documentation and material witnesses, that the very core of this problem was the result of certain local Government Employees' attitude toward the award of contract to a minority contractor under

the provisions of Section 8(a) of the Small Business Act.¹⁰¹

Contractor's Claim for Additional Compensation—\$84,831.47

[1] An alternative basis for the relief sought in the claim letter dated May 18, 1976, is reformation of the contract on the ground of mutual mistake. In the portion of the July 11, 1975, letter, quoted above (AF 18), the contractor asserted that it had inadvertently omitted pull back time from its bid proposal. A unilateral error made by one of the parties to a contract is not a mutual mistake, however, and there is no other evidence in the record supporting a claim of mutual mistake. In any event, it is clear that the Board has no authority under the Disputes clause to reform contracts. *American Ligurian Co., Inc.*, IBCA-492-4-65 (Jan. 21, 1966), 73 I.D. 15, 66-1 BCA par. 5,326. While the Contract Disputes Act does vest boards of contract appeals with authority to reform contracts in cases where a contractor shows that it is entitled to such relief, this is not a case where such

⁸ In especially pertinent part the decision states: "[O]n inspection of units if the average spacing comes out to 12' x 12' it is accepted, the actual number of trees are not counted. The claim of extra work has not been substantiated" (AF 54, "Finding of Facts, Decision of the Contracting Officer," p. 2).

¹⁰¹ A BLM memorandum pertaining to a conference held on Nov. 11, 1975, which included representatives of the contractor, SBA, and BLM states: "Nero & Associates, represented by their Attorney, Fred Smith, presented their case. The basic problems in not finishing the contract, according to the attorney, were racial discrimination, sabotage, and internal personnel problems. * * * One former company employee is presently being sought for misuse of company equipment and funds" (AF 27, memorandum dated Nov. 18, 1975, p. 2).

authority could be exercised even if a mutual mistake had been shown to exist. In the case at hand the contract was entered into on Apr. 3, 1975. The claim involved in the appeal was presented to the contracting officer for decision after the effective date of the Act (Mar. 1, 1979). In such circumstances the contractor could have but failed to elect to have its claim processed under the provisions of the Contract Disputes Act of 1978. *See Nome Pharmacy, Inc.*, ASBCA No. 24333 (Feb. 7, 1980), 80-1 BCA par. 14,279 at 70,325.

[2] In the claim letters of July 13 and Aug. 21, 1978, the contractor predicates its claim upon defective specifications. According to the contractor, the specifications were defective in that compliance with the specification requirement for 12- by 12-foot spacing between leave trees results in 350 leave trees per acre rather than the approximately 300 leave trees per acre contemplated by the specifications. The claim letters assert that in the initial thinning the contractor followed the 12- by 12-foot spacing requirement and ended up with 350 leave trees per acre.

It is contended that the contractor was subsequently required to rework areas containing 350 leave trees per acre which resulted in substantial increased costs to the con-

tractor. Addressing this question in the findings from which the instant appeal was taken, the contracting officer says that on inspection of units if the average spacing comes out to 12 by 12 feet the work was accepted and the actual number of trees were not counted.

Except for the bald statements in the claim letters of July 13 and Aug. 21, 1978, the record before us is devoid of evidence to show that the contractor was ever required to rework areas where the average spacing between leave trees was 12 by 12 feet. The mere fact that a specification is defective in some respects does not entitle a contractor to an increase in the contract price unless it can show that its costs have been increased to some extent by reason of the defective specifications. This the appellant has failed to do. *See Frank A. Hill*, AGBCA No. 78-106-4 (Nov. 28, 1980), 80-2 BCA par. 14,794. Insofar as the claim is predicated upon defective specifications, the claim is denied.

[3] In the claim letter of May 18, 1976, the contractor asserts as an alternative ground for relief that it is entitled to an equitable adjustment under the Changed Conditions Clause.¹⁰ Reliance upon this clause is apparently based upon the allega-

¹⁰ See n.7, *supra*, and accompanying text.

February 19, 1981

tions the appellant has made concerning the withholding of relevant information¹¹ from Nero and SBA by BLM during the course of discussions and negotiations prior to the submission of Nero's bid proposal. In these discussions and negotiations BLM is said to have stated that it had estimated the cost of the work to be in the range of \$70,000 to \$74,000. BLM is also said to have indicated that its interest in entering into an agreement with SBA relative to an 8(a) contract was largely dependent upon Nero's willingness to accept a subcontract consistent with BLM's alleged estimate of the cost of the work.

According to the claim letter, Nero's original estimate for performing the contract work was in the amount of \$86,330.95. By reason of the negotiations with BLM and SBA prior to submission of its bid proposal, however, Nero is said to have revised its estimate of the cost of the work, and prepared new field work sheets and new estimating detail to reduce its proposal to the level demanded by BLM. Since in the notice of appeal the appellant

says its claim, as outlined in the letter of May 18, 1976, is confirmed and continued, that letter is seen as setting forth the principal grounds for the appeal. If the events described in that letter actually occurred, they would also lend credence to allegation in the notice of appeal concerning the attitude of some of the Government's employees toward the award of a contract to a minority contractor under the provisions of sec. 8(a) of the Small Business Act.

In the notice of appeal the appellant indicates that it expects to substantiate the very serious charges made against the Government and particularly the BLM, "via documentation and material witnesses." As no oral hearing was requested, no testimony has been received from any witness in support of the allegations made by the appellant. In response to the Order Settling Record, the appellant requested no documents to be added to those contained in the appeal file. The documents contained in the appeal file do not support the appellant's allegations. In fact, a number of them unequivocally refute them. As to the conference which allegedly took place between Nero, SBA, and BLM prior to the submission of Nero's bid proposal and at which the BLM is alleged to have withheld material

¹¹ The information allegedly withheld by BLM included estimates of the costs of the work prepared by BLM prior to negotiations purported to have been held which exceeded \$100,000. The record shows that BLM's estimate for the cost of doing the work was in the amount of \$78,850 (AF 54).

information¹² and in effect coerced Nero into submitting a much lower bid proposal than it had initially prepared, the contracting officer flatly denies that such a conference ever took place or that representatives of BLM had any conversations with representatives of the appellant prior to the submission of Nero's bid proposal. SBA has stated that its memorandum of negotiation indicates that the price proposed by Nero was accepted by SBA and BLM as submitted (AF 43).

Based upon the record made in these proceedings, the Board finds that the allegations made against the Government and particularly the BLM are entirely lacking in substance. We find no evidence of the withholding of material information or misrepresentation on the part of the Government. Insofar as the claim is based upon the Differing Site Conditions Clause, the claim is denied.¹³

¹² BLM representatives were said to have reviewed Nero's bid proposal prior to submission without questioning the densities reflected therein ranging from 450 to 927 stems per acre, even though aerial photographs and other data in BLM's possession demonstrated densities of approximately 1,700 stems per acre (AF 42, letter dated May 18, 1976, to SBA, p. 2).

The records fail to disclose that any aerial surveys were made of tracts of land involved in the three thinning. Concerning this aspect of the case, SBA states: "[O]ur file contains no information regarding the estimated density or stems per acre to be thinned on the acreage specified in the contract, other than the range of 300 to 9,500 trees per acre set forth in Section I, General Information, Paragraph B of the subcontract * * * (AF 43, letter dated June 14, 1976, p. 1).

¹³ See *Tectonics, Inc.*, VACAB No. 1187 (Nov. 16, 1976), 77-1 BCA par. 12,228, denying a changed conditions claim where the Board found that absent affirmative repre-

Government's Claim for Overpayment—\$5,735.62

[4] The Government asserts that when it processed the voucher for partial payment No. 5, it included for payment under item No. 6 thereof an item designated as C-C-75-10 Myrtle Point, Unit 1, in the amount of \$6,837.80 (AF 30A). The voucher prepared by BLM for partial payment No. 6 is said to have also included the item designated above in the amount of \$6,837.80 (AF 30). Taking into account other adjustments between the parties related to the contract,¹⁴ the net amount claimed to be due the Government by reason of the overpayment is in the amount of \$5,735.62.

The Government's assertions¹⁵ being substantiated by the record before us and it appearing that the appellant has never contested either the fact of the overpayment in the amount specified or the net amount of the Government's claim as set forth in the findings from which the instant appeal was taken, we find and determine that the appellant is indebted to the Government in the amount claimed of \$5,735.62.

Summary

1. The appellant's claim for additional compensation in the amount of \$84,831.47 is denied.

sentations by the Government or failure of the Government to disclose vital data not readily available to the bidder, the contractor was chargeable with such knowledge as would have been revealed by an adequate site investigation.

¹⁴ See n.3, *supra*.

¹⁵ See Govt. Brief at 11 for a more detailed discussion of the basis for the Government's claim.

2. The Government's claim against the appellant in the amount of \$5,735.62 is allowed.

WILLIAM F. MCGRAW
Chief Administrative Judge

I CONCUR:

G. HERBERT PACKWOOD
Administrative Judge

FORT BERTHOLD LAND AND LIVESTOCK ASSOCIATION

V.

AREA DIRECTOR, ABERDEEN
AREA OFFICE, BUREAU OF
INDIAN AFFAIRS

8 IBIA 230

Decided February 20, 1981

Appeal from decision of the Area Director, Aberdeen Area Office, Bureau of Indian Affairs, raising minimum grazing rental rate for allotted land on the Fort Berthold Indian Reservation.

Affirmed.

1. Grazing Permits and Licenses: Generally—Indian Lands: Grazing: Rental Rates

In ascertaining the reasonableness of a rental rate increase for grazing lands permitted under authority of 25 CFR Part 151, it was error for the Administrative Law Judge to conclude that "fair annual return" to which Indian landowners are entitled under the regu-

lations is "something different and less than fair market value."

2. Grazing Permits and Licenses: Generally—Indian Lands: Grazing: Rental Rates

The independent market survey utilized by the Bureau of Indian Affairs in justifying an increase in grazing rental rates on the Fort Berthold Reservation cannot be regarded as invalid on grounds that off-reservation transactions were included in the survey.

3. Bureau of Indian Affairs: Administrative Appeals: Generally—Grazing Permits and Licenses: Generally—Indian Lands: Grazing: Rental Rates

In reviewing action of the Bureau of Indian Affairs in raising grazing rental rates, the Board of Indian Appeals should overturn the action only if it is found to be unreasonable. As long as the Bureau's action is supported in law and by substantial evidence, it would be an inappropriate intrusion into the Bureau's function for the Board to substitute its judgment for the agency's.

APPEARANCES: Phillip D. Armstrong, Esq., Minot, North Dakota, for appellant; Roger W. Thomas, Esq., Office of the Field Solicitor, Aberdeen, South Dakota, for respondent.

OPINION BY ADMINISTRATIVE JUDGE ARNESS

INTERIOR BOARD OF INDIAN APPEALS

The Board here reaches a final decision on an appeal taken by the Fort Berthold Land and Livestock

Association, an organization composed primarily of Indian ranchers, from an action taken Oct. 4, 1979, by the Area Director, Aberdeen Area Office, Bureau of Indian Affairs, raising the minimum acceptable grazing rental on the Fort Berthold Indian Reservation for the permit Nov. 1, 1976, through Oct. 31, 1980.

In February 1980 the Commissioner referred the above matter to the Board of Indian Appeals for review and final Department decision pursuant to the provisions of 25 CFR 2.19(b). By order dated Feb. 13, 1980, the Board referred the appeal to the Hearings Division of the Office of Hearings and Appeals for an expedited factfinding hearing and recommended decision by an Administrative Law Judge. The assigned Administrative Law Judge, Keith L. Burrowes, declined to hold a factfinding hearing at that time and instead filed a recommend decision with the Board on Apr. 11, 1980, in which he concluded that the Bureau's action was improper as a matter of law. Judge Burrowes' legal opinion was rejected by the Board in a decision rendered June 6, 1980 (8 IBIA 90, 87 I.D. 201). The matter was remanded to the Administrative Law Judge with renewed instructions to ascertain the reasonableness of the rental rate set by the Bureau following an evidentiary hearing.

On Sept. 25, 1980, Judge Burrowes entered a recommended decision regarding the reasonableness of the disputed rental rate increase. Interested parties were allowed un-

til mid-November to file exceptions or other comments with the Board regarding the recommended decision. Final comments were received Nov. 21, 1980, and all briefs have now been considered.¹

Statement of the Issue

The matter at issue is the reasonableness of grazing fees set by the Area Director, Bureau of Indian Affairs, Aberdeen, South Dakota, which fees applied to the Fort Berthold Indian Reservation of North Dakota, and to, among others, the Fort Berthold Land and Livestock Association for certain lands permitted for the period Nov. 1, 1979, to Oct. 31, 1980. The increase in question pertains only to individually owned trust lands for which the minimum grazing rental was raised from \$42 in 1979 to \$57 for the year 1979-80.²

Discussion, Findings, and Conclusions

In setting the minimum rental rate in question the Bureau relied in part on a market survey of 37 rentals of grazing land on or near the Fort Berthold Indian Reserva-

¹ Appellant's statement dated Nov. 17, 1980, raises a procedural objection to the submission by the Bureau, through counsel, of its exceptions to the recommended decision. The objection is unfounded. The Board's regulations specifically authorize the filing of written exceptions to recommended decisions by Administrative Law Judges (see 43 CFR 4.368 (1979), 46 FR 7334, 7338 (Jan. 23, 1981)), and this privilege was conveyed by the Board to all parties by order dated Oct. 9, 1980.

² It is for the governing tribe to establish minimum grazing rental rates for the use of tribal land. 25 CFR 151.13(a).

v.

AREA DIRECTOR, ABERDEEN

February 20, 1981

tion. The survey was prepared by Darrell Rasmusson, an independent appraiser-contractor, "for the purpose of providing some indication of the current prices being paid for cash rent of grazing land" (Rasmusson Narrative at 1). Mr. Rasmusson characterized the survey data provided in his report as the product of "arms length transactions where the landlord and tenant negotiated for the best rates possible with the least amount of government supervision." *Ibid.* Mr. Rasmusson stated that the survey data was gathered to show the "fair market value" of grazing rentals in the surveyed tracts (Tr. 13, 29).

Some of the grazing land surveyed by the independent appraiser had been leased on a price-per-acre basis. Other lands were leased or permitted on an animal unit basis. For comparison purposes, all data used by the contractor was broken down into fees per animal unit month (AUM) (Rasmusson Narrative at 3). In the grazing trade, an "animal unit" refers to one adult cow with unweaned calf by her side or the equivalent thereof based on comparable forage consumption.³

The specific rental to be paid by a permittee of Indian grazing lands is determined on the basis of the AUM rate fixed for the range unit measured against its established carrying capacity. Carrying capac-

ity may vary between tracts based on the amount of available forage, water, and other factors. The carrying capacity of a tract is multiplied by the AUM rate to arrive at the monthly fee. (Thus, grazing tracts A and B may be adjoining, of equal size, and assigned the same AUM rate. However, tract B may have twice the carrying capacity of tract A owing to density of forage and water sources. Tract B, because of its greater carrying capacity, will accommodate more cattle and produce more rental for the Indian landowner.) The Bureau of Indian Affairs calculates annual grazing rental rates on a 10-month basis to account for seasonal fluctuations in grazing productivity.

On the data collected in the case before us, the independent appraiser concluded that in the Fort Berthold area grazing leases and permits for a duration of 3-5 years were being let during the period in question for \$4.50 to \$6.90 per AUM, or a median price of \$5.70 per AUM (Rasmusson Narrative at 3).

The independent market study of Darrell Rasmusson was reviewed by Mr. Jim Quackenbush, a range conservationist with the Bureau of Indian Affairs, who had the responsibility of submitting a recommendation to his supervisor, the Assistant Superintendent, Fort Berthold Agency, regarding the establishment of a "fair rental rate for allotted land on the Reservation" (Tr. 38). Mr. Quackenbush, who has

³ See Tr. at 10; Rasmusson Narrative at 3; see also 25 CFR 153.1(e).

been a range conservationist with the Bureau for 7 years and who is experienced in proposing fair rental rates for Indian lands, testified that his objective was to recommend a grazing rental rate which coincided with "fair market value" (Tr. 38, 40, 50, 61, 64). Mr. Quackenbush stated that other factors were utilized in formulating a recommendation but that they, too, were geared to "fair market value." Ultimately, Mr. Quackenbush recommended that the Bureau adopt an annual grazing rental rate of \$57 and the Aberdeen Area Director accepted this recommendation.

*Legality of "Fair Market Value"
Standard*

[1] Appellant's main argument in this appeal is that it was error for the Bureau to establish a minimum grazing rental on the basis of what "fair market value" for such grazing privileges may be. Judge Burrowes agreed with appellant noting that the regulations require the establishment of a rate which "shall provide a fair annual return to the land owners." See 25 CFR 151.13 (b). According to Judge Burrowes, "the 'fair annual return' due to the Indian land owners under these regulations is something different (and less) than the fair market value" (Recommended Decision at 2).

Judge Burrowes refers to no legal authority for his conclusion that fair annual return is something different and less than fair market value. The only authority cited in his opinion for this proposition is a fragment of the testimony given by

Mr. Quackenbush. As we have already noted, however, Mr. Quackenbush repeatedly testified that he perceived his task to be the development of a rental rate consistent with "fair market value." Mr. Quackenbush summarized his understanding of the general grazing regulations and the import of the phrase "fair annual return" contained therein during cross-examination:

Q. 25 CFR 151.13(b) dealing with the establishment of grazing fees. Does not that section require the Area Director to establish a minimum acceptable rental rate which provides a fair annual return?

A. Yes.

Q. Well that isn't the same as fair market value, is it?

A. I would say it's the same thing. If they are not getting fair market value, they are not getting a fair annual return.

(Tr. 64).

The Board agrees with the position of the Bureau whose brief states on this point:

We submit that the term "fair annual return" has substantially the same meaning as "fair market value."

There is no language in 25 CFR Part 151 that might possibly be construed to require "fair annual return" to have some other meaning. In § 151.1 there are set forth many definitions of terms but no reason was apparently seen to define "fair annual return" to mean something other than it would appear to mean. As a matter of fact if "fair annual return" was intended to mean something new and different and something less than "fair market value" there would have been an absolute necessity to define it.

(Govt. Brief, filed Nov. 10, 1980, at 7).

v.

AREA DIRECTOR, ABERDEEN

February 20, 1981

While the Board has found no administrative or judicial rulings expressly equating "fair annual return" and "fair market value" in the context of the Bureau's leasing or permitting of Indian lands,⁴ the terms have been used interchangeably over the years by the Bureau of Indian Affairs as well as in noted treatises on the Secretary's leasing authority. See, e.g., Chambers and Price, *Regulating Sovereignty: Secretarial Discretion and the Leasing of Indian Lands*, 26 Stan. L. Rev. 1061 (May 1974).⁵

⁴ Nor, of course, have we found any rulings distinguishing the two.

⁵ The treatise cited is primarily devoted to why and how the Secretary of the Interior may look to factors other than economic return to Indians in exercising his various leasing approval powers. While its primary emphasis is on the role the Secretary should play in the long-term leasing of tribal business leases, the article recognizes that with respect to short-term leasing or permitting of allotted lands, the Bureau's concern has been and possibly should continue to be insuring that the allottee receives "fair annual rental" or "fair market value" for his land. Pertinent excerpts are quoted below:

"The approval power as presently exercised requires that the Secretary scrutinize only the financial fairness of the transaction—a 'fair market value' approach. The Secretary's regulations provide as the chief prerequisite for approval that the lease shall be for 'the present fair annual rental'" (at 1076).

"A virtue of the limited 'fair market value' approach is that it implies some acknowledgment by the Secretary that it is inappropriate for him to promulgate land use policies for Indian country. By stating in advance that he will approve any lease that provides a fair annual rental for the real estate, the Secretary is agreeing to ratify any determination a tribal lessor or allottee makes as to the social effects of a lease" (at 1033).

"We favor a combination of approaches—the 'free market' approach for short-term leases of tribal lands and a more 'preservative' approach for long-term leases, with retention of financial review for all leases of allotted lands." *Ibid.*

Judge Burrowes recognized that characterizing "fair annual return" as something less than "fair market value" penalizes the Indian landowner. His recommended decision states:

At the outset, I must state my disgust and dismay at the regulations herein which force on the Bureau of Indian Affairs (hereinafter, BIA) the position of having to balance the interests of the competing land owners and livestock operators.

If the land owners are to receive only a "fair annual return," rather than "fair market value," then the land owners are in fact being forced to subsidize the cattlemen. If the objective of the regulation is to be met, it should be done by a method that does not force one group of individuals to subsidize another group, nor through a method that forces the "bad guy" BIA employee into such an untenable position.

(Recommended Decision at 2).

In the absence of any persuasive authority that the term "fair annual return" as used in 25 CFR Part 151 is not the same as "fair market value," the Board does not understand why the Administrative Law Judge was constrained to treat these terms differently, leading inevitably to a degree of subsidization of ranchers by the landowners. In the Board's view, of varying possible interpretations which can be given to regulations, an interpretation which places the rulemaker in an "untenable position" ought to be avoided, not adopted.

Counsel for the Bureau correctly states, in our opinion, that the rec-

ommended decision misconstrues 25 CFR Part 151 in such a way "as to diminish the trust responsibility of the United States to the Indian landowners by the creation of a so-called trust responsibility to the cattle operator" (Govt. Brief, filed Nov. 10, 1980, at 3).

The general provisions of 25 CFR 151.3(b) are quoted and relied upon in the recommended decision. We concur with the Bureau that the language of sec. 151.3(b), which recites as one of the objectives of 25 CFR Part 151 the need to "promote use of the range resource by Indians to enable them to earn a living, in whole or in part, through the grazing of their own livestock" must, by necessity, refer to some other method than the reduction of fees due the Indian landowner for the use of his land.

The objective of sec. 151.3(b) may be met in a number of ways under the regulations without depriving landowners of fair annual return or fair market value for their land. *See*, for example, 25 CFR 151.5 (establishment of range units for more effective utilization of the range resources); 25 CFR 151.10 (allocation of range units to Indian corporations, Indian associations, and adult tribal members); and 25 CFR 151.11(a)(5) (Indian preference to adult tribal members, Indian corporations, and Indian associations in meeting high bids under competitive sales for grazing privileges).

The Secretary's trust responsibility to Indian landowners to insure protection of their economic interest

through the permitting of Indian lands for grazing was specifically addressed in *Coomes v. Adkinson*, 414 F. Supp. 975, 992 (D.S.D. 1976). The court stated:

The B.I.A. officers are not landowners with free choice in dealing with this land, but rather are servants of the Indian people. The Secretary's failure, through B.I.A. subordinates, to recognize and give serious consideration in their written decisions to the stated economic interest of the Indian landowners constitutes a serious breach of the Secretary's fiduciary duties.

Establishing Fair Market Value

From its own review of the evidence adduced at the hearing of July 24, 1980, the Board is satisfied that the Bureau's increase of the minimum grazing rental on the Fort Berthold Reservation to \$57 per year per animal unit for the period Nov. 1, 1979, to Oct. 31, 1980, was reasonable.

A starting point for evaluating the reasonableness of the \$57 fee is the recommendation of Judge Burrows that a reasonable rate, albeit below "fair market value," would be \$52 per year.

The basis for the \$57 rate set by the Bureau predominantly rests on the independent market survey performed by Darrel Rasmusson. (*See* Tr. at 38; Recommended Decision at 3.) Although Mr. Quackenbush, the Fort Berthold range conservationist who endorsed the survey's findings, testified to the consideration of other factors in addition to the report in proposing the foregoing rate, these other factors appear to have served merely as an informal check on the

v.

AREA DIRECTOR, ABERDEEN

February 20, 1981

validity of the data contained in the survey.⁶

Although the evidentiary hearing commenced with a presentation by the Government as to how the Bureau set the disputed rental rate, the burden of proof in this appeal is on appellant to show that the Bureau's action was unreasonable. *Cf. Hazel Hawk Visser v. Area Director, Portland Area Office*, 7 IBIA 22 (1978).

Appellant sought to invalidate the independent study in three major ways: (1) By contending that the survey improperly looked to fair market value instead of fair annual return; (2) by various challenges to the "comparable tracts" considered in the report; and (3) by the opinion testimony of its own expert witness, Mr. Vern Englehorn. We have already disposed of the first argument by holding that fair annual return signifies the same thing as fair market value under the provisions of 25 CFR Part 151. We turn to appellant's other primary contentions.⁷

⁶ For example, Mr. Quackenbush stated that he considered the following: The effects of inflation on the grazing market; knowledge acquired from conversations with various farmers and ranchers; and personal knowledge derived from observation of his father's cattle operation in Canada. Appellant managed to show deficiencies in each of the foregoing considerations, however.

⁷ A fourth line of attack on the increased rental was attempted by appellant through the testimony of various members of the association. The Board has reviewed this testimony and concludes that it amounts to self-serving proclamations that the increased rental was unjustified. For reasons set forth in this opinion and from consideration of the record as a whole, the Board does not agree that the increase was unjustified.

[2] Appellant submits that the independent study should have excluded most, if not all, "comparable tracts" located off the reservation. Of the 37 comparables examined, only 9 were located on the reservation. The survey does reflect a lesser average value for on-reservation tracts as compared with off-reservation tracts.⁸

The Board does not agree that off-reservation transactions have little bearing on the fair market value of grazing privileges on the reservation. It is obvious to us that a cattle operator who has a choice of obtaining the use of grazing lands on or near the reservation will consider, among other things, the respective cost of obtaining such rights. Higher off-reservation fees could and apparently have led to higher on-reservation fees. There is no evidence of record to contradict this premise.

In a dispute over a lease effected under the provisions of 25 CFR Part 131, this Board rejected a recommended decision of an Administrative Law Judge who eliminated comparables from a market appraisal which were of generally higher values. *Byrd v. Commis-*

⁸ The average for the nine on-reservation comparables was found to be \$4.50 per AUM and the median \$4.29. For the 28 off-reservation transactions, the average was \$6.14 and the median \$5.89. Combining the two areas, the average was \$5.78 and the median \$5.62. The average of the latter two figures is \$5.70 from which a 10-month "annual" rate of \$57 was suggested. See Recommended Decision at 4.

sioner of Indian Affairs, 7 IBIA 142, 145 (1979), *appeal pending sub nom. Byrd v. Andrus*, C 79-229 (E.D. Wash., filed June 21, 1979). We stated:

In comparing and reviewing the appraisals we disagree with Judge Clarke's removal from consideration of comparables Nos. 50 and 54, two of the comparables used by Swanson in arriving at the fair rental value. It appears that the foregoing comparables were dismissed merely because they were of greater value than the other comparables. We do not agree that only tracts of identical or lesser value should be used as comparables in an appraisal.⁹

Consistent with the above, we do not think off-reservation comparables should be excluded from an appraisal of grazing transactions in this case merely because they have a higher average value.

Appellant challenges the use of off-reservation comparables in the independent survey because they are generally lease transactions as opposed to grazing privileges obtained by permit. According to appellant, reservation permit transactions are less costly than lease transactions because "permits can be revoked at any time, a grazing permit gives no interest in the land, lenders more readily provide funds to operators who have an interest in the grazing lands, [and] reservation grazing lands are less well improved, there being less fencing and

less ponds and dams, and remoteness from markets" (Appellant's Posthearing Brief at 6-7).

The Department's rules define a grazing permit as a "revocable privilege granted in writing limited to entering on and utilizing forage by domestic livestock on a specified tract of land." 25 CFR 151.1(k). The revocability of the privilege is strictly regulated, however. It may not be revoked until after due notice and only on the following grounds: Termination of the trust status of the land; violation of terms; allocation to Indian use; or allocation for grazing exempt from permit pursuant to 25 CFR 151.8. The latter two revocations may be accomplished only after 180 days written notice. *See* 25 CFR 151.15 (b) and (c).¹⁰

Through its own expert witness, Mr. Vern Englehorn, appellant has sought to discredit the independent

⁹ The *Byrd* decision is of additional significance wherein it shows that the Bureau of Indian Affairs regards the term "fair annual rental," as found in 25 CFR Part 131, to be synonymous with "fair market value."

¹⁰ The Government argues that a grazing permit under Part 151 is usually more certain in duration than a lease under Part 131: "In actuality because Indian preference is implemented in the allocation and bid preference systems provided in obtaining grazing permits, which do not exist in obtaining farm and pasture leases, there is much longer considered use of Indian lands by the same permittees than the same lessees" (Govt. Brief, filed Nov. 10, 1980, at 9). The administrative record is insufficient to support a finding or conclusion on this allegation one way or the other. We would observe, however, that while the stability of grazing permits held by non-Indians on Indian land is affected by the provision of 25 CFR 151.15(c) which permits cancellation or modification of permits for conversion to Indian use, Indian permittees, such as in the case at bar, are apparently on better footing than non-Indian permittees. This would surely be true if the phrase "allocation to Indian use" is not intended to mean "Indian landowner use."

v.

AREA DIRECTOR, ABERDEEN

February 20, 1981

survey prepared for the Bureau by distinguishing many of the "comparable tracts" included in the survey. In apparent acceptance of Mr. Englehorn's testimony and narrative report, the Administrative Law Judge held in the recommended decision that 10 of the 37 tracts surveyed are not comparable.¹¹ Specific reasons were not given by Judge Burrowes for the elimination of any of these tracts. The recommended decision states in general, however, that comparable tracts possessed of improvements, hay land, or performance promises from the lessor should not be considered unless the value of such factors is removed to arrive at straight grazing value (Recommended Decision at 4).

Neither Judge Burrowes nor appellant's expert witness attempted to factor out such "extra" values in their assessment of the comparable tracts relied upon by the Bureau.¹²

¹¹ The tracts found unacceptable by the Administrative Law Judge are: 17, 21, 25, 28, 29, 30, 32, 33, 34, and 37, all of which are located off the reservation.

¹² In addition, appellant's expert witness offered no opinion as to the reasonableness of the fees set by the Bureau. In light of this fact, the Government has moved that his entire testimony be stricken (Govt. Brief, filed Nov. 10, 1980, at 14). The foregoing motion is without merit. It is clear that the purpose of the testimony given by appellant's expert witness was to show that the Bureau's fee increase was unreasonable and that it was based on invalid data. Had the Board accepted this opinion an appropriate order would be to set aside the decision and remand the case to the Bureau for a new appraisal to establish fair rental value. *Cf. Junction Oil Co., Inc.*, 21 IBLA 78 (1975).

Instead, the comparables allegedly overvalued because of improvements or other factors were completely removed from consideration. Among other things, this approach overlooks the fact that lands permitted for grazing on the reservation have also received improvements and possible lessor-management assistance. For example, Quintin Sulzle, an area range conservationist with the BIA's Aberdeen Area Office, testified that the Bureau has invested \$160,000 in various range improvements on the Fort Berthold reservation (Tr. 130).

In collecting data which would give an indication of the fair market value of grazing privileges in the Fort Berthold area, the Bureau's independent appraiser sought to provide a complete picture of the market, as the Government's brief summarizes:

There is testimony about how certain highs and lows were eliminated from the report because in the appraiser's trained judgment, the information was unreliable. (Tr. p. 8 L. 7 to 8). Data was tested and reconfirmed (Tr. p. 25 L. 1 to 31). Data that reflected some compulsion and was not "arms-length" was tested for family or relative involvement (Tr. p. 29 L. 8 to 13). Other information was eliminated by the expert because it didn't make sense based on his financial judgment (Tr. p. 8-9 L. 20-4). As much data as possible was selected within the appropriate geographic distribution to obtain a "common basis." (Tr. p. 9 L. 5, p. 10, L. 2).

(Govt. Brief, filed Nov. 10, 1980, at 15).

[3] The extensive data gathered by the independent appraiser was used by the Bureau to arrive at a fair market value for grazing privileges on the reservation. The Bureau arrived at a figure which it considered reasonable. In our review of that determination, the Board's requirement is to overturn the decision only if it is found to be unreasonable. It is possible that we could set a different rate from the evidence adduced as could anyone else. However, as long as the Bureau's action is supported in law and by substantial evidence, it would be an inappropriate intrusion into the Bureau's function for this body to substitute its judgment for the agency's.¹³

Our holding in this case is that the rental increase ordered by the Area Director was not unreasonable, contrary to law, or unsupported by substantial evidence. The Area Director's decision is therefore affirmed.

This decision is final for the Department.

¹³ In this regard, Departmental regulations preclude the Board of Indian Appeals from exercising discretionary authority delegated by the Secretary to the Commissioner of Indian Affairs, except as otherwise allowed by the Commissioner on a case-by-case basis. See 46 FR 7334, 7337 (Jan. 23, 1981).

APPEAL OF DAKOTA TITLES & RECORDS, A JOINT VENTURE

IBCA-1420-1-81

Decided *February 24, 1981*

Bureau of Indian Affairs.

Dismissed.

Contracts: Contract Disputes Act of 1978: Jurisdiction—Contracts: Disputes and Remedies: Jurisdiction

A protest of award by an unsuccessful bidder is dismissed where the Board finds that it has no jurisdiction over bid protest under either the disputes clause or the Contract Disputes Act of 1978.

APPEARANCES: David C. Humphrey, Attorney at Law, Yankton, South Dakota, for Appellant; Roger W. Thomas, Department Counsel, Aberdeen, South Dakota, for the Government.

OPINION BY CHIEF
ADMINISTRATIVE JUDGE
McGRAW

INTERIOR BOARD OF CONTRACT APPEALS

The Government has moved to dismiss the instant appeal on the ground that the Board is without jurisdiction over the subject matter of the appeal. The appellant has filed an opposition to the granting of the Government's motion to dismiss asserting that "the Defendant and Appellee has, by its own application of the procedures available, did select and apply those procedures in the Solicitation, Award, and Appeal process surrounding RFP Nos. A-00147 and A-00149 re-

February 24, 1981

spectively" ("Resistance to Motion to Dismiss," p. 2). In the complaint filed in these proceedings, the appellant undertakes to show that the contract covered by its protest was awarded contrary to the evaluation procedures set forth in the solicitation request. It also alleges prejudice by reason of the contracting officer having advised the appellant of its right to protest the award made by taking an appeal to this Board. Included among the prayers for relief in the complaint is "5) That the Contract be awarded to the Plaintiff" (Complaint, p. 8).

Nowhere does the appellant address the question of what authority this Board has to resolve protests of award. Jurisdiction over protests of award has always been considered to lie with the Comptroller General. On many occasions in the past this Board has held that the jurisdiction conferred by the disputes clause only extends to resolution of disputes between the parties to the contract under which the appeal was taken or their lawful successors or assignees. *See*, for example, *MacDonald Construction Co.*, IBCA-572-5-66 (Mar. 17, 1967), 67-1 BCA par. 6,202; *Divide Constructors, Inc., Subcontractor to Granite Construction Co.*, IBCA-1134-12-76 (Mar. 29, 1977), 84 I.D. 119, 77-1 BCA par. 12,430; and *Zurn Engineers*, IBCA-1176-12-77 (July 20, 1978), 85 I.D. 279, 78-2 BCA par. 13,335.

While the jurisdiction of the Board has been greatly enlarged by reason of the enactment of the Con-

tract Disputes Act of 1978 (P.L. 95-563, 92 Stat. 2383, 41 U.S.C. § 601 *et seq.* (Supp. II 1978)), the Act has been interpreted as not extending the jurisdiction of boards of contract appeals to protests of award. Addressing this question in the recent case of *James L. Jones*, PSBCA No. 778 (Feb. 28, 1980), 80-1 BCA par. 14,292, the Postal Service Board of Contract Appeals stated at 70,373:

The facts clearly establish that Appellant's appeal pertains to the formation of a contract and not an existing contract to which it is a party. This Board in *Edwin T. Noyes, III*, PSBCA 652, July 12, 1979, and subsequent decisions has consistently held that the Board does not have jurisdiction over claims filed by disappointed bidders against the award of contracts.

The appellant has alleged that it has been wronged by reason of the actions taken by the Government in awarding a contract to another bidder. It has not shown that it has any standing to bring its protest of award to this Board for resolution. Absent jurisdiction over the subject matter, this Board is without authority to provide relief even if the appellant were to prove its case. For the reasons stated and in reliance upon the authorities cited, the appeal is dismissed as beyond the purview of our jurisdiction.

Administrative Judge

APPEAL OF FRANKLIN INSTRUMENT CO., INC.**IBCA-1270-6-79**Decided *February 26, 1981*Contract No. 14-08-0001-16295,
Geological Survey

Denied.

1. Contracts: Performance or Default: Excusable Delays

Where a prime contractor's delayed performance of its contractual obligations was caused by its sole source subcontractor's failure to perform, the prime contractor assumed the risk of such nonperformance by its subcontractor, and the prime contractor's delayed performance was not an excusable cause of delay cognizable under the default clause.

2. Contracts: Performance or Default: Waiver and Estoppel

Where the Government's conduct constituted encouragement to a contractor to proceed with performance of the contract work after the delivery date had passed, and where such a contractor incurred performance costs in reliance thereon, the Government has waived the delivery schedule.

3. Contracts: Disputes and Remedies: Termination for Default: Generally

Where the contractor delivered contract items which failed to substantially conform with the contract specifications, and where the contracting officer terminated the contractor's right to proceed with performance of the contract work because of the contractor's non-conforming delivery, the Government's termination for default was proper.

APPEARANCES: James M. Marsh, Esq., La Brum & Doak, Philadelphia,

Pennsylvania, for Appellant; Ross W. Dembling, Esq., Department Counsel, Washington, D.C., for the Government.

**OPINION BY
ADMINISTRATIVE JUDGE
DOANE****INTERIOR BOARD OF
CONTRACT APPEALS*****Factual and Procedural
Background Statement***

This appeal is concerned with whether the contracting officer properly terminated for default a firm fixed price indefinite quantity supply contract.

Appellant, Franklin Instrument Co., Inc., entered into contract No. 14-08-0001-16295 with the U.S. Department of the Interior, Geological Survey, on July 14, 1978. The contract, executed on Standard Forms 30 and 32, was subject to the Government's issuance of delivery orders from the date of the contract award. It called for the delivery of minute and hour timers with quartz crystal controlled movement within 120 days after the date of the Government's delivery order. The Geological Survey uses the timers to program its digital recorders to collect hydrologic data for various governmental agencies.

In the instant case, the contracting officer partially terminated appellant's right to proceed for default for the stated reasons that appellant: (1) failed to make delivery within the period of performance of the contract and delivery order No. ER-66320; (2)

failed to make acceptable progress in the performance of the contract; and (3) failed to respond to the Government's letter of Apr. 19, 1979, within 10 days after receipt of such letter. However, the contracting officer's primary reason for terminating appellant's right to proceed was based on appellant's failure to deliver the contract items in accordance with the contract specifications.

Appellant alleged in its complaint that the Government had waived the original delivery schedule and that the delays were chargeable to the Government. Appellant also alleged that the Government's improper termination of its contract, together with the Government's refusal to accept completed items, had caused appellant to incur substantial damages. In its prayer for relief, appellant asked the Board to vacate the termination for default and to reinstate its contract. At the prehearing conference, however, appellant asked the Board to convert the termination for default into a termination for the convenience of the Government.

The Issues

1. Was appellant in default of its contract?
2. Did appellant experience any excusable cause for delay of its contractual performance beyond the original delivery date?
3. Did the Government's actions after the delivery date constitute a waiver of the delivery schedule?
4. Even if the Government

waived the original delivery date, did the Government still have the right to terminate appellant's right to proceed with performance if appellant failed to deliver contract items in accordance with the contract specifications?

5. Did the Government's acceptance of all units delivered by appellant deny appellant both the right and opportunity to correct any alleged deficiencies?

Discussion

A. EXCUSABLE DELAY.

It is undisputed in this appeal that at the time the contracting officer terminated appellant's right to proceed for default, appellant had not yet delivered 532 timers as required by delivery order No. ER-66320. Appellant argues, however, that the purported termination was unlawful because its lack of deliveries was caused by the failure of a Government designated sole source supplier to deliver essential components. The Government rebuts this argument and argues that appellant's delayed performance was not excusable.

The Armed Forces Board of Contract Appeals (ASBCA) considered the issue of whether a contractor's failure to deliver was excusable if its sole source supplier failed to perform in the appeal of *Aero-kits, Inc.*, ASBCA No. 12324 (Mar. 11, 1968), 68-1 BCA par. 6917, *motion for reconsideration denied*, 68-2 BCA par. 7088. In that case, at page 31,996, the Board explained the contractual obligations of a

Government contractor involved in a sole source procurement as follows:

Appellant contracted with the Government to furnish all of the designated kit parts, some of which were sole source, others unrestricted source. Appellant's price included a charge for procuring sole source items just as for procuring unrestricted source items. Appellant's obligation to the Government to supply the sole source items was no different from its obligation to supply the remaining items. The limitation on the appellant's ability to select its suppliers because of the sole source designations was an inherent condition of the contract. Appellant agreed to this limitation when it entered into the contract; it was not imposed by the Government after the contract was made. The latter would present a wholly different problem. In making this type of contract appellant was well aware that a sole source procurement might cause greater difficulties than an unrestricted source procurement. Appellant clearly assumed the risk that non-performance by a sole source supplier entails. There is no basis on which appellant can now be relieved of the contractual obligation which it assumed.

[1] In the instant appeal, it is clear that appellant, Franklin Instrument Co., Inc., contracted with the Government to furnish 1,035 quartz crystals timers, all of which required a sole source Cannon connector. It is also clear that the limitation on appellant's ability to select its suppliers because of this sole source designation was an "inherent condition" of this contract; that appellant agreed to such a limitation when it entered into this contract with the Government; and that appellant "assumed the risk" that nonperformance might entail. Therefore, as in *Aerokits*, there is

no basis on which appellant can now be relieved of the contractual obligation which it assumed (AF Tab. 7, Art. 13, par. 4.2).

B. WAIVER OF THE DELIVERY SCHEDULE.

Appellant argues that the purported termination was unlawful because the Government had waived the delivery schedule. It is well settled that where the Government waives the delivery schedule, a contractor's delivery after such date is, in effect, timely. The Government argues, however, that appellant failed to deliver the supplies in a timely fashion and that the Government did not waive the delivery date.

The ASBCA was confronted with the issue of whether the Government had waived the delivery schedule in the appeal of *General Products Corp.*, ASBCA No. 16658 (Aug. 7, 1972), 72-2 BCA par. 9629. In this appeal, at page 44,981, the Board held, *inter alia*, that

waiver of the delivery schedule by acts or conduct of the Government representatives ordinarily requires at least two basic elements, (1) conduct on the part of the Government which is reasonably believed by the delinquent contractor to constitute encouragement to proceed with performance of the contract after the delivery date has passed, and (2) inurrence of performance costs by the delinquent contractor in reliance thereon.

[2] On these facts it is obvious that the Government "encouraged" appellant to proceed with performance of this contract after the delivery date had passed, since after such date the Government not only sent

February 26, 1981

appellant approximately 200 Cannon connectors with which to manufacture the timers, but the contracting officer also indicated that he would accept appellant's late deliveries (Tr. 187, 188). It is also obvious that appellant incurred performance costs in reliance on such encouragement (Appellant's Exhs. 5, 6, and 7). Since appellant has proved the elements of waiver are present, it follows that the Government has waived the delivery schedule. Therefore, the contracting officer's termination cannot be upheld on the basis that appellant failed to deliver within the period of performance of the contract and the delivery order since the Government had waived the delivery date.

C. GOVERNMENT ACCEPTANCE AND DENIAL OF THE CONTRACTOR'S RIGHT TO CORRECT THE DEFECTS.

Appellant argues that the purported termination was unlawful because the Government had accepted all units delivered by appellant and had denied it any opportunity to correct any alleged deficiencies in those units or in the 532 remaining unshipped units. Appellant states that the Uniform Commercial Code (U.C.C.) has been applied to Federal Government contract disputes for many years. We agree that the U.C.C. has been applied to such disputes. See, for example: *Federal Pacific Electric Co.*, IBCA No. 334 (Oct. 23, 1964), 1964 BCA 4494. As legal support for its

argument, appellant cites U.C.C. § 2-508 entitled "Cure by Seller of Improper Tender or Delivery; Replacement" which reads as follows:

(1) Where any tender or delivery by the seller is *rejected* because non-conforming and the time for performance has not yet expired, the seller may seasonably notify the buyer of his intention to cure and may then within the contract time make a conforming delivery.

(2) Where the buyer *rejects* a non-conforming tender which the seller had reasonable grounds to believe would be acceptable with or without money allowance the seller may if he seasonably notifies the buyer have a further reasonable time to substitute a conforming tender. [Italics supplied.]

A perusal of this section of the Code reveals that it applies only where the buyer has "rejected" the seller's tender or delivery. However, under these facts, the Government did not "reject" the timers. Instead, the evidence in the record reveals that the Government "accepted" such units in spite of their defects (Tr. 172). Furthermore, appellant must agree with the Board's position since it has couched its argument in terms of the Government's acceptance, rather than the Government's rejection, of the 503 delivered units. Since this section clearly requires that the buyer first "reject" the seller's tender or delivery, and since appellant failed to prove that the Government rejected the delivered units, it is clear that U.C.C. § 2-508 does not apply.

Appellant also argues that it was denied an opportunity to correct the alleged deficiencies in the 532 remaining unshipped units, even

though time for performance had not yet expired, apparently because of the Government's waiver of the delivery date. As was earlier stated in this opinion, the Government contends that appellant's right to proceed was terminated primarily because appellant failed to deliver timers in accordance with the contract specifications. The ASBCA was faced with a similar problem in the appeal of *Phil Rich Fan Manufacturing Co., Inc.*, ASBCA No. 12770 (Jan. 29, 1971), 71-1 BCA par. 8694. In this appeal, at page 40,387, the ASBCA held, *inter alia*, that:

When the Government waives the due date and then waits until the contractor delivers the supplies, the *Lumen* or *DeVito* type of decision is not likely to be relevant. The problem is more akin to that in *Radiation Technology, Inc., v. U.S.* [11 CCF par. 80,702], 177 Ct. Cl. 227, 366 F.2d 1003 (1966). Because of the due date waiver the delivery is, in effect, timely, in the way it would have been if made at the end of the original delivery schedule. But the Government may then make a summary termination for default if the supplies are nonconforming.

We think that this was the situation here. It is clear that the Government "waived" the original delivery date. It is also clear that appellant delivered nonconforming supplies (Tr. 172). Thus, the Government could have made a summary termination for default since the supplies were nonconforming.

We also think that the instant appeal is akin to *Radiation Technology, supra*. There, the Court of Claims of the United States was

confronted with the question of the propriety of the Government's termination of a contract without granting the plaintiff an opportunity to repair the defective scaler-timer high voltage systems. In that case, the contracting officer had terminated appellant's right to proceed because of its failure "to deliver the systems in accordance with the specifications" under subparagraph (a)(i) of the default clause. The court concluded, at page 232, that the Government had an absolute right to terminate for non-delivery and stated in relevant part that

[u]nder the view which we espouse, the contractor is entitled to a reasonable period in which to cure a nonconformity *provided that the supplies shipped are in substantial conformity with contract specifications.*

In order to meet this requirement, it is incumbent at the outset that the contractor demonstrate that he had reasonable grounds to believe that his delivery would conform to contract requirements. Shipment alone is not an adequate badge of proof. Further, the right to cure assumes that the defects complained of are minor in nature and extent and are susceptible to correction within a reasonable time. Where extensive repair or readjustment is necessary in order to produce a fully operable product, substantial performance cannot be found and summary termination would be warranted. Other relevant considerations bearing upon the question of compliance involve the usability of the items, the nature of the product involved (whether it involves complex precision instruments as opposed to a route production item), and the urgency of the Government's demand. The greater such urgency the greater the requirement that performance approach the over all level of strict conformity [Italics supplied.]

[3] Under these circumstances, appellant failed to show that the timers "substantially conformed" with the contract specification. First, the record is devoid of any evidence that appellant had "reasonable grounds to believe" that its delivery would conform to the contract requirements. Nor is there any evidence that the defects complained of by the Government are minor in nature and extent (Government's Answer, par. 15; AF Tab 4(B), Tab 6(A); Tr. 114, 118, 121-23, 128-30, 133, 149, 150, 153-54, 159, 190-91, 195, 209, 210). The evidence in the record clearly reveals that the timers were "unusable" because of the defects and unreliability (Tr. 123, 133, 159); that extensive readjustment by the Government was necessary in order to produce a fully operable timer (Tr. 129, 153, 195, 210); and that the Government "urgently needed" the timers (Tr. 125). Thus, appellant was not entitled to a reasonable period of time in which to cure any nonconformities since the timers did not "substantially conform" with the performance requirements of the contract. Since appellant had no "right to cure" the nonconformities, and since the timers did not "substantially conform" with the contract requirements, the Government not only had the right to summarily terminate appellant's contract, but it also follows that the Government had the right to terminate such a contract after issuance of its second show cause letter.

Findings of Facts and Conclusions of Law

Based upon the foregoing discussion of the evidence, we make the following findings of fact and conclusions of law:

1. Delivery order No. ER-66320, issued on Sept. 25, 1978, required appellant to deliver the timers within 120 days after the date of the said order (AF Tab 7).

2. Delivery was required to be made on or before Jan. 23, 1979 (AF Tab 7).

3. Appellant did not deliver on said date, and the contracting officer issued a show cause letter (AF Tab 4(C)).

4. The reasons set forth in appellant's letter, dated Feb. 12, 1979, do not constitute an excusable cause of delay cognizable under the default clause of the contract (*Aerokits, Inc., supra*).

5. The Government waived the original delivery schedule since: (a) it encouraged appellant to proceed with performance after the delivery date; (b) it indicated that it would accept appellant's late deliveries; and (c) appellant incurred performance costs in reliance on such encouragement (*General Products Corp., ASBCA No. 16658 (Aug. 7, 1972), 72-2 BCA par. 9629; Tr. 187, 188; Appellant's Exh. 5, 6, 7*).

6. The contracting officer issued a second show letter on Apr. 19, 1979, and set forth several reasons for the timers' failure to comply with the

contract requirements (AF Tab 4(B)).

7. The timers that appellant subsequently delivered did not substantially conform to the contract specification (Tr. 114, 118, 121-23, 128-30, 133, 149, 150, 153-54, 159, 190-91, 195, 209, 210; AF Tab 4(B), Tab 6(A); Government's Answer, par. 15).

8. The contracting officer properly terminated appellant's right to proceed with performance for default because appellant failed to deliver the timers in accordance with the contract specification (see citation in findings of fact No. 7).

Decision

We find that where a prime contractor's delayed performance is caused by its sole source subcontractor's failure to perform, the prime contractor's delayed performance is not excusable. Thus, the Board denies appellant's claim for relief based upon excusable delay.

We also find that the Government waived the original delivery date and that appellant's deliveries

after that date were, in effect, timely. Thus, the Government improperly terminated appellant's right to proceed based upon untimely deliveries.

We also find that appellant was not entitled to a right to cure the timers' nonconformities since appellant delivered timers which failed substantially to conform with the contract requirements. Thus, the Board finds that the contracting officer properly terminated appellant's right to proceed with performance for default because appellant failed to deliver the timers in accordance with the contract specifications.

Finally, since we agree with the Government that appellant failed to deliver contract items in accordance with the contract specifications, the Board hereby denies the instant appeal.

Administrative Judge

I CONCUR:

G. HERBERT PACKWOOD

Administrative Judge

**INDIAN COUNTRY STATUS OF
MISSISSIPPI CHOCTAW SCHOOL
LANDS ***

M-36933

January 19, 1981

Indians: Criminal Jurisdiction

Six parcels of Bureau of Indian Affairs school land adjoining land held in trust for the Mississippi Band of Choctaw Indians are Indian country within the meaning of 18 U.S.C. § 1151(b) (1976).

*OPINION BY OFFICE
OF THE SOLICITOR*

TO: ASSISTANT SECRETARY—INDIAN
AFFAIRS

FROM: SOLICITOR

SUBJECT: INDIAN COUNTRY STATUS
OF MISSISSIPPI CHOCTAW SCHOOL
LANDS

Pursuant to a request from counsel for the Mississippi Band of Choctaw Indian, this office has reviewed the question whether six parcels of BIA school land which adjoin lands held in trust for the band¹ are dependent Indian communities and therefore Indian country within the meaning of 18 U.S.C. § 1151(b). For the reasons discussed below, we conclude that the school lands are dependent Indian communities.

The school lands were purchased under authority of several appropriations acts, beginning with the

Act of May 25, 1918, 40 Stat. 561, 573, which appropriated funds, in terms similar or identical to those of the 1918 act, "for [the] education [of full-blood Choctaw Indians of Mississippi] by establishing and maintaining day schools including the purchase of land and construction of necessary buildings." Act of May 25, 1918, *supra*. These lands were not among the lands declared to be in trust for the Mississippi Choctaw Indians by the Act of June 21, 1939, 53 Stat. 851.² The legislative history of the 1939 act indicates that the lands intended to be declared in trust were those lands purchased under other provisions of the above-referenced appropriations acts. Those provisions authorized expenditures "for the purchase of lands, including improvements thereon, not exceeding eighty acres for any one family, for the use and occupancy of [full-blood Choctaw Indians of Mississippi], to be expended under conditions to be prescribed by the Secretary of the Interior for its repayment to the United States * * *." (The Act of May 25, 1918, 40 Stat. 561, 573, is

² The questions whether these Indian school lands may, notwithstanding the absence of a formal declaration of trust, be properly classified as a part of the Choctaw Indian Reservation under other principles of law, or whether the Mississippi Choctaws may have claim to a beneficial interest in or use rights to these school lands, is not addressed in this memorandum, and no opinion on those questions is expressed herein. See Acting Solicitor's Memorandum, July 9, 1940 (whether or not lands purchased by the United States for Indian schools and hospitals constitute an "Indian Reservation"), 1 *Op Sol. on Indian Affairs* 964 (U.S.D.I. 1979).

*Not in chronological order.

¹The six school land parcels are located in the Mississippi Choctaw communities of Pearl River, Bogue Chitto, Conehatta, Tucker, Red Water, and Standing Pine.

quoted. The provisions of other appropriations acts are similar.) *See* S. Rep. 108, 76th Cong., 1st Sess. (1939); H.R. Rep. 194, 76th Cong., 1st Sess. (1939).

Moreover, the school lands were omitted from the 1944 proclamation, 9 Fed. Reg. 14907, which described the lands held in trust under authority of the 1939 act and those taken in trust under the Indian Reorganization Act, 25 U.S.C. § 461 *et seq.*, and which, further, proclaimed an Indian reservation.³

In *United States v. John*, 437 U.S. 634 (1978), the Supreme Court held that the Mississippi Choctaw trust lands are Indian country because they are an Indian reservation within the meaning of 18 U.S.C. § 1151(a).⁴ However, it is doubtful that the reservation holding in *John* may be said to encompass the school lands, because the immediate bases for the Court's conclusion were the 1939 act and the 1944 proclamation, (*See* 437 U.S. at 649), neither of which included the school lands.

Other considerations relating to the history and present uses of the school lands, however, indicate that

the lands may properly be considered, dependent Indian communities. Recent federal court decisions indicate that no one factor is determinative of whether a particular area is a dependent Indian community but, rather, that various factors must be taken and considered together. *United States v. Martine*, 442 F. 2d 1022 (10th Cir. 1971); *United States v. Mound*, 477 F. Supp. 156 (D.S.Dak. 1979). Factors considered relevant by the Tenth Circuit Court of Appeals in *Martine* were "the nature of the area in question, the relationship of the inhabitants of the area to Indian Tribes, and to the federal government, and the established practice of government agencies toward the area." 442 F. 2d at 1023. The district court in *Mound* made similar factual inquiries.

It is evident that the school lands have historically been integral parts of the Choctaw communities. Prior to the institution of appropriations for the Mississippi Choctaws in 1918, the Choctaws had grouped themselves into natural communities, with respect to six of the seven presently existing communities.⁵ The seventh, Bogue Homa, was apparently not a pre-existing community but was formed through efforts of the BIA to gather to-

³ The memorandum of the Solicitor transmitting the proclamation to the Assistant Secretary, after noting that complete title to the school lands was in the United States, stated that they could not, under existing law, be brought within the scope of the proclamation. Solicitor's Memorandum, Nov. 29, 1944.

⁴ The Court, accordingly, found it unnecessary to reach the question whether they are a dependent Indian community under 18 U.S.C. § 1151(b). 437 U.S. at 648, n. 17.

⁵ *See Indian Office Handbook of Information: Mississippi Choctaw Reservation*, September 1935 (hereafter cited *Handbook*) at 10, 24; Memorandum of the Commissioner of Indian Affairs to the Secretary of the Interior about the Pearl River Indian Community, Apr. 21, 1965 (hereafter cited Commissioner's Memorandum) at 7, 9, 15 and Exhibit A thereto at 2.

SCHOOL LANDS

January 19, 1981

gether scattered tenant farmers in Jones County, Mississippi.⁶

The lands purchased for school purposes were chosen for their locations within the already existing communities, and the lands purchased for resale to Choctaw Indians were also selected for their location within the communities and their proximity to the school sites.⁷ BIA documents often refer to the communities as the "day school communities."⁸ These and other sources indicate that the schools were expected to serve and have served general community purposes in addition to their primary educational function. The 1935 *Handbook*, citing an earlier report, states, with reference to the schools, "[T]he object [was] to establish a center of education for the children and to make the Day School a center for developing the small farms and providing limited education for the adults." *Handbook* at 7. Quoting a 1935 verbal report of the Director of Education, the *Handbook* states, at page 24, "We are building the entire school program around the local community needs, whether they be economic, social, health, sanitation, health conditions in the home, food, nutrition, or care of babies."

⁶ *Id.* The Bogue Homa school is now closed and is not further considered in this memorandum. In 1975, the Bogue Homa land was placed in trust for the Mississippi Band of Choctaw Indians. See 41 Fed. Reg. 10114 (1976).

⁷ Commissioner's Memorandum at 8, 15.

⁸ *Handbook* at 10, 24, 40; Commissioner's Memorandum at 9.

A Comprehensive Plan prepared for the Mississippi Band of Choctaw Indians by a private firm in 1974 attests to the continued central role of the schools within the communities. For instance, at page 46, the Plan states, "The focal point of Community life in Bogue Chitto, as in all seven communities, is the Bureau of Indian Affairs Schools * * *. The school has historically been the community meeting place, due to the youth residing there and attending class, and due to the last [sic] of any other community focus as well." At page 76, it states, "The Choctaws do have a strong sense of community, * * * and accordingly hold to the idea of 'identity preservation' in development strategies. The community school is traditionally the force of community life, and, unless an alternative community center is provided, should be maintained as such."

Information supplied by the Mississippi Choctaw Agency covering the period of 1970-1979 shows that, in 1979, Indian families resided on each of the six school parcels, ranging from one family each at Tucker and Standing Pine to fourteen families at Pearl River. There have been Indian families residing on most of the parcels throughout the 10-year period. There were also 152 dormitory residents at Pear River and 10 dormitory residents at Bogue Chitto in 1979. Another dormitory at Conehatta was closed in 1974. It housed 27 students in its last year.

Moreover, the Choctaw Court of Indian Offenses has since its establishment in 1968 regularly exercised jurisdiction over civil and criminal matters involving Mississippi Choctaws arising from incidents taking place on the school lands. Likewise, BIA law enforcement officers patrol these areas and make arrests as warranted. (Most arrests occur at the Pearl River school site. Only rarely are arrests made at the other school sites.)

Since the late 1960's, the Mississippi Choctaws through their tribal government have operated a large number of community educational programs from facilities located on the school lands and have in several instances constructed tribal facilities on these lands with BIA concurrence.⁹ Perhaps most significant in terms of illustrating tribal use of these school lands and facilities, has been the Band's joint operation with BIA of grades K-3 in all six of the BIA day schools pursuant to a HEW Followthrough contract begun in 1969. That program served 410 students during the 1979-1980 school year.¹⁰

A further example of Choctaw community use of the school lands is the annual Choctaw Indian Fair. For each of the past 31 years, the Band has conducted its fair on the Pearl River School site. This fair is an annual celebration of the Choctaw culture which has yearly since

1950 brought thousands of tourists to the Choctaw Reservation.¹¹

Two arguments might be raised against a conclusion that the school lands are dependent Indian communities. The first is that the lands were purchased for institutional purposes and not for the use and occupancy of the Choctaws. The second is that the number of permanent residents on the school lands, in some instances at least, may be insufficient to constitute "communities."

With respect to the first argument, we note that, while the lands were purchased for school purposes, they were purchased for the education, specifically, of the Mississippi Choctaws and hence for their specific benefit. Moreover, while perhaps originally intended to serve only an educational function of the BIA, *i.e.*, the delivery of educational services to the Mississippi Choctaws, they have in fact for many years been "used" by the Choctaws for general community and educational purposes, with the Band in recent years taking on an increasing degree of policy and operational control over the use of these lands and facilities, consistent with the present federal policy of tribal self-determination and Indian control of education. *See, e.g.*, 25 U.S.C. § 450a; 25 U.S.C. § 2010.

The situation of the Choctaw school lands is thus clearly distinguishable from that of a BIA school unattached to any Indian reservation and used for education of In-

⁹ *E.g.*, the tribal arts and crafts building and an administration building for the tribal Headstart program, both at Pearl River.

¹⁰ Information supplied by counsel for the Band.

¹¹ *Id.*

SCHOOL LANDS

January 19, 1981

dian children in general, rather than children of a particular tribe. That was the situation addressed in an Acting Solicitor's memorandum of July 9, 1940, which held that the Phoenix Indian School was not Indian country.¹²

With respect to the small number of permanent residents on some of the parcels, we note that no court has yet directly addressed the scope of the term "community" as an element of "dependent Indian community" or determined whether a dependent Indian community must itself be a self-contained community or simply a part of a larger community. A *relationship* between the community and an Indian tribe has, however, been considered an element of an area's Indian country status. *Martine* at 1023, *Mound* at 159. In our view, where there are, as here, some permanent Indian residents and where tribal members regularly use the lands for general community purposes, the relation of the school lands to the larger Indian community is sufficiently integral and vital to render them dependent Indian communities.

In our view, when all the factors concerning the school lands are considered together, it becomes evident that they may properly be consid-

ered dependent Indian communities. Of particular importance are the following elements:

(1) The existence of the Choctaw communities, at approximately their present locations, prior to institution of federal services and purchase of the school lands in their midst.

(2) The fact that the lands, although purchased for educational purposes and held in fee, were intended for the specific benefit of the Choctaw communities.

(3) The present location of the land parcels immediately adjacent to Choctaw trust lands.

(4) The historical role of the schools as focal points of Choctaw community life and their regular use by the Mississippi Choctaw tribal government for operation of tribal educational and other programs.

(5) The residence of Indian families on a relatively permanent basis on the lands.

(6) The established practice of the BIA, the Band, and the Choctaw Court of Indian Offenses to regard the school lands as part of the Choctaw communities and as within BIA jurisdiction for law enforcement purposes.

Taking the sum of these factors, we conclude that the school lands are dependent Indian communities and therefore Indian country.

CLYDE O. MARTZ

Solicitor

¹² Acting Solicitor's Memorandum, July 9, 1940, *supra*, n. 2. One state court has held, however, that just such an off-reservation boarding school, on land not used or occupied by any Indian tribe, is a dependent Indian community. *C.M.G. v. Oklahoma*, 594 P.2d 798 (Okla. Cr. 1979), *cert. denied*, 444 U.S. 992 (1979).

INDIAN TRIBAL STATUS UNDER
THE BALD EAGLE PROTECTION
ACT *

M-36934

February 26, 1981

Bald Eagle Protection Act—Indian
Tribes: Federal Recognition

Only those groups which have received Federal acknowledgement of their Indian tribal status constitute Indian Tribes, for purposes of sec. 2 of the Bald Eagle Protection Act.

OPINION BY OFFICE OF THE
SOLICITOR

TO: ASSISTANT SECRETARY, FISH &
WILDLIFE AND PARKS
ASSISTANT SECRETARY, INDIAN
AFFAIRS
ALL REGIONAL AND FIELD
SOLICITORS

FROM: DEPUTY SOLICITOR
SUBJECT: INDIAN TRIBAL STATUS
UNDER THE BALD EAGLE PROTEC-
TION ACT

My opinion has been requested on the criteria to be applied in determining whether a group constitutes an Indian tribe whose members are eligible to possess bald eagle feathers for religious purposes under sec. 2 of the Bald Eagle Protection Act, 16 U.S.C. § 668a. In particular, Mr. William M. Tayac has sought a permit to acquire eagle feathers under the Act on grounds that he is a member of the Piscataway Indian Tribe, Maryland, and that he requires these feathers to participate in tribal religious ceremonies. There is no

group known as the "Piscataway Indian Tribe" which has been acknowledged as maintaining a government-to-government relationship with the United States. A list of acknowledged Indian tribes maintaining government-to-government relations with the United States is published annually in the *Federal Register*. See e.g., 44 FR 7235 (1979) and 45 FR 27828 (1980).

For the reasons which follow, I conclude that only those groups which are included in the annual list of Indian tribes published in the *Federal Register* (or in supplements thereto) constitute Indian tribes for purposes of qualifying for the exemption in sec. 2 of the Bald Eagle Protection Act, 16 U.S.C. § 668a.

The Bald Eagle Protection Act, 16 U.S.C. §§ 668–668d, includes broad prohibitions against the taking, possession, sale, or other uses of the bald or golden eagle or any parts thereof. Sec. 2 of the Act, however, creates a number of limited exceptions to the prohibitions of the Act; it reads in pertinent part as follows:

Whenever, after investigation, the Secretary of the Interior shall determine that it is compatible with the preservation of the bald eagle or the golden eagle to permit the taking, possession, and transportation of specimens thereof * * * *for the religious purposes of Indian tribes* * * * [the Secretary] may authorize the taking of such eagles pursuant to regulations which he is hereby authorized to prescribe. [Italics added.]

The regulations governing the application procedures and issuance criteria for permits for religious

*Not in chronological order.

PROTECTION ACT

February 26, 1981

purposes are codified as 50 CFR § 22.22. Sec. 22.22(a) (5) of the regulations requires that an application for feathers be accompanied by "a certification from the Bureau of Indian Affairs that the applicant is an Indian."

The issue to be determined is whether the Piscataways exist as an "Indian tribe" within the scope of the Bald Eagle Act and whether members of this alleged tribe are entitled to eagle feathers.

An "Indian tribe" constitutes far more than a group or voluntary association of individuals who share a common Indian ancestry. In order to constitute a tribe as opposed to an ethnic association, a group must have continuously exercised a degree of political control over its members. Thus, in the leading case of *Montoya v. United States*, 180 U.S. 261, 266 (1901), the Supreme Court defined "[Indian] tribe" as follows:

By a "tribe" we understand a body of Indians of the same or a similar race, *united in a community under one leadership or government* and inhabiting a particular though sometimes ill-defined territory * * *. [Italics added.]

Many cases have followed *Montoya* in recognizing that a group of individuals of common Indian descent must continuously exercise at least some attributes of sovereignty in order to constitute a tribe, *e.g.*, *United States v. Sandoval*, 231 U.S. 28, 46 (1913); *Mashpee Tribe v. New Seabury Corp.*, 592 F.2d 575 (1st Cir. 1979), *cert. denied* 444

U.S. 866 (1979); *United States v. Washington*, 476 F. Supp. 1101 (W. D. Wa., 1979). The necessity of the continuous exercise of sovereignty to tribal status has also been recognized by previous opinions of the Solicitor of this Department; *e.g.* *Opinions of the Solicitor of the Department of the Interior Relating to Indian Affairs* 724 (opinion of Feb. 8, 1937), 774 (opinion of July 29, 1937), and by the leading commentator on federal Indian law, Felix Cohen. *Handbook of Federal Indian Law* 268-272 (1942).

Whether a particular group constitutes an Indian tribe has generally been held to be a matter for the determination of Congress or of the Executive branch. *United States v. Holliday*, 70 U.S. (3 Wall) 407, 419 (1865); *United States v. Sandoval*, 231 U.S. 28, 46 (1913). In some cases and under certain limited circumstances determination of the tribal status of a group has been made judicially. *Mashpee Tribe v. New Seabury Corp.*, *supra*, *United States v. Washington*, *supra*. Delineation of the circumstances in which this determination has been made judicially is beyond the scope of this opinion. As the authorities cited above show, however, acknowledgment by Congress, the Executive branch or in some instances by the courts that a particular group exists as an Indian tribe rests upon a determination that the group constitutes a political rather than simply a racial entity. *See generally*

Morton v. Mancari, 417 U.S. 536, 551-555 (1974).

Neither Congress, the Executive branch, nor the judiciary has ever acknowledged that the Piscataways exist as an Indian tribe. This lack of acknowledgment means that the Piscataways are not now considered to be and are not now treated as existing as an Indian tribe by the federal government.

The Fish and Wildlife Service's own regulations implementing the Indian tribal exemption of sec. 2 of the Bald Eagle Protection Act require that applicants for eagle feathers secure a certification from the BIA of their status as Indians. 50 CFR § 22.22(a)(5). Clearly, the BIA is in no position factually or legally to certify the Indian status of a member of a group with which the BIA does not deal as an Indian tribe.

By regulations set forth in 25 CFR Part 54, this Department has established a procedure under which groups claiming to be Indian tribes can secure a determination of their tribal status. The Department promulgated these regulations so that the claims of the many groups seeking tribal status could be determined in an orderly and rational manner by a body with expertise in making such determinations: the Federal Acknowledgment Project (FAP). Pursuant to the regulations, groups seeking tribal status are required as an initial matter to file a documented petition with the FAP which shows that the group

meets the specified criteria entitling it to tribal status. 25 CFR § 54.7. The Piscataways have not yet submitted a documented petition to the FAP, and they cannot secure a determination of their claim to tribal status without complying with the procedures set forth in 25 CFR Part 54.

The carefully prescribed acknowledgment process of 25 CFR Part 54 cannot be circumvented by an attempt to secure feathers "for the religious purposes of Indian tribes" under sec. 2 of the Bald Eagle Protection Act, 16 U.S.C. § 668a. A group is eligible for the benefits and services available to Indian tribes only after it has secured federal acknowledgment as an Indian tribe under 25 CFR Part 54. These benefits and services include eligibility for eagle feather permits. It is my opinion that only those groups which have been federally acknowledged as Indian tribes are entitled to eagle feathers under the Bald Eagle Act.

This opinion was prepared by the Division of Indian Affairs of the Office of the Solicitor, Acting Associate Solicitor, Hans Walker, Jr., Scott Keep, Fran Ayer, and Anita Vogt of the Division participated in the preparation of this opinion. The principal author was Robin A. Friedman.

W. KEITH HOWARD

53 IBLA 92

Decided *March 2, 1981*

Appeal from decisions of New Mexico State Office, Bureau of Land Management, rejecting oil and gas lease offers NM-38076 and NM-38081.

Affirmed.

1. Oil and Gas Leases: Applications: Attorneys-in-Fact or Agents—Oil and Gas Leases: Applications: Drawings

43 CFR 3102.6-1 sets forth the statements and evidence required when an attorney-in-fact or agent signs a simultaneous oil and gas lease drawing entry card on behalf of the applicant. Where an offer is signed and completed by a father acting as agent for his son, and where the father advises the son as to the selection of the parcel, the applicant cannot be considered "qualified" and the offer to lease drawn with first priority accepted, unless the statements required by 43 CFR 3102.6-1 have been filed with the drawing entry card.

2. Notice: Generally—Regulations: Generally—Statutes

All persons dealing with the Government are presumed to have knowledge of relevant statutes and duly promulgated regulations.

APPEARANCES: W. Keith Howard,
pro se.

OPINION BY
ADMINISTRATIVE JUDGE
LEWIS

INTERIOR BOARD
OF LANDS APPEALS

W. Keith Howard appeals from decisions of the New Mexico State Office, Bureau of Land Management (BLM), dated Feb. 1 and Feb. 7, 1980, rejecting his oil and gas lease offers NM-38076 and NM-38081.

The record shows that the simultaneously filed drawing entry cards (DEC's) of W. Keith Howard were drawn first by the New Mexico State Office, BLM, in a drawing held Aug. 7, 1979, to determine the priority for awarding oil and gas leases covering parcel Nos. NM-1065 and NM-1074. The DEC's were signed manually with the signatures reading "W. Keith Howard."

On Aug. 30, 1979, BLM issued its decisions requiring appellant to submit additional evidence by answering questions surrounding the circumstances of his offers. By answering the questions, appellant informed BLM that his father, Charles H. Howard, had filled out the blanks on appellant's DEC's; that appellant's father had signed the cards for appellant and had been given authority to sign on appellant's behalf as his agent; that his father had signed the cards acting as his agent, in appellant's absence, with his consent and instruction; that no one furnished him with information or assisted him in filling out the cards; that there was no agreement between him and his father.

BLM issued its decisions on Feb. 1 and Feb. 7, 1980, which read in pertinent part:

By decision dated August 30, 1979, we requested additional information from Warren K. Howard. The information was received September 17, 1979, and Warren K. Howard states that he did not personally sign the entry card. He states Charles H. Howard signed it on his behalf. Since Charles H. Howard signed on behalf of Warren K. Howard, compliance with 43 CFR 3102.6-1 is mandatory. Our records do not show that Charles H. Howard filed evidence of his authority to sign on behalf of Warren K. Howard as required by 43 CFR 3102.6-1 (a) (1). Furthermore, the statements required by 43 CFR 3102.6-1 (a) (2) did not accompany the offer. See attached Circular 2357.

In his statement of reasons appellant contends that his father was given "full legal authority" to sign appellant's name on the DEC's. He contends that no fraud or breach of the regulations was intended and that the technical breach arose from the fact that he was unable to memorize 24 pages of Circular 2357. Appellant adds that only a law school graduate would be able to interpret 43 CFR 3102.6-1 and enter the simultaneous oil and gas lease drawings.

By order of Nov. 28, 1980, the Board requested additional information. In his response appellant stated that he did not personally select the parcels listed on the DEC's and that he was advised by his father.

[1] The DEC's which appellant filed in the Aug. 7, 1979, drawing contain instructions which, *inter*

alia, provide that "compliance *must* also be made with the provisions of 43 CFR 3102." This regulation defines the qualifications of lessees, and 43 CFR 3102.6-1 more specifically sets forth the statements and evidence required when an attorney-in-fact or agent signs an offer on behalf of the applicant. That regulation, 43 CFR 3102.6-1, provides in part that:

(2) If the offer is signed by an attorney-in-fact or agent, it shall be accompanied by separate statements over the signatures of the attorney-in-fact or agent and the offeror stating whether or not there is any agreement or understanding between them or with any other person, either oral or written, by which the attorney in fact or agent or such other person has received or is to receive any interest in the lease when issued, including royalty interest or interest in any operating agreement under the lease, giving full details of the agreement or understanding if it is a verbal one.

If an offer is signed by an agent or attorney-in-fact, it is well settled that the applicant cannot be considered "qualified," and the offer to lease drawn with first priority cannot be accepted, unless the statements required by 43 CFR 3102.6-1 have been filed with the drawing entry card. *Rebecca J. Waters*, 28 IBLA 381 (1977); *Southern Union Production Co.*, 22 IBLA 379 (1975); *Husky Oil Co.*, A-30440 (Oct. 27, 1965).

The issue before us is whether the offeror's father acted as an "agent" within the meaning of the regulation by completing and signing the DEC's for his son, or whether the

father was functioning merely as the son's amanuensis.

We find that he was acting as his son's agent within the meaning of 43 CFR 3102.6-1(a)(2). In answering the Board's questions, appellant revealed that he did not personally select the parcels in question and that his father advised him. From these facts it is evident that the father exercised discretion in this matter. Where a person exercises discretion in selecting the land and filing the offer on behalf of the offeror, that person is acting as the offeror's agent, and the separate statements required by 43 CFR 3102.6-1(a)(2) must be filed, failing which the offer must be rejected. See *Lorenz K. Ayers*, 50 IBLA 240 (1980); *D. E. Pack (On Reconsideration)*, 38 IBLA 23, 85 I.D. 408 (1978), *aff'd in part, rev'd in part*,¹ *sub nom. Stewart Capital Corp. v. Andrus*, Civ. No. C-79-123K (D. Wyo. Apr. 24, 1980) and *Runnells v. Andrus*, Civ. No. C 77-0268 (D.C.D. Utah, Feb. 19, 1980); *Ray H. Thames*, 31 IBLA 167 (1977), *aff'd sub nom. McDonald v. Andrus*, Civ. No. S 77-0333(c) (D.S.D. Miss. Jan. 29, 1980); *Robert C. Leary*, 27 IBLA 296 (1976). Only in the event that the role of the father was limited to that of a

mere scrivener, or amanuensis, would the necessity for the compliance with the regulation be avoided.² See *Rebecca J. Waters, supra*.

It is unfortunate that appellant was confused by the regulations. Such confusion, however, cannot excuse appellant's failure to file the required documents. All persons dealing with the Government are presumed to have knowledge of relevant statutes and duly promulgated regulations. 44 U.S.C. §§ 1507, 1510 (1976); *Federal Crop Insurance Corp. v. Merrill*, 332 U.S. 380 (1947); *Dale E. Jenkins*, 52 IBLA 9 (1981); *John J. O'Loughlin*, 50 IBLA 50 (1980).

Therefore, pursuant to the authority delegated to the Board of Land Appeals by the Secretary of the Interior, 43 CFR 4.1, the decision appealed from is affirmed.

¹ The Board's decision was affirmed by the District Courts in Mississippi, Utah, and Wyoming as to its interpretation of what the regulation required, and reversed by the District Courts in Wyoming and Utah only as to its retroactive application of the interpretation.

² Under revised regulation 43 CFR 3112.2-1(b), published on May 23, 1980, 45 FR 35156 and 35164, effective June 16, 1980, applications signed by anyone other than the applicant must be rendered in such a manner so as to reveal the name of the applicant, the name of the signatory, and their respective relationship.

PEABODY COAL CO., INC.

3 IB SMA 32

Decided *March 3, 1981*

Appeal by the Office of Surface Mining Reclamation and Enforcement (OSM) from the Sept. 30, 1980, summary decision of Administrative Law Judge Frederick A. Miller, in Docket Nos. IN 0-37-R and IN 0-38-R, vacating Notices of Violation No. 80-3-11-16 and No. 80-3-11-17 on the ground that OSM failed to answer Peabody Coal Company's application for review of these notices within the time prescribed in 43 CFR 4.1165.

Reversed and remanded.

1. Surface Mining Control and Reclamation Act of 1977: Administrative Procedure: Generally—Surface Mining Control and Reclamation Act of 1977: Hearings: Procedure

An Administrative Law Judge has discretion to determine appropriate action to correct the late filing of an answer in a proceeding to review a notice of violation; however, vacation of the notice of violation is not appropriate action when the applicant has shown no prejudice resulting from a late answer.

APPEARANCES: Myra P. Spicker, Esq., Office of the Field Solicitor, Indianapolis, Indiana, Marcus P. McGraw, Esq., Assistant Solicitor for Enforcement, and Susan A. Shands, Esq., Division of Surface Mining, Office of the Solicitor, Washington, D.C., for the Office of Surface Mining Reclamation and Enforcement.

**OPINION BY THE BOARD
OF SURFACE MINING AND
RECLAMATION APPEALS**

This appeal was brought by the Office of Surface Mining Reclamation and Enforcement (OSM) from the Sept. 30, 1980, summary decision of the Hearings Division which vacated Notices of Violation No. 80-3-11-16 and No. 80-3-11-17. The Administrative Law Judge determined that the language of 43 CFR 4.1165(a), providing that "[w]here an application for review is filed by a permittee, OSM * * * shall file an answer within 20 days of service of a copy of such application," is mandatory, and held that the notices of violation issued to Peabody Coal Co. (Peabody) must be vacated because OSM failed to answer Peabody's applications for review of the notices within the time specified in that regulation. We reverse the summary decision and remand this case for further proceedings.

*Factual and Procedural
Background*

On July 3, 1980, Peabody filed applications for review of Notices of Violation No. 80-3-11-16 and No. 80-3-11-17 pursuant to 43 CFR 4.1160-4.1164.¹ OSM was served

¹The notices of violation were issued pursuant to sec. 521 of the Surface Mining Control and Reclamation Act of 1977, 91 Stat. 445, 504, 30 U.S.C. § 1271 (Supp. II 1978) and the Department's regulations at 30 CFR Part 722. Peabody was charged with violating 30 CFR 710.11(a)(2)(i) which provides: "A person conducting coal mining operations shall have a permit if required by the State in which he is mining and shall comply with State laws and regulations that are not inconsistent with the Act and this chapter."

with these applications on July 7, 1980, and answered them on Aug. 4, 1980, a week after the time prescribed in 43 CFR 4.1165(a).

Peabody moved for summary vacation of the notices of violation on Sept. 22, 1980, arguing that the language of 43 CFR 4.1165 is mandatory and imposes a jurisdictional constraint. The Administrative Law Judge granted Peabody's motion. OSM timely appealed and submitted a brief. Peabody did not reply.

Discussion

The Board recently rejected treating the language of 43 CFR 4.1165 as mandatory. *William Francis Rice*, 3 IBSMA 17, 88 I.D. 269 (1981); *see also Lake Coal Co., Inc.*, 3 IBSMA 9, 88 I.D. 266 (1981). In *Rice* it was acknowledged that OSM's answer may be important to focusing the issues and, thus, a tardy answer may disadvantage the applicant or inconvenience the Administrative Law Judge. 3 IBSMA at 22, 88 I.D. at 272. In accordance with that decision, however, action in response to such a circumstance "must address the prejudice shown and may not, except in extreme circumstances, include vacating a notice of violation or cessation order. *See Badger Coal Co.*, 2 IBSMA 147, 87 I.D. 319 (1980)." 3 IBSMA at 22, 88 I.D. at 272.

[1] Peabody showed no prejudice resulting from OSM's 1-week delay in answering the applications for review. Indeed, Peabody allowed 45 days to lapse prior to filing its mo-

tions to vacate the notices of violation.² Thus, in accordance with the decisions above, we hold that it was improper to vacate the notices of violation under the circumstances of this case.

For the foregoing reasons the summary decisions below are reversed and the case is remanded for further proceedings.

WILL A. IRWIN

Chief Administrative Judge

NEWTON FRISHBERG

Administrative Judge

ALLEN DUNCAN

53 IBLA 101

Decided March 4, 1981

Appeal from decision of the Wyoming State Office, Bureau of Land Management, rejecting simultaneous oil and gas lease offer W-70179.

Appeal dismissed.

1. Attorneys—Practice Before the Department: Persons Qualified to Practice

Qualifications to practice before the Department of the Interior are prescribed by regulations. Where an appeal is brought by a corporation that does not appear to fall within any of the categories of persons authorized to practice, the appeal is subject to dismissal.

² It would not be inappropriate to question the timeliness of Peabody's motions, even had they included allegations of prejudice caused by OSM's delay. *See* 43 CFR 4.1112(c), which provides that "[f]ailure to make a timely motion * * * may be construed as a waiver of objection."

APPEARANCES: Richard A. Williams, of Commonwealth Management Corp., Dallas, Texas, for appellant.

*OPINION BY
ADMINISTRATIVE JUDGE
LEWIS*

*INTERIOR BOARD OF
LAND APPEALS*

Allen Duncan has appealed from a decision of the Wyoming State Office, Bureau of Land Management (BLM), dated May 8, 1980, rejecting his noncompetitive oil and gas lease offer W-70179. The offer was rejected because appellant failed to include his zip code in his address on the drawing entry card (DEC).

[1] The appeal is brought by Commonwealth Management Corp., of Dallas, Texas, on behalf of the appellant, who authorized the corporation to represent him in this matter. This is violative of the regulations governing practice before the Department, codified under 43 CFR Part 1.

It cannot be disputed that the appearance of the corporation before us in a representative capacity constitutes "practice" as that term is defined in 43 CFR 1.2. It is not alleged that the corporation is a professional association of attorneys licensed to practice before any of the states or any possession or territory of the United States. 43 CFR 1.3(b)(1) and (2). Nor do any of the special provisions of 43 CFR 1.3(b)(3) apply. Moreover, 43 CFR 4.3 and 43 CFR 1812.1-1 require that representatives of

parties in proceedings before appeals boards of the Office of Hearings and Appeals must be qualified under 43 CFR Part 1. These regulations were promulgated pursuant to statute, 43 U.S.C. § 1464 (1976), and have the force and effect of law. *Rodway v. U.S. Department of Agriculture*, 514 F. 2d 809 (D.C. Cir. 1975); *G.S.A. v. Benson*, 415 F. 2d 878 (9th Cir. 1969); *Whatt-off v. United States*, 355 F. 2d 473 (8th Cir. 1966); *A. N. Deringer, Inc. v. United States*, 447 F. Supp. 451 (Cust. Ct. 1978).

The fact that appellant authorized the corporation to represent him in this appeal does not alter the situation. This Board has repeatedly held that an appeal filed for an appellant by an attorney-in-fact who is not qualified to practice before the Department under 43 CFR 1.3 is subject to summary dismissal. *Haruyuki Yamane*, 19 IBLA 320 (1975); *Thomas P. Lang*, 14 IBLA 20 (1973); *Henry H. Ledger*, 13 IBLA 356 (1973).

The authority of the Secretary to promulgate these regulations was judicially recognized as early as 70 years ago. In *Phillips v. Ballinger*, 37 App. D.C. (1911), the Court held that the right to appear before the Department of the Interior is not an inherent right, but a privilege granted by law, and subject to such limitations and conditions as are necessary for the protection both of the Department and the public.

In *Haruyuki Yamane*, *supra*, this Board dismissed appeals filed by one who was not authorized to prac-

tice on behalf of several oil and gas lease applicants. In affirming the Board's decision, *sub nom. Burglin v. Secretary of the Interior*, Civ. No. A 75-133 (D. Alaska, Jan. 7, 1977), the Court said:

[N]or is the regulation arbitrary or capricious or otherwise in contravention of plaintiffs' Constitutional rights. Parties in interest are expressly permitted to practice before the Department on their own behalf, or to have any qualified person so designated under the regulation appear for them. Plaintiffs have failed to show that their Constitutional rights of due process were in any way violated. The Secretary's motion for summary judgment is granted.

The District Court's decision was subsequently affirmed by the Court of Appeals in *Burglin v. Secretary of the Interior*, No. 77-1655 (9th Cir. Aug. 18, 1978), saying, *inter alia*, "The appellants' attack on the Department of the Interior's regulations prescribing standards for those who practice before its administrative bodies are [*sic*] similarly without merit. See *Federal Communications Commission v. Schreiber*, 381 U.S. 279, 290-91 (1965)."

For a more extensive analysis of the regulations and cases relating to practice before the Department, see cases collected in *United States v. John Gayanich*, 36 IBLA 111 (1978).

In an almost identical case to the one at bar, *W. Duane Kennedy*, 24 IBLA 152 (1976), a corporate leasing service attempted to appeal the rejection of one of its client's offers. The Board held that the cor-

poration was not qualified to practice before us and had no standing to appeal in its own right in light of the offeror's declaration that he was the sole party in interest. In the present circumstances Commonwealth Management Corporation has also failed to make a necessary showing that it is qualified to practice before the Department.

Accordingly, pursuant to the authority delegated to the Board of Land Appeals by the Secretary of the Interior, 43 CFR 4.1, the appeal is dismissed.

BARBARA J. NIERNBERGER,

THOMAS H. CONNELLY

53 IBLA 112

Decided March 4, 1981

Appeal from decision of Colorado State Office, Bureau of Land Management, rejecting oil and gas lease offer C-27901 and denying approval of assignment of interest in this lease.

Set aside and remanded.

1. Oil and Gas Leases: Assignments or Transfers—Oil and Gas Leases: First-Qualified Applicant—Oil and Gas

Leases: Noncompetitive Leases—Oil and Gas Leases: Unit and Cooperative Agreements

A noncompetitive oil and gas lease may only be issued to the first qualified applicant therefor. An extension of time may be granted to supply necessary evidence of joinder in a unit agreement prior to lease issuance and a lease offer will not be rejected in favor of a junior offeror where an extension is timely requested and the requested evidence is provided in good faith and without unreasonable delay thereafter.

APPEARANCES: Maurice T. Reidy, Esq., Denver, Colorado, for appellants.

OPINION BY ADMINISTRATIVE JUDGE LEWIS

INTERIOR BOARD OF LAND APPEALS

Barbara J. Niernberger and Thomas H. Connelly appeal from a decision of the Colorado State Office, Bureau of Land Management (BLM), dated Jan. 16, 1980, rejecting Niernberger's offer to lease C-27901, because she failed to furnish a joinder or attempted joinder within the time required. BLM also rejected Niernberger's assignment of her interest in the lease to Connelly.

Barbara Niernberger's simultaneously filed drawing entry card (DEC) received first priority for parcel CO-196 in a drawing held on Mar. 22, 1979. On Mar. 27, 1979, Niernberger executed an assignment of her interest in the lease to Connelly, which assignment was filed with BLM on Apr. 10, 1979.

In assignee Connelly's request for approval of assignment dated Apr. 10, 1979, he signed and thus agreed to be bound by the following statement: "ASSIGNEE AGREES to be bound by the terms and provisions of the lease described here, provided the assignment is approved by the Authorized Officer of the Bureau of Land Management."

BLM issued a decision on Apr. 23, 1979, stating that the land within the offer is within the Fireplace Rock Unit Area. BLM stated that under 43 CFR 3100.6-1 the offeror is required to file evidence with the BLM office that an agreement has been entered into with the unit operator, Anadarko Production Co. (Anadarko), for the development and operation of the lands within the unit area pursuant to the terms and provisions of the approved unit agreement, or file a statement giving satisfactory reasons for failure to enter into such agreement. BLM allowed Niernberger 30 days from receipt of the decision in which to file the required information.

On Apr. 27, 1979, Connelly sent a letter to Anadarko requesting Anadarko "to send me the necessary papers in order that I may put this lease in the Fireplace Rock Unit." This letter was filed with BLM on Apr. 30, 1979. On May 21, 1979, Connelly filed with BLM evidence of attempted joinder to the unit. On this date he also requested a 60-day extension for approval of the joinder. On July 10, 1979, BLM requested further information from Niernberger which she submitted on

March 4, 1981

July 24, 1979. On Aug. 22, 1979, Niernberger filed evidence of attempted joinder. The final joinder instruments, which required the approval of the working interest owners, were accepted by Geological Survey on Dec. 11, 1979.

BLM issued its decision dated Jan. 16, 1980, rejecting the lease offer. There it stated in part:

On May 21, 1979, evidence of attempted joinder to the unit was furnished by Thomas H. Connelly. However, no evidence of joinder or attempted joinder by the offeror was received until August 22, 1979. Thomas H. Connally [*sic*] has no interest in the land, as an assignment cannot be approved before a lease issues.

The April 23, 1979 decision is considered final and the offer of Barbara J. Niernberger is rejected. The time allowed for appeal of that decision has expired. Regulation 43 CFR 1821.2-2 provides that when a document is required to be filed within a specified period of time, the filing of the document after the expiration of that period cannot be accepted if the right of a third party has intervened. The drawing entry card receiving next priority for parcel CO-196 must now be considered for lease issuance.

Since Barbara J. Niernberger will receive no interest in the land, the assignment to Thomas H. Connelly is of no effect and approval of the assignment is hereby denied. Advance rental will be authorized for refund to Thomas H. Connelly.

In their statement of reasons, appellants contend that the Government recognized that the assignment had been filed because it sent a copy of the Apr. 23, 1980, decision to the assignee; that Connelly met all the requirements listed in the decision of April 30 within the 30-day period; that no action was taken on

Connelly's request for an extension of time; that appellants' efforts, under the direction of the unit operator and its agent constituted an "attempted joinder" in accordance with the decision of Apr. 23, 1980; that the unit operator, having been informed that Connelly was assignee, did not request a joinder from Niernberger; that no action was taken by BLM until after all parties required to execute the joinder had been approved by Geological Survey; that the Government should not be allowed to rely upon its own unclear decision of Apr. 23, 1979, to effect a final rejection as of Jan. 16, 1980, without even acting on the request for extension and with all requirements having been satisfied prior to the decision of Jan. 16, 1980.

[1] Departmental regulation 43 CFR 3106.3-4 provides that a transfer of an offer may be approved as incident to the assignment of the lease. The regulation states:

§ 3106.3-4 Transfer of offer.

A transfer of the whole interest in all or any part of the offer may be approved as an incident to the transfer, by assignment or otherwise, of the whole interest in all or any part of the lease. A transfer of an undivided fractional interest in the whole offer may be approved as an incident to the transfer of an undivided fractional interest in the whole lease. An application for approval of a transfer of an offer must include a statement that the transferee agrees to be bound by the offer to the extent that it is transferred and must be signed by the transferee. In other instances transfers of an offer will not be approved prior to the issuance of a lease for the lands or deposits covered by the said transfers.

The case file shows the transferee did sign the application for approval of the transfer, as required by the regulation and he did agree to be bound by the terms and provisions of the lease. Although the form utilized by the offeror and the assignee for submission of their assignment to BLM for approval is entitled "ASSIGNMENT AFFECTING RECORD TITLE TO OIL AND GAS LEASE" and appears to be appropriate for assignments of leases already issued, there is no apparent reason why the same form should not suffice for approval of assignment of a lease offer. The express agreement of the assignee to be bound by the terms of the lease necessarily constitutes an adoption by the assignee of the terms of the assignor's lease offer. BLM offers no explanation why, despite the wording of the regulation which contemplates approval of assignments of offers prior to lease issuance, such approval was not granted in this case. In any event, BLM recognized Connelly's interest as an assignee and referred to him as such when it sent him a copy of its decision of Apr. 23, 1979. He then complied with the requirements of that decision in a timely fashion. It appears from the record that the offeror believed that the actions of the assignee in providing BLM with evidence of his joinder in the unit agreement constituted compliance with the decision of Apr. 23, 1979 (copies of which had been sent to both the offeror and the assignee), requiring evidence of joinder. The

record fails to disclose any effort by BLM to notify the offeror that this was not the case until the decision of Jan. 16, 1980, rejecting the lease offer.

The decision below is in error to the extent it rejected the lease offer on the ground that the offeror's evidence of joinder was filed after the deadline. A noncompetitive oil and gas lease may be issued only to the first qualified applicant. 30 U.S.C. § 226(c) (1976); *Cotton Petroleum Corp.*, 38 IBLA 271 (1978). However, there is no suggestion here that appellant Niernberger's lease offer was defective so as to require disqualification of the offer. Good faith delay in compliance with the regulation and decision regarding evidence of joinder or attempted joinder in the unit may be distinguished from noncompliance with the regulations regarding such matters as proper form of lease offers, evidence of qualifications, and timely payment of rental and filing fees. A violation of the latter has the effect of disqualifying the offer from receiving priority, and the intervening rights of the offeror receiving next priority preclude allowing time for cure of the defect. *Cf. Donald E. Jordan*, 35 IBLA 290 (1978) (failure to file rental within 15-day deadline established by regulation); *Cotton Petroleum Corp.*, *supra* (lease offer not accompanied by evidence of authority of agent to sign).

Accordingly, in light of the good faith effort of appellants Niernberger and Connelly to provide the re-

quested evidence of joinder, which has now been supplied, the request for extension of the deadline made by Connelly, and the apparent acquiescence of BLM in extending the deadline for providing the evidence, it was improper to hold that the intervening rights of a third party preclude acceptance of the evidence and require rejection of the lease offer. The extension of time requested by Connelly, whom BLM knew to be the assignee of offeror's interest and whom BLM treated as the offeror's representative in this matter, was sufficient to preclude rejection of the offeror's evidence on the ground it was not filed within the 30-day deadline.

Therefore, pursuant to the authority delegated to the Board of Land Appeals by the Secretary of the Interior, 43 CFR 4.1, the decision appealed from is set aside and the case is remanded for action consistent with the decision herein.

ANNE POINDEXTER LEWIS

Administrative Judge

I CONCUR:

BERNARD V. PARRETTE

Chief Administrative Judge

ADMINISTRATIVE JUDGE STUEB- ING CONCURRING:

While in full accordance with the majority opinion, I think it important to express my analysis of 43 CFR 3106.3-4, which is a significant element contributing to my view of the case.

As noted in the majority opinion, the regulation stated:

§ 3106.3-4 Transfer of offer.

A transfer of the whole interest in all or any part of the offer may be approved as an incident to the transfer, by assignment or otherwise, of the whole interest in all or any part of the lease. A transfer of an undivided fractional interest in the whole offer may be approved as an incident to the transfer of an undivided fractional interest in the whole lease. An application for approval of a transfer of an offer must include a statement that the transferee agrees to be bound by the offer to the extent that it is transferred and must be signed by the transferee. In other instances transfers of an offer will not be approved prior to the issuance of a lease for the lands or deposits covered by the said transfers.

Note that the regulation states, "A transfer of the whole interest in all * * * of the *offer* may be approved as an incident to the transfer, by assignment * * * of the whole interest in all * * * of the [potential] *lease*." (Italics added.) Since this contemplates approval of the transfer of the *offer*, no *lease* could then exist. So the only rational way to read this sentence of the regulation is to imply the modifier "potential" before the word "lease." The regulation also states, "An application for approval of a transfer of an *offer* must include a statement that the transferee agrees to be bound by the offer * * *." (Italics added.) The meaning of this is obscure. An *offer* is not binding. It should read "the *lease*," referring, as the first sentence of the regulation must, to the lease that will issue in response to the offer.

BLM had the executed assignment, signed by the assignee, and stating in the text of this *BLM printed form* that he agreed to be bound by the *lease*. To conform this statement on the BLM assignment form with the regulation, the assignees would have had to cross out the word "lease" and write in the word "offer." That would have made no sense, because an offer is not binding on anyone, pending its acceptance, which in BLM practice is signified only by the execution of the *lease* on behalf of the United States. *Mobil Oil Corp.*, 35 IBLA 375, 85 I.D. 225 (1978); *Raymond N. Joeckel*, 29 IBLA 170 (1977).

The last sentence of the regulation is also ambiguous. What "other instances" are there where the transfer of the offer will not be approved prior to the issuance of the lease, and what are the "instances" where it *will be*?

I conclude that BLM should accept oil and gas lease offer C-27901 of Niernberger and grant approval of assignment of her interest in the lease to Connelly for the following reasons: There was substantial compliance with the requirement of the decision by the assignee, who acted in good faith; the action of the assignee was subsequently ratified by the offeror; the apparent purpose and spirit of the regulation was satisfied by the assignee's signed agreement to be bound by the terms of the *lease*; and, finally, the ambiguity of the regulation must be resolved in the appellant's favor in accordance with the rule in *Bill J.*

Maddox, 34 IBLA 278 (1978); *Mary I. Arata*, 4 IBLA 201, 78 I.D. 397 (1971); *A. M. Shaffer*, 73 I.D. 293 (1966).

EDWARD W. STUEBING
Administrative Judge

NELBRO PACKING CO.

5 ANCAB 174

Decided *March 9, 1981.*

Appeal from Decision of the Alaska State Office, Bureau of Land Management AA-6680-A.

Reversed in part and remanded.

1. Alaska Native Claims Settlement Act: Alaska Native Claims Appeal Board: Appeals: Jurisdiction

Where a decision by the BLM involves the effect of the Alaska Native Claims Settlement Act upon an interest, or pending application for an interest derived under the public land laws, including the general mining law and mineral leasing acts, any appeal from such decision shall be directed to the Alaska Native Claims Appeal Board. Where the decision by the BLM involves the validity of an interest, or pending application for an interest, asserted under the public land laws, including the general mining law and mineral leasing acts, any appeal from such decision shall be directed to the Interior Board of Land Appeals.

2. Alaska Native Claims Settlement Act: Conveyances: Valid Existing Rights: Generally

A right-of-way under 43 U.S.C. § 959 (1976), issued before conveyance under ANCSA of the underlying land, would be a valid existing right protected under § 14(g) of the Act.

3. Alaska Native Claims Settlement Act: Administrative Procedure: Applications

Where conveyance of land to a Native corporation under ANCSA would effectively deny a pending application for a right-of-way across such land, the applicant is entitled to a decision expressly granting or denying the right-of-way and stating the reasons therefor.

APPEARANCES: E. Michele Moquin, Esq., Jones, Grey and Bayley, and Edward G. Burton, Esq., Burr, Pease, and Kurtz, Inc., for appellant; David C. Crosby, Esq., Wickwire, Lewis, Goldmark and Schorr, and Robert S. Spitzfaden, Esq., Smith and Gruening, for Appellee Paug-Vik, Inc., Ltd.; Bruce Schultheis, Esq., Office of the Regional Solicitor, for the Bureau of Land Management; Thomas Gingras, Esq., for Bristol Bay Native Corp.

OPINION BY ALASKA NATIVE CLAIMS APPEAL BOARD

Summary of Appeal

The Appellant, Nelbro Packing Co., seeks a right-of-way for a water pipeline over land approved for conveyance to Paug-Vik, Inc., Ltd., a Native corporation organized pursuant to ANCSA for the Village of Naknek. The pipeline carries water from a lake to a cannery.

Nelbro Packing Co. applied to the Bureau of Land Management for a right-of-way 17 years ago, in 1963, and has used the water pipeline continuously in its cannery operation pending action on the right-of-way application. No final

action on the right-of-way application has been taken. Intervening events have included obtaining field reports and appraisals by the Bureau of Land Management for the purpose of setting an annual rental, a 1967 Native protest, and Paug-Vik, Inc., Ltd.'s selection, pursuant to ANCSA, of the underlying lands.

The Bureau of Land Management in 1980 issued a Decision to Issue Conveyance approving the affected lands for conveyance to Paug-Vik, Inc., Ltd., without either reserving the right-of-way sought by the appellant, or denying the appellant's right-of-way application.

The Board on appeal reverses and remands to the Bureau of Land Management for adjudication of the appellant's right-of-way application.

Jurisdiction

The Alaska Native Claims Appeal Board, pursuant to delegation of authority to administer the Alaska Native Claims Settlement Act, 85 Stat. 688, *as amended*, 43 U.S.C. §§ 1601-1628 (1976 and Supp. I 1977), and the implementing regulations in 43 CFR Part 2650 and 43 CFR Part 4, Subpart J, hereby makes the following findings, conclusions and decision.

Chronology

In 1963, the Appellant, Nelbro Packing Co., (Nelbro), filed application A-060591 for a right-of-way pursuant to 43 U.S.C. § 959 (1976), which provided in pertinent part:

The Secretary of the Interior is authorized * * * to permit the use of rights of way through the public lands * * * for canals, * * * pipes and pipelines, * * * or other water conduits, and for water plants, dams, and reservoirs used to promote irrigation or mining or quarrying, * * * or the supplying of water for domestic, public, or any other beneficial uses * * * *provided* * * * That any permission given by the Secretary of the Interior under the provisions of this section may be revoked by him or his successor in his discretion, and shall not be held to confer any right, or easement, or interest in, to, and over any public land, reservations or park.

(These provisions were repealed by § 706(a) of the Federal Land Policy and Management Act (FLPMA), 43 U.S.C. § 1701 (note) (1976). FLPMA in 43 U.S.C. § 1761(a) (1976) contains the following provision for rights-of-ways:

The Secretary, with respect to the public lands and, the Secretary of Agriculture, with respect to lands within the National Forest System * * * are authorized to grant, issue, or renew rights-of-way * * * for—

(1) reservoirs, canals, ditches, flumes, laterals, pipes, pipelines, tunnels, and other facilities and systems for the * * * transportation, or distribution of water;

Application A-060591 was for a right-of-way extending from an existing right-of-way, already granted to Nelbro (A-031271), to Monsen Lake, which is Nelbro's main water source for their fish processing facility at Naknek.

The land involved in this appeal is a parcel underlying one end of Nelbro's application A-060591.

In 1964, at the Bureau of Land Management's (BLM's) request,

Nelbro amended their application making it subject to certain regulatory terms and conditions.

BLM, in a letter of January of 1967, advised Nelbro's engineer, "The Nelbro Packing Company right-of-way application Anchorage serial number 060591 is awaiting an appraisal. * * * We hope to be able to grant the right-of-way soon." In April, Native Protest AA-872 was filed by Bristol Bay, Kodiak, and Alaska Peninsula Native associations. The protest opposed disposal of lands which included the tract underlying the right-of-way sought by Nelbro.

In February and March of 1968, Nelbro again wrote to BLM to inquire about the status of their application. BLM again responded that they were waiting for an appraisal in order to set the annual rental for the right-of-way.

In May of 1968, Nelbro submitted to BLM a copy of Alaska DL Form 238, Declaration of Water Appropriation, filed with the State pursuant to the Alaska Water Use Act (§ 1 Ch 50 SLA 1966, AS 46.15.010-46.15.270 (1980)).

In a letter of Oct. 16, 1968, responding to Nelbro's inquiry, BLM explained that lands in Nelbro's application were within Native Protest AA-872 and the right-of-way could not be granted until the protest was resolved or the Natives granted a release. BLM stated that they were awaiting a field report and appraisal and would "contact the Native groups to attempt to secure a release from them so that the right-of-way may be granted."

March 9, 1981

In January of 1969, BLM advised Nelbro that the status of the application had not changed, except that in addition to the protest, the Bureau of Indian Affairs had applied to withdraw all unreserved lands for the protection of Native rights, so that BLM could not act on the right-of-way application until final action on the withdrawal.

A formal land freeze was imposed in 1969, preventing land dispositions pending settlement of Native claims. (P.L.O. No. 4582, 34 FR 1025 (Jan. 12, 1969).) Enactment of ANCSA in 1971 ended the land freeze, but also resulted in withdrawal of the disputed land for selection by the village of Naknek.

In May of 1976, BLM advised Nelbro that Native protests were cancelled by enactment of ANCSA but that Naknek Village (Paug-Vik) had selected the land underlying the disputed right-of-way. Therefore, pursuant to regulations in 43 CFR 2650.1(a)(2)(i), Native comments on Nelbro's application were required to be considered.

Meanwhile, in related proceedings, Paug-Vik opposed Nelbro's application to the Alaska Department of Natural Resources for a permit for water use, and Nelbro defended its application.

In December of 1976, BLM advised Nelbro that they must submit a certificate of water use from the State.

In January of 1977, Paug-Vik wrote to BLM objecting to Nelbro's right-of-way application. Paug-Vik asserted that Nelbro's appropriation of water from the lake had caused a

decline in water level, detracting from the scenic and recreational value of the lake and threatening destruction of spawning grounds. Nelbro's water appropriation permit was approved by the Department of Natural Resources in November. In August of 1977, BLM made a field examination.

In March of 1978, the District Manager, Anchorage District Office, BLM, concurred in a report made for the purpose of determining if the right-of-way should be granted which recommended issuance of the right-of-way to Nelbro, as follows:

The subject lands have been used by Nelbro for many years to transport water from Monsen Lake to their cannery. Although Nelbro did not have legal authority to do this, their actions were prompted by the fact that Allen Nelson Pump Lake proved to be inadequate for their needs. In order to keep the cannery operating at full capacity, it was determined necessary to tap the water source at Monsen Lake.

The operation of the cannery is economically important to both the local and the State economy. The company pays a substantial amount of money out in the form of taxes, licenses, fees and payroll to workers and fishermen. Over half of those on the payroll are residents of Alaska and many are from the immediate Naknek area itself.

Paug-Vik, Inc. strongly opposes the right-of-way and the appropriation of water from Monsen Lake. Their objections are based on the claimed environmental impacts caused by the draw-down on the lake and they also question the State's authority to adjudicate water rights on native lands. The appropriation of water from Monsen Lake has affected the lake's resource values but the re-

sulting impacts have been negligible (see EAR). The issue concerning the State's authority to adjudicate water rights on native lands is very important to the State of Alaska. That State has issued a decision, to grant a permit to Nelbro for the appropriation of water from Monsen Lake. This permit will give Nelbro the right to appropriate water until the subject right-of-way case is resolved, and if the case is resolved in Nelbro's favor, then a certificate of appropriation will be issued to the company.

Evidence was submitted at the fact-finding hearing on October 14, 1977, concerning the appropriation of water from Monsen Lake that Paug-Vik at one time proposed to sell water to canneries in the area. Nelbro has indicated they will not buy water from Paug-Vik nor do they wish to purchase the right-of-way from Paug-Vik.

There are no existing land use conflicts concerning the proposed right-of-way. It appears that the present use of the subject land is the highest and best use.

In view of the above conclusions, it is recommended that the subject right-of-way be granted, as provided in 43 CFR 2873 subject to the terms and conditions in 43 CFR 2801.1-3 and 2801.1-5 and the attached stipulations. It is further recommended that the right-of-way be renewable and the granted width be ten feet on each side of the centerline.

BLM Land Report, Feb. 16, 1978. No action was taken on this recommendation.

In August of 1978, the State issued a water use permit to Nelbro.

On May 15, 1980, BLM issued the decision here appealed, approving lands for conveyance to Paug-Vik without reserving the right-of-way sought by Nelbro and without issuing a formal decision denying Nelbro's application.

It should be noted that Nelbro and Paug-Vik are litigating several related matters in the courts: a quiet title action involving the entire right-of-way claimed by Nelbro pursuant to 43 U.S.C. § 661, (*Nelbro v. United States, et al.*, Civil No. A80-188, District of Alaska) and an action contesting issuance of a water use permit and certificate of appropriation to Nelbro by the State (*Paug-Vik v. Leresche*, Anchorage Superior Court No. 3AN-78-5846). Nothing in the record indicates that the issues in litigation are identical to, or controlling on, the issues in this appeal.

Decision

Nelbro asks that BLM be required to render a formal decision on its right-of-way application, A-060591, and that the Board direct BLM to grant the right-of-way. Nelbro argues that BLM is required to give notice of any decision on an application, and that the decision must be based on a reasoned conclusion.

In support of requiring BLM to grant the application, Nelbro argues, first, that its compliance with all requirements compels BLM, in their exercise of discretion, to grant the right-of-way. In fact, Nelbro argues, BLM's conduct indicates that they have already exercised their discretion by indicating to Nelbro that the right-of-way application was informally approved, and refusal to grant the right-of-way now would be an impermissible change of position.

Second, Nelbro contends that BLM is estopped to deny the application because of its representation to Nelbro, because of its prejudicial delay in granting what Nelbro refers to as "formal" approval, and because of Nelbro's expenses incurred in perfecting water rights to Monsen Lake. Nelbro asserts that BLM's actions constitute affirmative misconduct such as to invoke estoppel against the government.

Paug-Vik agrees that BLM's decision, if upheld, would effectively deny Nelbro's pending application. However, Paug-Vik argues that, since Nelbro has a right of appeal from BLM's decision, which it has exercised here, it is not prejudiced. Paug-Vik asserts that the Secretary is under no obligation to act on an application within a specified time, particularly when the application impacts pending Native protests or claims.

Paug-Vik asserts that BLM properly exercised its discretion in rejecting Nelbro's application, in view of Congressional and Secretarial policy on economic exploitation of Native-selected lands prior to conveyance.

Paug-Vik denies Nelbro's contention that BLM is estopped to deny the right-of-way application. Paug-Vik asserts that BLM never made representations, or took an inconsistent position on Nelbro's application, that could invoke estoppel. Paug-Vik further contends that, even if the elements of estoppel were present, estoppel cannot be in-

voked against the government without affirmative misconduct by government officials, and no action of BLM constituted affirmative misconduct.

Bristol Bay Native Corp., (Bristol Bay) concurs with Paug-Vik.

BLM takes the position that Nelbro has no valid existing rights protected under ANCSA because the mere filing of an application creates no such right; an application within the Secretary's discretion to grant confers no right; and, even if granted, a right-of-way under 43 U.S.C. § 959 (1976) is revocable and on its face cannot be held to confer any right or easement.

BLM has moved to transfer this appeal to the Interior Board of Land Appeals (IBLA), because the issue raised by Nelbro is whether BLM can be required to issue a right-of-way under 43 U.S.C. § 959, and this is a matter within IBLA's jurisdiction.

Nelbro concurs with the motion, in that the substantive right they claim would have been the subject of an appeal to IBLA if BLM had issued a separate decision.

Paug-Vik and Bristol Bay oppose the motion.

It must be noted at the outset that this appeal raises issues which are not within the jurisdiction of this Board.

Regulations in 43 CFR 4.1(b) (5) outline the Board's jurisdiction;

Alaska Native Claims Appeal Board. The Board considers and decides finally for the Department appeals to the head of the Department from findings of fact

or decisions rendered by Departmental officials in matters relating to land selection arising under the Alaska Native Claims Settlement Act (85 Stat. 688), and orders and conducts hearings as necessary; except the Board shall not consider appeals relating to enrollment of Alaska Natives; and with respect to appeals from Departmental decisions on village eligibility under Section 11(b) of the Act, decisions of the Board shall be submitted to the Secretary for his personal approval before becoming final.

The jurisdiction of the IBLA is set forth in 43 CFR 4.1(b) (3) :

Board of Land Appeals. The Board decides finally for the Department appeals to the head of the Department from decisions rendered by Departmental officials relating to the use and disposition of public lands and their resources and the use and disposition of mineral resources in certain acquired lands of the United States and in the submerged lands of the Outer Continental Shelf.

Appellants from land selection decisions under ANCSA frequently assert valid existing rights and interests which are in conflict with conveyances under ANCSA, and seek protection for such interests under the Act. Such asserted rights are frequently derived from decisions of Departmental officials on the disposition of public lands and resources under the public land laws. The status of such an interest as a protected right under ANCSA may depend upon a determination of that interest's status or validity under the public land laws.

Thus, an appeal from a conveyance under ANCSA may raise issues within the jurisdiction of both Boards. Accordingly, this Board's procedural regulations provide for

Appeals Boards of the Department to certify issues on appeal to each other for determination. (43 CFR 4.901(c) (1979).)

[1] Where a decision by the BLM involves the effect of the Alaska Native Claims Settlement Act upon an interest, or pending application for an interest, derived under the public land laws, including the general mining law and mineral leasing acts, any appeal from such decision shall be directed to the Alaska Native Claims Appeal Board. Where the decision by the BLM involves the validity of an interest, or pending application for an interest, asserted under the public land laws, including the general mining law and mineral leasing acts, any appeal from such decision shall be directed to IBLA.

The Appellant, Nelbro Packing Co., claims to be entitled to a right-of-way, predating enactment of ANCSA, for its water pipeline under public land law (43 U.S.C. § 959, and FLPMA, *supra*). They also claim that such right-of-way would be entitled to protection under ANCSA. The former claim is clearly within the jurisdiction of IBLA; the latter is clearly within the jurisdiction of this Board. The Board will rule on the latter claim and will then address the former claim from a procedural standpoint.

[2] The Board finds that a right-of-way under 43 U.S.C. § 959, issued before conveyance under ANCSA of the underlying land, would be a valid existing right pro-

March 9, 1981

tected under § 14(g) of the Act, which provides in pertinent part:

Where, prior to patent of any land or minerals under this chapter, a * * * permit, right-of-way, or easement * * * has been issued for the surface or minerals covered under such patent, the patent shall contain provisions making it subject to the * * * right-of-way, or easement, and the right of the * * * permittee, or grantee to the complete enjoyment of all rights, privileges, and benefits thereby granted to him.

43 U.S.C. § 1613(g) (1976).

The Board recognizes that such an interest is revocable by the Secretary in his discretion, and does not, within the terms of 43 U.S.C. § 959, constitute "any right or easement, or interest in, to, or over any public land, * * *." However, such an interest would be, at the least, a permit granted by the Secretary under a Federal statute and, as such, would be protected by § 14(g) until actually revoked.

Nelbro's claim of entitlement to the right-of-way raises both procedural and substantive questions. The first procedural issue raised is whether or not BLM is required to provide Nelbro with a formal decision on their right-of-way application A-060591 before conveying the underlying land to Paug-Vik in such a manner as to preclude ever granting the right-of-way to Nelbro.

[3] The Board finds that BLM must issue such a decision. Where conveyance of land to a Native corporation under ANCSA would effectively deny a pending application for a right-of-way across such

land, the applicant is entitled to a decision expressly granting or denying the right-of-way and stating the reasons therefore.

It is questionable whether Nelbro's application under 43 U.S.C. § 959 is entitled to due process, since granting of the application is discretionary with the Secretary and that statute recites on its face that such a grant would not constitute an interest in land. In any case, as Paug-Vik points out, Nelbro is presently participating as appellant in the Departmental appeal process, and cannot be found to have been deprived of that right.

Nelbro has cited *Ashbacher Radio Corp. v. Federal Communications Commission*, 326 U.S. 327 (1945) for the proposition that BLM could not impliedly deny their application for a right-of-way by approving the underlying lands for conveyance to Paug-Vik, without reserving the right-of-way and without issuing a formal decision rejecting Nelbro's application.

The Board notes that the facts in *Ashbacher* are distinguishable from those of the present appeal in that *Ashbacher* involved a statutory right of hearing, which had "as a practical matter been substantially nullified" by the grant of the competing application. (*Ashbacher Radio Corp. v. Federal Communications Commission, supra*, at 327, 334 (1945).)

However, the Board concludes that as a matter of elementary fair dealing between a Federal agency and citizens, a principle similar to

that expressed in *Ashbacher* must be applied. BLM's discretion to grant or deny rights-of-way is not completely unbridled or quixotic, but must be exercised in a fair and reasonable manner. To deny an applicant the opportunity to know the reasons for an implied denial of his application, after action on the application has been delayed 17 years, borders on the arbitrary and capricious.

The circumstances underlying this appeal are not unlike those where a person tenders a bid at a competitive oil and gas lease sale and BLM simply rejects the bid as "inadequate" and does not issue a decision supportable on a rational basis. In those and similar cases, IBLA has remanded to BLM for readjudication. In the case of *Charles E. Hinkle, Chevron, U.S.A., Inc.*, 40 IBLA 250 (1979), the Board found that while it had repeatedly upheld the authority of the Secretary to reject oil and gas bids for inadequacy of the bonus offered, such rejection must have a reasonable basis in fact. *Gerald S. Ostrowski*, 34 IBLA 254 (1978); *Frances J. Richmond*, 29 IBLA 137 (1977); *Yates Petroleum Corp.*, 27 IBLA 224 (1976); *H & W Oil Co., Inc.*, 22 IBLA 313, 315 (1975).

Further, the Board held that [w]here high bids which are not clearly spurious or irresponsible are rejected solely on the basis of a statement by an official that the bids are inadequate and no rational or substantial basis for that conclusion appears in the case records, the decision will be set aside and the cases remanded for compilation of a proper record and readjudication of the acceptability of the bids. *Frances J. Rich-*

mond, supra, at 304; *Ojai Oil Co.*, 39 IBLA 173 (1979); *Arkla Exploration Co.*, 25 IBLA 220 (1976).

40 IBLA at 253.

While the Board does not attempt here to reconcile the various similarities and differences between oil and gas bid rejection situations and those raised in this case, it nevertheless concludes that the same basic tenets of fairness required in the oil and gas cases should apply in the facts of this case.

Accordingly, the Board will remand this appeal to BLM for issuance of a formal decision on application A-060591. This procedure is consistent with the Board's ruling in *Appeal of the State of Alaska*, 1 ANCAB 281, 83 I.D. 685 (1976) [VLS 75-8], in which the Board, at BLM's request, remanded an appeal to BLM for adjudication of a Native corporation's land selection under ANCSA, which had been the basis for rejection of a selection by the State of Alaska.

Substantive issues relating to Nelbro's entitlement to the claimed right-of-way, including the question of whether BLM is now estopped to deny the right-of-way, are within the jurisdiction of IBLA.

The Board notes that pursuant to provisions for interim administration in ANCSA and implementing regulations (43 U.S.C. § 1621(i) (1976); 43 CFR 2650.1(a) (1979)) withdrawal of the disputed land for selection by Paug-Vik does not in itself prevent BLM, in the exercise of its discretion, from granting the right-of-way sought by Nelbro.

March 12, 1981

BLM's motion to transfer this appeal directly to the Interior Board of Land Appeals is denied.

The Board's order of segregation dated Feb. 9, 1980, was in error and is hereby vacated. It is in general the Board's policy to segregate those lands affected by an appeal so that the remainder of the lands proposed for conveyance, and not affected by the appeal, may be conveyed. However, it appears to be difficult to describe adequately the land underlying Nelbro's right-of-way applictiaion in order to segregate that land and convey the remainder of the 30-acre tract proposed for conveyance. Paug-Vik has not requested segregation in this appeal. Accordingly, the Board will not attempt to segregate the land affected by this appeal.

The Board remands to BLM for a decision on application A-060591.

This represents a unanimous decision of the Board.

OPINION BY CHIEF
ADMINISTRATIVE JUDGE
McGRAW

INTERIOR BOARD OF
CONTRACT APPEALS

The Government has filed a motion for summary judgement on the claim covered by the instant appeal on the ground that no genuine triable issue of material fact exists

with respect to the alleged differing site conditions attributed to a severe rainstorm creating unusual weather conditions at the worksite. After asserting that for the purposes of the motion it may be assumed to be true that the damages claimed were caused by an unusually severe rainstorm, the Government states: "3. As a matter of law, abnormal weather, such as that alleged by Appellant, is not a changed condition within the meaning of clause 4 of the General Provisions" (Motion for Summary Judgment, p. 1). In support of this position the Government has submitted a memorandum of law in which are cited decisions of this Board considered to be controlling with respect to the issues presented by this appeal.

By order dated Dec. 5, 1980, the appellant was given 30 days from the date of receipt of the order to file an opposition to the Government's motions for summary judgment. Several attempts by the Board to serve a copy of the order upon the appellant by certified mail, return receipt requested, were unsuccessful. In a letter to the Board under date of Jan. 8, 1981, however, the appellant states:

We take exception to Mr. Wesley's request not to have a hearing on its Motion. We do wish to have an oral hearing in this matter with oral argument.

It is respectfully requested that Mr. Wesley's request be denied and that a hearing be arranged as soon as possible in this matter.^[1]

¹ This is the first and only communication from the appellant to the Board since the filing of the notice of appeal under date of Sept. 9, 1980.

Summary Findings of Fact

1. Contract No. 9-07-30-C0483 was entered into between the contractor and the Bureau of Reclamation² under date of Aug. 20, 1979, in the estimated amount of \$6,642,-350. The contract calls for relocating and lining of main canal, Station 0+00 to Station 353+43.37 in accordance with the specifications No. 30-C0483 (Appeal File Exhibit No. 3).³

2. The contract work was to be completed within 600 calendar days from the date of receipt of the notice to proceed. As the notice to proceed was received by the contractor on Sept. 18, 1979, the date initially established for completion of the contract work was May 10, 1981. By "Findings of Fact" dated Mar. 26, 1980,⁴ the contractor was granted a time extension of 28 calendar days by reason of unusually severe weather in the form of excessive precipitation between Dec. 20, 1979, and Mar. 2, 1980 (AF 2c and 4).

3. The contract was prepared on standard forms for construction contracts and included the General Provisions appearing in Standard Form 23-A (Apr. 1975 ed.) and those contained in Supplement to General Provisions. Particularly germane to the questions presented

² The Bureau of Reclamation issued the specifications and is administering the contract on behalf of the Bureau of Indian Affairs. The Bureau of Reclamation has been renamed the Water and Power Resources Service (Government Answer, pp. 1, 2).

³ Hereafter simply AF followed by the exhibit number.

⁴ No appeal was taken from this "Finding of Fact."

March 12, 1981

are the following General Provisions from Standard Form 23-A:

4. DIFFERING SITE CONDITIONS

(a) The Contractor shall promptly, and before such conditions are disturbed, notify the Contracting Officer in writing of: (1) Subsurface or latent physical conditions at the site differing materially from those indicated in this contract, or (2) unknown physical conditions at the site, of an unusual nature, differing materially from those ordinarily encountered and generally recognized as inhering in work of the character provided for in this contract. The Contracting Officer shall promptly investigate the conditions, and if he finds that such conditions do materially so differ and cause an increase or decrease in the Contractor's cost of, or the time required for, performance of any part of the work under this contract, whether or not changed as a result of such conditions, an equitable adjustment shall be made and the contract modified in writing accordingly.

(b) No claim of the Contractor under this clause shall be allowed unless the Contractor has given the notice required in (a) above; provided, however, the time prescribed therefor may be extended by the Government.

(c) No claims by the Contractor for an equitable adjustment hereunder shall be allowed if asserted after final payment under this contract.^[5]

* * * * *

12. PERMITS AND RESPONSIBILITIES

The Contractor shall, without additional expense to the Government, be responsible for obtaining any necessary licenses and permits, and for complying with any applicable Federal, State, and municipal laws, codes, and regulations, in connection with the prosecution of the work. He shall be similarly responsible

for all damages to persons or property that occur as a result of his fault or negligence. He shall take proper safety and health precautions to protect the work, the workers, the public and the property of others. He shall also be responsible for all materials delivered and work performed until completion and acceptance of the entire construction work, except for any completed unit of construction thereof which theretofore may have been accepted.^[6]

4. By letter dated Feb. 20, 1980, the contractor submitted a claim under Clause 4, Differing Site Conditions, in the estimated amount of \$250,000. With respect to the claim the contractor asserts that on February 19 or 20, a severe rainstorm had occurred 20 to 50 miles east of the project and that the water runoff from this storm had severely damaged the canal work by breaking the contractor's protective ditches and by flooding the excavated canal. The damage to the work was attributed to unknown physical conditions of an unusual nature which differed materially from those ordinarily encountered and generally recognized as inhering in work of the character provided for in the contract (AF 2a).

5. In the letter of June 30, 1980, the contractor asserts that the detailed cost breakdown submitted shows that the damages sustained by reason of the Feb. 19, 1980, storm were in the amount of \$287,348.60. Citing Clause 6 of the General Pro-

⁵ See also Clause 4A, Administration of the Differing Site Conditions Clause (Supplement to General Provisions, Standard Form 23-A, Apr. 1975 ed.).

⁶ The Supplement to General Provisions (n. 5, *supra*), adds the following language at the end of Clause 12: "Upon completion of the contract, or final acceptance of any completed unit thereof, the work shall be delivered complete and undamaged."

visions, the letter states: "I certify that the claim is made in good faith, that the supporting data is accurate and complete to the best of my knowledge and belief, and that the amount requested accurately reflects the contract adjustment for which McCutcheon-Peterson believes the Government is liable" (AF 2g).

6. In denying the differing site conditions claim the contracting officer stated (i) that it has been consistently held that neither of the two categories of changed conditions comprehends storms, floods, or other forms of abnormal weather, and (ii) that it is well settled that where work is damaged before completion and acceptance by an Act of God or by other forces of nature, without the fault of either party, and in the absence of a contract provision shifting the risk of such loss to the Government, the contractor is obligated to repair the damage at its own expense. Immediately thereafter he found: "13. The work damaged had neither been completed nor accepted by the Government at the time the damage was sustained, and there is no clause in the contract shifting the risk of such loss to the Government" (AF 2).⁷

7. In the notice of appeal dated Sept. 9, 1980, the appellant states:

[T]he clause "Differing Site Conditions" found in Paragraph 4 of the General Provisions (SF 23-A) is being interpreted

incorrectly and that the severe storm which affected the project site caused an increase in the Contractor's cost in the amount of \$287,348.60 due to the conditions of the site as a result of said storm.

The percentage of precipitation—354% over average for February, 1980 certainly created a jobsite of an unusual condition and an equitable adjustment should be made and the contract modified in writing.

(AF 1).⁸

Discussion

The appellant states that precipitation in February of 1980 was 354 percent above the average over a 70-year period. The contracting officer has found that to be the case (n. 8, *supra*). The appellant asserts that the severe storm which affected the project site resulted in an increase in the contractor's cost in the amount of \$287,348.60 (Finding 7). The Government says that for the purposes of the motion for summary judgment, it may be assumed that all the damages claimed by the appellant were caused by an unusually severe rainstorm. The contracting officer found that the work damaged had neither been completed nor accepted by the Government at the time the damage was sustained and that there is no clause in the contract shifting the risk of loss to the Government (text accompanying n. 7, *supra*). The contractor has not disputed the findings

⁷ The "Findings of Fact" also states: "15. Based on the rationale of this decision, the Contracting Officer has not addressed in the decision the questions of the severity of the storm or whether the damages have been adequately described and documented" (AF 2).

⁸ The "Findings of Fact" of Mar. 26, 1980 (AF 2c), shows that in the general vicinity of the jobsite in February of 1980, precipitation was 354 percent above the average over a 70-year period from 1894 through 1963 (AF 2c) ("Findings of Fact" by the contracting officer, p. 2).

March 12, 1981

and the record before us clearly supports the findings so made.⁹

Except for the request for a hearing by the appellant, the issues raised by the instant appeal are indistinguishable in principle from those confronting the Board in *The Holloway Companies*, IBCA-1182-3-78 (Feb. 11, 1980), 87 I.D. 56, 80-1 BCA par. 14,264. There the Board noted that no issues of fact was presented and that the only issue of law involved was whether a construction contractor was entitled to an equitable adjustment under the Differing Site Conditions clause for the additional costs allegedly incurred as a result of the adverse weather conditions, after which it stated (87 I.D. 58-59, 80-1 BCA at 70,264):

[T]he law is well settled: that a contractor may not recover increased costs which result from adverse weather conditions, absent a contract provision which allows it; and, that weather conditions, whether normal or unusually severe, do not constitute a differing site condition under Clause 4 of the General Provisions of the standard construction contract.

⁹ The Permits and Responsibilities clause (quoted in the text, *supra*) clearly makes the contractor responsible for the work until it has been completed and accepted. Construing a substantially similar clause in *Charles T. Parker Construction Co.*, IBCA-335 (Jan. 29, 1964), 71 I.D. 6, 10, 1964 BCA par. 4017 at 19,792-793, the Board stated: "It is well settled by the courts and by opinions of this Board that where work is damaged before completion and acceptance by an Act of God or by other forces of nature, without the fault of either party, and in the absence of a contract provision shifting the risk of such a loss to the Government, the contractor is obligated to repair the damage at its own expense" (footnotes omitted).

In *Holloway*, the Board noted that in *Arundel Corp. v. United States*, 103 Ct. Cl. 688 (1945), *cert. denied*, 326 U.S. 752 (1945), the Court of Claims had held that the action of a hurricane was not a changed condition within the meaning of Article 4 of the contract. In the recent case of *Turnkey Enterprises, Inc. v. United States*, — Ct. Cl. — (1979), 597 F.2d 750 (involving the lack of surface and subsurface flow in a river resulting from inadequate rainfall in the river's watershed), the Court of Claims found that the plaintiff had failed to establish either a "Category One" or a "Category Two" changed condition. Citing and quoting from *Arundel*, *supra*, in support of the decision reached, the Court states (579 F.2d 754):

[T]he flow of the river and rainfall are so intertwined as to make it impossible to separate the river conditions from the weather. The record demonstrates clearly that weather was the dominant factor which actually determined the nature of river conditions during the period in issue. Weather, as indicated previously, is not a risk which is shifted to defendant via the changed conditions clause. *Hardeman-Monier-Hutcherson v. United States*, 458 F.2d 1364, 1370-71, 198 Ct. Cl. 472, 485-86 (1972).

In this case the appellant has requested an oral hearing on its appeal with oral argument. It has not undertaken to show or even to say what useful purpose would be served by holding a hearing. If it were to prove its central allegation that the damages for which claim has been made were attributable to a rain-

storm occurring on or about Feb. 19, 1980, it would still have failed to show that the conditions at the job-site as a result of such rainstorm constituted differing site conditions within the meaning of the Differing Site Conditions clause.

Although its discretionary authority to refuse to grant hearings has been exercised in only a comparatively few number of cases, the Board has denied requests for a hearing in a variety of circumstances. For example, it has done so where jurisdiction over a particular claim was patently lacking¹⁰ or where there was no genuine dispute as to material facts.¹¹

The rules of practice applicable to the instant appeal¹² vest the Board with a considerable amount of discretion. Rule 4.105 (dismissal for lack of jurisdiction) states in es-

pecially pertinent part: "[T]he Board has authority to raise at any time and on its own motion the issue of its jurisdiction to conduct a proceeding and *may* afford the parties an opportunity to be heard thereon." (*Italics added.*) The general guidelines presently governing appeals before this Board state under Rule 4.100(e) (4): "These rules will be interpreted so as to secure a just and inexpensive determination of appeals without unnecessary delay." Virtually identical language appearing in an earlier version of our rules has been interpreted as providing the Board with authority to grant summary judgment.¹³

Decision

[1, 2] The Government's motion for summary judgment squarely raises the question of whether the Differing Site Conditions clause of the standard form of construction contract provides any basis for re-

¹⁰ *American Cement Corp.*, IBCA-496-5-65 and IBCA-578-7-66 (Sept. 21, 1966), 73 I.D. 266, 273-78, 66-2 BCA par. 5849 at 27, 154-157 (claim for loss of commercial business dismissed without a hearing), *aff'd on reconsideration*, 74 I.D. 15, 18-27, 66-2 BCA par. 6065 at 23,065-073.

¹¹ See *Desert Sun Engineering Corp.*, IBCA-725-8-68 (Dec. 31, 1968), 75 I.D. 424, 432, 69-1 BCA par. 7431 at 34,512 in which in connection with its refusal to approve the Government's request for a hearing, the Board stated: "[I]f every finding made by the contracting officer, and every conclusion or allegation made either by the contracting officer or the Department Counsel were to be substantiated at an oral hearing, the Government nonetheless would fail before the Board, because the Government is improperly attempting to collect both actual and illiquidated damages" (footnote omitted); see also *Lloyd E. Tull, Inc.*, IBCA-574-6-66 (Feb. 15, 1967), 67-1 BCA par. 6137 (contractor's claim denied without granting the requested hearing where the Board found that there were no material facts in dispute).

¹² Interim Rules of Practice before the Interior Board of Contract Appeals.

¹³ See *Zurn Engineers*, IBCA-1176-12-77 (July 20, 1978), 85 I.D. 279, 287, n.24, 78-2 BCA par. 13,335 at 65,192; and *Armstrong & Armstrong, Inc.*, IBCA-1061-3-75 and IBCA-1072-7-75 (Apr. 7, 1976), 83 I.D. 148, 157, n.28, 76-1 BCA par. 11,826 at 56,464.

See also *Ingalls Shipbuilding Division, Litton Systems, Inc.*, ASBCA No. 22645 (Oct. 22, 1979), 79-2 BCA par. 14,147, in which the Board stated at page 69,627:

"Our jurisdiction to entertain summary judgment motions is no longer in doubt. Such motions here acquired a deserved respectability in our practice (in appropriate cases, of course) that they may not have enjoyed in earlier years. *E.g.*, *Lockheed Shipbuilding & Construction Co.*, ASBCA No. 18460, 77-1 BCA par. 12,458 at 60,380 (and authorities cited); *SenColMar Industries, Inc.*, ASBCA Nos. 15339, 16277, 16477, 73-2 BCA par. 10,086."

March 16, 1981

lief to a contractor who sustains serious damage to the contract work prior to completion and acceptance as a result of a severe rainstorm. The appellant has not alleged and there is nothing in the record to suggest that any action the Government took or failed to take contributed in any way to the damages to the jobsite for which claim has been made. There is no provision in the contract contravening the Permits and Responsibilities clause which expressly makes the contractor responsible for work performed until completion and acceptance of the entire construction work.

While the appellant has requested a hearing, it has not undertaken to show or even allege that any facts are in dispute for which the testimony of witnesses might be of material assistance to the Board in its role of fact-finder. Assumed to be true by the Government for the purposes of the motion is that the damages claimed were caused by an unusually severe rainstorm. The Board finds that to convene and hold a hearing in such circumstances would not secure a just and inexpensive determination of the appeal without unnecessary delay.

If all of appellant's allegations are accepted as true, neither the Differing Site Conditions clause nor any other clause contained in the contract provide a basis for granting the appellant relief with respect to the claim asserted.¹⁴ For the rea-

¹⁴ Although the instant contract is subject to the provisions of the Contract Disputes

sons stated and in reliance upon the authorities cited, the appellant's request for a hearing is denied, the Government's motion for summary judgment is granted, and the appeal is accordingly denied.

Chief Administrative Judge

I CONCUR:

G. HERBERT PACKWOOD
Administrative Judge

**TOPTIKI COAL CORP.
(ON RECONSIDERATION)**

3 IBSMA 40

Decided March 16, 1981

Reconsideration of the decision of July 28, 1980, in Toptiki Coal Corp., 2 IBSMA 173, 87 I.D. 331 (1980), reversing the decision of Administrative Law Judge Tom M. Allen (Docket Nos. NX 9-69-R and NX 9-43-P) which vacated a notice of violation issued to Toptiki Coal Corp. for allegedly placing spoil on the downslope of its permit area in violation of 30 CFR 716.2(a).

Act of 1978 (P.L. 95-563, 92 Stat. 2383, 41 U.S.C.A. § 601-613 (West Supp. 1980)), our greatly enlarged jurisdiction under the Act is of no benefit to the appellant in the circumstances present here. This is so because the decisions of the boards in this area reflect the rule enunciated in such cases as *Arundel Corp. v. United States*, 103 Ct. Cl. 688 (1945), *cert. denied*, 326 U.S. 752 (1945), and recently confirmed as still the rule by the Court of Claims in *Turnkey Enterprises, Inc. v. United States*, _____ Ct. Cl. _____ (1979), 597 F.2d 750.

Decision of Hearings Division affirmed as modified; notice of violation vacated.

1. Surface Mining Control and Reclamation Act of 1977: Spoil and Mine Wastes: Downslope—Surface Mining Control and Reclamation Act of 1977: Words and Phrases

"Downslope." The downslope in a multiple seam mining operation is the portion of the permit area below the actual and projected outcrop of the lowest seam being mined.

APPEARANCES: Randolph L. Jones, Jr., Esq., and Joseph W. Craft III, Esq., MAPCO, Inc., Tulsa, Oklahoma, and Richard McMillan, Jr., Esq., and David R. Case, Esq., Crowell and Moring, Washington, D.C., for Toptiki Coal Corporation; John P. Williams, Esq., Office of the Field Solicitor, Knoxville, Tennessee, and Marcus P. McGraw, Esq., Assistant Solicitor for Enforcement, Washington, D.C., for the Office of Surface Mining Reclamation and Enforcement.

**OPINION BY THE INTERIOR
BOARD OF SURFACE MINING
AND RECLAMATION
APPEALS**

Toptiki Coal Corp. (Toptiki) has petitioned the Board to reconsider its decision in *Toptiki Coal Corp.*, 2 IBSMA 173, 87 I.D. 331 (1980). The Board granted reconsideration on Sept. 10, 1980; the parties have filed briefs; and oral argument was held on Dec. 5, 1980. In its earlier decision, the Board held that downslope is the area below the projected

outcrop of the lowest coalbed (seam) on a mountain being mined rather than the area below the projected outcrop of the lowest coal seam under permit, as was held by the Administrative Law Judge. In accordance with its holding, the Board reversed the decision of the Administrative Law Judge and reinstated the notice of violation issued to Toptiki by the Office of Surface Mining Reclamation and Enforcement (OSM) for allowing spoil on the downslope portion of its permit area.

In our original decision we concluded that of the four seams within Toptiki's permit area, the lowest being mined at the time of inspection was the next-to-highest. In making that determination we directed our attention solely to the fact that there was no mining directly below the mining on that seam. A re-examination of the record discloses that conclusion to have been correct. It also reveals, however, that mining of the next-to-lowest seam was occurring at two places some 600 feet apart on either side of the site of the violation alleged by OSM.

The Board is thus presented with the question whether the term "downslope," as defined in 30 CFR 710.5 and as used in 30 CFR 716.2 (a), means the entire area directly below any portion of the lowest seam being mined in a particular section of a mountain, or only so much of that area that is below the projected outcrop of the lowest

seam being mined within the entire permit area.¹

[1] Toptiki argues that the former interpretation is broader than is necessary to serve the purpose of the regulation prohibiting spoil on the downslope, namely, to protect natural areas that would otherwise not be disturbed by mining operations because they are below the projected outcrop of the lowest coal seam being mined. We agree both with Toptiki's statement of the purpose of the subject regulation and with the interpretation of the regulatory definition of "downslope" that it asserts on that basis. We hold, therefore, that "downslope" means only the portion of the permit area below the actual and projected outcrop of the lowest seam being mined² and that, under the facts of this case, Toptiki did not place spoil on the downslope portion of its permit area.

Our decision is changed in accordance with the above. The decision of the Administrative Law Judge is

¹ The following cross section depicts the placement of spoil alleged to be in violation of 30 CFR 716.2(a). Note, it is not drawn to scale.

² Unless the entire projected length of a lower seam is coextensive with or longer than the higher one, there could be situations where the downslope suddenly shifts from a lower to a higher plane.

affirmed and the notice of violation is vacated, not, however, because the area of the alleged violation was above the projected outcrop of the lowest seam permitted to be mined, as was held below, but rather because it was above the projected outcrop of the lowest seam actually being mined.³

53 IBLA 192

Decided March 17, 1981

Appeal from the decision of the Montana State Office, Bureau of Land Management, declaring 87 mining claims abandoned and void. M MC 47859.

Affirmed.

1. Federal Land Policy and Management Act of 1976: Recordation of Affidavit of Assessment Work or Notice of Intention to Hold Mining Claim—Mining Claims: Recordation

Under sec. 314 of the Federal Land Policy and Management Act of 1976, 43 U.S.C. § 1744 (1976), the owner of a mining

³ This does not mean that Toptiki is immune to any regulatory mechanism governing the disposal or maintenance of spoil. Likewise, it remains subject to all applicable post-mining reclamation requirements, no matter how much more difficult those may become due to the spoil handling techniques Toptiki has voluntarily chosen.

claim located before Oct. 21, 1976, must file a notice of intention to hold or evidence of performance of annual assessment work on the claim on or before Oct. 22, 1979, and prior to Dec. 31 of each year thereafter. This requirement is mandatory and failure to comply is deemed conclusively to constitute an abandonment of the claim by the owner and renders the claim void.

2. Federal Land Policy and Management Act of 1976: Recordation of Mining Claims and Abandonment—Mining Claims: Abandonment

The conclusive presumption of abandonment which attends the failure to file an instrument required by 43 U.S.C. § 1744 (1976) is imposed by the statute itself. A matter of law, it is self-operative and does not depend upon any act or decision of an administrative official. In enacting the statute, Congress did not invest the Secretary with authority to waive or excuse noncompliance with the statute, or to afford claimants any relief from the statutory consequences.

3. Administrative Procedure: Adjudication — Evidence: Generally — Evidence: Presumptions—Federal Land Policy and Management Act of 1976: Recordation of Affidavit of Assessment Work or Notice of Intention to Hold Mining Claim—Mining Claims: Abandonment

Although at common law, abandonment of a mining claim can be established only by evidence demonstrating that it was the claimant's intention to abandon it and in fact did so, in enacting the Federal Land Policy and Management Act of 1976 (43 U.S.C. § 1744 (1976)) Congress specifically placed the burden on the claimant to show that the claim has not been abandoned by his compliance with the Act's requirements, and any failure of compliance produces a conclusive presumption of abandonment. Accordingly, extraneous evidence that a

claimant intended not to abandon his claim may not be considered in such cases.

4. Administrative Authority: Generally—Constitutional Law: Generally—Federal Land Policy and Management Act of 1976: Recordation of Affidavit of Assessment Work or Notice of Intention to Hold Mining Claim—Mining Claims: Recordation

Department of the Interior, as an agency of the executive branch of Government, is without jurisdiction to consider whether the mining claims recordation provisions of the Federal Land Policy and Management Act of 1976 are constitutional.

5. Estoppel—Federal Employees and Officers: Authority to Bind Government

Reliance on incomplete information provided by Federal employees cannot create any rights not authorized by law.

APPEARANCES: Lynn Keith, *pro se*.

OPINION BY ADMINISTRATIVE JUDGE STUEBING

INTERIOR BOARD OF LAND APPEALS

By its decision dated Oct. 14, 1980, the Montana State Office, Bureau of Land Management (BLM), notified Lynn Keith and Art Neils that their 87 lode mining claims,¹ location notices for which previously had been recorded with

¹ The claims are listed by name, serial number, and date of location in BLM's decision of Oct. 14, 1980, to which reference is here made.

BLM, were deemed to be abandoned and void because of the failure of the claimants to file with BLM either affidavits of assessment work performed or notices of intention to hold the claims. As all of the claims had been located prior to Oct. 21, 1976, either such affidavits or notices of intent were required to be submitted to BLM on or before Oct. 22, 1979, as provided by statute and regulation. 43 U.S.C. § 1744 (1976) ; 43 CFR 3833.2-1(a). On Oct. 28, 1980, BLM issued an amended decision to correct an error in the original so as to show that location notices for each of the claims had been recorded on Oct. 22, 1979, rather than on the date mentioned in the original decision.

Lynn Keith has appealed² from BLM's finding that the claims must be deemed abandoned and void. Appellant does not deny that no affidavits of the performance of assessment work or notices of intention to hold these claims were filed. Instead, appellant contends that the regulations are arbitrary, capricious, unconstitutional, inequitable, unreasonable, preemptive, and subject to continuously revised interpretations which are applied retroactively. Appellant also argues that the regulations are not being used by BLM for the purpose intended by the statute, but to burden claimants with unnecessary obligations. Moreover, appellant says, BLM failed to adequately inform the public of the new requirements in that the notices dis-

tributed by BLM provided incomplete information. As an example, appellant has submitted an information "flyer" or "broadside" which BLM prepared and distributed to explain where, when, and how location certificates must be recorded. This publication makes no reference to the need to file evidence of assessment work or notices of intention to hold claims.

Although appellant's arguments in support of these various contentions are well presented and clearly understood, they do not establish a basis for reversal of BLM's decision.

[1] Under sec. 314 of the Federal Land Policy and Management Act of 1976, 43 U.S.C. § 1744 (1976), the owner of a mining claim located on or before Oct. 21, 1976, must file notice of intention to hold the claim, or evidence of the performance of annual assessment work on the claim, in the proper BLM office on or before Oct. 22, 1979, and prior to December 31 of each year thereafter. This requirement is mandatory, not discretionary, and failure to comply is deemed conclusively to constitute an abandonment of the claim by the owner, and renders the claim void. *James V. Brady*, 51 IBLA 361 (1980).

[2] The conclusive presumption of abandonment which attends the failure to file an instrument required by 43 U.S.C. § 1744 (1976) is imposed by the statute itself, and would operate even without the regulations. See *Northwest Citizens for Wilderness Mining Co., Inc. v. Bureau of Land Management*, Civ. No.

² Art Neils, the other party in interest, did not appeal.

78-46 M (D. Mont. June 19, 1979). A matter of law, the conclusive presumption is self-operative and does not depend upon any act or decision of an administrative official. In enacting the statute, Congress did not invest the Secretary of the Interior with authority to waive or excuse noncompliance with the statute, or to afford claimants any relief from the statutory consequences. *Thomas F. Byron*, 52 IBLA 49 (1981).

[3] Appellant also argues that the intention not to abandon these claims was apparent, saying, in essence, that the act of filing the certificates of location for record in BLM and the payment of recording fees on the last day on which notices of intention to hold, or evidence of assessment work could be submitted, clearly indicated that the claims were not abandoned. At common law, evidence of the abandonment of a mining claim would have to establish that it was the claimant's intention to abandon and that he in fact did so. *Farrell v. Lockhart*, 210 U.S. 142 (1908); 1 Am. Jur. 2d, *Abandoned Property* §§ 13, 16 (1962). Almost any evidence tending to show to the contrary would be admissible. Here, however, in enacted legislation, the Congress has specifically placed the burden on the claimant to show that the claim has *not* been abandoned by complying with the requirements of the Act, and any failure of compliance produces a *conclusive* presumption of abandonment. Accordingly, extraneous evidence that a claimant intended not to abandon may not be considered.

[4] Appellant's challenge of the statute and regulations cannot be sustained here. Essentially, the regulations merely mirror the statute and, to the extent that they have been considered by the courts, they have been upheld. *See Topaz Beryllium Co. v. United States*, 479 F. Supp. 309 (D. Utah 1979) (*appeal pending*); *Northwest Citizens for Wilderness Mining Co., Inc. v. Bureau of Land Management*, *supra*. In any event, it has frequently been held that an appeals board of this Department has no authority to declare a duly promulgated regulation invalid. *Exxon Co., U.S.A.*, 45 IBLA 313 (1980); *cf. Garland Coal and Mining Co.*, 52 IBLA 60 (1981). Nor may such a regulation be waived by the Department. *Marvin E. Brown*, 52 IBLA 44 (1981), and cases therein cited. With reference to the statute, this Board adheres to its earlier holdings that the Department of the Interior, being an agency of the executive branch of the Government, is not the proper forum to decide whether an act of Congress is constitutional. *Alex Pinkham*, 52 IBLA 149 (1981), and cases therein cited. Jurisdiction of such an issue is reserved exclusively to the judicial branch.

[5] Appellant asserts that the failure to file the required documents is attributable to inadequate and incomplete information supplied in BLM publications and orally by BLM personnel. However, all persons dealing with the Government are presumed to have knowledge of relevant statutes and

duly promulgated regulations. *Federal Crop Insurance Corp. v. Merrill*, 332 U.S. 380 (1947); *Edward W. Kramer*, 51 IBLA 294 (1980). Therefore, reliance upon erroneous or incomplete information provided by BLM employees cannot relieve the owner of a mining claim of an obligation imposed by statute, or create rights not authorized by law, or relieve the claimant of the consequences imposed by the statute for failure to comply with its requirements. *Parker v. United States*, 461 F. 2d 806 (Ct. Cl. 1972); *Montilla v. United States*, 457 F. 2d 978 (Ct. Cl. 1972); *Atlantic Richfield Co. v. Hickel*, 432 F. 2d 587 (10th Cir. 1970); *Northwest Citizens for Wilderness Mining Co., Inc.*, 33 IBLA 317 (1978). In the absence of a showing of affirmative misconduct by a responsible Federal employee, an estoppel will not lie against the Government because of reliance on erroneous or inadequate information given. *United States v. Ruby Co.*, 588 F. 2d 697 (9th Cir. 1978).

Accordingly, pursuant to the authority delegated to the Board of Land Appeals by the Secretary of the Interior, 43 CFR 4.1, the decision appealed from, as supplemented, is affirmed.

EDWARD W. STUEBING

Administrative Judge

WE CONCUR:

JAMES L. BURSKI

Administrative Judge

C. RANDALL GRANT, JR.

Acting Administrative Judge

UNITED STATES v. DONALD E.
FLYNN AND HEIRS OF HENRY
OROCK, DECEASED

53 IBLA 208

Decided March 18, 1981

Appeal from a decision of Administrative Law Judge E. Kendall Clarke rejecting the Native allotment application of Henry Orock, AA-5841, to the extent that it conflicts with the trade and manufacturing site application of Donald Flynn, AA-4545, and approving the Flynn application.

Affirmed as modified.

1. Alaska: Native Allotments

An Alaskan Native allotment applicant is required to make satisfactory proof of substantially continuous use and occupancy of the land for a minimum period of 5 years. Such use and occupancy contemplates substantial actual possession or use of the land, at least potentially exclusive of others, and not merely intermittent use. While qualifying use must be substantially continuous, there is no requirement that the 5-year use be in a consecutive 5-year period.

2. Alaska: Native Allotments —
Alaska: Possessory Rights

The right to a Native allotment vests only upon the completion of 5 years' use or occupancy of land and the filing of an application therefor. Absent the timely filing of an allotment application, where a Native, who has completed the requisite 5 years' use, ceases to use or occupy the land and permits the land to return to an unoccupied state, the right to an allotment of that land also terminates, regardless of the subjective intent of the Native. In a similar fashion, all possessory rights afforded by the Act of May 17, 1884, 23 Stat. 24, 26, and other similar Acts, terminate upon the cessation of actual use or occupancy. Such lands then

become open to the initiation of rights by others.

3. Alaska: Native Allotments—Rules of Practice: Government Contests

The provisions of 25 U.S.C. § 194 (1976) relating to the placing of the burden of proof do not apply where the Government contests the qualifications of an allotment applicant. An allotment applicant in such a situation is the proponent of the rule and must show his or her entitlement to the land sought.

Lucy S. Ahvakana, 3 IBLA 341 (1971), and Wilbur Martin, Sr., A-25862 (May 31, 1950), overruled to extent inconsistent.

APPEARANCES: Joel Bolger, Esq., and David B. Snyder, Esq., Alaska Legal Services Corporation, for the heirs of Henry Orock; Charles Cranston, Esq., Cranston, Waters, Dahl & Jarrell, Anchorage, Alaska, for Donald E. Flynn.

OPINION BY ADMINISTRATIVE JUDGE BURSKI

INTERIOR BOARD OF LAND APPEALS

The heirs of Henry Orock appeal from the decision of Administrative Law Judge E. Kendall Clarke rejecting the Native allotment application of Henry Orock, AA-5841, to the extent that it conflicts with the trade and manufacturing site application of Donald E. Flynn, AA-4545, and approving Flynn's application.

On Dec. 4, 1968, Donald Flynn filed a notice of location for a trade and manufacturing site near the

Dog Salmon River. Henry Orock filed a Native allotment application on Dec. 22, 1969, for lands which conflicted as to 35 acres with Flynn's site. Orock claimed use since 1945. Following Flynn's filing an application to purchase in January 1972, BLM issued a complaint alleging that Flynn had attempted to appropriate occupied and improved lands claimed by an Alaska Native. That complaint was dismissed on Oct. 27, 1976, and BLM prepared to issue a patent to Flynn. The heirs of Orock filed a complaint with the United States District Court for the District of Alaska seeking to enjoin BLM from issuing a patent to Flynn and requesting that a patent to the disputed lands be issued to them under the Native Allotment Act. By order dated Dec. 17, 1976, the District Court directed that the Department of the Interior hold a hearing covering all conflicting issues between BLM and the two applications. The hearing was held in King Salmon, Alaska, on Oct. 21 and 22, 1977.

Judge Clarke's decision provides a detailed summary of the testimony and evidence adduced at the hearing, and we set forth here:

Gerald Yeiter, a BLM realty specialist and trespass investigator, was called as a witness for the Government. (Tr. 6). He testified he conducted a field investigation of the disputed land on June 11, 1973. A helicopter flight was made over the entire 160 acre allotment. During the flight, Mr. Yeiter saw a small cabin, which was later determined to belong to Donald Flynn, on the site. (Tr. 8). The site is situated on a butte in an area that is very good for hunting and fishing. (Tr. 9).

March 18, 1981

An earlier field report concerning Henry Orock's native allotment (Ex. 9) prepared by William E. Ireland and Mr. Yeiter recommended that the allotment be rejected. (Tr. 11). The report concluded that the applicant, Orock, had abandoned use of his allotment several years prior to the field examination. (Ex. 9). A supplemental investigation on January 20, 1975 and report dated April 2, 1975 was made by Mr. Yeiter. He concluded that "it is likely a cabin could have been there, however, possibly too deteriorated to be recognized." In addition he determined, "If a cabin was there as alleged, it had definitely been abandoned since 1961." (Tr. 13, Ex. 10). Another supplemental report dated February 14, 1977 prepared by Mr. Yeiter reaffirmed his earlier recommendations. (Tr. 14, Ex. 11). In particular the report states:

"It is the investigator's opinion that a cabin was constructed in 1942 as Moses Taongnok has stated. The roof had caved in, in 1952 as stated by Tom Riley. Further, that due to age, the cottonwood logs were in an aggressive state of decay and the applicant left the area in 1952 not to return, with no further use of the land. The site plus one other which is located approximately four miles up river were abandoned and only utilized in a temporary manner. That the applicant (according to his brother-in-law, Nick Meticgoruk) stated that Orock left Pilot Point in December 1959 because of ill health not to return. It appears to this investigator from the best evidence submitted by Orock in the land in question had been segregated by Flynn's use and occupancy since 1965, which was four years prior to Orock's filing an application for an allotment. . . . Further from the best evidence supplied to this investigator by Henry Orock (sic) heirs there was no real proof that Orock ever occupied and used the land in question as required."

On cross-examination by counsel for Henry Orock, Mr. Yeiter stated in investigating a Native Allotment Application

he would attempt to talk to all the people who may have knowledge concerning an applicant's allotment. (Tr. 17). However, he only contacted the people on the Pilot Point and Ugashik village councils during his investigation in 1973. (Tr. 18). The allotment is 11.2 air miles from Pilot Point. (Tr. 18). Mr. Yeiter also had reservations about the BLM's decision to grant 125 acres of land adjacent to the disputed area to the Heirs of Henry Orock. (Tr. 19). When asked what "abandonment" meant to him, Mr. Yeiter explained, ". . . [I]f I went down to the Dog Salmon River, and decided to leave my job and go trapping for a couple months, and cut me a log cabin, and just take off and leave and never return." (Tr. 20).

During a third visit to the allotment, Mr. Yeiter did discover some old logs behind Flynn's cabin. (Tr. 22). He stated these logs could have been overlooked earlier since they were covered with moss and vegetation. (Tr. 23). The logs were ten feet away from Flynn's cabin. Another site was discovered upriver approximately four miles east of the allotment. (Tr. 21). A cabin found on this site is still recognizable. (Ex. 11).

On further questioning by counsel for Mr. Flynn, Mr. Yeiter asserted he has a forestry background that would allow him to determine the age of cottonwood trees. (Tr. 172). A sample of a cottonwood log that was found lying near Flynn's cabin was taken on October 8, 1976. (Ex. H). Mr. Yeiter estimated the log to be over twenty years old and possibly up to thirty years old (Tr. 175). Likewise, he determined the log had been on the ground for that amount of time also. (Tr. 176). In his opinion, the logs have been part of a disintegrating cabin for about twenty years.

A field examination report dated October 18, 1976, prepared by Carl F. Ehelebe, a BLM natural resource specialist, confirmed the discovery of deteriorating cottonwood logs that had been part of a small cabin 10 feet away from Flynn's cabin. (Flynn Ex. I). The report con-

cluded it had taken many years for the cottonwood logs to disintegrate into the condition that it was found in. Although the logs could have possibly been part of a cabin that Henry Orock contended was on the allotment, the report opined that the logs are highly unlikely to be the remains of any structure that was alleged to have been standing in 1964. Moreover, since the degree of deterioration is so advanced, it is also unlikely that the logs were part of a cabin that was built in 1947. The logs found were 20 to 30 years old.

Another field examination report also dated October 18, 1976, involving the Dog Salmon River area was introduced into evidence. (Flynn Ex. J.). This report also acknowledged there were several cottonwood logs found behind Flynn's cabin. The report stated "[T]he logs were all in an advanced state of decomposition, suggesting that the structure has been collapsed for 10 or more years." Although rusted cans, glass fragments and pieces of decayed roofing paper were found, no personal belongings were uncovered. In addition, this report disclosed there is another structure of more recent construction four miles upstream from Flynn's cabin site. This structure had collapsed at least several years prior to its discovery by the field examiner.

Arthur Condardy, Sr., was called as a witness on behalf of Henry Orock. He has resided in the Pilot Point-Ugashik area for the past fifty years. (Tr. 26). In addition, he has known Henry Orock since he was a "kid." He visited Orock at the cabin on the Dog Salmon River in the late forties and early fifties. The visits were made during the winter when Orock was trapping. The cabin was made out of logs. (Tr. 27). Mr. Condardy estimated Orock trapped near the vicinity of the cabin for 10 years. Orock also hunted for caribou up near the cabin. (Tr. 28). Mr. Condardy testified Orock moved to Anchorage in 1968 or 1969. However, Orock made trips back to the cabin during trapping season. (Tr. 29).

On cross-examination, Mr. Condardy admitted he had stated Orock left for

Anchorage in the early 1960's in an affidavit made October 8, 1976. (Ex. A, Tr. 31). The affidavit also stated that Mr. Condardy last saw the cabin standing on the allotment in 1952 or 1953. (Tr. 31). In addition, he asserted Orock would not leave his rifle at the site but would take it with him in the dogsled. (Tr. 33). He has never seen Orock on the allotment after 1960, although Orock was back at Pilot Point constantly during the 1960's. (Tr. 34).

Valentine Supsook, a former resident of Pilot Point, also is acquainted with Henry Orock. He has visited and stayed at Henry Orock's cabin near the Dog Salmon River in the 1950's. (Tr. 40). According to Mr. Supsook, Orock allowed other residents of Pilot Point use of the cabin. Mr. Orock also owned a house in Pilot Point. (Tr. 42). When Mr. Orock became ill, he stopped going up to the cabin. (Tr. 43).

On cross-examination, Mr. Supsook testified the area near Orock's cabin is a customary hunting ground for all of the people in the Pilot Point area. (Tr. 45). However, it is customary that no one goes near another person's trapline. Orock's traplines could have extended for more than five miles. (Tr. 46).

Mary Beth Toms, one of Henry Orock's daughters, testified she recalled her father going trapping in 1956. (Tr. 52). Furthermore, she believes her father went trapping in 1959. (Tr. 53). Mr. Orock would go back and forth to Pilot Point from Anchorage during the 1960's. (Tr. 55). At times he was forced to stay in Anchorage because of his failing health. (Tr. 56). Ms. Toms contended her father always wanted to go back to his land on the Dog Salmon River. (Tr. 56).

Moses R. Taongnok, from Ugashik, testified he helped Henry Orock build his cabin out of cottonwood on the Dog Salmon River. (Tr. 63). When Mr. Taongnok visited the allotment in the 1960's, he found that Mr. Flynn had built a cabin right over the area where Mr. Orock had built his. (Tr. 67). The last time Mr. Taongnok went trapping with Mr. Orock at the allotment was in the 1960's. (Tr.

March 18, 1981

70). Mr. Taongnok has a cabin eight miles downriver from the disputed site. (Tr. 71).

Mr. Taongnok admitted on cross-examination he did not see Mr. Flynn tear down Mr. Orock's cabin. (Tr. 76). An affidavit signed by Mr. Taongnok indicated he had helped Mr. Orock build the cabin in 1942. Furthermore, Mr. Taongnok stated he did not know when Mr. Orock last used the cabin or land. (Flynn, Ex. B). However, Mr. Taongnok denied that the affidavit accurately states his testimony. He testified he does not know when he last saw the cabin. (Tr. 81).

Martha Lonsdale, another one of Henry Orock's daughters, also testified that her father built a cabin on the Dog Salmon River. (Tr. 84). After Ms. Lonsdale had moved to Anchorage, Mr. Orock would visit her annually. Mr. Orock moved to Anchorage from Pilot Point in 1967. (Tr. 87). Ms. Lonsdale has no knowledge as to whether her father went back to his land on the Dog Salmon River after 1963. (Tr. 88). However, a letter dated November 14, 1965, signed by Henry Orock, stated he was going back to Pilot Point the next day. (Orock Ex. K). She visited the cabin in 1970. (Tr. 92).

During her visit to the allotment in 1970, Ms. Lonsdale discovered that a new cabin had been built near the site of Orock's old cabin. The only evidence of the old cabin were logs that were stacked three or four logs high. (Tr. 94). She also found nets and traps stacked against these old logs. According to Ms. Lonsdale, the traps were old. An old rifle was found hanging on the door of the new cabin. (Tr. 95). She took the rifle in belief that it had belonged to her father. She also returned to the site every year until 1976. In 1971, she found that the remaining portions of the old cabin had been removed and a snowmobile shelter built on that site. (Tr. 96). However some of the old logs still were on the ground near the new cabin. Some of the logs were stacked behind the new cabin. (Tr. 97).

On cross-examination, Ms. Lonsdale maintained the old logs were stacked

two and a half feet high when she visited the allotment in 1970. (Tr. 100). She discovered the new cabin had two rooms. The floor in one of the rooms in Flynn's cabin appeared to have been compacted as if someone had walked on it for years. (Tr. 101). She also contended that the new cabin was built over part of the site of the old cabin. (Tr. 103, Ex. D).

Nick Meticgoruk, who has known Henry Orock for many years, testified he visited the Dog Salmon River cabin site and took photographs of it sometime in the 1950's or later. (Tr. 108, Orock Ex. C, D and E). He did not visit Orock at the cabin site after he took those photos. (Tr. 112). Mr. Meticgoruk is a resident of Pilot Point. He stated that Mr. Orock trapped for furs every year. (Tr. 113). A photograph of Mr. Orock standing in front of a log cabin was introduced into the record. (Ex. C). He also contended that a rifle found during the 1970 inspection he made with Ms. Lonsdale belonged to Henry Orock. (Tr. 114, Orock Ex. N 1-6). In addition, he confirmed Ms. Lonsdale's [*sic*] contention that the Flynn cabin was built on top of Orock's old cabin. (Tr. 115).

An affidavit signed by Nick Meticgoruk indicated that the photos of the Orock cabin, (Orock Ex. C), were taken in 1949. (Flynn Ex. E). On cross-examination, Mr. Meticgoruk conceded that he took the photos in 1949 (Tr. 120). He also stated that Mr. Orock did not go back to Pilot Point after 1959. (Tr. 121).

Another one of Henry Orock's daughters, Jane Stephenson, was called as a witness. She stated Mr. Orock went trapping near the Dog Salmon River in 1957. (Tr. 126). She also testified that Mr. Orock was forced to go to Anchorage because of his failing health. (Tr. 127). According to Ms. Stephenson, Mr. Orock always intended to go back to the cabin on the Dog Salmon River. (Tr. 128).

Orin D. Sebert was called on behalf of Mr. Flynn. Mr. Sebert is a pilot for Peninsula Airways which is headquartered in Pilot Point and King Salmon. (Tr. 134). He has been flying out of Pilot

Point since 1954. In addition, he has resided in Pilot Point since 1949. He flew Mr. Flynn into the Dog Salmon River area on August 8, 1965. (Tr. 136). However, Mr. Sebert did not go up to the cabin site at that time. From the landing site, he could not see the cabin site. (Tr. 137). During a later visit he went up to the cabin. He could not recall observing any remnants of an old cabin near Flynn's cabin. (Tr. 137). Significantly, Mr. Sebert was aware that there was a cabin at the disputed allotment earlier. But, the cabin was no longer there when he took Mr. Flynn there. The old cabin was used up to 1959. (Tr. 138).

Mr. Sebert announced that other people from the Pilot Point area trapped near the Flynn cabin. He contended four or five other people he knew did. (Tr. 139). Although he lacks any records concerning air travel in 1960, he believed Mr. Orock did not go back to the Dog Salmon River after 1960. (Tr. 140). On the other hand, Mr. Sebert acknowledged that Mr. Orock made visits back to Pilot Point during the 1960's. (Tr. 41). Moreover, Mr. Sebert denies that Mr. Flynn had ever asked him about the prior use of the disputed land in question. (Tr. 142). But upon further questioning, Mr. Sebert changed his testimony and stated, "I think he did, yes." (Tr. 142).

Robert W. Gruber stated he flew Don Flynn into the Dog Salmon River area in June, 1965. During a thirty minute inspection of the area at that time, he did not discover a cabin or any remnants of one. (Tr. 146). However, the inspection was a general one of the area. If the remains of a cabin were hidden under the trees, he would not have seen them. (Tr. 151).

Robert Piatt, a former assistant hunting guide for Mr. Flynn, stated he worked at the Dog Salmon cabin site in 1966. He saw an outline of an old cabin behind Flynn's cabin. The outline was covered with vegetation. (Tr. 153). During the three years that Mr. Piatt was at Flynn's cabin, he saw no one else come up to the area and use it. (Tr. 155). However, he never was at the cabin during the winter

months. (Tr. 156). Additionally, he never uncovered any nets or traps near the old cabin. (Tr. 157). Likewise, he never found any part of Flynn's cabin to be constructed from any old cottonwood logs. (Tr. 158).

Roger B. Briggs, a fisherman, from Ugashik, Alaska, testified he visited Flynn's cabin in the fall of 1965. (Tr. 161). At that time the cabin was nearly completed. He was at the site for three hours. However, he did not find any signs of any old cabin. He also insisted that Mr. Flynn's cabin was constructed out of plywood and no part of it used any cottonwood logs. (Tr. 162). He does not know Mr. Orock. (Tr. 163).

Donald Flynn, a guide and commercial fisherman from Homer, Alaska, stated he began conducting guided hunting expeditions in the Dog Salmon River area in 1965. (Tr. 188). Mr. Flynn declared:

"In the—in the summer and fall of '65. I think the first trip was done with Bob Gruber, when I definitely had in mind to find a site for my cabin. We circled the Dog Salmon River area. And I had already established that that was an area that I would like. We were looking for a place where we could land safely for a plane operation, and where we could build a dry camp above the swamp. There's quite a bit of swamp in that area. So we stopped at what is now the—my established camp, where there is a rock ridge that juts out into the river, with tree protection and good possibility of building a permanent area." (Tr. 189).

When asked if he was interested to know if there were any other claims to the site he initially occupied in 1965, Mr. Flynn responded:

"As a guide, I naturally was, because first of all, guides don't encroach upon each other. And secondly, I wouldn't build a camp in a large area where there were possibilities of building other camps, if I knew there would become a conflict later." (Tr. 190).

Mr. Flynn contends he asked Orin Sebert in 1965 if there had been any prior occupancy or use of the disputed land. Mr. Sebert indicated there were no pre-

vious occupants but stated other people had trapped there. (Tr. 190). Because Mr. Flynn had no knowledge that anyone also had been on the cabin site and because there was no visible construction of any cabin or other dwelling, he decided to build his cabin there. (Tr. 191). The area was in a complete natural state at that time. Grass had grown to two to three feet in height. (Tr. 192).

In August of 1965, Mr. Flynn began constructing a plywood cabin on the disputed land. (Tr. 192). While building his cabin, Mr. Flynn discovered some old logs ten feet behind his cabin site. (Tr. 193). Ten to twenty logs were scattered on the ground. He also found an old rusted rifle near his cabin. (Tr. 196).

Mr. Flynn denies that any part of his cabin was built with any of the old logs found near his cabin. (Tr. 199). However, he admitted it is possible that he did use some of the old logs to build a ramp to run his snow mobile through. (Tr. 200). The floor of Flynn's cabin is all plywood. (Tr. 203). Mr. Flynn had never heard of Mr. Orock until he found a native allotment tag on one of his monument stakes in 1971. (Tr. 206).

When Mr. Flynn filed his location notice on December 4, 1968, he was unaware of any native allotment claim to the disputed land. (Tr. 206). He also filed an application to purchase a Trade and Manufacturing Site which corrected the inaccurate description of his earlier location notice. (Tr. 207, Ex. 3). The area has been used in conjunction with Mr. Flynn's hunting operations. (Tr. 207). However, several trappers have been using Flynn's cabin during the winter months. (Tr. 208). Several traps were found near Flynn's cabin several times. (Tr. 208). He also is aware that the area has been used for trapping in the past. In 1973, there appeared to be evidence of someone using a net to fish in the river. (Tr. 212).

Mr. Flynn believes there are no other available sites to conduct his hunting trips outside of the site he currently claims. (Tr. 213). He denied ever tearing

down any cabin or destroying any signs of one. (Tr. 214).

On cross-examination, Mr. Flynn stated he talked to Moses Taongnok about the disputed land once but he did not consult with any other person from the area. (Tr. 223). When Mr. Flynn completed the 1972 application for a Trade and Manufacturing Site, he thought the questions on the form related back to his earlier 1968 location notice. (Tr. 227). In particular, he thought that the question asking if the disputed land had any other claims to it referred to the events arising in 1968 and not subsequently. (Tr. 227).

In rebuttal, Alec Gretchen, an air taxi operator from Pilot Point was called in behalf of the heirs of Henry Orock. (Tr. 230). Mr. Gretchen has known Henry Orock for a long period of time. In 1948, Mr. Gretchen flew Orock up to the Dog Salmon River to trap and hunt. Mr. Orock did not have a cabin there at that time. (Tr. 231). Over a span of ten years, Mr. Gretchen took Orock up to the Dog Salmon River a dozen times. Mr. Gretchen learned there was a cabin there in the mid-1960's. (Tr. 232). He saw a cabin there but cannot recall when. The last time Mr. Gretchen saw Orock was in 1970 at Pilot Point. (Tr. 234). Mr. Gretchen denies Mr. Flynn ever asked him about Mr. Orock. (Tr. 235).

Moses Taongnok contended that bears had gotten into Orock's cabin and had torn down several of the walls. (Tr. 238). Subsequently, he examined the cabin in 1964. It was still standing then. (Tr. 241). However, in an earlier affidavit, Mr. Taongnok admitted he did not know whether he inspected the allotment in 1964. (Flynn Ex. B).

The deposition of Robert L. Haynes was introduced into the record in behalf of Donald Flynn. Mr. Haynes is a commercial fisherman from Homer, Alaska. (Depo. 2). He has known Mr. Flynn since 1968. (Depo. 3). In July of 1970, he accompanied Mr. Flynn on a visit to the cabin site on the Dog Salmon River. (Depo. 5). Mr. Haynes found a two-room plywood cabin there but found no other

cabin. However, he did find several rotted old cottonwood logs on the ground next to Flynn's cabin. The logs possibly could have been part of a corner of an old cabin. (Depo. 7). He estimated the logs were ten years old. (Depo. 8).

Over the next three years, Mr. Haynes was Mr. Flynn's assistant guide. During this time, Mr. Haynes made annual trips to the cabin site. (Depo. 10). The cabin remained in the same condition during that time. (Depo. 10). Significantly, Mr. Haynes has never heard of any claims to the disputed land by Mr. Orock. (Depo. 12).

On cross examination, Mr. Haynes deposed he had initially heard about the conflicting claim to the land in 1975. (Depo. 15). Mr. Flynn had mentioned that there appeared to be signs of an old fallen down cabin on the Dog Salmon site. In addition, Mr. Flynn choose [*sic*] the Dog Salmon site because it was the first good shelter near available timber under a rock cliff. (Depo. 20). Mr. Haynes declared he did not find any hunting or trapping equipment near the old logs. (Depo. 25).

In his decision, Judge Clarke made various rulings. First, he applied the Federal common law of "abandonment" and held that the record did not establish that Orock intended to abandon his claims (Decision at 12-13). Second, he held that the heirs of Orock had failed to submit satisfactory proof of a substantial continuous use and occupancy of the land for a period of 5 years. Judge Clarke stated:

Although the record is replete with testimony alleging Orock has trapped in the Dog Salmon area since 1948, there is no clear and credible evidence that Orock trapped and used the allotment site for a 5-year period. I find the testimony of Nick Meticgoruk vague and imprecise. Even though he contends Orock trapped every year, he fails to indicate where and

when Orock did so. Arthur Condardy merely estimated that Orock trapped in the vicinity for ten years during the late 1940's and early 1950's. (Tr. 28). He gave no specific dates when he saw Orock use the cabin or trapped near it. The most favorable view of Orock's evidence reveals use only for a period of four years from 1956-1959. (Tr. 52, 59, 126). Consequently, this period of use will not support a finding of substantial continuous use and occupancy of the allotment for a period of five year. 43 CFR § 2561.2(a). (Decision at 13).

Third, Judge Clarke held that appellants had failed to prove that Orock ever had "substantial actual possession and use of a cabin" near the site of Flynn's cabin. Noting that this Board had held in a number of prior cases that a long period of nonuse vitiates the effectiveness of any prior use, the Judge held that, as the record disclosed no use of the cabin after 1960, this period of nonuse would vitiate any prior qualifying use (Decision at 14). Judge Clarke accordingly found that no preference right had been vested in appellant with respect to the land embraced by the trade and manufacturing site application.

With respect to Flynn's trade and manufacturing site, Judge Clarke expressly found that Flynn had no knowledge of any prior occupancy when he initiated the claim and found, therefore, that his trade and manufacturing site should be approved (Decision at 14-15).

In their statement of reasons, appellants argue that Orock did satisfy the use and occupancy requirements of the Native Allotment Act

of 1906, *as amended*, 43 U.S.C. §§ 270-1 to 270-3 (1970) (repealed subject to pending applications, section 18a, Alaska Native Claims Settlement Act, 43 U.S.C. § 1617 (1976)). Appellants assert first that the requirement that 5 years' use and occupancy be shown applies only to land within a national forest. We have previously rejected that argument. *Jack Gosuk*, 22 IBLA 392 (1975); *Heldina Etluska*, 21 IBLA 292 (1975). Appellants then contend, nevertheless, that the 5-year requirement has been met. They argue that Judge Clarke did not correctly apply the standards for use and occupancy found in 43 CFR 2561.0-5(a) and urge that a more favorable application of the regulation be made. They invoke the "often repeated canon of construction that Federal statutes relating to Indian Affairs should be liberally construed to give maximum benefit to Indians." In addition, they assert that 25 U.S.C. § 194 (1976) requires that the burden of proof be placed on Flynn to establish that Orock did not occupy the land for the required 5 years.

[1] The first question which we must examine is whether appellants showed that Orock had used the land in such a manner and for a sufficient period of time so as to establish use, qualifying under the Native Allotment Act, *supra*.

Judge Clarke's decision was premised on a finding that appellants had not clearly established a continuous 5-year period of use and

occupancy by Orock. Appellants object specifically to this finding. Our review of the record supports appellants' contention that Judge Clarke erred in his ruling on this question.

In the first place, this Board has never ruled that all 5 years of the use and occupancy contemplated by the regulations *must be* consecutive. Indeed, such a construction could lead to the rejection of an application where a Native had lived on the land 16 out of 20 years, but had been required, for various reasons, to be absent every fifth year. The concept of "substantially continuous" use is one seen best at extreme points. Thus, no one would contend that a use of 2 years followed by the passage of 10 years of no use and then followed by a 3-year period of use would constitute substantially continuous use. On the other hand, our first hypothetical of 16 years' use in a 20-year period does evince such substantially continuous use. No one would really contend that this latter situation merely established "intermittent" use.

Moreover, there was more than sufficient testimony to establish that 5 years' consecutive use had, in fact, occurred. There was uncontradicted testimony that Orock trapped in the area for over 10 years (Tr. 26-27, 40-42, 232). Given the existence of a cabin on the site (a matter to which we will turn *infra*) it seems safe to assume that Orock would have made use of the same during the period in which he was trapping.

As to whether or not Orock's cabin was actually located within the land embraced by Flynn's trade and manufacturing site application, we must agree with appellants that the evidence is overwhelming that Orock's cabin was located at one time within the boundaries of Flynn's site. In actuality, however, Judge Clarke's decision was not premised on a view that the situs of Orock's cabin was someplace other than Flynn's site; rather, his ruling was clearly predicated on his belief that the subsequent nonuse of the site vitiated the prior use.

[2] Examination of the question of what period of nonuse is sufficient to render nugatory prior qualifying use requires a detailed analysis of both the history of the Native Allotment Act and subsequent Departmental proceedings. At the outset we note that all parties apparently proceeded upon the assumption that upon completion of 5 years' use and occupancy a preference right would vest in the Native occupant. This is *not* correct, as we will explain more fully below. Initially, however, it is crucial to distinguish between two separate types of uses which gave rise to different types of Native rights.

The first source of Native rights arose from sec. 8 of the Act of May 17, 1884, 23 Stat. 26, which provided that Alaska Natives "shall not be disturbed in the possession of any lands actually in their use and occupation or now claimed by them."¹

¹ Of similar purport was sec. 27 of the Act of June 6, 1900, 31 Stat. 321, 330.

This provision accorded no permanent rights in the lands to the Natives, being only designed to protect their occupancy until such time as Congress should act further on the question of title to such lands.² See *Tee-Hit-Ton Indians v. United States*, 348 U.S. 272, 278 (1955). Moreover, the right of occupancy was deemed to provide no rights as against the United States. See *United States v. Atlantic Richfield Co.*, *supra* at 1029-31; *Alaska Commercial Co.*, 39 L.D. 597 (1911). See also *Edwardsen v. Morton*, 369 F. Supp. 1359, 1370 (D.D.C. 1973).

In order to more fully protect the rights of Alaska Natives, Congress adopted the Act of May 17, 1906, 34 Stat. 197, originally 43 U.S.C. §§ 270-1 to 270-3 (1970), generally referred to as the Native Allotment Act. That Act provided, in essence, for the allotment of up to 160 acres of land and granted a preference right as to such lands as were actu-

² Sec. 8 of the Act of May 17, 1884, *supra*, was construed to apply only to lands occupied as of the date of that Act, and was not applicable to lands subsequently occupied. See *Heckman v. Sutter*, 119 F. 83 (9th Cir. 1902); *contra*, *Young v. Goldsteen*, 97 F. 303, 308 (D. Alaska 1899) (All persons had a right to expect protection from Congress if they were first to go upon the public domain and occupy and improve the same, even though they went there after May 17, 1884.)

However, as various public land laws were made applicable to Alaska, most notably the Act of Mar. 3, 1891, which provided for trade and manufacturing sites, these Acts expressly excepted lands then occupied by Natives. See sec. 14, Act of Mar. 3, 1891, 26 Stat. 1095, 1100. Thus, most entries under the public land laws required that the land not be used or occupied by Natives as of the time of the entry or application. See *United States v. Atlantic Richfield Co.*, 435 F. Supp. 1009, 1014-15 (D. Alaska 1977), *aff'd*, 612 F.2d 1133 (9th Cir. 1980).

March 18, 1981

ally occupied by the Native.³ Thus, under the original Act, occupancy was only required in order to gain a preference right. *See generally Acquisition of Title to Public Lands in the Territory of Alaska*, 50 L.D. 27, 48-49 (1923). By Departmental decision, however, allotments within national forests could only be granted where they were based on occupancy prior to the establishment of the forest or alternatively, where the land was classified by the Secretary of Agriculture, under 43 U.S.C. § 270-2 (1970), as agricultural. *See Shields v. United States*, No. A 77-66 Civil (D. Alaska, Jan. 9, 1981); *Louis P. Simpson*, 20 IBLA 387 (1975); *Yakutat and Southern Railway v. Harry*, 48 L.D. 362 (1921). As early as 1935, however, the Department required 5 years' use and occupancy prior to the issuance of any allotment certificate. *See Allotments of Public Lands in Alaska to Indians and Eskimos*, 55 I.D. 282, 285 (1935). By the Act of Aug. 2, 1956, 70 Stat. 954, Congress amended the Native Allotment Act to expressly require 5 years' use and occupancy as a prerequisite to the grant of any allotment, thereby ratifying the earlier Departmental regulations. *See Medina Flynn*, 23 IBLA 288

(1976); *Heldina Eluska*, *supra*, at 294 (1975); *Terza Hopson*, 3 IBLA 134, 144 n.5 (1971).

There are certain critical differences between these two separate sources of Native rights. Thus, the rights of occupancy protected under the Act of May 17, 1884, *supra*, and subsequent such Acts, extended to lands used communally, as well as individually, and was possessed of no gross acreage restriction. The right to an allotment, however, was limited by regulation since 1935 and by statute since 1956, to lands use by an individual Native by himself or in conjunction with his dependents and was limited to a total of 160 acres.⁴ What was not different, however, was the nature of the use involved. Though phrased in differing parlance, the type of appropriation contemplated under both statutes was the same. Thus, permissive Native occupation under the various Acts was required to be "notorious, exclusive and continuous, and of such a nature as to leave visible evidence thereof so as to put strangers upon notice that the land is in the use or occupancy of another, and the apparent extent thereof must be reasonably apparent." *United States v. 10.95 Acres of Land in Juneau*, 75 F. Supp. 841, 844 (D. Alaska 1948).

³ The General Allotment Act, Act of Feb. 8, 1887, 24 Stat. 388, 25 U.S.C. §§ 331-349 (1976), was originally deemed not to apply to Alaska since the native inhabitants were not officially classified as "Indians" until the Indian Reorganization Act of 1934, Act of June 18, 1934, 48 Stat. 984, 988, 25 U.S.C. § 479 (1976). *See, e.g., John Brady*, 19 L.D. 323 (1894). *But see Nagle v. United States*, 191 F. 141 (9th Cir. 1911); *Status of Alaskan Natives*, 53 I.D. 593 (1932).

⁴ Initially, the Department also required that the allotment be of one contiguous tract of land. *See Solicitor's Opinion*, M-36352 (June 27, 1956). This holding was subsequently reversed in *Allotment of Land to Alaska Natives*, 71 I.D. 340 (1964), on the basis that it failed to take into consideration the seasonality of use customary to the Native way of life.

See also *United States v. State of Alaska*, 201 F. Supp. 796 (D. Alaska 1962); *Kittie Cleogeruh*, 28 L.D. 427 (1899); *A. S. Wadleigh*, 13 L.D. 120 (1891).

In the area of Native allotments, while it has been recognized that occupancy or use must only be "substantially continuous" (See *Frank St. Clair*, 52 L.D. 597 (1929), on petition, 53 I.D. 194 (1930)), such occupancy or use must, at a minimum, be "potentially" exclusive. See 43 CFR 2561.0-5 (a). In *Herbert H. Hilscher*, 67 I.D. 410 (1960), the Department was faced with both the question of "occupancy" sufficient to establish a preference right under the Native Allotment Act and the existence of "occupancy" sufficient to serve as a bar to the initiation of rights by non-Natives. Appellants have focused on the following sentence in that decision. "In the instant case, the preference right for an allotment resulting from occupancy on a portion of this tract by Mrs. Smith's [the Native allotment applicant] family was presumably extinguished when, sometime between 1938 and 1944, the family left the tract *with the intention of permanently residing elsewhere.*" (Italics supplied.) *Id.* at 415. Appellants argue that *Hilscher* stands for the proposition that an allotment can be abandoned only under traditional common law principles which require an "intent" to abandon. Read in its entirety, however, *Hilscher* does not support the argument appellants advance.

The *Hilscher* case involved con-

flicting applications: The first was filed by Herbert H. Hilscher on June 1, 1954, for a soldiers' additional homestead entry, and the second was filed by Maria M. Smith on May 24, 1956, seeking a Native allotment of the same land. Hilscher contended that at the time he had made application for the land he had examined the land and found no traces of present or recent habitation on any portion and no evidence of occupancy or use, though there were certain "old ruins" on property immediately adjacent. Further, he stated that he had been informed that no one had lived on the land for at least 15 years.

On the other hand, it was uncontested that Smith's father, Skar Stevens, had lived on the land from 1906-1910 until sometime between 1938 and 1944 "when he moved elsewhere permanently." The decision noted, however, that

it appears that when the [Hilscher's] application was filed no one had lived on the tract for approximately 10 years, the only evidence of former occupancy being fallen timber crossbars and pieces of roofing from cabins, rusty tins and similar debris in several places on the ground overgrown with brush.

Id. at 412-13. Smith also stated that she had stored a boat on a beach area bordering the tract since 1950.

The Acting Director, BLM, rejected Hilscher's application not because of the preference right of Smith, but because the tract of land was "claimed" by a Native and thus unavailable for entry under the soldiers' additional homestead regu-

lations, citing 43 CFR 61.7 (1954).⁵ In *Hilscher*, Solicitor Stevens initially noted that there was nothing either in regulation or statute which required rejection of an entry because the land applied for is "claimed" by a Native. *Cf. United States v. 10.95 Acres of Land in Juneau, supra* at 844. Rather, the regulations merely required appellant to state whether or not the land was claimed. Inasmuch as the Smith allotment application was not filed until almost 2 years after Hilscher's application, failure to identify the allotment claim could not serve as a predicate for rejection of Hilscher's application.

Solicitor Stevens then turned to the related question of the existence of a preference right in Smith or, failing that, the existence of a Native occupancy right such as would defeat Hilscher's application.⁶ With reference to Smith's asserted preference right to an allotment, the Solicitor made the statement, set forth *supra*, that Smith's preference right was "presumably extinguished when, sometime between 1938 and 1944, the family left the tract *with the intention of permanently resid-*

ing elsewhere." (Italics supplied.) 67 I.D. at 415. Two points must be raised concerning this statement. First, though the statement expressly notes the existence of an "intention" to reside elsewhere, there is nothing in the decision which would provide a basis for the conclusion that Skar Stevens "intended" to abandon the land. Rather, the original statement, set forth at 67 I.D. 412, merely notes that Skar Stevens lived on the land until 1938 to 1944 "when he moved elsewhere permanently." This was not a statement of his intent but was rather one of fact. The subsequent reference to "intention" appears to be a conclusion derived from the fact of Skar Stevens' actions, not an observation of his state of mind.

Second, and more importantly, this statement must be read in conjunction with the two succeeding paragraphs of the decision. Thus, Solicitor Stevens noted that there was no reason to construe the occupancy contemplated by the Native allotment preference provisions any differently from the occupancy of the Natives which prevented subsequent disposals of land to third parties. Solicitor Stevens then stated:

Occupancy implies some substantial actual possession and use of land, at least potentially exclusive of others, such as necessarily results from residence on or cultivation of land. Such slight and sporadic use of land as shown by the allotment applicant's storing a boat thereon is neither exclusive nor substantial, and, by itself, amounts to actual occupancy of no

⁵ While this specific regulation no longer exists, its provisions are replicated, in relevant part, in 43 CFR 2562.3(d)(2) (trade and manufacturing sites), and 43 CFR 2563.1-1(a)(6) (homesites and headquarters).

⁶ As this Board has had occasion to recognize, situations may arise, such as in communal use, where an individual Native allotment applicant would be unable to qualify for an allotment but such use as was shown would prohibit other forms of disposition. See *Lucy S. Ahvakana*, 3 IBLA 341, 343 (1971).

larger an area than is required for depositing a boat (about 15 feet long) on the ground. *In the instant case there is evidence that no one has resided on the land for many years and that only a small area along the beach on this tract has been even casually used or occupied for at least 15 years.* This evidence will not support a conclusion that in 1954 the tract was occupied, within the meaning of the provisions here relevant, either by the Indian families who formerly resided on it, or by Mrs. Smith, with the exception of that small area on the beach on which she allegedly stored her boat since approximately 1948. Consequently, to the extent that the decisions of the Acting Director and the manager held that the appellant's application must be rejected because the tract was occupied by an Alaskan Indian or natives, the decisions were erroneous. [Italics supplied.]

Id. at 416 (footnote omitted).⁷

We wish to emphasize particularly that Solicitor Stevens' reference to use and occupancy applies equally to use and occupancy under the Native Allotment Act, as well as to occupancy contemplated by the Act of 1884 and its progeny. Support for this construction is readily seen by comparing early Departmental decisions involving Native allotment preference applications (see, e.g., *Frank St. Clair (On Petition)*, *supra*; *Yakutat and South-*

ern Ry. v. Harry, *supra*), with those relating to the occupancy protection afforded under the 1884 Act (see, e.g., *Point Roberts Canning Co.*, 26 L.D. 517 (1898); *Fort Alexander Fishing Station*, 23 L.D. 335 (1896); *A. S. Wadleigh*, *supra*). Thus, the preference right of allotment attached only to the lands occupied or used (*Frank St. Clair (On Petition)*, *supra*), just as the 1884 Act extended only to lands presently under "actual occupation or use." *Naval Reservation*, 25 L.D. 212 (1897); *A. S. Wadleigh*, *supra*.

It is equally clear that a cessation of occupancy could nullify rights acquired by prior occupancy under the 1884 Act. Thus, in *Carroll v. Price*, 81 F. 137 (D. Alaska 1896), Judge Delaney charged the jury, in part, as follows:

A possessory right acquired in public lands may be lost by abandonment, and where a party, having once acquired this right, surrenders his claim, goes off the ground, or gives up his possession in the sense of abandoning his right, the piece of land becomes restored to its original status in the public domain, and is subject to occupation and possession by any other citizen. But if the original occupant, after such abandonment takes place, and before any other person acquires any rights thereon, goes back on the ground, reassumes possession, makes additional improvements, his right to the piece of land becomes restored, and the tract is again segregated from the public domain to such a degree as to enable him to hold it against anybody except the United States. There is some evidence in this case tending to show that the possession and occupancy of the plaintiff and his grantors were not continuous from 1881, but although such possession may have been interrupted, if you find that it was resumed prior to the location and occupancy

⁷ We would note that to the extent that *Hilscher* indicated that residence and cultivation were prerequisites to use and occupancy, its scope was restricted by a subsequent Solicitor's opinion which noted that in determining use and occupancy reference must be made "to the natives' mode of life and the climate and character of the land." *Allotment of Land to Alaska Natives*, *supra* at 359. This latter opinion, however, expressly noted that the requirement of substantial actual possession and use of land, at least potentially exclusive of others "had received judicial approbation." *Id.* at 358.

claimed by the defendants, then the plaintiff has the better right. [Italics supplied.]

Id. at 140-41. While Judge Delaney's charge employs the term "abandonment" it is contextually clear that this "abandonment" was not dependent upon a subject state of mind, but rather related to physical acts in relation to the land.

Under the original instruction for processing Native allotments, published on Feb. 11, 1907, 35 L.D. 437, it is clear that occupancy *to the date of application* was a prerequisite for the assertion of a preference right to an allotment. The instructions included a requirement that the allotment applicant provide an affidavit which "must be sworn to by the person applying, and if claiming under the preference right clause the date of the beginning of his occupancy must be given, and its continuous nature." 35 L.D. at 437. This requirement is clearly reflected in the affidavit form which accompanied the instructions. The preference allotment applicant was required to swear, in relevant part, "that I have occupied the land so applied for since _____." *Id.* at 439. It is clear that the exercise of the preference right was preconditioned on present occupancy or use as of the time of application.

With this in mind, we return to our original statement that completion of 5 years' use or occupancy did not vest a mere preference right to an allotment. Rather, it was only by application, *together with* the requisite use or occupancy, that the

inchoate preference right matured into a vested right. The preference right was not an *in praesenti* grant of land.⁸ On the contrary, it required clear identification of the land sought by an applicant before it could be exercised. Indeed, the system of allotment could proceed on no other basis. A Native could clearly use or occupy in excess of 160 acres in a manner consonant with the Native Allotment Act. Prior to his or her application, the Native's use and occupancy would be protected against outside encroachments, save for that by the United States. By application, however, the Native would receive a preference right to an allotment of up to 160 acres. *See Arthur R. Martin*, 41 IBLA 224 (1979); *cf. Florence May Ree*, 17 L.D. 142 (1893) (application for allotment under General Allotment Act, Act of Feb. 8, 1887, 24 Stat. 388, may be confirmed to heirs). Death of a Native, invested with an inchoate right to apply for an allotment, but who had not applied in his or her lifetime, terminated the inchoate right and no allotment could be predicated based on such Native's use or occupancy. *Louis P. Simpson*, *supra* at 391-92; *Larry W. Dirks*, 14 IBLA 401, 403-04 (1974).

It is recognized that "abandon-

⁸ *See generally New York Indians v. United States*, 170 U.S. 1, 15-24 (1898). In *New York Indians*, *supra*, inasmuch as the Supreme Court found that the Treaty of Buffalo Creek did constitute an *in praesenti* grant of specific land, the Court examined whether subsequent actions constituted an "abandonment" as known in common law.

ment" as used in legal terminology requires not only a relinquishment of occupancy or a failure to proceed with a claim, but also an intent to abandon. *New York Indians v. United States*, *supra* at 35; *United States v. Wheeler*, 161 F. Supp. 193, 198 (W.D. Ark. 1958). We think Judge Clarke was clearly correct in finding that there was no "abandonment" of the claim within the context of Federal law. The problem, however, is that the concept of "abandonment" is simply not applicable to the facts of this case.

What is involved herein is not an abandonment of a claim, but the cessation of use and occupancy. At the time Orock ceased returning to his cabin he had no "claim" to the land since he had not filed an application for an allotment. When an application was filed in 1969, the evidence clearly indicates Orock had not been using the land for at least 9 years. Until 1969, therefore, there was simply no "claim" which Orock could abandon. In contradistinction, had Orock filed his application in 1959, having at that time completed 5 years' use or occupancy, and then removed himself, for whatever reason, from the land, the question of "abandonment" would properly be raised, and proof of his subjective intent to abandon would be prerequisite to nullifying his claim. Moreover, had Orock filed his application in 1959, or at any time prior to Flynn's settlement, that would have segregated the land in his favor, pending adjudication. 43 CFR 2561.1(e); *Evelyn Alexander*, 45 IBLA 28, 35 (1980). Absent an

application, however, removal from land once occupied does not implicate legal concepts of "abandonment."

Indeed, any other system of analysis would create insurmountable problems in administering the public land laws in the State of Alaska. Inasmuch as Alaska was expressly excepted from the purview of the Taylor Grazing Act (sec. 1, Act of June 28, 1934, 48 Stat. 1269, 43 U.S.C. § 315 (1976)), land claims in Alaska have continued to be capable of initiation by settlement, *Vernard E. Jones*, 76 I.D. 133 (1969).⁹ It was not until the Act of Apr. 29, 1950, 64 Stat. 94, 95, 43 U.S.C. § 687a-1 (1976), that settlers initiating occupancy claims in Alaska were required, in all cases, to notify BLM of the initiation of their claim within 90 days of establishing settlement. Failure to so notify BLM did not, ipso facto, nullify the claim, but it did prevent the settler from obtaining any credit for such occupancy as occurred prior to the filing of a notice of the claim or application to purchase.¹⁰

⁹ Pursuant to sec. 1 of the Taylor Grazing Act, all vacant public lands, with certain exceptions, were withdrawn from entry, selection, and location under the nonmineral land laws by various Executive orders. Under sec. 7 of the Taylor Grazing Act, the Secretary of the Interior has the authority to classify and open lands to entry. Absent such classification, however, no such entry can be permitted.

¹⁰ The mere filing of a notice of occupancy of land for a trade and manufacturing or homesite vested no rights absent occupancy. See *Peter Pan Seafoods, Inc. v. Schimmel*, 72 I.D. 242 (1965). Moreover, under the provisions of the Act of Apr. 29, 1950, *supra*, mere occupancy of a settlement claim, absent the timely filing of a notice of location or an application to purchase, afforded the occupant no rights such as would prevent a withdrawal from attaching. See *Kennecott Copper Co.*, 8 IBLA 21, 79 I.D. 636 (1972).

To the extent that prior use and occupancy by Natives, and other settlers at least until 1950, afforded specific protections absent any application to acquire title, it was essential that acts of appropriation occur which would disclose to an observer on the ground that the land was under active development or use. *Sandra L. Lough*, 25 IBLA 96, 105 (1976), and cases cited.¹¹ Such occupancy or use would serve as notice to all subsequent persons that the land was under appropriation and thus not available for the initiation of other claims.

Thus, requiring that the occupancy or use be of a continuous nature was essential to the entire structure of Alaskan settlement claims, for the only notice to the world of prior occupation or use would be present occupation or use. In the instant case, the evidence indicates, and Judge Clarke so found, that there was no standing or visible cabin on the site when Flynn initially occupied the land in 1965, nor were there signs of prior use (Decision at 14). No application for an allotment had yet been filed by Orock. Judge Clarke found that Orock did not use the land after

1960, and specifically found that Flynn did not have knowledge of prior occupancy or use of the claim. To require Flynn to somehow become aware of the existence of a prior claim which is neither evidenced on the land nor noticed in the BLM records, at the peril that at some future point in time, his own claim would be subject to invalidation, would enforce a standard of omniscience totally inconsistent with the entire history of land law adjudication in Alaska. *See Evelyn Alexander, supra*.¹²

We hold, therefore, that absent the filing of an application for allotment, cessation of use or occupancy for a period of time sufficient to remove any evidence of a present use, occupancy or claim to the land, terminated all protected rights under both the allotment and permissive occupancy statutes and re-

¹¹ While these cases arose under the trade and manufacturing and homesite laws, the animating concept applies with equal, if not greater, force to Native use and occupancy. Inasmuch as the Act of Apr. 29, 1950, *supra*, did not affect either permissive occupancy of Natives under the 1884 and subsequent Acts, or occupancy with a view towards acquiring an allotment under the 1906 Act, the only possible way for any individual to be put on notice that the land was used or occupied by a Native would be through physical evidence on the land that it was under the prior appropriation of another.

¹² We are fully cognizant that Flynn, by failing to provide notice of his settlement within 90 days, lost credit for all prior use and occupancy, under the Act of Apr. 29, 1950, *supra*. Thus, had the land which he used been included in a withdrawal prior to the filing of his notice of location in December 1968, the land occupied would have been subject to the withdrawal and that would preclude recognition of any right in Flynn. *See Edwin William Seiler*, 16 IBLA 352 (1974); *Kennecott Copper Co., supra*. This was a risk to which Flynn subjected himself by failing to notice his settlement pursuant to Act of Apr. 29, 1950, *supra*. Moreover, had a Native allotment application been filed prior to the filing of Flynn's notice of settlement, Flynn's right to the land would have been defeated by the segregative effect which occurred upon the filing of an acceptable application, unless he could subsequently show that the allotment applicant had "permanently abandoned occupancy of the land." 43 CFR 2212.9-1(g) (1967). In the instant case, however, Flynn's notice of location preceded Orock's allotment application by almost a year, and thus, the dangers to which Flynn had subjected himself by failing to timely notice his occupancy did not come to fruition.

stored the land to its original status of vacant and unappropriated land, regardless of the existence of any "intent" to permanently abandon such use or occupancy.¹³ Such prior use or occupancy does not serve as a bar for the initiation of rights in the lands by other individuals.

In the context of the present case, we hold that Orock's cessation of use and occupancy in 1960 and the subsequent, if not coterminous disintegration of the cabin on the site, terminated such inchoate rights to an allotment of which Orock may have been possessed, and rendered the land subject to the initiation of rights by Flynn.

Nothing in *Pence v. Kleppe*, 529 F.2d 135 (9th Cir. 1976), militates against this view. By its nature, the *Pence* litigation involved Native allotment *applicants*. The decision noted that an applicant who meets the statutory requirements is entitled to an allotment which may not be arbitrarily denied. 529 F.2d at 141-42. Thus, to the extent that applicants allege compliance with the statutory mandate they are entitled to notice and an opportunity for hearing on disputed issues of fact prior to rejection of their appli-

cations. See *Donald Peters*, 26 IBLA 235, 241-42, 83 I.D. 308 (1976), *reaff'd*, *Donald Peters (On Reconsideration)*, 28 IBLA 153, 83 I.D. 564 (1976). The *Pence* case, however, did not purport to examine substantive questions concerning the nature of qualifying use and occupancy.

In the instant case, a hearing, as directed by the District Court, has been held. The full due process rights mandated by the Ninth Circuit have been afforded appellants. All sides have had full opportunity to be heard and the dictates of the *Pence* case have been observed.

There are two Departmental cases which arguably conflict with our above analysis. The first is *Wilbur Martin, Sr.*, A-25862 (May 31, 1950). Appellant, a Klamath Indian, had purchased a prior homestead entry of one Arthur Bell in 1922 and moved onto the land, subsequently building a house, woodshed, barn, and smokehouse. Martin resided on the land *with his family*, from 1923 to 1928. After 1928, the opinion notes "Mr. Martin lived in logging camps, as he was working in the timber industry because of his inability to make a living on his homestead, but he never had any intention of abandoning his settlement." The land embraced in his settlement was withdrawn in 1934, but Martin did not apply for an allotment under sec. 4 of the Act of Feb. 28, 1891, 26 Stat. 795, 25 U.S.C. § 336 (1976), until 1946. Examining, *inter alia*, the question whether by absenting

¹³ We would make one final point on this matter. The regulations permit the performance of the requisite use and occupancy within 6 years *after* the filing of an application. See 43 CFR 2561.2. But the regulations also require that the Bureau of Indian Affairs certify "that the applicant *has occupied* and posted the lands as stated in the application." (Italics supplied.) 43 CFR 2561.1(d). Thus, the present regulations, while recognizing that absolutely consecutive use need not ensue to warrant the granting of an allotment, clearly presuppose the existence of "present" use.

March 18, 1981

himself from the land from 1928 until the time of application in 1946 Martin had forfeited his right to an allotment, Solicitor White stated:

It is to be noted, in this connection, *that there is no requirement in the controlling statute or in the regulations quoted above that after a legal right to an allotment has been acquired, residence must be continuously maintained on the land up to the time of the filing of an application for the allotment. In view of the statements made by the Acting Area Director of the Bureau of Indian Affairs, upon the basis of a thorough investigation, that Mr. Martin left the land (after maintaining his residence there for six years) only because of economic necessity, that he never intended to abandon his settlement, and that he asked the Bureau in 1940, reasonably soon after the establishment of a branch office in his locality, for assistance in getting a patent to the land, and in view of the flexibility which is permissible under the pertinent statutory provision and departmental regulations in making determinations respecting Indian settlement cases of this sort, I have reached the conclusion that Mr. Martin did not lose his right to an allotment of the land because of his long absence from the land and his delay in filing an application for the allotment.* [Italics supplied.]

While this opinion apparently holds that once residency has been established, the right to an allotment vests, regardless of subsequent acts of the applicant (absent an intent to abandon), the fact situation which is described in the decision is not clear. Thus, though it seems likely that the structures constructed during Martin's residency remained intact, the opinion is silent

on this question. Similarly, while the opinion implies that Martin's family remained on the lands sought from 1928 to 1946, this crucial fact is not really stated. Moreover, the decision is related only to Martin's actual residency and does not discuss whether, regardless of where he was actually living, the land was still under his use.

The second case which appears to conflict with our analysis herein is this Board's decision in *Lucy S. Ahvakana, supra*. Ahvakana involved a conflict between a State selection filed by the State of Alaska in 1964, and a subsequent Native allotment application by Ahvakana, filed in 1968. Ahvakana alleged that she had established occupancy on the land at various intervals between 1929 and 1945, and that various improvements, consisting of a two-room house with storm porch and a two-room store building with storm porch had been placed on the land, presumably at that time. The Fairbanks District Office, BLM, rejected the Ahvakana application, but the BLM Office of Appeals and Hearings vacated that decision and remanded the case for investigation of Ahvakana's allegations. The State of Alaska thereupon appealed to the Secretary.

The Board, in *Lucy S. Ahvakana, supra*, affirmed the decision of the BLM Office of Appeals and Hearings. The Board first noted that "even if the Indian allotment application is not found to be allowable, the Indian use of the land may be sufficient to bar the state selection

application *pro tanto*." 3 IBLA at 344. The opinion then went on to say:

If in fact, it is ultimately determined from the investigation that the native has established substantial occupancy prior to the time of the state selection, the land was not vacant and unappropriated and, therefore, not properly subject to a state selection. *As to the charge of abandonment whether a native has permanently abandoned occupancy of claimed land to the extent that he has forfeited any claim he may have established under the Native Allotment Act, depends upon his reason for leaving the land and the interest and relationship he thereafter maintained with the land. See Wilbur Martin, Sr., A-25862 (May 31, 1950).* Here again, a native's intent in such a matter can only be determined after a thorough investigation of the facts. If, however, no positive proof is developed which establishes substantial continuous occupancy for a five-year period prior to the state selection or it is clear that the native had abandoned the land prior to the selection, the allotment will not be allowed and the application will be rejected. [Italics supplied.]

Id. at 345. These two cases, thus, can arguably be said to represent a view contrary to that set forth in our analysis. It is interesting, however, that *Ahvakana* cited only *Martin* as support for its proposition and *Martin* cited no authority whatsoever. In view of all we have said above, we cannot find that *Ahvakana* or *Martin*, to the extent that they hold that upon completion of 5 years' use or occupancy, the right to an allotment vests so that only a legal abandonment can defeat such a right, correctly reflect the law. Accordingly, we hereby expressly overrule *Lucy*

S. Ahvakana, supra, and *Wilbur Martin, Sr., supra*, to the extent that they are inconsistent with the views expressed herein.¹⁴

[3] We now turn to appellants' remaining argument. Appellants' application of 25 U.S.C. § 194 (1976) is misplaced in this case. Sec. 194 reads:

In all trials about the right of property in which an Indian may be a party on one side, and a white person on the other, the burden of proof shall rest upon the white person, whenever the Indian shall make out a presumption of title in himself from the fact of previous possession or ownership.

¹⁴ We also note that in the early case of *Burr v. House*, 3 Alaska 641 (1909), Judge Overfield stated that "abandonment of possessory rights upon the public domain is a question of fact, as well as intent." *Id.* at 643. In that case, however, Judge Overfield found that

"there was sufficient notice given the defendant House, by the physical condition of the lot in question on June 8th, to have put him on his guard that it was claimed by others, and in their occupation and use. In addition to such physical evidence as plainly showed the segregation of this lot from the public domain, there were admittedly, by the testimony of House himself, two signs posted on the said above-mentioned building, referring would-be purchasers in one instance to the agent, Waldron, and in the other to a real estate firm in Valdez." (Italics supplied.) *Id.* at 646-47.

In order to possess something one need not have actual residential occupancy. In *Burr v. House, supra*, Judge Overfield found that the building on the land, which was standing at the time of House's entry, clearly evidenced present possession. In such a situation, abandonment, as a legal term, is properly examined. Our decision is consistent with this approach. Thus, had Oroch's cabin been in a state of repair at the time of Flynn's entry, his continued "possession" would have served as a bar to the initiation of rights by Flynn. Because, however, the evidence indicates as Judge Clarke found, that there was no physical evidence evincing a possessory right, the land was properly deemed to have been restored to the status of vacant and unappropriated land.

Appellants urge that Flynn should have the burden of showing that the required use and occupancy was not accomplished. However, on the issue of use, occupancy, and entitlement to the allotment, the adverse parties are not Orock and Flynn, but rather Orock and the Department of the Interior which issued the complaint against Orock's application.¹⁵ Regardless of Flynn's involvement, the Department could not issue a patent to the heirs of Henry Orock until the requirements of the Native Allotment Act, *supra*, have been met. As noted by Judge Clarke, the burden of meeting the use and occupancy requirement by clear and credible evidence rests with the Native allotment applicant. In any event, regardless of where the burden of proof is determined to rest, it is clear from our review that Orock's application for the 35-acre parcel must be rejected.

In closing, we wish to make mention of a matter which, while it surfaced briefly at the hearing, was not subject to briefing by either party, viz, the question of how the use and occupancy of Orock on the parcel in conflict with Flynn differed from the use and occupancy of the adjacent 125-acre tract which had been approved for allotment by the State

Office decision of Mar. 21, 1977 (*see* Tr. 19-21). Inasmuch as the State Office granted this part of the allotment, Orock's use and occupancy of this adjacent land was not examined.

It is clear, however, that to the extent which we have held that Orock's cessation of use and occupancy vitiated his right of allotment to the land upon which his cabin had formerly been located, the cessation of use of the surrounding land should equally have resulted in the rejection of his application for the 125-acre parcel. While this matter is not part of the instant appeal, the courts have long recognized the continuing authority of the Department to investigate all claims to land until the actual issuance of patent. *Schade v. Andrus*, Nos. 78-3700, 78-3703 (9th Cir. Feb. 2, 1981). Accordingly, absent the issuance of the patent during the pendency of this appeal, we would normally direct BLM to initiate a contest against the remaining 125-acre tract.

Congress, however, in the Alaska National Interest Lands Conservation Act, Dec. 2, 1980, P.L. 96-487, 94 Stat. 2371, 2435, in essence has provided for approval of all Native allotment applications, which were pending on or before Dec. 18, 1971, in the absence of specified conflicts. *See* sec. 905(a)(1). The only conflict of record apparently involves the Flynn application for the 35 acres. Thus, in the absence of any protests from parties identified in

¹⁵ In this regard, we would note that the statement of the Regional Solicitor that the Government was merely a "stakeholder" (Tr. 3) was not necessarily accurate. It is possible that the evidence developed at the hearing would show the subject land had been under prior communal use by neighboring Native communities. Had that eventually transpired, Judge Clarke would have properly rejected both applications.

sec. 905(a) (5), the allotment of the remaining 125 acres will be approved as provided for in the Act. *Cf. Alyeska Pipeline Co.*, 52 IBLA 222 (1981).

Therefore, pursuant to the authority delegated to the Board of Land Appeals by the Secretary of the Interior, 43 CFR 4.1, the decision appealed from is affirmed as modified for the reasons stated herein.

**COUNCIL OF THE SOUTHERN
MOUNTAINS, INC.**

v.

**OFFICE OF SURFACE MINING
RECLAMATION & ENFORCEMENT**

3 IBSMA 44

Decided March 23, 1981

Petition for award of costs and expenses, including attorneys' fees, filed with the Board under the authority of 43 CFR 4.1290.

Petition denied.

1. Surface Mining Control and Reclamation Act of 1977: Attorneys' Fees/ Costs and Expenses: Final Order

A qualitative analysis of any order asserted to be a final order of the Office of Hearings and Appeals which is a prerequisite

to an award of costs and expenses under the Act must be done before such an award may be considered further; the regulations contemplate that such a qualifying final order will have been issued by OHA setting forth a judgment on the merits of the resolution of the administrative proceeding. Here no such order has been issued and an award would thus be inappropriate.

2. Surface Mining Control and Reclamation Act of 1977: Attorneys' Fees/ Costs and Expenses: Substantial Contribution

Where, largely due to what may have earlier appeared to have been a Board indication that it had resolved the compensation issue in petitioner's favor, petitioner made a substantial contribution to the determination of the standards to be used in cases for award of costs and expenses, it would be grossly unfair not to compensate petitioner for that contribution.

3. Surface Mining Control and Reclamation Act of 1977: Attorneys' Fees/ Costs and Expenses: Standards for Award

The Office of Hearings and Appeals will follow the standards for award of costs and expenses including attorneys' fees set out by the D.C. Circuit Court of Appeals in *Copeland v. Marshall*, — F. 2d — (1980).

APPEARANCES: L. Thomas Galloway, Esq., and Richard L. Webb, Esq., Center for Law and Social Policy, for petitioner, Council of the Southern Mountains, Inc.; Marcus P. McGraw, Esq., Assistant Solicitor for Enforcement, Mark Squillace, Esq., and Arlene Robinson, Esq., Office of the Solicitor, United States Department of the Interior, for respondent, Office of Surface Mining Reclamation and Enforcement.

COUNCIL OF THE SOUTHERN MOUNTAINS, INC. *v.*
OFFICE OF SURFACE MINING RECLAMATION &
ENFORCEMENT
March 23, 1981

*OPINION BY THE INTERIOR
BOARD OF SURFACE
MINING AND RECLAMATION
APPEALS*

This case is before the Board on a Petition for Award of Costs and Expenses filed under the authority of 43 CFR 4.1290 by Council of the Southern Mountains, Inc. (Council), on Mar. 7, 1980. Named as respondent in the petition is the Office of Surface Mining Reclamation and Enforcement (OSM). The factual and procedural context of the petition follows.

Council is an Appalachian-based membership organization whose concerns include the various issues surrounding strip mining in central Appalachia. Several of Council's members live in the vicinity of a mountaintop removal project in Ogden Creek Hollow, Knott County, Kentucky, operated by Highland Coal Co. (Highland). These members allegedly had been affected and were upset by certain alleged violations of the Surface Mining Control and Reclamation Act of 1977 (Act) in Highland's operation.¹ Mr. Dan Hendrickson, Coordinator of the Council, communicated the members' complaints by telephone to the Hazard, Kentucky, OSM office on May 29, 1979, follow-

ing that up with a written report on June 1, 1979.²

On 3 days in the middle of June 1979, OSM inspectors visited the Highland site, made some recommendations for improving sedimentation control, but took no enforcement action.

On July 6, Council made a second complaint.³ OSM inspected the Highland site on July 10, apparently in response to this complaint, but (according to Council) only with regard to the grade of the access road. On July 11, OSM informed Council by letter that a complete investigation had been made and that Highland had been found to be in full compliance with the Act.

Prior to the July 11 letter, Council, exercising its right to informal review of an adverse OSM decision under 30 CFR 721.13(d), had requested such review regarding the OSM reaction to the first (May-June) complaint. In that request Council further asked for a meeting with OSM Regional Office personnel to discuss the issues involved. The OSM Regional Director replied to that request, first orally and later in

² The regulation at 30 CFR 721.13 makes provision for the filing of a report by a citizen(s) when such believes that there is a violation of the Act by a mine operator. It also requires OSM to conduct an investigation based on the report unless it has reason to believe the information in the report to be incorrect.

³ The conditions complained of in the July complaint were spoil on downslopes, lack of sedimentation control, unacceptable road conditions, spoil in unauthorized areas, and blasting at times other than those on company records.

¹ Specifically reported by the members were, among other things, excessive and unscheduled blasting, interference with ground water, lack of sedimentation control, improperly constructed access and haul roads, improper disposal of spoil, and failure to salvage topsoil.

a letter dated July 23, 1979, and thereby informed Council that he had reviewed the Highland inspection and found it proper. He further informed Council that the requested meeting was not required by the regulations but that the Regional Office would handle any future, properly made complaint regarding the Highland site. (Council has alleged that the foregoing information related to an asserted oral communication it received from OSM to the effect that the Regional Director's decision represented his belief that Council's purposes would best be served by the filing of another complaint with informal review as necessary.)

Acting upon the Regional Director's asserted suggestion, Council prepared yet another complaint (contained in a letter) and presented it in a meeting with OSM on July 27, 1979. It included a detailed list of suspected violations along with documents and maps.⁴

On the same date Mr. Hendrickson accompanied OSM inspectors on another visit to the Highland site. According to Council, the inspectors did not inspect a number of conditions and practices, failed to take certain quantitative and sampling measures, failed to make an adequate photographic record and, though the inspection report noted conditions and practices constitut-

ing violations and recommended enforcement action, took no such action, all of this despite Council's express requests in favor of such action.

On Aug. 7, 1979, Council presented the Regional Director with a request for informal review of OSM's response (described in the last paragraph) to its July 27 complaint. The Regional Director's decision on that request was issued on Sept. 7, 1979. Therein he reported that OSM had taken enforcement action in some of the areas complained of and promised action in others. Expressing his satisfaction that the action taken plus that promised adequately addressed Council's concerns, the Regional Director denied Council the opportunity for any formal review of his decision.

Council has claimed that two concerns, namely placement of spoil in unauthorized areas and failure to salvage topsoil, were not addressed by the decision, although it appears to be satisfied with the position, set out in the decision, that OSM was unable to determine whether there was a violation as to the latter circumstance. It then prevailed upon the Regional Director to reverse his decision on formal review, which he did on Sept. 28, 1979.

After the Regional Director gave Council the right to appeal, Council filed its notice of appeal with this Board on Oct. 18, 1979. That notice did not set forth any reason for the appeal. Instead, it stated that "appellant will file a statement of reasons for its appeal and a supporting

⁴ The suspected violations contained therein included sedimentation control problems, failure to divert certain runoff through a sedimentation pond, failure to meet grade, durability and drainage requirements on various roads, improper spoil handling, improper handling of toxic materials, failure to salvage topsoil, and various blasting improprieties.

COUNCIL OF THE SOUTHERN MOUNTAINS, INC. v.
OFFICE OF SURFACE MINING RECLAMATION &
ENFORCEMENT
March 23, 1981

filing." On Oct. 30, 1979, Council filed a motion for extension of time within which to file the statement of reasons. One of the grounds for the extension request was that Council was negotiating with the operator and that the course of the appeal would depend on the results of those negotiations. On Nov. 5, 1979, the Board granted the motion and extended the filing date to Dec. 21, 1979. On Dec. 12, 1979, Council requested an additional extension because the negotiations with the operator had not been concluded. On Dec. 19, 1979, the Board granted the extension until Jan. 14, 1980. On Jan. 11, 1980, Council filed a motion entitled "*Appellant's Motion for Voluntary Dismissal*." It stated that the "negotiations have met with progress and * * * the purposes of the Act now are best served by dismissal of this action." It further stated that while Council was "entitled to federal enforcement action to secure compliance with the law, such action will not be necessary to secure compliance and this appeal may be dismissed." By a footnote, Council advised that it would subsequently be petitioning the Board for costs and expenses. The motion was granted by order of Jan. 22, 1980. Council filed its petition for costs and expenses, as noted, on Mar. 7, 1980.

Discussion

Council seeks an award under regulations that provide for an

award for costs, expenses, and attorneys' fees when the petitioner has participated in a proceeding under the Act which has resulted in a final order by the Office of Hearings and Appeals (OHA). 43 CFR 4.1290. The award is conditioned on the petitioner's having "made a substantial contribution to a full and fair determination of the issues." 43 CFR 4.1294(b). The regulations are silent concerning whether informal proceedings such as were involved here are included. Council maintains they are. OSM urges us to declare that only formal proceedings are covered.

[1] Regardless, though, of whether the regulations extend coverage to informal administrative proceedings, a preliminary determination must be made about the qualitative nature of the final order of OHA upon which the claim is based.

Guidance for resolution of this issue is found in the requirement, set forth in the several subsections of 43 CFR 4.1294, of a finding that the claimant made "a substantial contribution to the full and fair determination of the issues." For OHA competently to make such a finding, it must either have rendered the "full and fair determination of issues," to which claimant purportedly contributed, or have approved some agreement by which such a determination was accomplished. In either circumstance it is contemplated that a final order will have been issued by OHA setting

forth a judgment of the merits of the resolution of the administrative proceeding. In the instance case, however, no such judgment was rendered by the Board or the Hearings Division regarding the determination of issues in the administrative proceeding to which Council claims to have made a substantial contribution.

Here, all of the issues were determined satisfactorily, either with OSM before it was deemed necessary to involve this Board⁵ or by virtue of negotiations, occurring after the appeal to the Board, between Council and the operator. OSM was not involved in the negotiations. Neither OSM nor the Board was supplied with whatever agreement was reached, either for information or approval. All we know, a statement of reasons never having been submitted, is that Council believed that OSM should have done an unspecified more than it did and that Council's negotiations with the operator resulted in some kind of undocumented (and unapproved by OSM or OHA) satisfaction to Council. That is insufficient involvement by OHA to sup-

port, under these regulations, an award of the type sought.

[2] Nevertheless, we do believe that Council has made a contribution that is worthy of compensation and is compensable. Largely due to what may now appear to have been an indication by the Board in its order of July 2, 1980, requesting further briefing, that we had resolved the question of compensation in favor of Council and required assistance only in establishing the standards, Council contributed substantially to the establishment of those standards that we are about to set forth. It would be grossly unfair not to compensate Council for that contribution which, however, did not commence until July 2, 1980, and is concerned solely with the applicable standards of award in those situations where an award is proper.⁶

STANDARDS FOR AWARD OF COSTS AND EXPENSES INCLUDING ATTORNEYS' FEES

Although we cannot conceive of all the combinations and permutations that might arise, the following includes the fundamental principles and standards to be applied by OHA in determining the amount of an award.

⁵ Only OHA, not OSM, has been authorized to make the kind of award sought, and if a dispute between a prospective petitioner and OSM is resolved by that prospective petitioner and some third person, the regulations do not now provide for an award for that kind of resolution. Although the Supreme Court has recognized that a party otherwise entitled to an award in a civil rights case does not lose that entitlement because the party prevailed through settlement rather than litigation, that settlement was presented to the court for approval. *Maher v. Gagne*, 448 U.S. _____, 100 S. Ct. 2570 (1980). In such a situation, where no substantive involvement is required of it, OHA may not be used merely as a lever to pry open the cash box.

⁶ Although not essential to the resolution of this matter, those standards have been well argued before and considered by this Board, and no good purpose would be served by deferring their establishment until we have a case in which we find an award to be proper. Indeed, our decision to award Council for its participation in determining the standards would seem even to require their publication now.

1. Attorneys' Fees

Recently, the United States Court of Appeals for the District of Columbia considered in depth the standards to be employed in granting attorneys' fees in so-called Title VII suits against the Government. *Copeland v. Marshall*, — F.2d — (No. 77-1351, Sept. 2, 1980). There is no reason for us to deviate from those standards.

As stated in *Copeland*, *supra*, the market value of the services rendered is the applicable measure. That means the actual fees charged the client by the attorney are not controlling. The attorney is to receive what the services are worth measured by those standards extant in the community where the services are rendered. Those measurements are to commence with the "lodestar" fee: the number of hours reasonably expended multiplied by a reasonable hourly rate. Our first task, then, is to determine the amount of time reasonably expended. For us to do so, the petitioner should document the amount of work performed so that OHA can segregate into categories the kinds of work performed by the various participating attorneys: The status of the attorney—Senior Partner, Junior Associate, etc., should be set forth along with the reasonable hourly rate prevailing in the particular community for similar work.⁷ Before going on, OHA

must determine whether all of the time was reasonably spent. After appropriate deduction for any unreasonableness, the total number of hours is then to be multiplied by the reasonable hourly rate of the community. *See McPherson v. School District #186*, 465 F. Supp. 749 (S.D. Ill. 1978); *McCormick v. Attala County Board of Education*, 424 F. Supp. 1382 (N.D. Miss. 1976). The resulting total is the lodestar.⁸

The lodestar is then to be adjusted, up or down, to reflect other factors such as the quality of the representation (*Copeland* deals with such matters in great detail and should be reviewed whenever adjustments are to be made). Of first importance in this regard is that the burden of justifying any deviation from the lodestar is upon the one urging it.

2. Costs and Expenses

Although some authorities have debated at length the differences and distinctions between costs and expenses, since both are compensable under our regulations we need not debate those fine points. Suffice it

is similarity, not exactitude, and if a petitioner should persist in maintaining the uniqueness of the services rendered, we will have to, reluctantly, hold that such singularity is not compensable by any coin of this realm.

⁸ The reasonable hourly rate subsumes ordinary overhead items such as rent, secretarial services, ordinary telephone charges, and the costs of paralegals. In regard to compensation to paralegals, *see Postow v. Oriental Bldg. Assn.*, 455 F. Supp. 781 (D.D.C. 1978); *see contra, Parker v. Califano*, 443 F. Supp. 789 (D.D.C. 1978).

⁷ Whether true or not, the argument that the particular bit of work was so novel that there is no similar work with which to compare it will not be accepted. The comparison

that anything compensable as costs under 28 U.S.C. § 1920 (1976) would be compensable under 43 CFR 4.1290. Other items, as well, might be payable under the "expense" rubric. Some which come to mind are extraordinary postage, long distance telephone calls, travel, and housing for out of town counsel.⁹

After all of the calculations are made, before settling an award, OHA should take a final close look to make sure that all of the items and amounts claimed for costs, expenses, and attorneys' fees are reasonable under the circumstances of the particular case. That means that all stipulations as to reasonableness should be carefully scrutinized.

The Board will entertain a proper petition from Council for what it believes to be its compensable contribution to the establishment of the standards herein set forth. Greater Washington, D.C., shall be deemed the locality where the work was performed.

The petition is denied, with leave to file within 15 days another petition as specified above.

Administrative Judge

**CHIEF ADMINISTRATIVE JUDGE
IRWIN DISSENTING IN PART AND
CONCURRING IN PART:**

One of Congress purposes in enacting P.L. 95-87 was to "assure

⁹ Although counsel is to be compensated by local standards, we are not saying that where reasonable, counsel may not be sought from afar. In that event, such counsel's traveling and living expenses would be compensable.

that appropriate procedures are provided for the public participation in the development, revision, and enforcement of regulations, standards, reclamation plans, or programs established by the Secretary or any State under this Act."¹ The rationale for this purpose was set forth in the report of the Senate Committee on Energy and Natural Resources on S. 7:

The success or failure of a national coal surface mining regulation program will depend, to a significant extent, on the role played by citizens in the regulatory process. The State regulatory authority or Department of Interior can employ only so many inspectors, only a limited number of inspections can be made on a regular basis and only a limited amount of information can be required in a permit or bond release application or elicited at a hearing. Moreover, a number of decisions to be made by the regulatory authority in the designation and variance processes under the Act are contingent on the outcome of land use issues which require an analysis of various local and regional considerations. While citizen participation is not, and cannot be, a substitute for governmental authority, citizen involvement in all phases of the regulatory scheme will help insure that the decisions and actions of the regulatory authority are grounded upon complete and full information. In addition, providing citizen access to administrative appellate procedures and the courts is a practical and legitimate method of assuring the regulatory authority's compliance with the requirement of the Act.

In many, if not most, cases in both the administrative and judicial forum, the citizen who sues to enforce the law, or participates in administrative proceedings to enforce the law, will have little or no money with which to hire a lawyer. If private citizens are to be able to assert

¹ Sec. 102(1), 30 U.S.C. § 1202(1) (Supp. II 1978).

the rights granted them by this bill, and if those who violate this bill's requirements are not to proceed with impunity, then citizens must have the opportunity to recover the attorneys' fees necessary to vindicate their rights. Attorneys' fees may be awarded to the permittee or government when the suit or participation is brought in bad faith.^{2]}

Similar language appears in the report of the House Committee on Interior and Insular Affairs on H.R. 2.³

One of the provisions designed to accomplish this purpose is sec. 525 (e).⁴ That section provides:

Whenever *an order* is issued under this section, or *as a result of any administrative proceeding* under this Act, at the request of any person, a sum equal to the aggregate amount of all costs and expenses (including attorney fees) as determined by the Secretary to have been reasonably incurred by such person for or in connection with his participation in such proceedings, including any judicial review of agency actions, may be assessed against either party as the court, resulting from judicial review or the Secretary, resulting from administrative proceedings, deems proper. [Italics added.]

The Secretary implemented this section in rules contained in 43 CFR 4.1290. This rule differs slightly from the statutory language emphasized above in two respects relevant to this case. Under 43 CFR 4.1290 a person may petition for the award of costs and expenses if he has re-

ceived a final order in an administrative proceeding before the Office of Hearings and Appeals (OHA). One might question whether the Secretary either in theory could or in fact did limit the scope of sec. 525 (e) by this rule, but that is not the Board's responsibility. It is the Board's responsibility, however, on behalf of the Secretary, to interpret and apply rules in accordance with Congressional intent. This my colleagues have failed to do; indeed, they have done the opposite.

In my colleagues' view, before a person may be awarded costs "a preliminary determination must be made about the qualitative nature of the final order of OHA upon which the claim is based."⁵ No such determination is mentioned in either the regulations or the comments accompanying them. Rather, the function of issuing an order that sets forth "a judgment of the merits of the resolution of the administrative proceeding" is simply arrogated to the Board.⁶

The comments to 43 CFR 4.1290 anticipated that some cases for which awards would be sought might be settled.⁷ Those comments state that "awards will not be precluded strictly because of the manner of disposition."⁸ There is no indication that a settlement must be submitted to or approved by OHA before an award may be

² S. Rep. No. 95-128, 95th Cong., 1st Sess. 59 (1977).

³ H.R. Rep. No. 95-218, 95th Cong., 1st Sess. 88 (1977).

⁴ A related provision, discussed below, is sec. 517(h).

⁵ Principal opinion, *supra* at 397.

⁷ Comment 2, 43 FR 34385 (Aug. 3, 1978).

⁸ *Id.*

granted. Yet that is what my colleagues now impose as a requirement in this case. Otherwise, in their view, OHA is "used merely as a lever to pry open the cash box."⁹

By adding requirements not contained in the regulations, my colleagues not only deny a lever. They also steal a key to effective participation that the Congress clearly intended to provide the public. In addition to being mistaken legally, this decision creates a barrier to the award of costs and expenses that will have at least two undesirable and unnecessary practical effects: (1) Participation by the public will be discouraged, particularly by those members who cannot afford lawyers and witnesses; and (2) litigation will be protracted in order to demonstrate "sufficient involvement" before OHA to be eligible for an award.

For these reasons I dissent from my colleagues' views concerning 43 CFR 4.1290. Because I believe that rule should be interpreted in accordance with Congress expressed intent, however, I join that portion of the principal opinion that authorizes Council to petition for an award in accordance with the standards outlined.

There remains the question whether Council, had it been sufficiently involved before OHA, could be reimbursed for reasonable costs incurred before OSM. The principal opinion leaves this question for another day. The companion dissenting-and-concurring opinion suggests the answer is "no." It does so on the basis of a presumption

that Congress must have meant "agency proceeding" as defined in the Administrative Procedure Act (APA) when it wrote "any administrative proceeding" in sec. 525(e) of the Act. This presumption is convenient at best. Nor is it strengthened by citing references to the APA found elsewhere in the Act, references made for purposes of defining procedures applicable to those sections and not relevant to defining the substantive scope of sec. 525(e). Congressional draftsmen are perfectly capable of using the language of the APA if they wish to do so. In sec. 525(e) they did not. They chose novel language: "any administrative proceeding."

One of the "administrative proceedings to enforce the law"¹⁰ is the kind involved in this case. Sec. 517 (h) requires the Secretary to establish procedures for informal review of any refusal by a representative of the Secretary to issue a citation with respect to any alleged violation of the Act which any person who is or may be adversely affected has reason to believe exists at a surface mining site and who notifies the Secretary in writing. These procedures are contained in 30 CFR 721.13. As the circumstances of this case indicate, they may involve considerable time and effort. Congress intended citizens to be involved "in all phases of the regulatory scheme * * * [*i*]n addition [to having] access to administrative appellate procedures." (Italics added.)¹¹ For this intent to be realized, awards of reasonable costs

COUNCIL OF THE SOUTHERN MOUNTAINS, INC. v.
OFFICE OF SURFACE MINING RECLAMATION &
ENFORCEMENT
March 23, 1981

must be available under 525(e) for participation in the kind of administrative procedures required by sec. 517(h). In my view such procedures are within the meaning of "any administrative proceeding" in sec. 525(e).

WILL A. IRWIN
Chief Administrative Judge

ADMINISTRATIVE JUDGE FRISHBERG CONCURRING IN PART AND DISSENTING IN PART:

I concur with that portion of the principal opinion which concludes that petitioner has not qualified for an award under the Surface Mining Control and Reclamation Act of 1977 (Act) or regulations. Accordingly, I must dissent from that portion of the opinion which authorizes Council to petition for an award for its contribution to the determination of standards relating to costs and expenses. This Board has no such authority.

While the language of sec. 525(e) of the Act (30 U.S.C. § 1275(e) (Supp. II 1978)) is not completely bereft of ambiguity, it clearly contemplates a formal proceeding before costs and expenses, including attorneys' fees, may be awarded, and so it has been interpreted by the Secretary in the Department's regulations. The section begins as follows: "Whenever an order is issued [1] under this section, or [2] as a result of any administrative proceeding under this Act." Petitioner argues that the language of the second

phrase encompasses a wide spectrum of activities, including informal proceedings under sec. 517(h) (30 U.S.C. § 1267(h) (Supp. II 1978)).¹ However, a reading of sec. 525(e) in conjunction with the language of the Administrative Procedure Act (APA)² leads to the conclusion that only formal proceedings were contemplated.

¹ Petitioner states on page 9 of its reply of May 5, 1980, to respondent's answer, after quoting sec. 525(e):

"The major question concerning the scope of § 525(e) involves the meaning of the phrase 'any administrative proceeding.' The plain language of § 525(e) would allow awards for any administrative proceeding, whether it was informal, adjudicative, quasi-adjudicative, or rulemaking. Thus, fee awards would be allowed for such administrative proceedings as:

- 1) Designation of Lands Unsuitable
- 2) Bond Release Proceedings (formal and informal)
- 3) Permit Hearing (formal and informal)
- 4) Rulemakings
- 5) Approval of State Programs
- 6) Withdrawal of Approval of State Programs
- 7) Review of Enforcement (formal and informal)

The language of § 525(e) is clear and unrestricted. By its terms, it is the broadest and most far reaching attorney fee provision ever passed by Congress."

But sec. 525(e) is triggered "[w]henever an order is issued * * * as a result of any administrative proceeding under this Act." Because "order" is defined in 5 U.S.C. § 551(6) (1976) as a final disposition in "a matter other than rulemaking," petitioner is incorrect in its contention that sec. 525(e) proceedings include rulemaking and, if considered akin to rulemaking, designation of unsuitable lands (see subsecs 522(a)(4)(d) and (a)(5)), and approval of state programs (see sec. 503). (See discussion in next paragraph of text re effect of definitions in 5 U.S.C. § 551 (1976) on language in sec. 525(e)).

² The Administrative Procedure Act was repealed as part of the general revision of title 5 of the United States Code, and its provisions were incorporated into subchapter II of chapter 5 and chapter 7 of that title, P.L. 89-554. However, the popular name will be used herein for convenience.

As pointed out by petitioner, "the major question concerning the scope of § 525(e) involves the meaning of the phrase 'any administrative proceeding.'" ³ I agree. The Act contains no definition of "administrative proceedings." See sec. 701, 30 U.S.C. § 1291 (1976). The APA, however, defines "agency proceeding." Pursuant to 5 U.S.C. § 551 (12) (1976), "'agency proceeding' means an agency process as defined by paragraphs (5), (7), and (9) of this section." Paragraph 5, 7, and 9 define rulemaking, adjudication, and licensing, respectively. 5 U.S.C. § 551 (5), (7), and (9) (1976). Moreover, Congress distinguished between "agency proceeding" and "agency action," which is defined separately in 5 U.S.C. § 551(13) (1976): "'agency action' includes the whole or a part of an agency rule, order, license, sanction, relief, or the equivalent or denial thereof, or failure to act." Since Congress selected its language in sec. 525(e) of the Act with knowledge of the definitions contained in the APA, it is reasonable to presume that it meant the same thing by its use of similar terms.⁴

No order was made here under the first phrase of sec. 525(e), "under this section," for that section applies expressly to cessation orders, notices of violation, notices

or orders issued "pursuant to a Federal program or the Federal lands program," sec. 525(a)(1), or to Federal enforcement of a state program, sec. 525(b). Nor was an order "issued * * * as a result of any administrative proceeding under this Act," the second phrase of sec. 525(e), for, as defined in the APA, "agency proceeding" refers only to rulemaking, adjudication, or licensing. The process initiated by petitioner under sec. 517(h) and concluded without participation by the Office of Hearings and Appeals was none of these. Had Congress intended the broad interpretation urged by petitioner, it would have used "administrative" or "agency action," rather than "administrative proceeding." The former term is separately defined and applied in the APA to a wide range of agency activities, including "sanction, relief, or the equivalent or denial thereof," which might encompass an OSM response to a citizen's complaint under sec. 517(h).

Were all of the adjudicative or licensing proceedings in the Act addressed in sec. 525, petitioner's argument would be more persuasive, for "under this section" would be the only language necessary, and the additional phrase, "or as a result of any administrative proceeding under this Act," would have to be given a broader definition than that in the APA or be held meaningless. However, as alluded to above,⁵ the Act requires a number of adjudicative and licensing procedures in sections other

³ See n.1, *supra*.

⁴ While the presumption is rebuttable, see, e.g., 2A Sutherland, *Statutory Construction* § 51.01 (4th ed. 1973), it is buttressed by express reference to and application of the APA throughout the Act. E.g., secs. 514 (permits), 518 (penalties), 525 (cessation orders and notices of violation, referring to secs. 521(a)(2) and (3)), 526 (judicial review), and 703 (employee protection).

⁵ See n.4, *supra*.

than 525 and 521. For example, permit disapproval proceedings under sec. 514(c), civil penalty proceedings under sec. 518, and employee discrimination proceedings under section 703 are required to be conducted pursuant to the APA (5 U.S.C. § 554 (1976)); and notice and opportunity for hearing are given to persons aggrieved by unsuitability determinations under sec. 522(c) and by release of performance bonds under sec. 519(f).⁶

I am not unmindful of Congress intent to provide for an even encourage public participation in enforcement of the Act. It does not necessarily follow, however, that Congress intended all public participation to be compensable. In drafting the regulations, the Secretary clearly and reasonably interpreted the language in sec. 525(e) in accordance with the definition of similar language in the APA.

The Board of Surface Mining and Reclamation Appeals (Board) is given jurisdiction over "[p]etitions for award of costs and expenses under section 525(e) of the Act." 43 CFR 4.1101(a) (7). CFR Chapter VII) is OSM given similar authority, although public participation in monitoring OSM's enforcement is provided and Secre-

tarial response by OSM is required by sec. 517(h).

It was certainly contemplated by Congress that such participation would be successful much of the time at the enforcement or informal (OSM) level without the aid of quasi-judicial or formal (OHA) proceedings.⁷ Had the Secretary felt that costs and expenses involved in successful or constructive public participation before OSM under sec. 517(h) should be compensable, it is difficult to understand why he did not provide that such an award could be made by OSM. While it might not possess expertise equivalent to that of OHA regarding attorneys' fees, OSM could just as easily determine other costs and expenses. Since, due to its informal nature, participation under sec. 517(h) would not ordinarily involve legal representation, why create a need for such representation and thus add considerably to the Government's or a permittee's costs by requiring a petition to, and award by, OHA? The only logical answer is that the Secretary had no such intention, and that the regulations thus do not provide for compensation of sec. 517(h) costs and expenses.

Only if a sec. 517(h) participant is aggrieved by an OSM decision

⁶ There is no direct reference to 5 U.S.C. § 554 (1976) in secs. 522(c) and 519(f) of the Act; however, the regulatory authority is required under sec. 519(h) to make a verbatim record of a hearing, which requirement makes operative the standards in 5 U.S.C. § 554 (1976).

⁷ The Act does not provide for administrative hearings, formal or otherwise, for unsuccessful public participants under sec. 517(h). Indeed, had the Secretary not provided for such review in 43 CFR 4.1280, 4.1281, disappointed members of the public could have appealed directly to court pursuant to sec. 520.

regarding enforcement, appeals to OHA, and makes a substantial contribution "to the full and fair determination of the issues" by OHA, 43 CFR 4.1294(a)(1), may he be compensated for those costs and expenses incurred in the appeal, whether the determination is by the Hearings Division, the Board, or both. *See* 43 CFR 4.1295, 4.1296.

The language of the regulations supports this conclusion. To file a petition for an award, costs and expenses must be incurred "as a result of that person's participation in any administrative proceeding under the Act which results in—(1) A final order * * * by an administrative law judge; or (2) A final order * * * by the Board." 43 CFR 4.1290.⁸ The costs and expenses incurred in this case were not as a result of petitioner's participation in such a proceeding, nor was there such a result. Indeed, there was no proceeding. No issues were presented to OHA, let alone joined. Petitioner's mere filing and subsequent petition to dismiss a notice of appeal did not constitute a "substantial contribution to the full and fair determination of the issues," as required under 43 CFR 4.1294(a)(1).

The Board has no statutory or regulatory authority to grant an award under those circumstances.⁹ Therefore, I must dissent from that

portion of the principal opinion which authorizes compensation to petitioner for its contribution to the determination of the standards governing awards. That such a result may be unfair does not confer upon us authority we do not otherwise possess.

It follows that there is no foundation for the principal opinion's exposition of standards for measuring the amount of an appropriate award. Were there such a foundation, however, I would concur with that portion of the principal opinion which announces those standards, and I do endorse them.

NEWTON FRISHBERG

Administrative Judge

THOROUGHFARE COAL CO.

3 IBSMA 72

Decided March 25, 1981

Appeal by Thoroughfare Coal Co. from the July 11, 1980, order of Administrative Law Judge Frederick A. Miller, in Docket No. NX 9-58-R, dismissing with prejudice the company's application for review of Notice of Violation No. 79-II-20-18 and upholding the notice in its entirety.

Affirmed, in part, as modified.

1. Surface Mining Control and Reclamation Act of 1977: Administrative Procedure: Generally—Surface Mining Control and Reclamation Act of 1977: Hearings: Procedure

⁸ *See also* 43 CFR 4.1291.

⁹ If the Board had such authority, the costs and expenses, including attorneys' fees, of petitioner's contribution to the Board's determination of such an award might well be compensable.

March 25, 1981

An applicant for review of a notice of violation who voluntarily failed to appear at the scheduled review hearing was properly deemed to have waived its right to a hearing, and the Administrative Law Judge could accept as true the allegations of fact contained in the notice of violation under review.

APPEARANCES: Dick Adams, Esq., Adams, Massamore & Moore, Madisonville, Kentucky, for Thoroughfare Coal Co.; John Phillip Williams, Esq., Office of the Field Solicitor, Knoxville, Tennessee, for the Office of Surface Mining Reclamation and Enforcement.

*OPINION BY THE INTERIOR
BOARD OF SURFACE
MINING AND RECLAMATION
APPEALS*

This appeal was brought by Thoroughfare Coal Co. (Thoroughfare) from the July 11, 1980, order of Administrative Law Judge Frederick A. Miller dismissing with prejudice the company's application for review of Notice of Violation No. 79-II-20-18. The order resulted from Thoroughfare's unexcused failure to attend the hearing scheduled for review of the notice.

Background

Notice of Violation No. 79-II-20-18 was issued to Thoroughfare on May 18, 1979, following inspections by the Office of Surface Mining Reclamation and Enforcement (OSM) of a tippie operation conducted by Thoroughfare in Hop-

kins, Kentucky.¹ A violation of 30 CFR 715.17(a) was charged in the notice: "Failure to cause all drainage from disturbed area to pass through silt structure."²

Thoroughfare applied for review of the notice of violation pursuant to 43 CFR 4.1160 through 4.1164, claiming, *inter alia*, that it did not commit the acts alleged by OSM and that OSM lacked authority to regulate its tippie operation. Answers to interrogatories propounded by OSM to Thoroughfare reveal that from the beginning of 1979 through May 1979, when the notice was issued, Thoroughfare used its tippie facility for the crushing and loading of coal for shipments. During this period 26,568.15 tons of coal were delivered to Thoroughfare's facility. Of this amount, 46.5 percent was received from a mine operated by the Owl Creek Coal Company, Inc., which was then partly owned by the owners of Thoroughfare, Lewis and Houston Vandiver. This mine is located between 10 and 20 miles from Thoroughfare's tippie facility.

At the hearing scheduled for consideration of Thoroughfare's application for review, counsel for Thoroughfare failed to appear. A statement by the Administrative Law

¹ These inspections were conducted pursuant to sec. 502(e) of the Surface Mining Control and Reclamation Act of 1977, 30 U.S.C. § 1267(a) (Supp. II 1978), and 30 CFR Part 721. The notice of violation was issued pursuant to 30 CFR Part 722.

² 30 CFR 715.17(a) requires, in pertinent part, that "[a]ll surface drainage from the disturbed area * * * shall be passed through a sedimentation pond or series of sedimentation ponds before leaving the permit area."

Judge at the proceeding indicates that counsel called his office in Louisville, Kentucky, at approximately 9 a.m. on June 26, 1979 (the hearing was scheduled to commence at 9 a.m. on June 26 in Evansville, Indiana), to communicate his intention neither to appear at the hearing nor to contest the alleged violation (Tr. 2). Counsel for OSM indicated that he was similarly informed by counsel for Thoroughfare later on the same morning (Tr. 3).

The Administrative Law Judge did not require OSM to present testimony from its witnesses assembled for the hearing or to adduce other evidence. Instead, counsel for OSM was instructed to propose an order upholding its enforcement action against Thoroughfare and dismissing the company's application for review with prejudice. The order ultimately issued by the Administrative Law Judge contains the following:

It is therefore Ordered and adjudged:

1.) That the applicant is deemed to have waived its right to a hearing for failure to appear in accordance with the notice of hearing.

2.) That OSM had jurisdiction over the facility for which Notice of Violation No. 79-II-20-18 was issued.

3.) That Notice of Violation No. 79-II-20-18 including the violation and the remedial action to abate the violation is upheld in its entirety.

4.) That applicant's application for review of Notice of Violation No. 79-II-20-18 be and is hereby dismissed with prejudice.

Thoroughfare filed a timely appeal from the order and requested a

full evidentiary hearing. Both parties filed briefs.³

Discussion

In upholding the notice of violation, the Administrative Law Judge did not provide a statement of findings of fact as required under the Department's regulations at 43 CFR 4.1127.⁴ We decline to remand the case on this ground, however, because the record is unambiguous in material respects and supports the Administrative Law Judge's order. *Cf. Dean Trucking Co., Inc.*, 1 IBMA 105, 86 I.D. 201 (1979) (case remanded for findings of fact).

³Thoroughfare also filed with the Board a document captioned: "Verified Motion for Temporary Relief." This motion was not granted.

⁴43 CFR 4.1127 provides in pertinent part: "An initial order or decision disposing of a case shall incorporate—(a) Findings of fact * * * and the basis and reasons therefore on all material issues of fact." This requirement is based on 5 U.S.C. § 557(c) (1976) (formerly a provision of the Administrative Procedure Act).

In the order under review there is the statement that "[c]ounsel for applicant by telephone informed both the [Administrative Law Judge] and counsel for respondent that it had been decided not to attend [the] hearing and [that] for various reasons the applicant no longer desired the hearing." There is a further statement that counsel for Thoroughfare did not interpose any objection to OSM's proposed order reciting that "OSM had jurisdiction over the facility for which the * * * notice of violation was issued, that such notice of violation including the [alleged] violation and the remedial [order] to abate such violation be upheld in its entirety and that the application for review [of the notice] be dismissed with prejudice." These recitations, which were adopted by the Administrative Law Judge (see text at 407), are ultimate conclusions of law and fact. They are not adequately supported in the order by a statement of underlying findings concerning the basis of OSM's asserted authority over the tippie facility and of the notice of violation.

March 25, 1981

[1] By its voluntary failure to appear at the scheduled review hearing, Thoroughfare waived its right to a hearing and, consequently, the Administrative Law Judge could accept as true the allegations of fact contained in the notice of violation. *See* 43 CFR 4.1156 (c); *see also* 43 CFR 4.1195(a).⁵ From those allegations we find the following.

1. On May 16, 17, and 18, 1979, OSM conducted inspections of a tippable facility operated by Thoroughfare Coal Co. in Hopkins County, Kentucky.

2. At the time of OSM's inspections Thoroughfare was using the tippable facility for the processing, other preparation, and/or loading of coal for interstate commerce.

3. At the time of OSM's inspections the tippable facility was oper-

ated by Thoroughfare in connection with and near a surface coal mine.

4. At the time of OSM's inspections there was surface drainage in the area disturbed by Thoroughfare's tippable operation and this drainage was not being passed through a sedimentation pond before leaving the permit area.

On the basis of these findings we conclude that OSM made a *prima facie* showing that it properly exercised its regulatory authority in issuing to Thoroughfare a notice of violation of 30 CFR 715.17(a).⁶ Accordingly, we hold that the order upholding the notice of violation under review is supported by the record.

For the foregoing reasons the July 11, 1980, order of the Administrative Law Judge is affirmed, in part, as modified to include our findings.

NEWTON FRISHBERG
Administrative Judge

WILL A. IRWIN
Chief Administrative Judge

⁵ The cited regulations apply by their terms to summary dispositions in civil penalty and permit suspension or revocation proceedings, respectively. Because OSM's initial evidentiary burden is the same in these proceedings as in a proceeding upon application for review of a notice of violation or cessation order (*see* 43 CFR 4.1155, 4.1193, 4.1171(a)), we take the provisions for summary disposition set forth in those regulations to be appropriate models for summary disposition in a proceeding on an application for review. Under 43 CFR 4.1156 an Administrative Law Judge may accept as true the allegations of fact contained in a notice of violation or cessation order when an applicant is deemed to have waived its right to a hearing. We note, however, that when counsel and witnesses for OSM are present, presentation of OSM's *prima facie* case in regular fashion (under oath and on the record) would best provide the Board and the courts with an appropriate record in the event of an appeal. In any event the regulations contemplate a disposition on the merits, however summary, upon an application timely filed and not withdrawn. Thus, dismissal below of Thoroughfare's application for review was inappropriate.

⁶ OSM's evidentiary burden in a proceeding upon an application for review is that of establishing a *prima facie* case in support of its enforcement action. 43 CFR 4.1171(a). The Board has previously stated that "[a] *prima facie* case is made where sufficient evidence is presented to establish the essential facts and which evidence will remain sufficient if not contradicted." *James Moore*, 1 IBSMA 216, 223 n.7, 86 I.D. 369, 373 n.7 (1979).

The general allegations of OSM's regulatory authority over Thoroughfare's tippable facility, in the notice of violation, are further supported by Thoroughfare's answers (summarized in the text at 408) to the interrogatories propounded by OSM. *See Roberts Brothers Coal Co., Inc.*, 2 IBSMA 284, 87 I.D. 439 (1980); *Drummond Coal Co.*, 2 IBSMA 189, 87 I.D. 347 (1980).

**ESTATE OF VICTOR YOUNG BEAR
(SUPP.)****8 IBIA 254**Decided *March 26, 1981*

Decision on reconsideration of Board's order of July 24, 1980, declaring as invalid an adoption action taken by the agency superintendent of the Fort Berthold Reservation pursuant to the Act of July 8, 1940, 57 Stat. 746.

Reversed.

1. Indian Probate: Adoption: Generally

The Act of July 8, 1940, 54 Stat. 746 (25 U.S.C. § 372a (1976)) gave limited authority to agency superintendents over the adoption of Indian children. Evaluated in light of its legislative history, the Act must be read as allowing superintendents to validate adoptions agreed to in writing by Indian parties as well as Indian custom adoptions.

2. Indian Probate: Adoption: Generally—Indian Probate: Adoption: Crow Tribe

The Act of Mar. 3, 1931, 46 Stat. 1494, relating to the adoption of Indian children on the Crow Reservation in Montana, vested the superintendent of the Crow Agency with adoption authority which served as a model in the draftsmanship of the Act of July 8, 1940.

Estate of Victor Young Bear, 8 IBIA 130, 87 I.D. 311 (1980), is reversed.

APPEARANCES: Janet C. Werness, Esq., for petitioner Theresa Bluhm; James P. Fitzimmons, Esq., for respondent Alice Young Bear; William Babby and Frances Ayer, Esq., for the Bureau of Indian Affairs and Office of the Solicitor, respectively.

**OPINION BY CHIEF
ADMINISTRATIVE JUDGE
HORTON****INTERIOR BOARD OF
INDIAN APPEALS**

On July 24, 1980, the Board issued a decision in the above estate which, among other things, declared as invalid a purported adoption of Theresa Bluhm by the decedent, Victor Young Bear, and his surviving spouse, Alice Young Bear, approved by the Superintendent of the Fort Berthold Agency, Bureau of Indian Affairs, on Dec. 26, 1945, under authority of the Act of July 8, 1980, 54 Stat. 746 (25 U.S.C. § 372a (1976)).¹ *Estate of Victor Young Bear*, 8 IBIA 130, 87 I.D. 311 (1980).

On Sept. 12, 1980, Theresa Bluhm, through counsel, filed a petition for reconsideration of the above determination pursuant to the provisions of 43 CFR 4.21(c). The Board agreed to reconsider its adoption ruling by order dated Sept. 16, 1980. Interested parties, including the Bureau of Indian Affairs, were requested to file briefs regarding the Board's July 24, 1980, decision and petitioner's objections thereto. Final comments were received in this reconsideration proceeding on Dec. 8, 1980.

Because the factual background to this controversy is not in dispute, no attempt will be made to summarize the Board's findings of fact set forth in its decision of July 24,

¹ All further references to U.S.C. are to 1976 edition.

March 26, 1981

1980. (See 8 IBIA 130, 132-36; 87 I.D. 311-14 (1980)).²

Questions Presented

The legal issues raised with respect to the Board's prior decision may be summarized as follows:

1. Did the Board err in interpreting the Supreme Court's holding in *Fisher v. District Court of the Sixteenth Judicial District of Montana*, 424 U.S. 382 (1976), as the equivalent of a pronouncement that 25 U.S.C. § 372a does not confer authority on agency superintendents to approve or grant adoptions of Indian minors?

2. If 25 U.S.C. § 372a does authorize agency superintendents to approve or grant adoptions of Indian minors, what, if any, limitations are attached to such power and was this power properly invoked in this case?

3. If 25 U.S.C. § 372a was improperly relied upon in this case by the agency superintendent in approving or granting the adoption of Theresa Bluhm, may the Department be estopped from treating the purported adoption as invalid in its probate of Victor Young Bear's trust estate?

Discussion and Conclusions of Law

In *Fisher*, the Supreme Court reviewed a decision of the Montana Supreme Court which held that a

lower state court had jurisdiction over adoption proceedings arising on the Northern Cheyenne Indian Reservation in which all parties were members of the tribe. The Montana Supreme Court read 25 U.S.C. § 372a as a congressional grant of jurisdiction over reservation adoptions to state courts.³ This

³ 25 U.S.C. § 372a (1976) reads as follows:

"§ 372a. Heirs by adoption

"In probate matters under the exclusive jurisdiction of the Secretary of the Interior, no person shall be recognized as an heir of a deceased Indian by virtue of an adoption—

"(1) Unless such adoption shall have been—

"(a) by a judgment or decree of a State court;

"(b) by a judgment or decree of an Indian court;

"(c) by a written adoption approved by the superintendent of the agency having jurisdiction over the tribe of which either the adopted child or the adoptive parent is a member, and duly recorded in a book kept by the superintendent for that purpose; or

"(d) by an adoption in accordance with a procedure established by the tribal authority, recognized by the Department of the Interior, of the tribe either of the adopted child or the adoptive parent, and duly recorded in a book kept by the tribe for that purpose; or

"(2) Unless such adoption shall have been recognized by the Department of the Interior prior to the effective date of this section or in the distribution of the estate of an Indian who has died prior to that date: *Provided*, That an adoption by Indian custom made prior to the effective date of this section may be made valid by recordation with the superintendent if both the adopted child and the adoptive parent are still living if the adoptive parent requests that the adoption be recorded, and if the adopted child is an adult and makes such a request or the superintendent on behalf of a minor child approves of the recordation.

"This section shall not apply with respect to the distribution of the estates of Indians of the Five Civilized Tribes or the Osage Tribe in the State of Oklahoma, or with respect to the distribution of estates of Indians who have died prior to the effective date of this section. (July 8, 1940, c. 555 §§ 1, 2, 54 Stat. 746.)"

The first and second paragraphs of 25 U.S.C. § 372a (1976), codify secs. 1 and 2, respectively, of the Act.

² As necessary to the ultimate resolution of this case, certain findings are repeated later in this opinion.

position was rejected by the Supreme Court in the following words:

25 U.S.C. § 372a manifests no congressional intent to confer jurisdiction upon state courts over adoptions by Indians. The statute is concerned solely with the documentation necessary to prove adoption by an Indian in proceedings before the Secretary of the Interior. It recognizes adoption "by a judgment or decree of a State court" as one means of documentation but nowhere addresses the jurisdiction of state courts to render such judgments or decrees. The statute does not confer jurisdiction upon the Montana courts. [Footnote omitted.]

424 U.S. at 388-89.

In its July 24, 1980, decision, the Board held that *Fisher* "makes it clear that 25 U.S.C. § 372a (1976) is not a statute which bestows authority to grant adoptions." 8 IBIA at 139; 87 I.D. at 316. We went on to state:

The Act simply provides that the Secretary of the Interior may rely on adoptions legally consummated under other specific authority in the course of performing the probate functions conferred on him by Congress. See 25 U.S.C. §§ 372-73 (1976). For example, under the Act of March 3, 1931, 46 Stat. 1494, the Superintendent of the Crow Indian Agency is specifically authorized to approve Indian adoptions on the Crow Reservation in Montana. See 25 CFR 11.29C; *Estate of Walks With A Wolf*, 65 I.D. 92 (1958). In short, Indian adoptions accomplished by the Superintendent of the Crow Agency pursuant to the Act of March 3, 1931, *supra*, or by any other superintendent pursuant to statute, typify the nature of adoption referred to by Congress in section 1(1)(c) of the Act of July 8, 1940 [codified at 25 U.S.C. § 372a(1)(c)]. [Footnote omitted.]

Id.

The above holding was premised, among other things, on the Board's perception that the Supreme Court had categorically declared sec. 1 of the Act of July 8, 1940, as unrelated to the establishment of Indian adoption authority, notwithstanding that only the question of State versus tribal authority was at issue in *Fisher*. That the Court tacitly denied that a purpose of the Act was to vest new adoption powers in the Secretary of the Interior was gleaned from its statement that "[t]he statute is concerned *solely* with * * * documentation necessary to prove adoption * * * in proceedings before the Secretary" and that the Act recognizes adoption by a decree of a state court "*as one means of documentation*" 424 U.S. at 389 (italics supplied). Reading 25 U.S.C. § 372a(1) as a whole, three other means of documentation, in addition to a judgment or decree of a state court, are cited, viz., by a judgment or decree of an Indian court; by a written adoption approved and recorded by an agency superintendent; and by an adoption in accordance with other established tribal procedure. See 25 U.S.C. § 372a(1)(a) through (d).

In addition to the above, the Board was struck by the existence of only one Departmental regulation concerning the adoption authority of agency superintendents—that being 25 CFR 11.29C, which pertains to adoptions of Crow In-

March 26, 1981

dians.⁴ It was difficult for us to conceive that the Department could view the Act of July 8, 1940, as a grant of jurisdictional authority to effect adoptions on Indian reservations while not bothering to promulgate any regulations subsequent to the Act to govern the exercise of this authority.

We also looked to the Bureau of Indian Affairs' operations manual for guidance. As noted in our initial decision, there are no manual provisions on adoption.⁵

Lastly, the Department's legislative history file concerning the Act of July 8, 1940, was examined by the Board before it rendered its initial decision in this matter. Although portions of this history are supportive of the theory that the Act vested agency superintendents with jurisdiction to effect adoptions, as

discussed below, this history was considered irrelevant in the face of what we perceived to be a contrary ruling from the Supreme Court.⁶

[1] The Board has carefully re-examined the *Fisher* opinion, the 1940 Act and its legislative history. Based on this examination and our review of the reconsideration briefs filed with the Board, we are persuaded that, contrary to our prior holding, limited authority over the adoption of Indian children was bestowed by Congress on agency superintendents through enactment of the 1940 adoption statute.

In arguing that the narrow, evidentiary purposes of 25 U.S.C. § 372a(1)(c), which pertains to state court adoption decrees, should not be attributed, through a reading of *Fisher*, to 25 U.S.C. § 372a(1)(c), which pertains to written adoptions approved by agency superintendents, the Government's brief in this reconsideration proceeding states:

§ 372a(1)(a) describes a type of evidence which is to constitute acceptable proof of an adoption in Indian probate proceedings. § 372a(1)(c) also describes a type of acceptable evidence and, in addition, delineates the steps to be followed in producing a valid adoption. There is no

⁴ 25 CFR 11.29C states:

"No future adoptions among or by the Crow Indians shall be recognized except those made in accordance with the Act of Mar. 3, 1931 (46 Stat. 1494)."

The Act of Mar. 3, 1931, is discussed in this opinion at page 418.

⁵ Manual provisions do exist on the subject of termination of parental controls. At 66 IAM 3.2.5 D (2) (1957 ed.), it is stated:

"Bureau employees acting in their official capacities shall not accept statements from parents designed to sever their parental controls and responsibilities for their children. Such statements have no legal force or effect in divesting a parent of his control of his child or of his duty to support him. Only by court action can ties between parent and child be legally severed and only by court action can parental control and responsibility for a child be vested in another person or in an agency. Records of such court action or documents issued by the court offer the only evidence of legal changes in status between a parent and his child."

⁶ The Board also reviewed published legislative history of the Indian Child Welfare Act of 1978, 92 Stat. 3069, which is aimed at fostering tribal control over Indian adoptions and other child custody matters arising in Indian country, for any reference or discussion of the Secretary's authority over Indian adoptions. None could be found. See H.R. Rep. No. 95-1386, 95th Cong., 2d Sess. 6, reprinted in [1978] U.S. Code Cong. & Ad. News 7530-7560.

question that 25 USC § 372a did not confer jurisdiction on the state courts if they did not already possess it. The Department and Bureau of Indian Affairs are not, however, on the same footing as a state. Whereas a state has jurisdiction over Indian matters only if Congress permits, the Bureau is that arm of the Federal Government charged with overseeing and implementing Congress' policies. As such, it has authority to carry out those policies and procedures established by Congress. 25 USC §§ 2, 9. In this instance Congressional policy, as shown by the legislative history of § 372a * * * was to assure that there would be a written record of all adoptions. The functions assigned by Congress to the

superintendents were specific mechanisms for effectuating that policy and were functions within the general authority of the Bureau to manage Indian affairs.

Joint Brief of BIA and Solicitor (hereafter, Government's Brief) filed Oct. 27, 1980, at 2.

The most detailed piece of legislative history in this matter is the virtually identical report submitted by Secretary Harold L. Ickes to the House and Senate on Feb. 8, 1940, requesting approval of draft legislation which became the Act of July 8, 1940. It is quoted at length (and line numbered) as follows:

1. The proposed bill provides that * * * no person
2. shall be held to be an heir of a deceased Indian by
3. virtue of an adoption unless the adoption is evidenced
4. by a judgment of a State or tribal court; or is a
5. written adoption approved and recorded by the super-
6. intendent of an agency, an adoption by Indian custom
7. made prior to the effective date of the act and
8. recorded with a superintendent, or a recorded adoption
9. made pursuant to a procedure established by tribal
10. authorities * * *. The broad purpose of the bill is
11. to require that there be a written record of each
12. adoption. The several methods recognized for making
13. such an adoption are those which the administration of
14. Indian affairs has shown to be desirable. The Depart-
15. ment now recognizes the decree of State courts and the
16. bill would continue this practice. Another presently
17. recognized method of adoption is by tribal court action
18. and this jurisdiction of tribal courts is continued.
19. However, the expense attendant upon an action in a
20. State court frequently compels an Indian to forego a
21. court proceeding and some tribes have not yet estab-
22. lished tribal courts; these difficulties the bill
23. would meet by recognizing a third method of adop-
24. tion, that of adoption by written recordation with the
25. superintendent of an agency. Recorded adoptions made
26. in accordance with procedures established by recognized
27. tribal authorities would also be valid under the provi-
28. sions of the bill.
- 29.
30. It is the present practice of this Department to
31. recognize the so-called "Indian custom" adoption when-

March 26, 1981

32. ever sufficient evidence of the decedent's intention
33. exists. At one time Indian custom adoptions were by
34. formal ceremonies, but in most tribes this ancient
35. practice has been relaxed and it is difficult to
36. determine whether or not an adoption was actually made
37. in a particular case. In none of the Indian custom
38. adoptions is there a written record and the available
39. evidence is often confusing, conflicting and of dubious
40. character. If the bill becomes law, adoptions made in
41. accordance with practices by persons who died prior to
42. the effective date of the act will be recognized by the
43. Department. Indian customs adoptions made prior to the
44. effective date of the act and participated in by per-
45. sons who are still living can be validated by recorda-
46. tion with a superintendent * * *

47.
48. On March 3, 1981, Congress enacted the "Crow" Act
49. (46 Stat. 1494), covering adoption by the Crow Indians
50. of Montana. The act has eliminated practically all
51. dispute and administrative difficulty in adoption among
52. the Crows. The proposed act is similar to the "Crow"
53. Act and in addition recognizes decrees of tribal courts
54. and adoptions made pursuant to tribal procedures, and
55. provides for the validation of "Indian custom" adop-
56. tions by their recordation during the lifetime of the
57. parties.

58.

59. The subject of adoption has been considered by
60. the tribal council, Government officials and Indian
61. assemblies. All agree that a remedy must be provided.
62. Expressed opinions are (1) adoption should be left to
63. the State courts; (2) it should be handled by the tri-
64. bal agencies; and (3) Indian custom should be recog-
65. nized and made of record.

66.

67. The instant proposal does not conflict with any
68. of these ideas. It embraces all of them and places
69. both the Indian and this Department in a position
70. where in all probate cases a record will be available
71. that will amply protect the bona fide claimant and
72. likewise eliminate the imposter.

The above report is susceptible to several interpretations. On one hand it clearly seems to state that the bill establishes a "method of adoption" by agency superintendents, supplementary to other recognized methods of adoption (lines 22-25). Elsewhere, however, it is said that the broad purpose of the bill is "to require that there be a written record of each adoption" (lines 10-12). In fact, Secretary Ickes describes the "method of adoption" to be followed by super-

intendents as one of "adoption by written recordation" (line 24). These latter statements, among others, suggest that what the Secretary actually proposed to Congress was, in essence, a procedure for recording adoptions at Indian agencies agreed to by interested parties or otherwise recognizable under Indian custom.⁷

Supportive of the argument that the Act of July 8, 1940, created no unique authority within agency superintendents to *grant* adoptions in a judicial sense is the legislative preference to refer to adoptions *approved* by agency superintendents. The terms "approved by" or "to approve" may have different meanings, depending upon the context in which they are used and the subject matter to which they pertain. *City of Springfield v. Commonwealth*, 349 Mass. 267, 207 N.E.2d 891 (1965). Ordinarily the act of "approval" is an action to commend, confirm, ratify, sanction, or to consent to some act or thing done by another. *In re State Bank of Millard County*, 84 Utah 147, 30 P.2d 211 (1934). While in some statutes or texts, the act of "approval" implies the exercise of judicial action or discretion, in other cases it may only contemplate the doing of a purely ministerial act. *Baynes v. Bank of Caruthersville*, 118 S.W.2d 1051 (Mo. App. 1938). Evaluated against the intended "broad purpose" of 25 U.S.C. § 372a—that of providing a

written record for adoptions to facilitate the Secretary's probate functions—we hold that the adoption approval and recordation authority conferred by Congress on agency superintendents in the 1940 Act was ministerial, not judicial, in nature.

If the proposal submitted by Secretary Ickes to Congress contemplated the establishment of jurisdiction in agency superintendents to sit in judgment on adoption matters arising on their reservations, the Secretary could hardly have concluded in his report to both Houses:

The instant proposal does not conflict with any of these ideas [i.e. that (1) adoption should be left to the State courts; (2) it should be handled by the tribal agencies; and (3) Indian custom should be recognized and made of record]. It embraces all of them and places both the Indian and this Department in a position where in all probate cases a record will be available.

There was only limited substantive debate of the Department's proposed adoption bill when it was considered by Congress. It consisted of an exchange in the House between Representative Rogers of Oklahoma and Representative Case of South Dakota, following Mr. Rogers' summary of the bill (H.R. 8499):

Mr. CASE: Does not the gentleman think it would be fair to have a 6-month period, at least during which the Indians might be given notice, and then adoptions that have been made in accordance with the tribal custom may be put on record so that they may be protected?

Mr. ROGERS: It does not affect anything that has been done in the past. It only provides for future cases.

Mr. CASE: Even there the gentleman

⁷ See, e.g., lines 43-46 of the quoted report: "Indian custom adoptions * * * can be validated by recordation with a superintendent."

March 26, 1981

knows Indian families have taken children in and, to all intents and purposes, have adopted them; but unless there is some way for these adoptions to be put on record or to be recognized in some way, an injustice might be done.

Mr. ROGERS: That may be true. It would not affect those who have been adopted in the past, because it is provided that if it had been done by a decree of an Indian tribe it shall be valid. The main requirement is that in the future there must be a record kept. The bill provided that the tribe itself shall keep the record, but we finally decided to place this obligation on the Indian Department.

86 Cong. Rec. 3009 (1940).

The above colloquy does not present a penetrating analysis of the bill. It does convey, however, that the proposed legislation was represented to the lawmakers to be a recordkeeping measure.

With respect to the type of Indian adoptions which agency superintendents were authorized to approve and record under 25 U.S.C. § 372a(1)(c), the Government's brief appears to take conflicting stands. Its main contention appears to be that the Fort Berthold superintendent was authorized in 1945 to approve the adoption of Theresa Bluhm by virtue of the 1940 Act, an action taken by the agency on the basis of written statements received by Theresa's natural and adoptive parents. On the other hand, the Government submits that "[t]he kinds of adoptions which the superintendents were authorized to approve and record were, in essence, Indian custom adoptions, for which

written evidence would henceforth be required" (Government's Brief at 4).

The Board observed in its initial decision that Indian custom adoptions were not recognized by the Three Affiliated Tribes of the Fort Berthold Reservation in 1945. 8 IBIA at 142, 87 I.D. at 317. Assuming, in the light most favorable to the superintendent, that the governing tribe of the reservation did not possess exclusive jurisdiction over Indian adoption matters arising thereon,⁸ it was nevertheless incum-

⁸ The Three Affiliated Tribes of the Fort Berthold Reservation accepted the terms of the Indian Reorganization Act of 1934, 48 Stat. 984, 25 U.S.C. §§ 461-79 (1976), and the Secretary subsequently approved the tribe's Code of Laws, adopted Dec. 9, 1943, which contains provisions concerning adoption.

Without ruling on the question of tribal jurisdiction, we noted before that in this case an apparent indispensable party to the adoption proceeding, Theresa's natural mother, did not live on the Fort Berthold Reservation and was not a member of the Three Affiliated Tribes; neither was Theresa's adoptive mother, Alice Young Bear, a member of the Three Affiliated Tribes. 8 IBIA 141; 87 I.D. 316-317. These circumstances differ from *Fisher* in which the Supreme Court held that the Northern Cheyenne Tribe possessed exclusive jurisdiction over an adoption proceeding. There, the Court noted that all parties were members of the tribe who resided on the reservation at all relevant times, and that none of the acts giving rise to the adoption proceeding occurred off the reservation. (Jurisdictional problems between states and tribes in Indian child custody proceedings have been substantially resolved for the future as a result of the Indian Child Welfare Act of 1978. A major feature of the Act is that it secures to an Indian tribe "jurisdiction exclusive as to any State over any child custody proceeding involving an Indian child who resides or is domiciled within the reservation of such tribe, except where such jurisdiction is otherwise vested in the State by existing Federal law." 25 U.S.C. § 1911(a) (Supp. II 1978). The Act makes no attempt

(Continued)

bent on the superintendent to approve and record an Indian custom adoption only if such adoptions were recognizable under tribal law.⁹

We do not think 25 U.S.C. § 372a (1) (c) authorizes superintendents to approve and record Indian custom adoptions only. If this is what Congress intended, it is reasonable to suppose that the term "Indian custom" would have been included in subparagraph (c). That it was not intended is also evident from the inclusion of an independent paragraph (sec. 2 of the Act) devoted to the documentation of Indian custom adoptions.

Secretary Ickes' report of Feb. 8, 1940, also shows that Indian custom adoptions were viewed as a separate

kind of adoption subject to BIA approval. *See* report, *supra*, at lines 1-10.

For an adoption to be approved by an agency superintendent under 25 U.S.C. § 372a (1) (c), the Act provides that it be a "written" adoption. The recording of an adoption pursuant to subparagraph (c) does not, in our opinion, satisfy the requirement for an adoption in writing.¹⁰ Consistent with our opinion that the approval power bestowed by Congress to superintendents was ministerial, not judicial, the nature of adoption ultimately subject to agency approval would be "adoptions by consent" or other noncontested adoptions agreed to *in writing* by the parties.

[2] Nothing in the Crow Adoption Act (Act of Mar. 3, 1931, 46 Stat. 1494), which the Department used as a model in the drafting of the 1940 Act,¹¹ contradicts the above interpretations. Modifying our previous assessment of the relationship of the Crow Act to the 1940 law, *see* 8 IBIA at 139; 87 I.D. at 316, we agree with the position of the Government that "25 U.S.C. § 372a is worded virtually identically to the Crow Act and, as evidenced by the legislative history, was intended to become general legislation * * * [applying] the successful adoption

(Continued)

to resolve jurisdictional conflicts between tribes and agency superintendents.)

The Board avoided ruling on the question whether the Three Affiliated Tribes possessed exclusive jurisdiction over the adoption in question here by invalidating the superintendent's action on other grounds. 8 IBIA at 140-41; 87 I.D. at 316. Since we are reversing our prior holding in this reconsideration proceeding, we are obliged to answer that we do not believe the state of the law in 1945 precluded the superintendent from approving the adoption of Theresa Bluhm. We recognize that this is an important ruling and that it is rendered without the benefit of participation in this case by the Three Affiliated Tribes. As interested as we are in putting this case to rest, it is nevertheless appropriate in our view to afford the tribe an opportunity to seek reconsideration of the foregoing opinion pursuant to terms set forth in the closing order of this decision.

⁹ As stated in our initial decision, there is no universal doctrine of Indian custom adoption. 8 IBIA at 141; 87 I.D. at 317. The right to designate the customs that are to be given recognition in regulating matters that affect tribal internal and social relations rests with each tribe as an incident of its sovereignty, *United States v. Mazurie*, 419 U.S. 544 (1975), and such customs may vary among tribes.

¹⁰ Sec. 372a-372a(1)(c) reads, in pertinent part, "no person shall be recognized as an heir of a deceased Indian by virtue of an adoption * * * [u]nless such adoption shall have been * * * by a written adoption approved by the superintendent * * * and duly recorded * * * by the superintendent." (Italics added.)

¹¹ *See* Secretary Ickes' report, *supra*, at lines 48-57.

March 26, 1981

procedures in the Crow Act to all tribes"¹² (Government's Brief at 5).

In the case at hand, the Fort Berthold superintendent was furnished written and signed statements by petitioner's natural and "adoptive" parents which satisfied the superintendent that these parties were agreeable to the adoption of petitioner, then age 5, by the Young Bears. It is too late for Theresa's adoptive mother, Alice Young Bear, to challenge the regularity of consents obtained over 30 years ago. See 8 IBIA at 137-38; 87 I.D. at 315. Alice Young Bear's contention that the superintendent lacked jurisdiction to approve Theresa's adoption is rejected on grounds that by virtue of the Act of July 8, 1940, 54 Stat. 746, Congress vested agency superintendents with specific authority to approve and record written adoptions agreed to by Indian parties. The Fort Berthold superintendent was therefore acting within the scope of his authority and in accordance with Federal law by approving petitioner's adoption in 1945.¹³

¹² The Act of Mar. 3, 1931, states:

"[H]ereafter no person shall be recognized as an adopted heir of a deceased Indian of the Crow Tribe of Indians of Montana unless said adoption shall have been by a judgment or decree of a State court, or by a written adoption approved by the superintendent of the Crow Indian Agency and duly recorded in a book kept by him for such purposes: Provided; That adoption by Indian custom made prior to the date of approval hereof involving probate proceedings now in process of consummation, shall not be affected by this Act."

¹³ The Government's Brief observes that enactment of the Indian Child Welfare Act in 1978 reflects "a change in Congressional policy and may eliminate future superintendent approved adoptions." At p. 5.

In accordance with the above, the Board hereby affirms *in toto* the Order Determining Heirs entered Aug. 8, 1979, by Administrative Law Judge Garry V. Fisher in which he held that Theresa Bluhm is entitled to a one-fourth share of the estate of Victor Young Bear.

In light of the above holding, we shall not attempt to answer petitioner's alternative contention that the doctrine of estoppel should be applied to uphold her adoption. We do observe that the Office of Hearings and Appeals has previously acknowledged the passing of the traditional rule that estoppel cannot be invoked against the Government and has recognized the elements of estoppel set forth by the Ninth Circuit in *United States v. Ruby Co.*, 588 F.2d 697 (1978), as the initial test for determining whether estoppel is appropriate. *Dorothy Smith*, 44 IBLA 25 (1979); *Edward L. Ellis*, 42 IBLA 66 (1979); *United States v. Larsen*, 36 IBLA 130 (1978).¹⁴ Assuming we were to adhere to our initial holding that the superintendent's adoption action was unlawful, one possible bar to the appropriateness of an estoppel

¹⁴ The elements of estoppel as identified in *Ruby* (and recited by petitioner) are:

"(1) The party to be estopped must know the facts;

"(2) He must intend that his conduct shall be acted on or must so act that the party asserting the estoppel has a right to believe it is so intended;

"(3) The latter must be ignorant of the true facts;

"(4) He must rely on the former's conduct to his injury." 588 F.2d at 703.

in this case is the recognized principle that estoppel is unavailable against the Government if its representative has not acted within the scope of his authority. *Ruby, supra*, at 701-704; *Dorothy Smith, supra*, at 31.

The governing body of the Three Affiliated Tribes of the Fort Berthold Reservation is hereby allowed 30 days from receipt of this decision in which to petition the Board for reconsideration. (*See n.8.*) If no such petition is timely filed, this decision will then be final for the Department.

MARTIN MATTLER

53 IBLA 323

Decided *March 26, 1981*

Appeal from a decision of the Utah State Office, Bureau of Land Management, denying a petition for reinstatement of oil and gas lease U-41028.

Affirmed.

1. Oil and Gas Leases: Termination

Upon failure of a lessee to pay rental on or before the anniversary date of the lease, for any lease on which there is no well capable of producing oil or gas in paying quantities, the lease automatically terminates by operation of law.

2. Oil and Gas Leases: Termination— Oil and Gas Leases: Reinstatement

A lessee may be entitled to reinstatement of the lease if it is shown, among other things, that reasonable diligence was exercised in mailing the payment, or that the delay in remitting the rental is justifiable. Where a lessee is unable to make the requisite showing, a petition for reinstatement is properly denied.

3. Oil and Gas Leases: Termination— Oil and Gas Leases: Reinstatement

Reasonable diligence generally requires mailing the rental payment sufficiently in advance of the anniversary or due date to account for normal delays in collection, transmittal, and delivery of the mail. Mailing the rental payment 1 day before or on the anniversary date of the lease does not constitute reasonable diligence.

4. Oil and Gas Leases: Termination— Oil and Gas Leases: Reinstatement

A late rental payment or an insufficient tender of rental may be justifiable if it is demonstrated that at or near the anniversary date there existed sufficiently extenuating circumstances outside the lessee's control which affected his or her actions in paying the rental fee. Instances of simple forgetfulness, inadvertence, ignorance of the regulations, reliance on BLM courtesy notices, and similar occurrences do not excuse a failure to exercise due diligence.

APPEARANCES: Martin Mattler, *pro se*.

OPINION BY
ADMINISTRATIVE
JUDGE HENRIQUES

INTERIOR BOARD OF
LAND APPEALS

Martin Mattler appeals from a decision of the Utah State Office,

March 26, 1981

Bureau of Land Management (BLM), dated Jan. 8, 1981, denying appellant's petition for reinstatement of oil and gas lease U-41028. The lease in question was issued effective Oct. 1, 1978, for a period of 10 years.¹

[1] Appellant's petition followed BLM's notification to appellant on Oct. 7, 1980, that lease U-41028 had terminated automatically by operation of law on Oct. 1, 1980, for failure to pay in advance the rental due on this lease. This termination was in accordance with 30 U.S.C. § 188 (b) (1976) which provides in part: "[U]pon failure of a lessee to pay rental on or before the anniversary date of the lease, for any lease on which there is no well capable of producing oil or gas in paying quantities, the lease shall automatically terminate by operation of law."

[2] Where a lease has been terminated automatically by operation of law for failure to make timely payment of the full amount of rental due, but such rental was paid or tendered within 20 days thereafter, the Secretary may reinstate the lease if, *inter alia*, it is shown to the satisfaction of the Secretary that such failure to make timely payment was either justifiable or not due to a lack

of reasonable diligence on the part of the lessee. 30 U.S.C. § 188(c) (1976).

[3] In appellant's case, a check for the full amount of rental due was written on Oct. 1, 1980, and received by BLM on Oct. 6, 1980. Reasonable diligence generally requires mailing the rental payment sufficiently in advance of the anniversary or due date to account for normal delays in collection, transmittal, and delivery of the mail. 43 CFR 3108.2-1(c)(2). Appellant's payment envelope, however, was postmarked on the date payment was due. This Board has repeatedly held that mailing the rental payment 1 day before or on the anniversary date of the lease does not constitute reasonable diligence. *See, e.g., Ronald C. Hill*, 38 IBLA 315 (1978); *J. R. Oil Corp.*, 36 IBLA 81 (1978); *Hubert W. Scudder*, 36 IBLA 191 (1978); *David R. Smith*, 33 IBLA 63 (1977); *Adolph F. Muratori*, 31 IBLA 39 (1977); *Henry Carter*, 24 IBLA 70 (1976).

[4] A failure to make timely payment may be justifiable, however, if it is demonstrated that at or near the anniversary date there existed sufficiently extenuating circumstances outside the lessee's control which affected his or her actions in paying the rental fee. *See* cases hereinbefore cited. Generally, this standard contemplates occurrences such as injury, *David Kirkland* 19 IBLA 305 (1975); or illness, *Billy Wright*, 29 IBLA 81 (1977); or death, *Fredres E. Laubaugh*, 24 IBLA 306

¹ In appellant Mattler's statement of reasons on appeal, Mattler states that he and Robert Gamble are the only two parties to the lease. BLM notes, however, that there are three record titleholders of oil and gas lease U-41028. They are Robert Gamble, Melbourne Concept, Inc., and appellant. The assignment of a one-third interest from Mattler and Gamble to Melbourne Concept, Inc., was approved by BLM effective Nov. 1, 1979.

(1976). Instances of simple forgetfulness, inadvertence, ignorance of the regulations, reliance on BLM courtesy billing notices, and similar occurrences do not excuse lack of diligence. Similarly, appellant's absence from the country and general unfamiliarity with the leasing process do not rise to the level of justification. *Benjamin T. Franklin*, 38 IBLA 291 (1978).

Accordingly, pursuant to the authority delegated to the Board of

Land Appeals by the Secretary of the Interior, 43 CFR 4.1, the decision of the State Office is affirmed.

DOUGLAS E. HENRIQUES

WE CONCUR:

BERNARD V. PARRETTE

Chief Administrative Judge

EDWARD W. STUEBING

Administrative Judge

April 8, 1981

APPEAL OF DYNADYNE, INC.

INTERIOR BOARD OF
CONTRACT APPEALS

IBCA-1329-1-80

Decided April 8, 1981

Contract No. H0133033, Bureau of
Mines.

Sustained in part.

1. Contracts: Construction and Operation:
Allowable Costs—Contracts: Construction
and Operation: Contract
Clauses

Where a cost-plus-fixed-fee contract expressly provides for the payment of finally negotiated overhead rates notwithstanding the foregoing provisions which include the limitation of cost provision, the Board finds that a claim for additional overhead costs is not subject to the limitation of the contract estimated costs.

2. Contracts: Construction and Operation:
Allowable Costs

Under a cost-plus-fixed-fee contract where indirect costs are disallowed as excessive or not directly related to the performance of the contract, the Board finds the determination of allowable costs to improperly apply the standard for direct costs to indirect costs and on review of the costs in question finds entitlement to a portion of the disallowed costs.

APPEARANCES: Donald A. Tobin, Attorney at Law, Sullivan & Beauregard, Washington, D.C., for Appellant; Ross W. Dembling, Department Counsel, Washington, D.C., for the Government.

OPINION BY
ADMINISTRATIVE JUDGE
LYNCH

In this appeal, Dynadyne seeks to recover \$32,261.70 in additional indirect costs under a cost-plus-fixed-fee (CPFF) contract. Appellant was a small business concern incorporated in 1972 with 98 percent of the stock owned by the President, Dr. Vennos and his wife. In April 1973, appellant responded to an announcement in the Commerce Business Daily with a proposal to the Bureau of Mines for developing an improved coal mine respirable dust sampler. The announcement contemplated a CPFF contract and on this basis, appellant proposed a total cost and fee of \$30,858 (GE-A).

A preaward survey of appellant's facility, accounting methods and credit rating resulted in the negotiation of an increased provisional overhead rate of 77 percent, the addition of a general and administrative rate of 18 percent, and a total CPFF of \$65,754. This was the second contract to be obtained by appellant. The first contract was a firm fixed price for \$28,600 with another agency of the Federal Government (AE-F3). The instant CPFF contract was awarded on June 27, 1973, with the term of performance to cover the succeeding 20 months. Modification No. 1, dated June 29, 1979, extended the completion date to June 30, 1976, increased the fixed fee to \$4,983, and increased the estimated cost to

\$71,874 for a total contract amount of \$76,857 (AF-E).

A final audit of the contractor's costs of performance is contained in a report dated Jan. 27, 1978 (AF-B6). The audit recommended allowing all of the total direct costs sub-

mitted for reimbursement by appellant in the amount of \$35,101. However, of the \$61,568 of indirect costs submitted for reimbursement, only \$34,901 was recommended for reimbursement. \$26,667 of indirect costs were questioned, as follows:

<i>Description</i>	<i>Costs for year ending 6/30/74</i>	<i>Costs for year ending 6/30/75</i>	<i>Total</i>	<i>Questioned</i>
Rents.....	\$5, 600	\$5, 600	\$11, 200	\$9, 266
Accounting & Audit.....		1, 042	1, 042	1, 042
Travel.....	1, 779	2, 236	4, 015	4, 015
Lab Supplies (R&D).....	2, 683	1, 209	3, 892	3, 892
Prof. Services (R&D).....	4, 226	4, 226	8, 452	8, 452

The contracting officer's final decision dated Jan. 15, 1980, determined that the amount for indirect costs to be paid by the Government would be \$36,773 instead of the \$61,568 then claimed by appellant, thus disallowing \$24,795 in added indirect costs. The decision does not reconcile the amount allowed and the category of costs for which the added \$1,872 was allowed. However, it is noted that the indirect expenses allowed by the contracting officer added to the direct expenses allowed equals the total estimated cost of \$71,874.

Appellant's claim presented at the hearing on July 29, 1980, and the subsequent briefs claims \$32,261 for indirect expenses in addition to the \$36,773 allowed by the contracting officer. The total of \$69,034.70 for indirect expenses claimed represents an increase of over \$7,000 for costs not addressed by the auditor in his report. These costs are primarily indirect wages and salaries and associated payroll taxes. It is

noted that a summary entitled "Corporate auditing (paid & accrued)" prepared by appellant's president and dated Aug. 2, 1977, was forwarded to the Government by letter of the same date (AF-C5). This summary of indirect expenses totals \$61,568. It includes indirect wages and salaries totaling \$10,186 for the contract period, an amount allowed by the auditor and the contracting officer. The summary also includes rent for the contract period in the total amount of \$11,200.

Discussion and Findings-Liability

The Government defends the disallowance of the claimed indirect expenses on the grounds that claimed costs exceed the total estimated cost specified in the contract, and that appellant failed to give the required notice of an overrun and secure the approval of the contracting officer for the added expenditures as required by the Limitation of Cost Clause (LOCC) of the contract. The LOCC provision relied

April 8, 1981

on by the Government is contained in Clause 21 of the contract entitled "Costs and Payments."

The "Costs and Payments" clause of the contract contains four major paragraphs A through D, entitled respectively: "Estimated Costs," "Limitation of Costs," "Payments," and "Overhead Rates." Under the first paragraph, the Government agrees to pay the allowable costs in accordance with the Federal Procurement Regulations, provided that the total amount does not exceed the estimated total shown in the schedule. The second paragraph requires that the contractor give prior notice of any impending overrun of costs and limits the Government obligation to pay for costs incurred in excess of the estimated costs in the contract. The third paragraph provides for progress payments. The fourth paragraph contains the following language in the designated subparagraphs:

(1) Notwithstanding the foregoing provisions, the allowable indirect costs under this contract shall be obtained by applying negotiated overhead rates to bases agreed upon by the parties.

* * * * *

(5) Pending establishment of final overhead rates for any period, the Contractor shall be reimbursed either at negotiated provisional rates as provided in the contract, or at billing rates as provided in the contract, or at billing rates acceptable to the Contracting Officer, subject to appropriate adjustment when the final rates for that period are established.

The fourth and final paragraph of the clause entitled "Overhead Rates" provides that "notwithstanding the foregoing provisions," the overhead rates shall be subject to a final negotiation and to appropriate adjustment when the final rates are established. There is no reference in the "Overhead Rates" paragraph to any limitation on the amount of such indirect costs so determined. The cases cited by the Government have no precedential value in this instance because the cited cases contain the usual Armed Services Procurement Regulation clauses, without an overriding "notwithstanding" provision to apply to finally determined overhead rates. The clear meaning of the phrase "notwithstanding the foregoing provisions" is to make the foregoing provisions inapplicable where there is a conflict with the overhead rate determining provision. In effect, the provisions made inapplicable include the limitation of cost provision, since it precedes the overhead rate determining provision and necessarily conflicts with it when the rate determined would result in costs over the contract estimated cost.

[1] Therefore, we find that the contract expressly excludes the claimed overhead costs from the cost limitation of the contract estimated costs.

Discussion and Finding-Quantum

In the instant case, the contract does not contain provisional rates

for overhead and general and administrative expenses, nor were final rates established. Instead, the auditors and the contracting officer treated each item of claimed indirect expense in the same manner as direct expenses and disallowed all or a portion of each item considered to be excessive or not directly related to the performance of the contract. In fact, the contracting officer's final determination allowed an arbitrary total dollar amount of overhead expenses without explaining the basis on which an increased allowance over that of the auditors was granted. The fact that the amount allowed exactly equalled the total estimated cost of the contract indicates that the individual items questioned by the auditors were not considered in detail to determine whether any portion of the questioned amounts should be allowed.

Additionally, it is noted that the treatment of overhead and general and administrative expenses in the same manner as direct expenses fails to accord any distinction between the categories of cost. The direct expenses of performing the contract are those costs which can be identified specifically with a particular final cost objective (FPR 1-15.202). Indirect costs are those which are incurred for common or joint objectives and therefore are not readily subject to treatment as a direct cost (FPR 1-15.203). The latter category generally includes such items as facility rental and utility costs which cannot be easily identified with each project, but which are included in the overhead

cost pool and are distributed over all projects as a percentage of the direct costs of the project. Here, a fledgling organization had a single CPFF contract during the performance period, but the indirect expenses incurred were based upon the hopes of acquiring and performing additional contracts in the same facility. The fact that the expectation of additional contracts did not materialize and the organization ceased to exist due to health problems of the president, does not warrant the application of the direct cost test to indirect expenses for a determination of allowability.

We now turn to a consideration of the disallowed costs. Respecting rental costs, the appellant claims that discussions with the Government contract negotiators assisting in establishing the provisional overhead rate included an agreement that rent for half of his residence used for contract performance would be charged at \$600 per year. The auditors considered this amount unreasonable and allowed only \$1,934 for 24 months on the basis of depreciating the 50 percent of the residence used for performance. When the contracting officer was queried about this method at the hearing, he termed the resulting monthly rent of about \$81 per month, "ridiculous" and indicated a willingness to negotiate further (Tr. 141). The contracting officer testifying was the official signing the contract with appellant even though he had not participated in negotiating the contract. The Government negotiators of the contract

April 8, 1981

were not available at the time of the hearing, and the contracting officer could only state that he was not aware of any advance agreement on rent and that the file does not disclose such an agreement. Contrasted with this testimony, appellant's president stated that the negotiators did not object when he offered the rental figure of \$600 per month (Tr. 23). He further testified that the Government had requested that he obtain rental quotations in the immediate vicinity, and that this resulted in a rate of \$467 per month (or \$11,200 for 24 months). As noted, *supra*, appellant's president used the latter amount in accruing rent on his records (AF-C5). The \$467 per month rental amount is shown on the Jan. 27, 1978, audit report as representing the amount appellant claimed for reimbursement. This amount appears to be the amount that was before the contracting officer in January 1980 when he made the final decision on appellant's claim. The claim of \$600 per month for rent was presented at the hearing with the allegation of an advance agreement to include this amount in overhead for rent. Appellant's testimony regarding the existence of an agreement on rent at \$600 per month is refuted by his own actions to accrue rent on his books at \$467 per month. The records of the appellant submitted to the Government for audit and to the contracting officer for decision are accorded greater weight than the uncorroborated claim of an advance agreement for a higher rental

amount. Therefore, we find that a reasonable rent for inclusion in the indirect expenses is \$467 per month for 24 months or \$11,208.

Appellant contends that \$1,284 in accounting and auditing costs were improperly disallowed as occurring after the contract performance period in 1976. Appellant argues that \$1,042 of such costs were incurred prior to the end of June 1976, the extended completion date, and that all of such costs were directly related to this contract and incurred solely to substantiate appellant's claims. Here appellant cites *Appeal of Recon Systems, Inc.*, IBCA 1214-9-78 (Sept. 25, 1979), 86 I.D. 478, 79-2 BCA par. 14,058, *reconsideration denied*, 80-1 BCA par. 14,245 to claim costs incurred subsequent to the performance period because they were incurred to satisfy demands of the Government. The situation here is distinguishable, in that, the work required in the *Recon* case was necessary to perform the contract. Here, the accounting and auditing costs are costs incurred to prepare and present a claim against the Government, and are no more allowable than attorney fees in the prosecution of a claim. In addition, all indirect costs claimed by appellant, audited by the Government, and partially denied by the contracting officer were incurred in the 2 years of performance prior to June 30, 1975. For reasons not explained, appellant did not claim indirect expenses for the year ending June 30, 1976, during the performance of the

work required by modification No. 1. No rental costs, wages and salaries, or other indirect expenses are claimed. We find no reason to exempt this one expenditure from appellant's apparent agreement to limit his claim for work in the year ending June 30, 1976, to direct costs. Appellant does contend that this expense is in the nature of a direct expense in that it would not have been incurred except for the existence of the instant contract. However, the accounting and auditing expenses remain as indirect expenses incurred to prepare and present a claim. Such costs are disallowed (FPR 1-15.205-31).

Travel expenses of \$2,199 are claimed as allowable indirect expense. The contract required that appellant make a survey of similar instruments for review by the Government before commencing to develop the contract instruments. The contract scope is therefore broadened to encompass a need to keep abreast of concurrent developments. Even if this were not so, a reasonable amount of travel to enable the principals of a firm to keep informed of developments in the firm's field of endeavor is properly considered as overhead expenses. The maintenance of current knowledge of expertise is a normal operating cost and the travel costs are allowed (FPR 1-15.206-46).

Disallowed costs for laboratory supplies in the amount of \$3,892 are claimed by appellant. Appellant described these supplies as small components, screws, resistors or

transistors, machine lubricants, and similar materials necessary to the general running of a laboratory. Appellant stated that the laboratory was well stocked at the beginning of the contract performance (Tr. 46). The costs claimed are the costs of indirect materials purchased during contract performance. Various methods of charging the cost of such materials to contracts are accepted accounting practices as long as the method used does not result in an undue burden to Government contracts. The accounting practice should assure that each project will bear its fair share of the cost of the supplies. Appellant testified that about 20 percent of the supplies may have been used in independent research and development (Tr. 45). Additionally, when such quantities of supplies are purchased in addition to the direct material, there is bound to be an unused portion. When a sizeable inventory remains or the contractor no longer has Government contracts to perform, an inventory adjustment may be taken. (*See Accounting Guide for Defense Contracts*, Paul M. Trueger, 5th Ed., pages 202 and 203.) Inasmuch as appellant charged all the purchases during the contract performance period to this contract and the entire amount was disallowed, the record contains little information on which a determination of an appropriate allowance can be based. However, considering the well-stocked bins shown on appellant's exhibit 16, and the other instruments appellant was

April 8, 1981

developing apart from the contract work (AE-17-20), we find that a reasonable allocation of laboratory supply expense to the contract to be one third of the total expenses. We allow \$1,298 for laboratory supplies.

Appellant claimed \$7,016 for indirect professional expenses. Appellant's president testified that a portion of these costs were incurred as expenses of the formation of Dynadyne (Tr. 108). Organizational expenses are unallowable (FPR 1-15.205-23). Still other costs were associated with the independent research and development projects of appellant (Tr. 109-114). Such costs may be allowed, but are required to be equitably applied to all projects of the contractor, including the independent research and development tasks (FPR 1-15.205-31). Appellant's president testified that regarding the contract work, he was virtually a one-man operation (Tr. 32-35) doing the designing, drafting, machining, assembly, administration, and other tasks. The need for professional assistance costing approximately 20 percent of direct costs is not explained sufficiently to permit a determination that all the costs were reasonably incurred. Also, the president testified concerning five or six other instruments developed with the aid of others during the contract period and charged to this category of costs (Tr. 54-62). These projects must bear a pro rata portion of these expenses. In view of the difficulty in identifying the costs asso-

ciated with organization and considering the number of additional independent developments going on concurrently, we allow \$1,000 of indirect professional expenses as a reasonable pro rata portion of the allowable expenses to be charged to the instant contract.

Appellant claims \$7,286.70 for wages and payroll taxes should be allowed for indirect expenses in addition to the \$10,186 presented to the auditors for reimbursement and allowed by the contracting officer. In the posthearing brief, appellant's counsel argues that the president's salary was agreed upon at about \$25,000 per year and that reimbursement for the 2 years should total over \$50,000. The brief notes that the reason for the lower recorded costs is that the president worked at many tasks other than president, and that these tasks of draftsman, machinist, etc., were charged at lower rates. The added costs are presented on appellant's exhibit 9 and discussed by the president at Tr. 97-100 as time reflected on the time and attendance records for corporate management and contract administration. It is noted that exhibit 9 was prepared with the assistance of an accountant subsequent to the time for which the indirect expenses are claimed. Appellant contends that the auditors did not consider these expenses because they did not review the time and attendance records. Exhibit 9 shows consistent entries of 44 hours per month for company manage-

ment and 24 hours per month for contract administration. The time and attendance records said to be the original record supporting this summary sheet are not in evidence. Such records were not examined by the auditors according to the president, who states that he does not know how the auditors arrived at the indirect wages and salaries allowed.

At the hearing, the Government made a motion to dismiss paragraph 25 of the complaint which contained these costs on the basis that the costs had not been presented to the contracting officer for his consideration and were not properly before the Board. Appellant countered that the costs had been presented to the Government in February 1980 (after filing of this appeal). The motion was denied in order that the entire claim could be presented in one hearing, noting that the contracting officer could at any time before decision by the Board reconsider and revise his decision.

Appellant's president testified that his educational background included five degrees, including an MBA in business administration from the Wharton School of Business. He did not include these additional amounts in his corporate audit report of Aug. 2, 1977, except by reference to additional costs in an explanatory note. The Board is not persuaded that a knowledgeable individual such as the president would not present to the auditors in

his claim for reimbursement the best evidence of these costs. These records have not been offered into evidence. Instead, only a summary sheet is provided, which shows monthly entries of 44 hours and 24 hours respectively for company management and contract administration. The president testified that he worked long hours in his various roles of a one-man operation, with the result that he often got only 3 hours sleep (Tr. 35, 81). It is incredulous on the record before us to accept that a single individual engaged in a multitude of business and operating tasks each day, maintained a methodical regimen of spending the same number of hours each day for company management and contract administration.

The fact that much of the president's time was billed as draftsman or machinist at lower rates than that of president or engineer simply shows that the contract performance requirements dictated the use of his time in these capacities. The inclusion of a higher rate for engineer or president in the provisional overhead rate was not an assurance that he would be paid this full annual salary for the life of the contract. Instead, it permitted him to charge the contract at a higher hourly rate for the hours during which he was performing the higher paid function. We find that the additional costs claimed for indirect wages and salaries are not supported by the record.

April 8, 1981

Summary and Conclusion

[2] Upon appeal of a decision of the contracting officer to the Board, the Board considers the issues presented de novo and is not bound by the decision of the contracting officer in any respect. Therefore, we accept only the direct and indirect

costs allowed by the audit before giving effect to our findings on the claimed additional costs. The amount arbitrarily allowed by the contracting officer in the final decision is not related to any specific category of costs and is disallowed as unsupported by the record. Our findings are summarized as follows:

Direct costs allowed by audit.....		\$35, 101
Indirect costs allowed by audit.....	\$34, 901	
Rent \$11,208 less \$1,934 allowed by audit.....	9, 274	
Added accounting and auditing costs.....	0	
Travel costs.....	2, 199	
Laboratory supplies.....	1, 298	
Professional expenses.....	1, 000	
Added indirect wages and salaries.....	0	
Total indirect expenses.....		\$48, 672
Total direct and indirect costs.....		83, 773
Contract estimated costs.....		71, 874
Added indirect costs allowed by Board.....		\$11, 899

Having found that appellant's claim for overrun costs is not barred by the LOC provision of the contract, we find that appellant is entitled to \$11,899 for additional indirect expenses above the contract estimated costs of \$71,874, plus interest to be computed by the contracting officer in accordance with the unnumbered clause of the contract entitled "Payment of interest on contractor's claims."

**APPEAL OF MARTIN K. EBY
CONSTRUCTION CO., INC.**

IBCA-1389-9-80

Decided April 8, 1981

Contract No. 8-07-DC-07292, Water and Power Resources Service.

Dismissed.

1. Rules of Practice: Appeals: Dismissal—Rules of Practice: Appeals: Motions—Contracts: Construction and Operation: Changes and Extras—Contracts: Construction and Operation: Contracting Officer

A claim asserted under the Changes clause for increased costs resulting from actions of the President in decontrolling

the price of heavy crude oil is dismissed as being outside the jurisdiction of the Board since the President's action was a sovereign act taken as part of the program to maintain or increase production of heavy crude oil.

APPEARANCES: Jess Myers, Vice President & General Counsel, Martin K. Eby Construction Co., Inc., Wichita, Kansas, for Appellant; William A. Perry, Department Counsel, Denver, Colorado, for the Government.

*OPINION BY
CHIEF ADMINISTRATIVE
JUDGE McGRAW*

*INTERIOR BOARD OF
CONTRACT APPEALS*

The Government has moved to dismiss the instant appeal on the ground that the Board is without authority to allow claims for increases in the cost of fuel required for the performance of the contract and attributed to actions of the President in decontrolling the price of heavy crude oil by the issuance of an Executive order. The claims submitted by the appellant on behalf of itself or on behalf of its subcontractor, S & D Paving Co., Inc., have been presented by the appellant as claims cognizable under General Provision 3 (Changes) of the contract.

The appellant did not avail itself of the opportunity to file an opposition to the Government's motion to dismiss and has made no request for a hearing.¹ Our ruling upon the

motion has been made upon the basis of the written record. Reference to exhibits are to those contained in the appeal file.

Discussion

The contract was entered into under date of Nov. 23, 1977, in the estimated amount of \$22,232,407. It calls for the construction and completion of the modification of Grand Coulee Feeder Canal in accordance with the terms of Specifications No. DC-7292 (Appeal File Exhibit No. 1, hereinafter referred to by the abbreviation AF followed by reference to the particular exhibit number involved). Prepared on standard forms for construction contracts, the contract includes the General Provisions set forth in Standard Form 23-A (April 1975 edition). By Order for Changes No. 9, dated Aug. 10, 1979, the time for completion of the contract work has been extended to and including Apr. 30, 1981 (AF 8).

In a letter to the Bureau of Reclamation (now Water and Power Resources Service), under date of June 19, 1979, the contractor states:

As you know, the President, by executive order, initiated the process of removing price controls on petroleum products, as of June 1, 1979. This act of the Government could not have been anticipated, (or) contemplated in Section 1.5.1, Division 1—General Requirements, when we submitted our bid. This act of the Government will directly cause an increase in fuel costs for our contract.

and the appellant has not otherwise advised the Board in any way as to the facts and circumstances it considers pertinent to the issues raised by the appeal.

¹ The notice of appeal dated Aug. 25, 1980, states that "[t]he decision or findings of fact is erroneous because: (Facts and circumstances to follow)." No Complaint was filed

April 8, 1981

Our fuel costs have already been increased by our suppliers, since the President announced his intended action, by approximately \$.44 per gallon, in anticipation of the actual act of the Government. We submit, therefore, that any and all increases in our fuel costs for this contract since the date of the President's announcement² are directly attributable to the act of the Government.

Please be advised that we regard this act of the Government as a constructive change order to our contract. We will assert a claim under the provisions of GP 3 of the contract as soon as a reasonably accurate estimate of the equitable adjustment can be prepared.

(AF 7).

By a letter to the Bureau dated July 11, 1979 (AF 6), the contractor revised its letter of June 19, 1979, by substituting the reference GP 13 of the General Provisions for the reference to Sec. 1.5.1, Division I—General Requirements in the June 19, 1979, letter. The cited provision reads as follows:

13. Conditions Affecting the Work

² Except for the reference to the President's announcement in the contractor's letter of June 19, 1979, the record does not disclose what action the President may have taken with respect to decontrolling the price of petroleum products prior to the issuance of Exec. Order No. 12153 on Aug. 17, 1979, 44 FR 48949.

The action of the President referred to by appellant as having occurred on or about June 1, 1979, may have been an announcement by him that he contemplated decontrolling the price of certain petroleum products within the foreseeable future. Concerning this aspect of the case, Government counsel states: "There was no executive order of which we are aware promulgated prior to June 1, 1979, decontrolling the price of petroleum products. The President did, however, on August 17, 1979, promulgate Executive Order 12153 decontrolling the price of heavy crude oil. * * * This point need not be labored, however, because even if all of Appellant's allegations be taken as true, he cannot recover" (Motion to Dismiss, p. 2).

The Contractor shall be responsible for having taken steps reasonably necessary to ascertain the nature and location of the work, and the general and local conditions which can affect the work or the cost thereof. Any failure by the Contractor to do so will not relieve him from responsibility for successfully performing the work without additional expense to the Government. The Government assumes no responsibility for any understanding or representations concerning conditions made by any of its officers or agents prior to the execution of this contract, unless such understanding or representations by the Government are expressly stated in the contract.

(AF 1a).

On Mar. 24, 1980, the contractor transmitted to the Water and Power Resources Service a letter from its asphalt paving subcontractor, S & D Paving Co., Inc., dated Mar. 17, 1980, outlining a claim for additional costs due to what is described by appellant as "unforeseen and unpredictable petroleum products cost increases." The claim submitted by the subcontractor was in the amount of \$57,549.24. With the contractor's markup added, however, the claim as presented to the Government was in the amount of \$71,194.66 (AF 5).

In a letter dated May 14, 1980, the Water and Power Resources Service advised the contractor that neither its claim nor that of its subcontractor was considered to be meritorious, since "[c]hanges made to the contract under Clause No. 3 of the General Provisions of the contract relate to acts of the contracting officer or Government in its contractual capacity and do not apply

to Presidential actions or other acts of the Government in its sovereign capacity" (AF 4). The same rationale was the basis for denying the contractor's claim and that of its subcontractor in the decision from which the instant appeal was taken (AF 2).

Addressing the appellant's claims in the motion to dismiss, Government counsel asserts (i) that the Executive order upon which the claims are based was a sovereign act of the President of the United States exercising his powers under the Emergency Petroleum Allocation Act of 1973,³ and (ii) that under well established principles of Government contract law the Government is not liable to the contractor for any increased costs resulting from a sovereign act of the Government. Fundamental to the Government's position is the assertion that if all of appellant's allegations are accepted as true and the

assumption is made that the President's actions in decontrolling the price of heavy crude oil resulted in increased fuel costs to the contractor, the appellant would still have failed to state a valid claim under the contract. Elaborating upon this portion, the Government states:

[A]ppellant relies solely on the acts of the President. The President took the step of decontrolling certain heavy crude oil as part of his energy program to increase production of crude oil. (EO 12153 1-102). This was a public and general act for the general good issued in the exercise of the sovereign power of the United States for which the Government is not liable. *Anthony P. Miller v. United States*, 161 Ct. Cl. 455, 472 (1963), cert denied 375 U.S. 879 (1963) * * *.

(Government Motion to Dismiss, pp. 3, 4).

While the rationale for the claims asserted has not been fully articulated, appellant's position appears to be that the actions the President took in decontrolling the price of heavy crude oil could not have been anticipated at the time of bidding; that such actions were a departure from the basis of the bargain between the parties; and that the action of the President in decontrolling the price of crude oil should be treated as a constructive change order to the contract. To support its contention that the action of the President could not have been anticipated at the time of bidding, the appellant points to Clause No. 13 (text, *supra*) of the General Provisions. In *McNamara Construction of Manitoba, Ltd. v. United States*, 206 Ct. Cl. 1, 6 (1975), however, the Court of

³ In especially relevant part Exec. Order No. 12153, dated Aug. 17, 1979 (44 FR 48949), and captioned "Decontrol Of Heavy Oil," reads as shown below:

"By the authority vested in me as President by the Constitution and statutes of the United States of America, including the Emergency Petroleum Allocation Act of 1973, as amended (15 U.S.C. 751 *et seq.*), and notwithstanding the delegations to the Secretary of Energy in Executive Order No. 11790 * * * it is hereby ordered as follows:

"1-101. Effective August 17, 1979, prices charged in the first sale of heavy crude oil are exempted from price controls adopted pursuant to the Emergency Petroleum Allocation Act of 1973, as amended. * * *

"1-102. The Secretary of Energy, or his delegate, shall expeditiously conduct a public inquiry as to what other types of heavy crude oil, if any, should be exempted from price controls adopted pursuant to the Emergency Petroleum Allocation Act of 1973, as amended, in order to maintain or increase production of such crude oil."

April 8, 1981

Claims construed a clause identical to Clause No. 13 of the instant contract as placing responsibility upon the contractor to take steps reasonably necessary to ascertain the general and local conditions which could affect the work or the cost thereof.⁴

In the case before us the contract was entered into in November of 1977 or approximately 3 years after the enactment of the Emergency Petroleum Allocation Act of 1973 providing for the imposition of price controls (n. 3, *supra*). The appellant has not even alleged that there was any understanding or agreement between the parties as to how long price controls applicable to heavy crude oil at the time of bidding would remain in effect. Absent a showing that an agreement of this nature was reached and then breached by the President decontrolling the price of heavy crude oil with adverse consequences to the contractor, the Board concludes that the risk of mistake arising from the appellant's investigation of the general and local conditions affecting the contract work remained with the appellant. (n. 4, *supra*).

The appellant's reliance upon the Changes clause as the vehicle for recovery is also considered to be misplaced. That clause provides for an equitable adjustment in the

contract price when the contracting officer orders changes in the work within the general scope of the contract. The contractor has not alleged that the contracting officer (or anyone purporting to act for him) gave an order, issued a directive or took any other action which increased the cost of performing the contract work; nor is there any allegation that the costs for which claim has been made arose as a result of the contractor being required to perform the contract work in a manner different than was contemplated at the time of bidding.

The Government concedes that the actions the President took in decontrolling the price of heavy crude oil in the summer of 1979 did materially increase the amount the contractor was required to pay for fuel required for the performance of the contract. The actions of the President upon which the claims are based involve or are related to the promulgation of Exec. Order No. 12153, dated Aug. 17, 1979, under the authority of the Emergency Petroleum Allocation Act of 1973. The appellant has not contended that the action of the President in decontrolling the price of heavy crude oil was other than a public and general act for the general good issued in the exercise of the sovereign power of the United States.⁵

⁴In *McNamara* (text, *supra*) the Court of Claims stated at p. 7: "[T]he contractor carries the risk of mistake arising from his investigation of general and local conditions which can affect the work or the cost thereof."

⁵See *Tony Downs Foods Co. v. United States*, 209 Ct. Cl. 31, 36, 37 (1976), in which the Court of Claims stated:

"Plaintiff's failure to challenge the character of the Executive Orders herein at issue renders unnecessary an extended discussion of

—Continued

Decision

There is nothing in the record before us to indicate that the appellant distinguishes in any way between acts of the United States in a contractual capacity and acts of the United States in a sovereign capacity or that with respect to monetary claims it recognizes the legal consequences of a particular act of the United States being placed in one category or the other. The distinction was recognized by the Supreme Court in *Horowitz v. United States*, 267 U.S. 458, 461 (1925), however, where the Court stated:

It has long been held by the Court of Claims that the United States when sued as a contractor cannot be held liable for an obstruction to the performance of the particular contract resulting from its public and general acts as a sovereign. *Deming v. United States*, 1 Ct. Cls. 190, 191; *Jones v. United States*, 1 Ct. Cls. 383, 384; *Wilson v. United States*, 11 Ct. Cls. 513, 520.^[9]

their public and general nature or that they were unquestionably promulgated for the general good. Suffice it to say that in *McCrary v. United States*, 114 Ct. Cl. 12, 84 F. Supp. 368 (1949), the court found the Government immune from damages resulting to a contractor from the imposition of an Executive Order labor freeze, akin to the instant Executive Order price freeze, holding such damages to be unrecoverable as *damnum absque injuria*. *McCrary v. United States*, *supra*, 114 Ct. Cl. at 36, 84 F. Supp. at 371.⁹

⁹ Immediately thereafter the Supreme Court stated at p. 461:

"In the *Jones Case*, *supra*, the court said: 'The two characters which the government possesses as a contractor and as a sovereign cannot be thus fused; nor can the United States while sued in the one character be made liable in damages for their acts done in the other. Whatever acts the government may do, be they legislative or executive, so long as they be public and general, cannot be deemed specially to alter, modify, obstruct or violate the particular contracts into which it

The rule of sovereign immunity is still followed by the Court of Claims and has been applied by the various boards of contract appeals in a variety of situations. See, for example, *Granite Construction Co.*, IBCA-947-1-72 (Nov. 13, 1972), 79 I.D. 644, 72-2 BCA par. 9,762, where this Board dismissed a contractor's claim where it found that the act of the President in impounding funds appropriated by Congress was a sovereign act for which no relief was available under the Suspension of Work clause. See also *Blake Construction Co., Inc.*, GSBICA No. 4118 (May 23, 1975), 75-1 BCA par. 11,278, in which the General Services Board denied a construction contractor's claim under the Change clause for the increased costs attributable to the lifting of the wage and price controls on the ground that the United States cannot be held liable for obstruction of a particular contract resulting from its public acts as sovereign.

In this appeal there are no material facts in dispute. For the purposes of the motion to dismiss the Government appears to concede that all of the additional costs for which claim has been made resulted from the President decontrolling the price of heavy crude oil in the summer of 1979. In support of the mo-

enters with private persons. * * * In this court the United States appear simply as contractors; and they are to be held liable only within the same limits that any other defendant would be in any other court. Though their sovereign acts performed for the general good may work injury to some private contractors, such parties gain nothing by having the United States as their defendants."

April 9, 1981

tion, the Government asserts that the President's actions in this case constitute public and general acts for the general good in the exercise of the sovereign power of the United States for which the Government is not liable. Although the assertions so made were accompanied by citations to authority, the appellant has filed no response. Nowhere in the record has the appellant addressed the defense the Government has raised of sovereign immunity. The text of the Executive order decontrolling the price of heavy crude oil indicates that the actions taken by the President were of a public and general nature for the general good in the exercise of the sovereign power of the United States and that they were taken as part of the energy program to maintain or increase production of heavy crude oil. There is nothing in the record to indicate otherwise.

The contract contains no price escalation provision. Neither the change clause nor any other clause contained in the contract provide a basis for granting the appellant relief. Absent such a clause, the Board has no jurisdiction⁷ over the ap-

peal. The appeal is therefore dismissed.⁸

I CONCUR:

G. HERBERT PACKWOOD
Administrative Judge

ESDRAS K. HARTLEY

54 IBLA 38

Decided April 9, 1981

Appeal from decision of Arizona State Office, Bureau of Land Management, rejecting oil and gas lease offer A 12541.

Set aside and remanded.

1. Oil and Gas Leases: Lands Subject to—Public Lands; Leases and Permits—Withdrawals and Reservations: Effect of

Public domain land withdraw or reserved is presumed to be available for oil and gas leasing unless the withdrawal or reservation specifically provides otherwise.

2. Oil and Gas Leases: Discretion to Lease

A decision of BLM refusing to issue an oil and gas lease in the exercise of the discretionary authority of the Secretary of the Interior over oil and gas leasing will be affirmed where it sets forth the reasons therefore and the facts of record support the conclusion that refusal to lease is in the public interest.

⁷ It is not possible to say whether the appellant's claims may also be predicated upon the theory of mutual mistake of fact. Assuming this to be the case, the appellant has made no effort to show that it would be entitled to relief on that ground. See *McNamara Construction of Manitoba, Ltd. v. United States*, *supra* at 4-13 (1975). As the appellant has failed to elect to have its claims considered under the Contract Disputes Act of 1978 (P.L. 95-563, 92 Stat. 2383, 41 U.S.C.A. §§ 601-613 (West Supp. 1980)), however, the Board would have no jurisdiction to consider a mutual mistake of fact claim in any event.

⁸ *Granite Construction Co.* (text, *supra*).

3. Oil and Gas Leases: Discretion to Lease—Oil and Gas Leases: Stipulations

Rejection of an oil and gas lease offer is a more severe measure than the most stringent stipulations and the record supporting a decision rejecting a lease offer in the public interest should ordinarily reflect consideration of whether leasing subject to clear and reasonable stipulations would adequately protect the public interest concerns of the surface management agency.

4. Oil and Gas Leases: Consent of Agency—Oil and Gas Leases: Discretion to Lease—Public Lands: Leases and Permits

Where public domain land is withdrawn or reserved for administration by another agency for a particular purpose, BLM should properly consider the recommendations of the surface management agency regarding lease issuance and any required stipulations, but this does not relieve BLM of the need to make an independent determination supported by the record of whether and under what conditions a lease may issue in the public interest consistent with multiple use values.

APPEARANCES: Laura L. Payne, Esq., Denver, Colorado, for appellant.

OPINION BY ACTING ADMINISTRATIVE JUDGE GRANT

INTERIOR BOARD OF LAND APPEALS

Esdras K. Hartley appeals from a decision of the Arizona State Office, Bureau of Land Management (BLM), dated May 16, 1980, rejecting his noncompetitive oil and gas lease offer, A 12541, for sec. 10,

T. 24 S., R. 28 E., Gila and Salt River meridian, Arizona. The land was reserved by Exec. Order No. 2138 of Feb. 19, 1915, for use by the Arizona National Guard as a rifle range. The BLM decision was based upon a determination by the Adjutant General of the Arizona National Guard that it would not be in the best interest of the National Guard to allow mineral leasing on the rifle range.

Appellant filed his oil and gas lease offer on Oct. 1, 1979, specifying that "[n]otwithstanding anything contained in subject offer to lease, offeror is applying for a sub-surface lease only inasmuch as the surface is reserved for military purposes for use of the National Guard of Arizona as a rifle range." On Oct. 24, 1979, BLM issued its first decision rejecting appellant's offer in which it stated:

The Adjutant General was contacted for input in regard to use of the lands for oil and gas leasing. A response to the request was received and we quote "It is determined by this Headquarters that it would not be in the best interest of the National Guard to allow mineral leasing on the above-mentioned rifle range."

The BLM decision further recited that prior to issuance of leases, the Geological Survey must concur with the stipulations attached to each lease. BLM contended that it is a practice of that agency to deny requests for clearance on stipulations excluding surface occupancy on the entire leasehold. BLM asserted in the decision that such a stipulation would effectively preclude

mineral development and therefore the tract should not be leased.

Appellant requested and was granted extensions of time to seek a change in the Adjutant General's recommendation. On May 12, 1980, the Contract Officer, Office of the Adjutant General, informed appellant that the Division of Military Affairs, State of Arizona, objected to oil and gas leasing of the lands in issue. He explained that the closest range that could be used by units currently utilizing the lands in issue is about 60 miles distant. He noted that such travel would be prohibitive with the fuel allowances provided. On May 16, 1980, BLM rejected appellant's oil and gas lease offer for the reasons stated in the decision of Oct. 24, 1979.

On appeal, appellant asserts that issuance of an oil and gas lease on the subject lands, with appropriate protective stipulations, is not inconsistent with and will not materially interfere with use of the lands for military purposes by the Arizona National Guard as a rifle range. Appellant contends in the statement of reasons for appeal that where the surface of public domain lands is administered by an agency other than BLM, the recommendation of that agency as to oil and gas leasing is advisory in nature and the ultimate decision of whether or not to lease remains with the Secretary.

Appellant acknowledges the proposition that BLM may refuse to issue a lease if the record supports the conclusion that the refusal

to lease is required in the public interest. However, appellant contends that there are no facts of record in this case to support the conclusion that leasing is not in the public interest and there is no indication that BLM independently determined that rejection was required.

Appellant further contends that BLM has improperly failed to give any consideration to the possibility of accepting the lease offer subject to reasonable stipulations. Counsel for appellant states that even if BLM determines that no accommodation can be made for surface access by the lessee without interfering with the use of the surface by the National Guard, appellant is willing to accept a lease with a no surface occupancy stipulation.

Accordingly, the issue presented by this appeal is whether a decision of the BLM rejecting an oil and gas lease offer in the exercise of the Secretary's discretionary authority will be affirmed as not being arbitrary, capricious, or an abuse of discretion in the absence of reasons supported by facts of record establishing that refusal to lease is required in the public interest and that clear and reasonable stipulations would not be sufficient to protect the public interest concerns raised by the surface management agency.

[1] Unless a withdrawal or reservation of public domain land specifically provides otherwise, the land withdrawn or reserved is presumed to be available for oil and gas leasing under secs. 1 and 17 of

the Mineral Leasing Act of 1920, as amended, 30 U.S.C. §§ 181, 226 (1976). *Joseph C. Manga*, 9 IBLA 319, 320 (1973); see *Udall v. Tallman*, 380 U.S. 1, 4 (1965).

[2] Sec. 17 of the Act, 30 U.S.C. § 226 (1976), requires that if an oil and gas lease is issued for lands not within the known geological structure of a producing oil or gas field, it must go to the first qualified applicant, but "it left the Secretary discretion to refuse to issue any lease at all on a given tract." *Udall v. Tallman*, *supra* at 4; *Schraier v. Hickel*, 419 F.2d 663, 666 (D.C. Cir. 1969). Further, the discretionary authority of the Secretary of the Interior to refuse to issue oil and gas leases for public domain lands applies even where the lands have not been withdrawn from operation of the mineral leasing laws. *Udall v. Tallman*, *supra*; *Robert P. Kunkel*, 41 IBLA 77 (1979). But cf. *Mountain States Legal Foundation v. Andrus*, 499 F. Supp. 383 (D. Wyo. 1980) (withholding action on substantial numbers of lease offers embracing very large tracts of public domain for extended period may be construed as a withdrawal under sec. 103 of the Federal Land Policy and Management Act of 1976, 43 U.S.C. § 1702(j) (1976)). A decision of BLM refusing to issue a lease will be upheld provided it sets forth the reasons for doing so and provided the background data and facts of record support the conclusion that the refusal is required in the public interest. *Robert P. Kunkel*, *supra*

at 78; see *Cartridge Syndicate*, 25 IBLA 57 (1976). No weight is attached to conclusory declarations of what is required in the public interest where supporting data is not submitted. See *James O. Breene, Jr. (On Reconsideration)*, 42 IBLA 395, 399 (1979).

[3] BLM has the authority to require execution of special stipulations to protect environmental and other land use values when deciding to issue a lease. Rejection of an oil and gas lease offer is a more severe measure than the most stringent stipulations and the record where leasing has been refused should ordinarily reflect that BLM has considered whether leasing subject to clear and reasonable stipulations would be sufficient to protect the public interest concerns raised by the surface management agency. *Robert P. Kunkel*, *supra* at 79; see *Howard L. Ross*, 49 IBLA 87 (1980); *James O. Breene, Jr. (On Reconsideration)*, *supra*.

[4] Where public domain land is withdrawn for administration by another agency for a particular purpose, BLM should properly consider the recommendations of the surface management agency regarding lease issuance and any required stipulations, but this does not relieve BLM of the need to make an independent determination supported by the record of whether and under what conditions a lease may issue in the public interest consistent with multiple use values. See *Stanley M. Edwards*, 24 IBLA 12, 83 I.D. 33 (1976); *Esdras K.*

April 9, 1981

Hartley, 23 IBLA 102 (1975).¹ In a recent case this Board considered an appeal from rejection of an oil and gas lease offer for land withdrawn for use by the Arizona National Guard as a rifle range where rejection was based on a determination of a Guard official that it would not be in the best interest of the National Guard to allow mineral leasing of the land. The Board held that rejection of an oil and gas lease offer for public domain lands withdrawn for the Arizona National Guard for use as a rifle range, based solely on the summary objection of the National Guard, where the record is devoid of any indication that BLM or Guard officials made an independent determination whether leasing as in the public interest, is not a proper exercise of discretion. *Howard L. Ross*, *supra* at 88.

This is consistent with the statutory provision cited in *Howard L. Ross*, *supra*, to the effect that no disposition of minerals on public lands withdrawn for use by any agency of the Department of Defense shall be made "where the Secretary of Defense, after consultation with the Secretary of the Interior, determines that such disposition or exploration is inconsistent with the military use of the lands so withdrawn or reserved." 43 U.S.C. § 158

(1976). Compatibility of leasing with the military purposes for which the land is withdrawn and whether such military uses might be protected by stipulations are certainly important (and perhaps dispositive) factors in determining whether leasing is in the public interest. However, no decision rejecting a lease offer can be sustained on the mere conclusory assertion that leasing is inconsistent with military use of the withdrawn lands. Accordingly, in the present context we need not reach the issue of whether the Arizona National Guard constitutes an agency of the Department of Defense which must consent to lease issuance under the statutory provision. 43 U.S.C. § 158 (1976).²

BLM rejected the offer in issue on the basis of the conclusory determination of the Adjutant General that it would not be in the best interest of the National Guard to allow mineral leasing on the rifle range. The only reason the National Guard offered for recommending against leasing the land was that it would be an inconvenience and a financial hardship for the Guard to travel to another rifle range 60 miles

¹ This should be distinguished from leasing of minerals in acquired lands of the United States under sec. 3 of the Mineral Leasing Act for Acquired Lands, *as amended*, 30 U.S.C. § 352 (1976), which requires the consent of the agency having jurisdiction over the lands containing such minerals. See *Duncan Miller*, 6 IBLA 216, 79 I.D. 416 (1972).

² As a general rule the National Guard is the organized militia of the states and constitutes a state governmental agency. 53 Am. Jur. 2d, *Military and Civil Defense* § 38 (1970); see *Mela v. Callaway*, 378 F. Supp. 25 (S.D.N.Y. 1974). Members of the Army National Guard of the United States are not in active Federal service and not part of the regular Army (under the Department of Defense) except when ordered into Federal service under law. 10 U.S.C. §§ 3062(c), 3495 (1976); 53 Am. Jur. 2d, *Military and Civil Defense* § 15 (1970); see *Satcher v. United States*, 101 F. Supp. 919 (W.D.S.C. 1952).

from the one at issue. The record does not disclose how much of the 640 acres of land is actually used as a rifle range and how frequently the range is used. There is no indication in the record of consideration by either BLM or the National Guard of whether surface use could be restricted to certain portions of the lease in a way which would avoid interference with use of the land by the National Guard.

Finally, BLM has misconstrued this Board's holding regarding issuance of oil and gas leases subject to no surface occupancy stipulations covering the entire lease area. Although as a general rule a stipulation should not be so restrictive as to preclude any right of enjoyment and a lease should not be issued under such circumstances, this Board has recognized an exception where, as in this case, the offeror manifests his willingness to accept a lease embodying those stringent conditions. *Cartridge Syndicate*, *supra* at 59.

Accordingly, the case will be remanded to BLM to consult further with the National Guard and to make a determination supported by the record regarding whether lease issuance is incompatible with the military use to which the land is being devoted and whether protective stipulations may be utilized as a means of eliminating any such incompatibility. The decision on remand should given reasons supported by information of record in the case.

Therefore, pursuant to the authority delegated to the Board of Land Appeals by the Secretary of the Interior, 43 CFR 4.1, the decision of the State Office is set aside and the case is remanded to that office for further consideration consistent with this decision.

TETLIN NATIVE CORP.

5 ANCAB 197

Decided April 14, 1981

Appeal from the Decision of the Alaska State Office, Bureau of Land Management F-20518, Sept. 24, 1980.

Motion to dismiss portion of appeal sustained.

1. Alaska Native Claims Settlement Act: Alaska Native Claims Appeal Board: Appeals: Jurisdiction

The Board has jurisdiction to decide whether the Bureau of Land Management, in issuing a decision to convey land pursuant to ANCSA, erred by failing to identify and adjudicate an alleged third-party interest derived from a source other than the Federal Government or the State of Alaska.

2. Alaska Native Claims Settlement Act: Conveyances: Valid Existing Rights: Third-Party Interests

Sec. 14(g) of ANCSA mandates identification, in conveyance documents issued pursuant to ANCSA, of only those interests issued by the United States or the State of Alaska. Alleged third-party interests derived from sources other than the United States or the State of Alaska are not within the scope of § 14(g) of ANCSA.

3. Alaska Native Claims Settlement Act: Conveyances: Valid Existing Rights: Third-Party Interests—Alaska Native Claims Settlement Act: Administrative Procedure: Decision to Issue Conveyance

Departmental policy expressed in Secretary's Order No. 3029 and converted into the Departmental Manual at 601 DM 2.3 and 2.4 does not require the Bureau of Land Management to identify or adjudicate alleged third-party interests derived from sources other than the Federal Government or the State of Alaska.

APPEARANCES: Frederick H. Boness, Esq., Preston Thorgrimson, Ellis & Holman, for Tetlin Native Corp.; Elizabeth S. Ingraham, Esq., for Doyon, Limited; M. Francis Neville, Esq., Office of the Regional Solicitor, for Bureau of Land Management; Carl Winner, Esq., Robertson, Monagle, Eastaugh and Bradley, for Resource Associates of Alaska (listing limited to persons addressing the issue decided).

**OPINION BY
ALASKA NATIVE CLAIMS
APPEAL BOARD**

Summary of Appeal

This appeal involves in part the question whether the Bureau of Land Management need identify and adjudicate, prior to conveyance of the subject lands pursuant to ANCSA, a mineral lease executed by the grantee Native corporation and a third party.

The Board holds that the Bureau of Land Management need neither identify nor adjudicate said mineral lease prior to conveyance of the subject land pursuant to ANCSA. Said lease is not within the scope or subject matter of § 14(g) of ANCSA. Departmental policy expressed in Secretary's Order No. 3029 and converted into the Departmental Manual at 601 DM 2.3 and 2.4 does not require the Bureau of Land Management to identify or adjudicate third-party interests derived from sources other than the United States or the State of Alaska.

Jurisdiction

The Alaska Native Claims Appeal Board, pursuant to delegation of authority to administer the Alaska Native Claims Settlement Act, 85 Stat. 688, *as amended*, 43 U.S.C. §§ 1601-1628 (1976 and Supp. I 1977), and the implementing regulations in 43 CFR Part 2650 and 43 CFR Part 4, Subpart J, hereby makes the following findings, conclusions and decision dismissing a portion of the appeal of Tetlin Native Corp. from the above-

designated decision of the Alaska State Office, Bureau of Land Management.

Procedural Background

On Nov. 15, 1973, pursuant to § 19(b) of the Alaska Native Claims Settlement Act (ANCSA), Tetlin Native Corp. (Tetlin) elected to receive title to lands within the former Tetlin Indian Reserve.

On Sept. 24, 1980, the Bureau of Land Management (BLM) issued its above-designated decision numbered F-20518 approving for conveyance to Tetlin a portion of the lands within the former Tetlin Indian Reserve.

On Oct. 24, 1980, Tetlin appealed the above-designated decision on the grounds, *inter alia*, that BLM failed to identify and adjudicate as invalid a mineral lease executed by Tetlin and Resource Associates of Alaska, Inc. (RAA), which lease purported to apply to all the lands approved for conveyance to Tetlin.

In its Answer, dated Jan. 20, 1981, to Tetlin's Statement of Reasons, RAA declared that this Board is without jurisdiction to determine the validity of the subject lease, that the BLM was correct in not addressing said lease in the challenged decision, and that said lease is in any case entirely valid and enforceable.

On Jan. 30, 1981, pursuant to the order of the Board, Tetlin filed a supplemental brief in support of its Statement of Reasons. Tetlin's primary argument was that § 14(g) of ANCSA and the Departmental

policy reflected in Secretary's Order No. 3016 (Dec. 14, 1977) (S.O. 3016) required the BLM to identify all valid third-party interests in the conveyance document. Appellant argued that the subject mineral lease, executed by RAA and Tetlin in August 1977 without the knowledge and consent of the BLM but purporting to be immediately applicable, could not possibly be valid, because at the time of execution of the lease the subject lands were Native-selected and under the administrative jurisdiction of the BLM. Appellant asserted that new third-party interests in the land could be created only pursuant to Federal law and only by the BLM. Appellant took the position that, prior to conveyance of the land pursuant to ANCSA, it is impossible for private parties to create a valid lease upon the subject lands without the BLM's knowledge and participation. Appellant asserted that while the lease is clearly invalid, certainty of title following conveyance to Tetlin requires that the lease be adjudicated and ruled invalid by the BLM.

On Feb. 10, 1981, RAA filed its answer to Tetlin's supplemental brief and a motion to dismiss for lack of jurisdiction. Quoting 43 CFR 4.1(b)(5),¹ RAA asserted that the Board lacked jurisdiction to decide Tetlin's appeal with re-

¹ Sec. 4.1(b)(5) provides that: "The Board considers and decides finally for the Department appeals to the head of the Department from findings of fact or decisions rendered by Departmental officials in matters relating to land selection arising under the Alaska Native Claims Settlement Act."

April 14, 1981

spect to the mineral lease. RAA argued that BLM did not make any "findings of fact or decisions" on the mineral lease, and that the lease is not a matter "relating to land selection arising under the Alaska Native Claims Settlement Act."

RAA cited *Appeal of Chickaloon Moose Creek Native Association, Inc.*, 4 ANCAB 250, 87 I.D. 219 (1980) [VLS 80-1] as disposing of an analogous appeal before this Board.

RAA also argued that the BLM was correct in not addressing the mineral lease. RAA asserted that the lease was not a third-party valid existing right requiring identification or adjudication pursuant to § 14(g) of ANCSA or Secretary's Order No. 3029, 43 FR 55287 (1978) (S.O. 3029), which superceded S.O. 3016. RAA argued that the lease, a private transaction, is not the sort of third-party valid existing right with which Congress, in enacting ANCSA, was concerned. RAA quoted *Appeal of Theodore J. Almasy, et al.*, 4 ANCAB 151, 160, 87 I.D. 81, 85 (1980) [RLS 79-12], where this Board concluded that: "Valid existing rights protected under § 14(g) are, in all cases, derived from and created by the State or Federal Government."

In summary, RAA argued that the mineral lease, executed in 1977 by private parties without government involvement, does not affect the conveyance of the subject lands to Tetlin pursuant to ANCSA. Further, the lease is not a matter relating to land selection, and it

was not recommended to the attention of the BLM by Congress when it mandated protection of valid existing rights.

Responding to RAA's motion to dismiss, Tetlin asserted that the Board does have jurisdiction to consider whether the lease should have been identified by the BLM in its Decision to Issue Conveyance (DIC). Tetlin argued that RAA's assertion that jurisdiction was lacking was based upon RAA's misreading of 43 CFR 4.1(b)(5) and of Tetlin's position in this appeal.

Tetlin argued that the DIC from which this appeal was taken is clearly a decision which satisfies the Board's jurisdictional requirement, and the fact that the DIC was silent regarding the RAA lease could not possibly, in and of itself, preclude jurisdiction in the Board to consider whether the omission was appropriate.

Tetlin further reclarified its position, regarding the mineral lease, that it is seeking to have this Board address only its contention that private parties cannot create a lease of lands within the public domain. Tetlin declared that it is not asking the Board to adjudicate completely the nature of the agreement between RAA and Tetlin.

On Mar. 9, 1981, the BLM filed its Answer to Tetlin's supplemental brief. BLM asserted that the Departmental policy cited by Tetlin had been modified by S.O. 3029 and, subsequently, in the Departmental Manual. It quoted 601 DM 2.3 in pertinent part, "[I]t is appropriate

for BLM to determine in the first instance the validity of those interests created by federal laws which are administered by BLM." BLM argued that the RAA lease is not an interest created by a Federal law administered by the BLM, and that therefore BLM has no duty to adjudicate the validity of the lease.

The BLM further argued that the BLM should not identify the subject mineral lease in the DIC because the lease was not created by the State or by another Federal agency. In support of this position, BLM quoted 601 DM 2.4:

The Bureau of Land Management will identify third party interests created by the State, as reflected by the land records of the State of Alaska, Division of Lands, and serve notice on all parties of each other's possible interests, but this Department will not adjudicate these interests.

Decision

Jurisdiction of the Board is determined pursuant to Departmental regulations in 43 CFR 4.1(b)(5):

Alaska Native Claims Appeal Board. The Board considers and decides finally for the Department appeals to the head of the Department from findings of fact or decisions rendered by Departmental officials in matters relating to land selection arising under the Alaska Native Claims Settlement Act (85 Stat. 688).

The subject BLM decision to convey to Tetlin, pursuant to § 19(b) of ANCSA, lands formerly within the Tetlin Indian Reserve is a decision "rendered by Departmental officials in matters relating

to land selection arising under the Alaska Native Claims Settlement Act." Tetlin's appeal of that decision, alleging that the decision should have identified and adjudicated the subject mineral lease, is accordingly an appeal from the type of decision described in 43 CFR 4.1(b)(5).

While arguing that the lease was invalid, Tetlin specifically appealed the BLM's failure, in the subject decision, to identify and adjudicate the RAA lease. Thus, the thrust of Tetlin's appeal was BLM's alleged error rather than the invalidity of the lease *per se*.

RAA is correct in their contention that the BLM decision did not make "findings of fact or decisions" on the disputed mineral lease. The decision is silent on the lease. It is this very omission which Tetlin appeals, asserting that BLM should have adjudicated the lease, and that the decision to convey should have reflected the status of the lease as determined by that adjudication. In arguing that the Board lacks jurisdiction because BLM did not make findings on the lease, RAA apparently takes the position that omission of any matter from a conveyance decision, even if erroneous, cannot be appealed. This is not the case. Where the alleged error is BLM's failure to adjudicate an interest and to note its validity or invalidity in an ANCSA conveyance decision, the appeal is from a land selection decision under ANCSA, and the Board clearly has jurisdiction.

RAA also challenges the Board's jurisdiction over this appeal because of the Board's ruling in *Appeal of Chickaloon Moose Creek Native Association, Inc., supra*, that contractual disputes between the appellant and other corporations are not appeals from findings of Departmental officials within jurisdictional regulations in 43 CFR 4.1(b) (5) and could not be decided by the Board. The issue on which the Board made this ruling in *Chickaloon* was whether a contract between the appellant Native corporation and other corporations was valid. As noted above, the threshold question before the Board in the present appeal is whether BLM erred in failing to adjudicate such a private contract. The Board's jurisdiction to decide that question is not addressed by the ruling in *Chickaloon*.

[1] Therefore, the Board holds it has jurisdiction to decide whether the BLM erred, in the above-designated decision, by failing to identify and adjudicate the RAA mineral lease.

Turning to the question whether BLM erred in failing to identify and adjudicate the subject mineral lease, the Board holds that the BLM did not err.

Tetlin argued that the lease was a purported "valid existing right," and that § 14(g) of ANCSA and Departmental policy reflected in S.O. 3016 required BLM to identify in the conveyance document all valid existing rights. Further, Tetlin argued that for Tetlin to re-

ceive "certainty of title" in lands conveyed pursuant to ANCSA, BLM is required to identify and adjudicate all alleged valid existing rights, even those which are "clearly invalid."

The RAA mineral lease here in dispute is not the sort of third-party interest with which Congress, in drafting § 14(g) of ANCSA, was concerned. With regard to identification of "valid existing rights," § 14(g) specifically provides:

Where, prior to patent of any land or minerals under this Act, a lease, contract, permit, right-of-way, or easement * * * has been issued for the surface or minerals covered under such patent, the patent, shall contain provisions making it subject to the lease, contract, permit, right-of-way, or easement * * *. Upon issuance of the patent, the patentee shall succeed and become entitled to any and all interests of the State or the United States as lessor, contractor, permitter, or grantor, in any such leases, contracts, permits, rights-of-way, or easements covering the estate patented * * *. The administration of such lease, contract, permit, right-of-way, or easement shall continue to be by the State or the United States, unless the agency responsible for administration waives administration.

[2] Sec. 14(g) mandates identification, in conveyance documents issued pursuant to ANCSA, of only those leases and other interests issued by the United States or the State of Alaska. Interests derived from sources other than the United States or the State of Alaska are not within the scope of § 14(g). Accordingly, the Board held in *Appeal of Theodore J. Almasay, et al., supra*, that "[v]alid existing rights

protected under § 14(g) are, in all cases derived from and created by the State and Federal Government." 4 ANCAB 151, 160, 87 I.D. 81, 85.

The current Departmental policy regarding identification and adjudication of alleged third-party interests in lands being conveyed under ANCSA was stated in S.O. 3029, and subsequently embodied in the Departmental Manual at 601 DM 2.3 and 2.4:

2.3 * * * Regarding adjudication of third party valid existing rights, it is appropriate for BLM to determine in the first instance the validity of those interests created by federal laws which are administered by BLM * * *.

2.4 *Procedures.* The Bureau of Land Management will identify third party interests created by the State, as reflected by the land records of the State of Alaska, Division of Lands, and serve notice on all parties of each other's possible interests, but this Department will not adjudicate these interests.

[3] Departmental policy expressed in S.O. 3029 and converted into the Departmental Manual at 601 DM 2.3 and 2.4 does not require BLM to identify or adjudicate alleged third-party interests derived from sources other than the Federal Government or the State of Alaska. Since the RAA mineral lease was not issued by the Federal Government or the State of Alaska, the BLM is not required to identify or adjudicate the lease prior to conveyance of the subject lands pursuant to ANCSA.

Order

Accordingly, the Board hereby dismisses the above-designated appeal of Tetlin Native Corp. insofar as it concerns the RAA mineral lease.

Left for future determination by this Board are those portions of Tetlin's above-designated appeal regarding site easement EIN 2 C5 and the business lease issued to Ray Scoby on Oct. 12, 1960.

This represents a unanimous decision of the Board.

BELVA COAL CO., INC.

3 IBSMA 83

Decided April 17, 1981

Appeal by the Office of Surface Mining Reclamation and Enforcement from that part of an Apr. 29, 1980, decision of Administrative Law Judge Tom M. Allen vacating violation 3 of Notice of Violation No. 79-I-47-20 issued for failure to maintain access and haul roads (Docket No. CH 0-17-P).

Affirmed as modified.

1. Surface Mining Control and Reclamation Act of 1977: Roads: Maintenance—Surface Mining Control and

April 17, 1981

Reclamation Act of 1977: Words and Phrases

"Road." A "road" that leads from a coal stockpile of an underground mining operation to a state road and over which coal trucks travel in moving between the stockpile and the state road is a road within the meaning of 30 CFR 710.5 and is subject to the maintenance requirements of 30 CFR 717.17(j) (3) (i).

2. Surface Mining Control and Reclamation Act of 1977: Roads: Maintenance

The road maintenance requirement of 30 CFR 717.17(j) (3) (i) is a preventive measure and proof of the existence of the harm it is intended to prevent is not necessary to establish a violation of that requirement; proof of the road's condition and maintenance practices of the road is required.

3. Surface Mining Control and Reclamation Act of 1977: Administrative Procedure: Burden of Proof—Surface Mining Control and Reclamation Act of 1977: Civil Penalties: Hearings Procedure—Surface Mining Control and Reclamation Act of 1977: Evidence: Generally

In a civil penalty proceeding when OSM's prima facie case as to the fact of violation is effectively controverted by the person charged with the violation, the violation must be vacated because OSM has the ultimate burden of persuasion in accordance with 43 CFR 4.1155.

APPEARANCES: Ricklin Brown, Esq., Bowles, McDavid, Graff & Love, Charleston, West Virginia, for Belva Coal Co. Inc; Harold Chambers, Esq., Office of the Field Solicitor, Charleston, West Virginia, Walton D. Morris, Jr., Esq., and Marcus P. McGraw, Esq., Assistant Solicitor for Enforcement, Office

of the Solicitor, Division of Surface Mining, Washington, D.C., for the Office of Surface Mining Reclamation and Enforcement.

*OPINION BY THE
INTERIOR BOARD OF
SURFACE MINING AND
RECLAMATION APPEALS*

The Office of Surface Mining Reclamation and Enforcement (OSM) has sought review of that part of an Apr. 29, 1980, decision of Administrative Law Judge Tom M. Allen vacating violation 3 of Notice of Violation No. 79-I-47-20, issued pursuant to the Surface Mining Control and Reclamation Act of 1977.¹ The violation alleged was a failure "to maintain access and haul roads by surfacing with a durable, nontoxic material" in accordance with 30 CFR 717.17(j) (3) (i). We affirm the Administrative Law Judge's decision, although for different reasons, as discussed below.

Background

On May 10, 1979, OSM inspectors visited the Belva Coal Co., Inc. (Belva), underground Mine 8-B in Logan County, West Virginia, and issued Notice of Violation No. 79-I-47-20 alleging four violations. Belva did not file an application for review of the notice, but did seek an assessment conference on the proposed civil penalty. After receipt of the conference report, it filed a petition for review of the civil

¹ Act of Aug. 3, 1977, 91 Stat. 445, 30 U.S.C. §§ 1201-1328 (Supp. II 1978).

penalty assessment. Following a hearing, the Administrative Law Judge vacated the notice and ordered repayment of the civil penalty. On May 29, 1980, OSM sought review of the decision. In its brief filed on July 11, 1980, OSM indicated that only alleged violation 3 was in issue.

At the hearing, the OSM inspector stated that on the date of his inspection the road leading from the state road to a stockpile area was covered with "rather large" amounts of coal fines and mud (Tr. 11). He cited Belva for failing to maintain a durable surface on that road (Tr. 16). He described the condition of the road, which was a little over 100 feet long (Tr. 32) and which he considered to be a haul road (Tr. 31), as follows:

On that date the road was fairly dry; there was some seepage coming out of the stockpile area, it was draining down the road a ways and off in to the pond near the end of the road. The material that was on the road was fairly dry but there was evidence in the past where trucks had been moving out that that had been an extremely muddy soupy situation and passage of a truck had caused material to slop out of the road on both sides.

(Tr. 16). The inspector said the road had been surfaced with stone at one time but the stone had not been replaced and the road had not been scraped (Tr. 38). "[T]he stone had been beat into the bottom and mud and coal fines from the hauling process deposited on the road and had not been removed" (Tr. 39). The inspector testified that material thrown out by the tires of trucks

would land on either side of the road, from where it would continue down the ditch line and would eventually enter a stream (Tr. 41). He stated that the ditch did not empty into a sedimentation pond (Tr. 41).

This last statement conflicted with the testimony of Jack Hughes, safety director for Belva, and Danny Vance, surface foreman for Belva. Hughes stated that the stockpile road was ditched on both sides; that there was a culvert under the stockpile road; and that ditches on the minesite side of the road led to a sedimentation pond (Tr. 69-70). He also stated that any drainage from the haul road area would have "no recourse but to enter one of the ponds" (Tr. 66). Vance stated that the ditch on the mine side of the state road emptied into the surface run-off pond (Tr. 86). Hughes estimated that the road was 75-100 feet in length (Tr. 68). He said it had been surfaced with crushed stone and on the date of inspection there was "some accumulation of dried mud and some coal fines" on the road (Tr. 68). He said the accumulation was a result of the coal loading process and dirt from the unpaved state road (Tr. 68). Vance stated that over a period of time coal fines and mud accumulate on the road (Tr. 84). He did not recall the amount of accumulation on the day of inspection, but stated:

We grade the roads quite frequently and when a build-up occurs on there we take the grader and remove it from the surface.

* * * * *

April 17, 1981

Summer months it's not too often; winter months it's daily because you have more of a mud build-up off of your dirt roads in the winter months.

(Tr. 90). Vance stated that he considered a haul road to be one used to haul coal and that Belva hauled coal on the road in question (Tr. 89).

Discussion and Conclusions

In his opinion, the Administrative Law Judge states the first issue as "[w]hether or not the 'haul road' was in fact a haul road and properly maintained." His discussion of this issue is as follows:

A haul road is defined as: "A road built to carry heavily loaded trucks at a good speed. The grade is limited on this type of road and usually is kept to less than 9 [*sic*²] percent of climb in direction of load movement."⁷

The regulations define "road" as: "Roads means access and haul roads constructed, used, re-constructed, improved, or maintained for use in surface coal mining and reclamation operations, including use by coal hauling vehicles leading to transfer, processing, or storage area."⁸

The "haul road" in question is, at most, 100 feet long (Tr. 68), or according to respondent, 50-55 feet (Tr. 20; Appl. Exh. 2).

It accesses the public road from the raw coal pile where trucks are loaded by means of a front-end loader.

According to the definition published by the Department of the Interior, it would be highly unlikely that any loaded coal

trucks could muster any appreciable speed in such a short distance.

While it could technically, although not accurately, be called a road, it appears to fall more into the category of a driveway to a coal loading facility. This, however, is of little consequence in light of other factors.^[3]

[1] Of course, it is the definition in the regulations that governs, not that in the Department's *Dictionary of Mining, Mineral, and Related Terms*. The definition in the regulations is a functional one: if a road is "used * * * by coal-hauling vehicles" it is a haul road or access road. Belva's representatives testified that the road was so used. Other evidence corroborates that fact. It is thus a road within the meaning of 30 CFR 710.5.

On the issue of whether Belva had properly maintained the road in accordance with 30 CFR 717.17(j)(3)(i), the Administrative Law Judge stated that OSM had not presented a *prima facie* case. He set forth the following, apparently as criteria for a *prima facie* case:

To charge an operator with a violation of this nature, without (1) determining by some means whether the road was soundly constructed of a durable, non-toxic material, or (2) that the maintenance schedule was nonexistent, ineffectual, or current, and (3) that the condition was likely to effect [*sic*] the hydrologic balance off the permit property, is certainly an unwarranted exercise of authority in light of Island Creek and Pegasus together with knowledge that any runoff from the road went

² The text of the dictionary quoted from reads "17 percent."

⁷ U.S. Dept. of the Interior, "A Dictionary of Mining, Mineral and Related Terms" (1968).

⁸ 30 CFR 710.5.

³ Decision of Apr. 29, 1980, Docket No. CH 0-17-P at pp. 6-7.

into ditches that led to sediment ponds.[⁴]

[2] *Island Creek Coal Co.*, 1 IBSMA 285, 86 I.D. 623 (1979), referred to in the excerpt above, also involved a violation of the requirement of 30 CFR 717.17(j) (3)(i) that haul roads "shall be routinely maintained by means such as, but not limited to, wetting, scraping, or surfacing." In that decision we discussed the relationship between whether a haul road was properly maintained in accordance with sec. 717.17(j) (3)(i) and whether the road was constructed of a durable, non-toxic material as required by sec. 717.17(j) (2)(iv).⁵ We also stated that OSM need not prove an adverse effect on water quality in order to establish a violation of sec. 717.17(j) (3)(i). Because the maintenance requirement is designed to *prevent* such effects, it is not necessary to demonstrate that the effects have occurred

to show that the preventive measures were not taken. Nor does the existence of ditches leading to sedimentation ponds vitiate a violation of 30 CFR 717.17(j) (3)(i). What *is* germane to a violation of that regulation is the condition of the road and the methods of maintaining it.⁶

On these latter issues the evidence in this case was conflicting. OSM's inspector testified that mud and coal fines were on the road when he inspected, that the stone surfacing had been beaten down and that the mud and coal fines deposited on the road had not been removed.⁷ This is adequate evidence to establish the essential facts and is sufficient for a *prima facie* case.⁸ It was, however, contradicted. Although Vance conceded there was some mud and coal fines on the road when it was inspected, he stated that Belva regularly scraped off accumulated deposits when needed, more often in winter than in summer.

[3] Because this was a civil penalty proceeding, in order to prevail OSM must carry the ultimate burden of persuasion on the fact of the violation.⁹ In this case its *prima facie* case was effectively controverted. Weighing all the relevant evidence, we hold that OSM did not carry its burden of persuasion.

⁴ *Id.* at 7-8. "Pegasus" refers to a July 13, 1979, decision in *Pegasus Mining Co.*, Docket No. CH 9-37-R, that preceded the Board's decision in *Island Creek*, discussed below.

⁵ *Island Creek Coal Co.*, *supra* at 290 n.10, 86 I.D. at 626 n.10 (1979), reads in part:

"The ALJ's opinion questions why OSM did not cite *Island Creek* for a violation of 30 CFR 717.17(j) (2)(iv). This subsection pertains to standards for the construction of roads and includes a requirement that they be surfaced with 'durable material.' In contrast, 30 CFR 717.17(j) (3)(i), which requires the routine maintenance of roads by means including surfacing, does not specify that durable material must be employed in such maintenance. The resurfacing of a road with a durable material may, however, be necessary under some circumstances to maintain a road in compliance with the purpose of 30 CFR 717.17(j). Regardless, however, of the cause of the deficiency, it is the fact of the inadequacy of the roadway conditions and not that cause which is at issue here."

⁶ Maintenance practices and schedules will, of course, depend on the road's use and other circumstances, e.g., weather. Whatever they are, they must be adequate to prevent additional contributions of suspended solids to stream flow.

⁷ Tr. 11, 39.

v.

ROBERT A. PETTIGREW

54 IBLA 149

Decided April 17, 1981

Appeal from a decision of Administrative Law Judge R. M. Steiner granting permission to engage in placer mining on lands withdrawn for power development. CA MC 60454.

Reversed.

**1. Mining Claims: Powersite Lands—
Mining Claims: Surface Uses—Mining
Claims Rights Restoration Act**

Under the Mining Claims Rights Restoration Act of 1955, it is proper to prohibit all placer mining operations on a mining claim on land withdrawn for power development or powersites, where unrestricted placer mining on such land would result in substantial interference with the use of the land for recreational purposes.

**2. Mining Claims: Powersite Lands—
Mining Claims: Surface Uses—Mining
Claims Rights Restoration Act**

The Mining Claims Rights Restoration Act of 1955 gives the Secretary of the Interior no discretion to permit limited or restricted placer mining on land withdrawn or reserved for power development or powersites. The Secretary may permit either unrestricted placer mining or none at all. The only condition which he may impose on permission to mine is that the locator must restore the surface of the claim to its condition immediately prior to mining operations.

APPEARANCES: James E. Turner, Esq., Office of the Solicitor, U.S. Department of the Interior, Sacramento, California, for appellant.

*OPINION BY
ADMINISTRATIVE JUDGE
HENRIQUES*

*INTERIOR BOARD OF
LAND APPEALS*

The United States through the Bureau of Land Management (BLM), Department of the Interior, appeals from a decision of Administrative Law Judge R. M. Steiner, dated Jan. 7, 1981, granting permission to Robert A. Pettigrew to engage in placer mining on lands withdrawn for power development. Judge Steiner's decision was issued following a public hearing pursuant to the provisions of the Act of Aug. 11, 1955, 30 U.S.C. §§ 621 through 625 (1976), also known as the Mining Claims Rights Restoration Act

of 1955. The claim at issue, the Retirement Crevice No. 1, was located on Jan. 15, 1980, in S $\frac{1}{2}$ SW $\frac{1}{4}$ SW $\frac{1}{4}$ sec. 22, T. 11 N., R. 10 E., Mount Diablo meridian, El Dorado County, California.¹

[1] Pettigrew's claim was located pursuant to the Act of Aug. 11, 1955, *supra*, which provides for location of mining claims on lands withdrawn for power development or powersites. The Act requires any person who locates a mining claim on such lands after Aug. 11, 1955, to file a copy of the notice of location in the district land office within 60 days of location. 30 U.S.C. § 623 (1976). A person who files a placer mining claim with BLM may not conduct mining operations on the claim within 60 days after filing in the land office, in order to give the Secretary the opportunity to decide whether a hearing should be held on the question of "whether placer mining operations would substan-

tially interfere with other uses of the land included within the placer claim." 30 U.S.C. § 621(b) (1976). If the Secretary decides to hold a hearing, mining operations on the claim must be suspended until the hearing has been held and an appropriate order issued which

shall provide for one of the following: (1) a complete prohibition of placer mining; (2) a permission to engage in placer mining upon the condition that the locator shall, following placer operations, restore the surface of the claim to the condition in which it was immediately prior to those operations; or (3) a general permission to engage in placer mining.

30 U.S.C. § 621(b) (1976). *See also* 43 CFR Subpart 3730.

At the hearing, BLM presented evidence that mining operations would interfere with rafting activities on the South Fork of the American River. The claim at issue includes land on both sides of this river. Interference would be caused by cables anchoring the claimant's dredge to the banks of the river (Tr. 23). Such cables would not only interfere with rafting, but would also interfere with access to the shore (Tr. 31) and enjoyment of a special use permit issued by BLM to a third party (Tr. 19). Evidence was further offered that private use of the South Fork of the American River for rafting activities totaled approximately 15,000 passengers during 1978.

We note that while the subject lands are withdrawn for power development, the phrase "other uses of the land included within the

¹ An examination of Government Exhibit 3 reveals that the lands sought by the claimant were, as of the date of the hearing, within the boundaries of a withdrawal for Power Project 2761 Proposed. Sec. 2 of the Act of Aug. 11, 1955, *supra*, excepts from mineral location those lands, *inter alia*, which are under examination and survey by a prospective licensee of the Federal Power Commission, if such prospective licensee holds an unanceled permit issued under the Federal Power Act authorizing him to conduct such examination and survey with respect to such lands and such permit has not been renewed in the case of such prospective licensee more than once. While the file does not reveal the status or existence of the permit involved, it is possible that the lands sought by claimant were closed to mineral location pursuant to sec. 2 at the time of claimant's filing of his location notice. If so, his location was void ab initio. The Government's decision to challenge the Retirement Crevice claim and our holding herein make unnecessary further inquiry into this issue.

v.

ROBERT A. PETTIGREW

April 17, 1981

placer claim" in sec. 621(b) is not restricted to power development uses. Although the Mining Claims Rights Restoration Act applies by its terms to land within power development withdrawals, all uses of the land are to be considered in determining whether placer mining operations will substantially interfere with the use of the land. *United States v. Cohan*, 70 I.D. 178, 179 (1963). In fact, the decisions considering whether to prohibit placer claims on powersite classifications have been concerned with uses other than power development. *United States v. Western Minerals & Petroleum, Inc.*, 12 IBLA 328 (1973) (use of the land for watershed); *United States v. Bennewitz*, 72 I.D. 183 (1965) (use of the land for recreational purposes); *United States v. Cohan*, *supra* (use of the land for recreational and homesite purposes). On the basis of the language of sec. 621(b) and the Departmental decisions which interpret it, it must be concluded that the "other uses" to which that section refers are not restricted to power development or powersites. Therefore, placer mining which would substantially interfere with recreational use of the withdrawn land is properly prohibited.

Based upon the evidence summarized above, Judge Steiner concluded that the Government had failed to establish that placer mining on the Retirement Crevice No. 1 would substantially interfere with

other uses of the land. Judge Steiner found instead that the claimant showed by a preponderance of the evidence that mining operations on the subject claim would not so interfere. Permission was granted to the claimant to engage in placer mining on the condition that the locator, following placer operations, restore the surface of the claim to the condition in which it was immediately prior to these operations. While we might acknowledge that claimant Pettigrew's mining operation would be unlikely to substantially interfere with other uses of the lands, we do not believe this is the real issue here.

[2] The Mining Claims Rights Restoration Act of 1955, *supra*, allows the Department only three alternative courses of action. As we have already noted, those three alternatives are: (1) To bar any placer mining activity; (2) to allow such mining activity without restriction; or (3) to allow placer mining with the restriction that the land be restored to its former condition after the cessation of mining. In considering the impact of mining operations on the environment, the Department looks at the impact of *normal* placer operations carried on without restrictions, and not just at the proposed operations of *the particular locator*. The reason for this policy is clear:

The statute permits the Secretary to act only once. He cannot issue an order now allowing unrestricted mining on the basis

of a one or two dredge operation and then if additional dredges are added or larger ones are substituted or a totally different type of operation is adopted, issue an order prohibiting mining. He can act only once, either to permit or prohibit. Because his course of action is so limited, to avoid defeating the purpose of the act, he should be able to base his decision not only on what the claimant proposes to do but also on what the claimant or his successor may be able to do in the way of placer mining.

United States v. Bennewitz, supra at 188; *accord, United States v. Weigel*, 26 IBLA 183 (1976); *Boyd McGinn*, 25 IBLA 188 (1976); *United States v. Western Minerals & Petroleum, Inc., supra*.

We agree with appellant that unrestricted mining on the claim site would substantially interfere with recreational uses of the lands. In so holding, we are looking not only to the claimant's proposed operations but also to potential operations involving additional dredges and different mining techniques. The grant of permission to the claimant to engage in placer mining is hereby revoked.

Therefore, pursuant to the authority delegated to the Board of Land Appeals by the Secretary of the Interior, 43 CFR 4.1, the decision of Judge Steiner is reversed.

DOUGLAS E. HENRIQUES,
Administrative Judge

WE CONCUR:

JAMES L. BURSKI,
Administrative Judge

C. RANDALL GRANT, JR.,
Acting Administrative Judge

CONCORD COAL CORP.

3 IBSMA 92

Decided April 17, 1981

Appeal by Concord Coal Corp. from the Sept. 26, 1980, decision of Administrative Law Judge Tom M. Allen, Docket Nos. CH 0-314-R, CH 0-335-R, and CH 0-349-R, rejecting its claim that its coal mining activity in Logan County, West Virginia, is excepted from the coverage of the Surface Mining Control and Reclamation Act of 1977, as an incidental part of government-financed construction, and sustaining enforcement action by the Office of Surface Mining Reclamation and Enforcement against Concord.

Affirmed.

1. Surface Mining Control and Reclamation Act of 1977: Applicability: Generally—Surface Mining Control and Reclamation Act of 1977: Words and Phrases

"Extraction of coal as an incidental part." For the purposes of 30 U.S.C. § 1278(3) (Supp. II 1978) and 30 CFR 700.11(d), which exclude the "extraction of coal as an incidental part of Federal, State or local government-financed highway or other construction" from the coverage of Federal performance standards otherwise applicable to surface coal mining operations, the phrase "extraction of coal as an incidental part" means, in accordance with 30 CFR 707.5, the extraction of coal which is necessary, from an engineering standpoint, to enable the construction to be accomplished and does not mean the extraction of coal for the purpose of financing the construction.

APPEARANCES: Philip G. Terrie, Esq., Charleston, West Virginia, for

Concord Coal Corp.; Thomas L. Hindes, Esq., Office of the Field Solicitor, Charleston, West Virginia, Marcus P. McGraw, Esq., Assistant Solicitor for Enforcement, and James M. McElfish, Esq., Division of Surface Mining, Office of the Solicitor, Washington, D.C., for the Office of Surface Mining Reclamation and Enforcement.

*OPINION BY THE
INTERIOR BOARD OF
SURFACE MINING AND
RECLAMATION APPEALS*

This appeal was brought by Concord Coal Corp. (Concord) from the Sept. 26, 1980, decision of the Hearings Division upholding four notices of violation issued by the Office of Surface Mining Reclamation and Enforcement (OSM) pursuant to the Surface Mining Control and Reclamation Act of 1977 (Act).¹ Concord challenged these notices on the ground that the violations alleged relate to activities which are an incidental part of government-financed construction and consequently are excepted from OSM's regulatory authority by sec. 528(3) of the Act, 30 U.S.C. § 1278 (3) (Supp. II 1978). The Administrative Law Judge rejected this challenge. For the reasons set forth below we affirm the decision on appeal.

*Factual and Procedural
Background*

Following its inspections of Concord's surface coal mining

operation in Logan County, West Virginia, on July 22 and 23, 1980, OSM served Concord with four notices of violation of the Department's initial program regulations. Concord applied for review of the notices and on Sept. 25, 1980, the matter was heard before the Hearings Division as submitted on a stipulated statement of issues and facts (SSIF), joint exhibits, and argument.² A summary of the evidence pertinent to our decision follows.

On Jan. 26, 1977, the Logan County Airport Authority (Airport Authority) executed a contract with Concord for the latter to construct a runway, access road, taxiway, parking apron, and approach zones on a 302-acre tract of land owned by the Airport Authority (Exh. I). The agreement provides that Concord will complete construction by Dec. 31, 1981; will receive \$1,050,000 in public funds as partial compensation for the work; and will derive the remainder of its compensation from the sale of coal pursuant to a lease agreement (Exh. G) among Concord, the Airport Authority, and Dingess-Rum Coal Co. (Dingess-Rum), also executed on January 26 and incorpo-

² With the exception of violation 7 of Notice of Violation No. 80-I-107-54, charging Concord with placing spoil in violation of 30 CFR 715.14(h)(3), Concord did not seek review of the violations alleged in the four notices on grounds other than its challenge of OSM's regulatory authority over its activities. Concord has requested temporary relief from the remedial action ordered by OSM to correct this alleged violation. The request is under consideration in the Hearings Division.

¹ Act of Aug. 3, 1977, 91 Stat. 445-532, 30 U.S.C. §§ 1201-1328 (Supp. II 1978).

rated into the contract by reference.³

Under the lease Concord is granted the right to mine and sell coal, owned by Dingess-Rum and underlying the airport property and adjacent land, in return for royalty payments to Dingess-Rum.⁴ The lease is subject to cancellation in the event of cancellation or termination of the construction contract with the Airport Authority. It has been estimated that 55 million cubic yards of overburden and 5 million tons of coal will be removed in operation pursuant to the lease (SSIF at 5). Total potential revenues from the sale of this coal at \$26 per ton (the approximate current price) would be \$130,000,000 (SSIF at 6).

Arguing that its surface coal mining operation is merely an incidental part of government-financed construction, Concord has sought to

have the notices of violation vacated on the basis of sec. 528 of the Act. That section provides in part: "The provisions of this Act shall not apply to any of the following activities: * * * (3) the extraction of coal as an incidental part of Federal, State or local government-financed highway or other construction under regulations established by the regulatory authority." 30 U.S.C. § 1278(3) (Supp. II 1978). The Administrative Law Judge rejected Concord's argument:

I find that the mineral rights were not donated nor are they owned by the Airport Authority. Based upon that * * * I find that the contract to mine coal is not with the Airport Authority. I find that the grant of Federal funds is not to Concord Coal Corporation. I therefore find that the coal project is not a Federally funded project within the exemption granted by the Act, and that OSM has jurisdiction to enforce the interim regulations.

(Decision of Sept. 26, 1980, at 2). Concord timely appealed the decision against it; both parties filed briefs with the Board.

Discussion and Conclusions

The decision below turned on the Administrative Law Judge's finding that the coal lease agreement between Dingess-Rum and Concord does not implicate the Airport Authority to the extent that the revenues obtained by Concord under the lease may be treated as government funds. We agree with the result reached in the decision, but base our agreement on a different rationale drawn from the provisions of 30

³ The business arrangements described in the contract and lease agreements arose from earlier efforts by the Airport Authority to secure construction of the facilities without regard to the coal resources underlying its 302-acre surface estate (Exh. A). The original project plans called for construction of the runway and related features at an elevation between 1,695 and 1,745 feet above sea level, which would have entailed excavation of approximately 3 million cubic yards of unclassified material (*id.*). The Airport Authority rejected all bids for the construction work as too costly and ultimately negotiated the arrangements with Dingess-Rum and Concord under which the airport will be located at the lower elevation as the result of the excavation of coal owned by Dingess-Rum (*id.*; SSIF).

⁴ It is not clear from the record what portion of the estimated 5 million tons of coal subject to the lease underlies land adjacent to the Airport Authority's surface estate. By a conditional lease executed on Feb. 4, 1976, Concord was granted the right to mine such coal prior to commencing its mining of coal underlying the Airport Authority's property (Exh. H).

April 17, 1981

CFR 700.11 and Part 707, which implement sec. 528 of the Act.⁵

[1] Under 30 CFR 700.11(d) "[t]he extraction of coal as an incidental part of Federal, State or local government-financed highway or other construction in accordance with 30 CFR Part 707" is excepted from the Department's regulation of surface coal mining. In Part 707 the phrase "extraction of coal as an incidental part" is defined to mean "the extraction of coal which is necessary to enable the construction to be accomplished." 30 CFR 707.5.⁶

⁵ These regulations were promulgated in accordance with the provision in sec. 528(3) of the Act that government-financed construction be excepted from the coverage of the Act "under regulations established by the regulatory authority." 30 U.S.C. § 1278(3) (Supp. II 1978). During the Federal initial program the term "regulatory authority" includes the Office of Surface Mining Reclamation and Enforcement. 30 U.S.C. § 1291(22) (Supp. II 1978); 30 CFR 700.5; 44 FR 14949, Comment 1 (Mar. 13, 1979). Before the Hearings Division both parties misdirected their attention to an earlier version of 30 CFR 700.11(d) published at 42 FR 62677 (Dec. 13, 1977). This version included the term "noncommercial" as a qualification of "government-financed construction" which could be excepted from the coverage of the Act. On appeal Concord has continued to focus on the earlier version of the regulation, arguing that the Secretary exceeded his regulatory authority by so qualifying sec. 528(3) of the Act (Brief for Appellant at 2-3). In its brief, OSM recognized that the present version of 30 CFR 700.11(d) became effective on Apr. 12, 1979, along with 30 CFR Part 707 (Brief for Appellee at 4). Whether Concord might have raised a similar argument against the current provisions implementing sec. 528(3), had it addressed those, is not of consequence. We view those provisions as being consistent with the manifested intent of Congress in promulgating sec. 528(3). See 44 FR 14948-50 (Mar. 13, 1979) (and congressional materials cited therein).

⁶ It is further provided in the definition:

"[O]nly that coal extracted from within the right-of-way, in the case of a road, railroad, utility line or other such construction, or within the boundaries of the area directly

Necessity, under this definition, is meant to be a function of engineering—not cost—constraints.⁷ In this respect the record is unambiguous: the extraction of coal underlying the site of contemplated airport construction is not necessary, as a matter of engineering, to facilitate that construction.⁸ Accordingly, Concord's coal mining operation does not qualify for exception under sec. 528(3) of the Act and 30 CFR 700.11(d).

As a result of our holding it is not necessary for us to address whether Concord's construction work is "government-financed construction," as the company has asserted. We do agree, however, with the Administrative Law Judge's finding (quoted in the text, *supra* at 458) that the Airport Authority does not own the coal being mined by Concord.⁹ From this finding we conclude that the revenue Concord may generate from its sale

affected by other types of government-financed construction, may be considered incidental to that construction. Extraction of coal outside the right-of-way or boundary of the area directly affected by the construction shall be subject to the requirements of the Act and this Chapter." 30 CFR 707.5.

⁷ The proposed definition of the phrase "extraction of coal as an incidental part" was "extraction of coal the market value of which is less than 50 percent of the cost of the government-financed construction." 43 FR 41808 (Sept. 18, 1978). It was changed in recognition of perceived congressional intent that the exemption provision in sec. 528(3) of the Act be applied on the basis of engineering judgments. 44 FR 14949, Comment 4 (Mar. 13, 1979).

⁸ Exh. A and SSIF (summarized, in pertinent part, in n.3, *supra*).

⁹ Whatever rights the Airport Authority may have as a third party to the coal lease do not extend to an ownership interest in coal (Exh. G).

of coal pursuant to the mining lease cannot be characterized as government funds, and, because this revenue will ultimately constitute the predominate source of compensation for the airport construction, it follows that the construction is not "government-financed" within the meaning of 30 CFR 707.5.¹⁰

The decision of the Hearings Division is affirmed.

WILL A. IRWIN

Chief Administrative Judge

NEWTON FRISHBERG

Administrative Judge

MELVIN J. MIRKIN

Administrative Judge

JOSEPH C. MANGA ET AL.

5 ANCAB 224

Decided April 20, 1981

Appeal from the Decision of the Alaska State Office, Bureau of Land Management F-19155-16 and F-21779-16.

Appellant Joseph Manga has standing to appeal. Appellants Dan Patrick

¹⁰ The term "government-financed construction" is defined as "construction funded 50 percent or more by funds appropriated from a government financing agency's budget or obtained from general revenue bonds, but * * * not * * * government financing agency guarantees, insurance, loans, funds obtained through industrial revenue bonds or their equivalent, or in-kind payments." 30 CFR 707.5. Financing for the airport construction by Concord was stipulated by the parties to be: \$130,000,000 estimated revenue from the sale of coal and \$1,050,000 revenue from public grants. Thus, less than 50 percent of the financing of the project is to be by qualifying funds.

and Harvey Strassburg do not have standing to appeal.

1. Alaska Native Claims Settlement Act: Alaska Native Claims Appeal Board: Appeals: Standing

The appropriate test of standing to appeal a decision under ANCSA is not whether a person is an "aggrieved party," but whether a person "claims a property interest in land affected by a determination from which an appeal to the Alaska Native Claims Appeal Board is allowed" as required by 43 CFR 4.902.

2. Alaska Native Claims Settlement Act: Alaska Native Claims Appeal Board: Appeals: Standing

Decisions made pursuant to ANCSA affect property interests differently, with the effect depending, in part, upon the section of the Act on which each decision is based. Therefore, application of the standing test in 43 CFR 4.902 must take into account the section of the Act relied upon in the decision under appeal.

3. Alaska Native Claims Settlement Act: Easements: Public Easements—Alaska Native Claims Settlement Act: Alaska Native Claims Appeal Board: Appeals: Standing

Since the purpose of a § 17(b)(1) public easement is to provide access across Native lands to lands not selected, such an easement necessarily affects lands other than those to be conveyed. Therefore, in asserting standing to appeal a § 17(b)(1) easement decision, a member of the public who claims a private interest in land other than the land to be conveyed may rely on this private holding as his or her "property interest" affected within the meaning of 43 CFR 4.902.

4. Alaska Native Claims Settlement Act: Conveyances: Valid Existing Rights; Generally—Alaska Native

**Claims Settlement Act: Easements:
Public Easements**

The private right of access protected by § 17(b) (2) of ANCSA for holders of valid existing rights is separate from public access routes specifically identified pursuant to § 17(b) (1). Possible protection under § 17(b) (2) does not preclude an individual from asserting that a public easement decision affects his or her property interest so as to meet the standing test of 43 CFR 4.902.

**5. Alaska Native Claims Settlement
Act: Easements: Public Easements—
Alaska Native Claims Settlement Act:
Alaska Native Claims Appeal Board:
Appeals: Standing**

An individual claiming standing to appeal a § 17(b) (1) public easement decision must assert public use of the desired easement in order to distinguish it from a § 17(b) (2) private access right.

APPEARANCES: Keith A. Christenson, Esq., Johnson, Christenson & Associates, for appellants; M. Francis Neville, Esq., Office of the Regional Solicitor, for the Bureau of Land Management; James Q. Mery, Esq. and Elizabeth S. Ingraham, Esq., for Doyon, Limited.

**OPINION BY ALASKA
NATIVE CLAIMS APPEAL
BOARD***Summary of Appeal*

This opinion decides the question of whether any member of the general public has standing to appeal a public easement decision. The standing regulation in 43 CFR 4.902 requires an appellant to "claim a property interest in land affected by

a determination." Appellant Manga asserts his mining claims are affected by a Bureau of Land Management decision which did not reserve a portion of an existing trail as a § 17(b) (1) public easement. Appellant claims use of the trail by the public.

The first argument opposing standing is that an appellant must have a property interest in the land to be conveyed, and a member of the public cannot claim a property interest in either the easement or the land underlying the easement. Second, even if a private interest is sufficient, the interest cannot be affected by a public easement decision because the holder of such interest has private access rights under § 17(b) (2).

The Board holds that because a § 17(b) (1) easement necessarily affects lands other than those to be conveyed, a member of the public seeking to appeal a public easement decision may claim a private property interest located outside a conveyance for standing purposes; and further, possible protection of private access right under § 17(b) (2) does not preclude an appeal from a public easement decision.

Jurisdiction

The Alaska Native Claims Appeal Board, pursuant to delegation of authority to administer the Alaska Native Claims Settlement Act, 85 Stat. 688, *as amended*, 43 U.S.C. §§ 1601-1628 (1976 and Supp. I 1977), and the implement-

ing regulations in 43 CFR Part 2650 and 43 CFR Part 4, Subpart J, hereby makes the following findings, conclusions and decision dismissing a portion of the appeal of Joseph C. Manga, *et al.*, from the above-designated decision of the Alaska State Office, Bureau of Land Management.

Procedural Background

On Jan. 15, 1980, Appellants Joseph C. Manga, Dan Patrick and Harvey Strassburg appealed the Decision of the Bureau of Land Management F-19155-16 and F-21779-16, dated Dec. 10, 1979, as modified on Dec. 26, 1979. On Jan. 23, 1980, appellants filed a Supplemental Notice of Appeal specifying grounds in this appeal.

On Feb. 11, 1980, appellants filed exhibits supplementing the record on appeal. The exhibits are holographic statements by Appellants Manga, Patrick and Strassburg on the issues in this appeal.

The Board, on Feb. 20, 1980, accepted the documents filed by appellants as constituting a statement of standing and reasons and ordered "[a]ll parties wishing to file briefs in response to the documents filed by appellants may do so within thirty (30) days from receipt of this Order."

The Bureau of Land Management (BLM), on Feb. 22, 1980, filed its Motion to Dismiss or to Require a More Definite Statement of Reasons and Standing.

The Board, on Mar. 12, 1980, issued an Order to Show Cause, stating *inter alia*:

Having reviewed this motion [BLM's Motion to Dismiss] and supporting memorandum, the Board hereby Orders appellants to show cause, within fifteen (15) days from the date of this Order, why this appeal should not be dismissed for the reasons stated in BLM's motion dated Feb. 21, 1980.

In response to a joint stipulation filed on Mar. 28, 1980, by BLM, Doyon, Limited, and the appellants, the Board on Apr. 11, 1980, dismissed all issues except the issue involving easements EIN 1a L and EIN 1b L and granted a 30-day time extension for appellants to respond to BLM's Motion to Dismiss and the Board's Order to Show Cause. The Board also ordered that:

Doyon, Limited and the Bureau of Land Management are granted an extension of time in which to respond to all documents filed by the appellants of thirty (30) days from the date on which the Board rules on the standing issues set forth in the March 12, 1980, Order to Show Cause. [Italics added.]

The question immediately before the Board is whether the appellants have standing to appeal the issue concerning the extent of EIN 1a L and EIN 1b L.

The BLM, in its memorandum filed Feb. 22, 1980, in support of its motion to dismiss, states:

It is the position of the BLM that the appellants lack standing to appeal any of the issues raised and that this appeal should therefore be dismissed. In order to have standing to appeal a BLM decision to this Board, a party must claim "a property interest in land affected by a determination" of the BLM. 43 CFR

§ 4.902. It is the BLM's position that the appellants do not meet this requirement.

1. *Issues concerning the extent of E1N [sic] 1aL and E1N [sic] 1bL:*

The appellants allege that, although E1N [sic] 1aL and E1N [sic] 1bL are proper, the BLM erred in failing to reserve a more extensive easement following existing cat trails and connecting the two in a continuous loop. The appellants alleged that this failure serves to "restrict the appellants' access." The appellants do not allege that they have a "property interest in land" in the existing cat trails. Unless the appellants can claim such a property interest, the appeal must be dismissed insofar as it relates to the issue of easements.

Appellants, on May 12, 1980, filed a brief entitled "Initial Brief of Appellants," which provided information and argument in favor of their standing to appeal the captioned decision.

Appellants identified their interest and easement use as follows:

Appellant, JOSEPH C. MANGA, is, in addition to his other endeavors, a prospector and miner who is possessed of certain unpatented mining claims for which the subject easements serve as alternate access depending on seasonal factors. Mr. Manga is possessed of fifteen (15) mining claims situated approximately thirty (30) miles southwest of the Galena townsite near the confluence of Bishop Creek and Little Bishop Creek. Of those claims, three (3) claims and portions of others are in one of the townships of the land selected (Township 11 South Range 9 East KRM). See Exhibit A attached hereto. There exists an exclusion mineral survey application, designated F-23158, to those claims within section 30 and 31, Township 11 South, Range 9 East KRM. Appellant Manga has been engaged in usage of the trails represented by the referenced easements for a

period of approximately twenty (20) years.

Appellant DAN PATRICK has used the trails for a period of approximately twenty (20) years for hunting, fishing, and recreation.

Appellant HARVEY STRASSBURG has been engaged in the usage of both easements as a trapline and as access to Native allotments which he uses in the area. [Italics added.]

Initial Brief of Appellants, *supra*, at 1-2.

Asserting historic and present use of the trial by themselves and other members of the public, appellants argue that BLM is misreading 43 CFR 4.902 and that

* * * the party desiring to appeal need only possess land affected by the [BLM] determination. Certainly, an easement itself is a property interest and has been such for time immemorial under the common law. Of greater import, however, is the fact that where a determination, whether with respect to a regional selection or otherwise, serves to divest a party of actual legal or practical access to lands owned or used by that party, the party has been affected by the determination being made and possesses standing. The question is not whether the land itself constitutes an inholding but rather is whether a property interest is affected by the determination.

Initial Brief of Appellants, *supra*, at 5.

Appellants argue further that the question of usage of the easements is of paramount concern:

[I]t cannot be seriously contended by the BLM that a person currently using an existing trail which is proposed to be lifted to easement status has no voice in the matter or effective legal recourse where the proposed decision will divest

him of his usage and/or access. That member of the public is directly affected by the decision being made and he is entitled to be heard and, if need be, is entitled to his day in the courts.

* * * * *

In essence, Appellants submit that all that is needed for standing is a knowledgeable [*sic*] concerned person who is a user of an easement or is a potential user of an easement to cross over Native lands to get to the public lands.

Initial Brief of Appellants, *supra*, at 5-6.

Finally, appellants contend that BLM's failure to reserve a public easement over those portions of the existing trails traversing T. 11 S., R. 9 E., K.R.M.,

* * * has effectively landlocked the public lands from public usage. The Appellants herein are not just prospective users of those trails, they are current and past users of those trails and are thus aggrieved by the determination being made and possess the requisite standing herein.

Initial Brief of Appellants, *supra*, at 7.

Decision

Appellants argue that (1) an easement is a property interest and if that alleged interest is affected by the BLM determination, then the appellants have standing to appeal; (2) "all that is needed for standing is a knowledgeable [*sic*] concerned person who is a user of an easement or is a potential user of an easement," and as such they "are thus aggrieved by the determination being made and possess the requisite standing"; (3) BLM's failure to delineate the entire cat trail as an easement has served to deprive the

appellants, and the public, of historic and viable usage of that trail for purposes of access to public lands.

The remedy sought by the appellants in this appeal is the reservation of a public easement pursuant to § 17(b)(1) of ANCSA, which provides as follows:

The Planning Commission shall identify public easements across lands selected by Village Corporations and the Regional Corporations and at periodic points along the courses of major waterways which are reasonably necessary to guarantee international treaty obligations, a full right of public use and access for recreation, hunting, transportation, utilities, docks, and such other public uses as the Planning Commission determines to be important.¹

The rationale for § 17(b)(1) is described by the court in *Alaska Public Easement Defense Fund v. Andrus*, 435 F. Supp. 664, 674 (D. Alaska 1977):

As previously mentioned the Act grants to the Alaska Natives 40 million acres of land in Alaska. The specific land which comprised the grant to eligible entities was not delineated. Rather the Village and Regional Corporations were to choose their land from the areas designated in conformity with the Act. In such circumstances Congress was justifiably concerned that certain portions of the State which were to remain in the public

¹ It is noted that decisions to reserve or not reserve public easements identified by the Planning Commission are actually made pursuant to § 17(b)(3) of ANCSA, which provides: "Prior to granting any patent under this Act to the Village Corporation and Regional Corporations, the Secretary shall consult with the State and the Planning Commission and shall reserve such public easements as he determines are necessary." To eliminate confusion, however, the Board uniformly refers to public easements as being established pursuant to § 17(b)(1).

domain would become inaccessible, or landlocked by Native lands. It appears, therefore, that the public easements were to be reserved to provide access to the lands not selected.

Implementing regulations in 43 CFR 2650.4-7(b)(1) discuss the purposes for which public transportation easements may be reserved:

Public easements for the transportation purposes which are reasonably necessary to guarantee the public's ability to reach publicly owned lands or major waterways may be reserved across lands conveyed to Native corporations. Such purposes may also include transportation to and from communities, airports, docks, marine coastline, groups of private holdings sufficient in number to constitute a public use, and government reservations or installations.

Members of the public, therefore, may reasonably assume that ANCSA guarantees continued access to public lands after adjacent lands have passed into private, Native ownership. The mechanism for this guarantee is the reservation of public easements. Whether this guarantee can be pursued through an administrative appeal to the Board depends on interpretation of the standing regulations in 43 CFR 4.902:

Any party who claims a property interest in land affected by a determination from which an appeal to the Alaska Native Claims Appeal Board is allowed, or an agency of the Federal Government, may appeal as provided in this subpart. However, a regional corporation shall have the right of appeal in any case involving land selections.

Prior to Aug. 1975, the Board determined standing pursuant to

43 CFR 2651.2(a)(5), which employed the "party aggrieved" test to determine who had standing to appeal decisions of village eligibility. When the Board's separate regulations were published in August of 1975, the Department determined that the standing test under ANCSA would be more precise. The language presently contained in 43 CFR 4.902 is the result.

The language in 43 CFR 4.902 is unique as a test of standing. While there is precedent for the proposition that administrative boards have, and should have, wider discretion than the courts in determining who may appeal (*see, Gardner v. FCC*, 530 F.2d 1086, 1090 (D.C. Cir. 1976)), it is evident that the standard in 43 CFR 4.902 was intended to be more restrictive than the test under a "party aggrieved" standard. The Board has found that the two standards require different interpretations and that the standing test in 43 CFR 4.902 is the more restrictive. (*Appeal of Sam E. McDowell*, 2 ANCAB 350 (1978) [VLS 78-2].)

[1] Therefore, as to appellants' claim that they have standing to appeal as parties aggrieved, the Board concludes they do not. The Board reiterates its finding in *Appeal of Sam E. McDowell, supra*, that the appropriate test of standing to appeal a decision under ANCSA is not whether a person is an "aggrieved party," but whether a person "claims a property interest in land affected by a de-

termination from which an appeal to the Alaska Native Claims Appeal Board is allowed."

The requirement that an appellant claim a property interest affected by the decision appealed clearly limits the rights of members of the general public to appeal easement decisions. In *Appeal of Sam E. McDowell, supra*, the Board found that recreational use of a river did not constitute a property interest sufficient to confer standing. Implicit in the finding that "use" is insufficient to meet the standing test is the conclusion that the only members of the public who can assert property interest for standing purposes are those with some private property right acquired under State or Federal laws.

The issue in this appeal is whether any member of the public, even one who claims a private property interest, has standing under the test in 43 CFR 4.902 to appeal a public easement decision.

It has been argued that since a member of the public cannot claim a property interest in the public easement itself, or in the land underlying the easement, such individual cannot meet the standing test.

In *Appeal of the State of Alaska*, 3 ANCAB 196, 86 I.D. 225 (1979) [VLS 78-42], the Board, ruling that the State could not claim a property interest in lands it had never selected under the Statehood Act, found that the possibility that the State might select such lands in the future was too remote and spec-

ulative to constitute a property interest within the meaning of 43 CFR 4.902.

In *Appeal of Chickaloon Moose Creek Native Association, Inc.*, 4 ANCAB 250, 87 I.D. 219 (1980) [VLS 80-1], the Board ruled that where an appellant with selection rights had not selected the lands in dispute, it could not claim a property interest in them based on alleged impact of a third-party contract, and therefore lacked standing.

In its Order Partially Dismissing Appeal, dated Feb. 8, 1980, in *Appeal of Chickaloon Moose Creek Native Association, Inc.*, 4 ANCAB 134, 144 (1980) [VLS 80-1], the Board declared:

Where a party has not selected lands within the lands in dispute in an appeal, that party cannot be found to claim a property interest in such lands within the meaning of standing regulations in 43 CFR 4.902. (See *Appeal of State of Alaska*, 3 ANCAB 196 (1979).)

Appeal of the State of Alaska, supra, and *Appeal of Chickaloon Moose Creek Native Association, Inc., supra*, are both distinguishable from the present appeal. In each of the prior appeals, the appellant sought to prevent BLM from conveying title for specific lands to a Native corporation. Neither appellant had previously selected the land.

In the present appeal, appellants do not seek to prevent conveyance to the selecting Native corporation. They are not competing for title to the land proposed for conveyance. Rather, they seek to have a public

transportation easement reserved across lands to be conveyed.

There are fundamental legal differences between the effect of a decision to convey title and the effect of a decision to reserve a public easement. An easement reservation under § 17(b)(1) does not involve a competing title interest. A potential appellant desiring to appeal a public easement decision cannot claim a property interest in the land underlying the easement, because, pursuant to ANCSA, title to the land underlying the easement goes to the selecting Native corporation. Likewise, a potential appellant cannot claim a private property interest in a § 17(b)(1) easement because these are public easements. The concept of private ownership of a public easement is a contradiction in terms.

The argument that an appellant must have a property interest in the land to be conveyed, regardless of the subject matter of the appeal, ignores the fact that a decision to convey land and a decision to reserve an easement across land affect property differently.

[2] The Board holds that decisions made pursuant to ANCSA affect property interests differently, with the effect depending, in part, upon the section of the Act on which each decision is based. Therefore, application of the standing test in 43 CFR 4.902 must take into account the section of the Act relied upon in the decision under appeal.

In examining the purpose of public easements established pur-

suant to § 17(b)(1) of ANCSA, the court in *Alaska Public Easement Defense Fund, supra*, at 674, interprets the intent of § 17(b)(1) as follows:

The quest for a resolution of this issue leads to the consideration of the purpose of the public easement section of the Act.

[3] As previously mentioned the Act grants to the Alaska Natives 40 million acres of land in Alaska. The specific land which comprised the grant to eligible entities was not delineated. Rather the Village and Regional Corporations were to choose their land from the areas designated in conformity with the Act. In such circumstances Congress was justifiably concerned that certain portions of the State which were to remain in the public domain would become inaccessible, or landlocked by Native lands. *It appears, therefore, that the public easements were to be reserved to provide access to the lands not selected*, and they were not intended to provide the public with a right to use the Native lands for recreational activities. This construction of the Act is supported by its language and legislative history.

Subsection 17(b)(1), in defining the scope of public easements, states that they are to be 'across lands' which would indicate an easement for travel. [Footnote omitted.] [Italics added.]

The Board notes from the court's interpretation of the language in § 17(b)(1) that the purpose of a public easement is to allow travel "across" lands selected by Native corporations to "lands not selected" and not for purpose of access onto Native lands for such activity as hunting, fishing, trapping or recreation.

[3] Since the purpose of a § 17(b)(1) public easement is to provide access across Native lands

to lands not selected, the Board concludes that a § 17(b)(1) easement necessarily affects lands other than those to be conveyed. Therefore, a member of the public who claims a private interest in land other than the land to be conveyed, in asserting standing to appeal a § 17(b)(1) easement decision, may rely on this private holding as his or her "property interest" affected within the meaning of 43 CFR 4.902.

It also has been argued that even the holder of a private property interest lacks standing to appeal because such individual is provided a right of access under § 17(b)(2) of ANCSA, and therefore the placement of a public easement can have no effect on his or her property interest.

Sec. 17(b)(2) provides in part:

[A]ny valid existing right recognized by this Act shall continue to have whatever right of access as is now provided for under existing law and this subsection shall not operate in any way to diminish or limit such right of access.

This provision is implemented by regulations in 43 CFR 2650.4-7(d)(5):

All conveyance documents shall contain a general provision which states that pursuant to section 17(b)(2) of the Act, any valid existing right recognized by the Act shall continue to have whatever right of access as is now provided for under existing law.

The Board has already ruled that an individual who does not have a specific claim of property interest is without standing to bring an appeal. The thrust of the previous ar-

gument is that a person who *does* claim a property interest also lacks standing to appeal a public easement decision because such person will continue to have a private right of access, and the property interest is therefore not affected by the decision.

The consequence of this position would be that no member of the general public, regardless of any claim of property interest, would have standing to appeal a decision rendered pursuant to that subsection of ANCSA specifically drafted for the benefit of the general public—§ 17(b).

The Board concludes that neither the Act nor the regulations mandate this result.

The court, in *Alaska Public Easement Defense Fund*, *supra*, distinguishes subsec. 17(b)(1) from subsec. 17(b)(2) as follows:

Subsection 17(b)(2), however, which protects access to valid existing uses appears to stand independently from the portions of the section which apply to the reservation of public easements. Its purpose is to insure that those who have valid existing uses do not lose access rights because of the public easement section. It maintains prior access in spite of the public easement section rather than serving as a limit on the scope of public easements.

435 F. Supp. 664, 678.

The court's findings that the two subsections appear to stand independently and have separate purposes and that § 17(b)(2) does not serve "as a limit on the scope of public easements," rebut the argument that protection under one subsection

is paramount to protection under the other.

It is clear that § 17(b) (1) is the statutory basis to assert a need of the general public for specifically located easements, and that such assertions are to be articulated to the Secretary of the Interior. Subsec. 17(b) (2), on the other hand, is the statutory basis to assert status quo protection for "whatever right of access as is now provided for under existing law," and such assertion is to be made by the individual claimant, through the courts if necessary.

Since the Department is not reserving § 17(b) (2) easements in conveyance documents, a claimant could not assert a right to a particular private access route through the Department, nor could the Department assure a claimant that a particular private access route would be protected pursuant to § 17(b) (2).

In this appeal, for example, the Secretary of the Interior could not guarantee Mr. Manga that § 17(b) (2) gives him a private right of access over the exact route he is attempting to have reserved pursuant to § 17(b) (1). Having no procedure to guarantee a property holder that the protection extended by § 17(b) (2) will attach to a particular route, the Secretary, through this Board, is unable to deny the property holder standing to appeal a public easement decision on the grounds that he or she will have the right to use the same access route under § 17(b) (2).

[4, 5] The Board finds that the private right of access provided to holders of valid existing rights pursuant to § 17(b) (2) of ANCSA is separate from the right provided in § 17(b) (1) of specifically-identified public access routes. Possible protection under § 17(b) (2) does not preclude the holder of a property interest from asserting that an easement decision affects his interest so as to satisfy the standing test of 43 CFR 4.902. However, an individual claiming standing to appeal an easement decision must assert public use of the desired easement in order to distinguish it from a § 17(b) (2) private access right.

In the present appeal, Joseph Manga claims private property interests on public lands to which he seeks access through the conveyance area. He asserts public use by himself and others of an existing trail through the conveyance area to gain access to his mining claims and to the public lands on which they are located. He seeks a public access easement for that purpose, along an existing route.

The Board concludes that Joseph Manga's claims of affected property interests fall within the meaning of 43 CFR 4.902, and that he has standing to appeal.

Two other individuals seek standing as co-appellants with Mr. Manga. Dan Patrick does not claim any property interest in, or in the vicinity of, the conveyance appealed. He asserts only that he has used the trails for which he seeks an easement for a period of 20 years for

hunting, fishing, and recreation. Harvey Strassburg similarly does not claim a property interest, but alleges that he has used "both easements" (presumably EIN 1a L and EIN 1b L) as a trapline and as access to Native allotments which he uses. He does not allege a property interest in these allotments. Because neither individual claims a property interest in any way affected by the conveyance, the Board under regulations in 43 CFR 4.902 must find that neither Mr. Patrick nor Mr. Strassburg has standing to appeal. It should also be noted that insofar as the trails were used in connection with activities on the lands now to be conveyed to a Native corporation, such uses do not justify reservation of a public easement under ANCSA.

JUDITH M. BRADY

Administrative Judge

ABIGAIL F. DUNNING

Administrative Judge

ADMINISTRATIVE JUDGE BALDWIN CONCURRING SPECIFICALLY

I concur that Appellants Dan Patrick and Harvey Strassburg do not have standing to appeal the BLM decision because they do not meet the property interest requirements of 43 CFR 4.902.

I am in agreement with the conclusion reached by the majority that Appellant Manga has standing to bring this appeal before ANCAB. However, my contention is that, in view of the limiting terms of the

criteria specified in 43 CFR 4.902, and of the Board's previous decisions, the majority's findings as stated are insufficient to give standing without consideration of appellant's claim of interest affected by BLM's decision.

I agree with the majority that under previous decisions, in order to sustain a claim of standing under the provisions of 43 CFR 4.902, an individual must claim a property interest in land affected by a determination from which an appeal to the Alaska Native Claims Appeal Board is allowed. (*See, Appeal of Sam E. McDowell*, 2 ANCAB 350 (1978) [VLS 78-2].)

Judge Bazelon, in *Koniag, Inc., Village of Uyak v. Andrus*, 580 F.2d 601 (D.C. Cir. 1978), in his concurring remarks, discusses standing and therein asks the question "[w]hat *should* be the standards for determining standing to appear before an agency [Federal]?" Bazelon suggests that "[t]he starting point in determining administrative standing should be the language of the statutes and regulations that provide for an administrative hearing, appeal or intervention." Bazelon concludes that where the statutes or regulations provide specific criteria for determining standing, those statutes or regulations should be controlling. As an example he cited 43 CFR 4.902 (1976) as providing relatively precise standards. Bazelon further concludes that

[t]his regulation quite clearly establishes three classes of persons who have stand-

ing; *those asserting a property interest in land*, federal agencies, and regional corporations in land selection cases. It thus provides fairly objective criteria that can be applied without recourse to a more refined analysis. [Footnote omitted.] [Italics added.]

580 F.2d 601, 614.

I concur that the Board's previous decisions on standing under § 4.902 are based upon an appellant's claim of a competing property interest in selected lands which is different from that involved in a claim of interest in lands affected by reservation of a public easement. However, I disagree that because of such a difference the only appellants of a public easement decision by BLM would be the selecting Native corporation because they will obtain title to the lands underlying the public easement. The determination by BLM to reserve an easement across Native-selected lands would also affect any other party having an existing interest to those same lands. Thus, I contend that pursuant to the Board's previous decisions the holder of a valid existing right under § 14(g) of ANCSA may also have standing to appeal BLM's decision to reserve a public easement across the lands covered by said § 14(g) interest.

It appears that the majority's finding that: "[3] * * * [A] member of the public who claims a private interest in land other than the land to be conveyed, in asserting standing to appeal a § 17(b) (1) easement decision, may rely on this

private holding as his or her 'property interest' affected within the meaning of 43 CFR 4.902" would not require an appellant to establish or assert how his claimed property interest is or can be affected by BLM's public easement decision other than to assert public use of the desired easement. I would contend that in the absence of establishing some basis for finding that an appellant has a claim of property interest which can be affected by BLM's public easement decision, that standing cannot be given within the terms of § 4.902.

Appellant Manga asserts a property interest in certain unpatented mining claims located within the boundary of lands selected by the Native corporation. These certain mining claims are contiguous with Manga's other mining claims located outside of the boundary of lands approved for conveyance. Appellant Manga asserts to have historically used the cat trail to access his mining claims and public lands. The cat trail is a roughly semicircular route with Manga's mining claims located approximately midway along the arc. Appellant Manga concurs with BLM's determination to place easements over a portion of each end of the cat trail to provide access to public lands. However, Appellant Manga, in Notice of Appeal, asserts that BLM's failure to "delineate" the entire cat trail as an easement deprives him of his historic and viable usage for purpose of access.

Appellant Manga's mining claims are located in part within the boundary of lands selected; the major portion of his claims are located on lands to remain in the public domain. The conveyance documents exclude those portions of Appellant Manga's mining claims located within the boundary of lands selected thus leaving their status unaffected at the time of conveyance; they are a property interest on public domain lands. Therefore, I am in agreement with the majority in this decision that Appellant Manga's mining claims are located on public lands. Further, it can be concluded that the mining claims are entirely outside of the boundary of lands approved for conveyance.

The Board has previously ruled on the question of standing to appeal when asserted interests are located outside of the boundary of lands approved for conveyance. In the *Appeal of Morpac, Inc.*, 3 ANCAB 89 (1978) [VLS 78-53], the Board concluded that:

The lands described by Morpac as those in which it claims a property interest are not included in the description of lands to be conveyed to the Eyak Corporation in the BLM Decision AA-8447-A, AA-8447-B; such lands are all seaward of the meandering mean high tide line and therefore are tidelands and submerged lands.

* * * * *

Morpac, Inc., has failed to show that the tidelands and submerged lands in which it asserts an interest are in any way affected by the decision here appealed. Morpac has not appealed BLM's treatment of its upland special use permits

as valid existing rights, subject to which Eyak Corporation will receive conveyance.

[1] Where the lands in which an appellant claims a property interest are not included in the decision to convey, *and appellant fails to show any connection between such land and land interests which are conveyed pursuant to such a decision, the Board finds that appellant has failed to meet the requirement for standing set forth in 43 CFR 4.902 and the appeal must therefore be dismissed.* [Italics added.]

3 ANCAB 94.

In the instant appeal, *if* Appellant Manga is claiming his unpatented mining claims as property interest affected, the record fails to show how the mining claims are affected.

Appellant Manga emphasizes that "[t]he question is not whether the land itself constitutes an inholding but rather is whether a property interest is affected by the determination." Appellant Manga further asserts that "a person currently using an existing trail which is proposed to be lifted to easement status * * * is directly affected by the decision being made and he is entitled to be heard." The record shows that Appellant Manga has been a user of that portion of the cat trail not identified as a public easement to access his unpatented mining claims.

There is no disagreement with the majority's discussion and findings that the interest in a private right of access under § 17(b)(2) is separate from and does not preclude the reservation of a public easement under § 17(b)(1) which is in accordance with finding in

Alaska Public Easement Defense Fund v. Andrus, 435 F. Supp. 664 (D. Alaska 1977).

It is agreed that determination of standing under § 4.902 cannot be based upon a claim that appellant's private needs for access under § 17(b)(2) are viewed as an alternative or a trade-off for reservation of a public easement under § 17(b)(1) as stated by the majority.

While the majority's findings make a determination that appellant's right to private access does not preclude reservation of a public easement, it fails to require from the appellant any affirmative assertion which I believe the file record must establish as a basis for a claim of interest within the selected lands and which is affected by BLM's decision before standing can be allowed under § 4.902.

At the time of bringing this appeal the only possible claim of interest which may be available to the appellant "in land affected by a determination" as required by § 4.902 is the asserted claim of access under § 17(b)(2).

The court's finding in *Alaska Public Easement Defense Fund*, *supra*, that a claim of private access under § 17(b)(2) is separate from, and does not prevent reservation of, a public easement under § 17(b)(1) would not preclude an assertion by appellant that the former may constitute an interest in the selected lands. The court was there confronted with a contention that a public easement must follow an ex-

isting use which it repudiated and did not rule on the issue of the interest itself.¹

While there is no dispute that Manga's unpatented mining claims constitute a property interest, there is a question raised by Appellant Manga that his property interest may be in the form of § 17(b)(2) access affected by the public easement determination. The record shows that Appellant Manga's § 17(b)(2) access would most probably begin from the public easements along the route of the "cat trail" connecting easements EIN 1a L and EIN 1b L. For purpose of determining standing, where the record shows that a property holder has valid existing rights access provided for by § 17(b)(2) that could be affected by the easement decision of BLM, that property holder should have standing to appeal the easement determination of the BLM.

I would therefore conclude that appellant's assertion of being eligible to acquire a private access under § 17(b)(2) does make a claim of an interest in the selected lands which gives standing under § 4.902 to appeal BLM's public easement decision. This is consistent with the finding that whatever interest appellant may acquire across selected lands under § 17(b)(2) is wholly separate from any public easement.

¹"At various points in the course of the briefs the contention has been made that public easements can be reserved only on the basis of valid existing use. * * * This contention finds its origins in subsec. 17(b)(2) which protects access to valid existing uses." *Alaska Public Easement Defense Fund*, *supra*, at 678.

When an appellant is granted standing to appeal a public easement determination on the basis that his property interest is affected, as required by 43 CFR 4.902, the appellant's private right of access pursuant to § 17(b) (2) may not be argued before the Board for lack of jurisdiction to hear such appeals.

JOSEPH A. BALDWIN
Administrative Judge

DRUMMOND COAL CO.

3 IBSMA 100

Decided April 21, 1981

Appeal by the Office of Surface Mining Reclamation and Enforcement from the Oct. 3, 1980, decision of Administrative Law Judge David Torbett in Docket No. NX 0-139-R, vacating violation 1 of Notice of Violation No. 80-II-84-11 issued to Drummond Coal Co., for an alleged violation of the topsoil handling provisions of 30 CFR 715.16.

Reversed.

1. Surface Mining Control and Reclamation Act of 1977: Topsoil: Redistribution—Surface Mining Control and Reclamation Act of 1977: Words and Phrases

"Topsoil." For purposes of the redistribution requirements of 30 CFR 715.16(b), topsoil means at least the same material as was required under 30 CFR 715.16(a) to be removed from areas to be disturbed by surface coal mining operations.

2. Surface Mining Control and Reclamation Act of 1977: Topsoil: Generally

Because neither the Act nor the regulations make only "irreplaceable" topsoil subject to 30 CFR 715.16, all topsoil is covered by that regulation.

3. Surface Mining Control and Reclamation Act of 1977: Topsoil: Redistribution

There is a violation of 30 CFR 715.16(b) when topsoil is redistributed in a way that does not protect it from erosion and no other protective measures are taken.

4. Surface Mining Control and Reclamation Act of 1977: Notices of Violation: Remedial Actions

The remedial action required in a notice of violation may be modified in the document terminating the notice if the termination clearly shows in writing the remedial action accepted by OSM as an alternative abatement.

APPEARANCES: Courtney W. Shea, Esq., Office of the Field Solicitor, Knoxville, Tennessee, Mark Squillace, Esq., Division of Surface Mining, Office of the Solicitor, Washington, D.C., for the Office of Surface Mining Reclamation and Enforcement; Richard E. Dick, Esq., Jasper, Alabama, for Drummond Coal Co.

OPINION BY THE INTERIOR BOARD OF SURFACE MINING AND RECLAMATION APPEALS

The Office of Surface Mining Reclamation and Enforcement (OSM) has sought review of an Oct. 3, 1980, decision of Administrative Law Judge David Torbett. That decision vacated violation 1 of Notice of Violation No. 80-II-

84-11 issued to Drummond Coal Co. (Drummond). We reverse that decision.

Background

On Feb. 13, 1980, OSM inspected Drummond's Natural Bridge 738 surface mine in Winston County, Alabama, and issued a notice of violation alleging two violations of the Surface Mining Control and Reclamation Act of 1977 (Act)¹ and its implementing regulations. Drummond contested only violation 1 which alleged that it had failed to protect topsoil from wind and water erosion after respreading in violation of 30 CFR 715.16. The notice required Drummond to "seed and/or mulch all respread topsoil for protection from wind and water erosion."

Drummond objected to the remedial action required in the notice and attempted to obtain a modification. On Mar. 3, 1980, OSM terminated the notice because the "operator has constructed diversion ditches across retopsoiled area instead of seeding and/or mulching. He feels that this will protect the respread topsoil from erosion."²

¹ Act of Aug. 3, 1977, 91 Stat. 445, 30 U.S.C. §§ 1201-1328 (Supp. II 1978).

² On Mar. 5, 1980, OSM issued Notice of Violation No. 80-II-84-20 to Drummond. This notice alleged the same violation after it was discovered on a second inspection, after a rainstorm, that the diversion ditches had breached and that topsoil was eroding from the area. Drummond sought review and temporary relief from this notice and a hearing was held on Mar. 28, 1980. At the conclusion of that hearing, the Administrative Law Judge issued an order from the bench vacating the notice. OSM did not appeal that decision.

Drummond sought review of this notice and a hearing was held on July 2, 1980.³ On Oct. 3, 1980, a decision was issued that vacated the notice because the remedial action required was inconsistent with the alleged violation. Although the Administrative Law Judge agreed with OSM that he had the authority to refashion the remedial action, he declined to exercise that power in this case "particularly in view of the fact that there is a real doubt as to whether the notice of violation was properly issued to begin with" (Decision at 3). This statement refers to the finding that "[t]he soil in question was not topsoil and it was not irreplaceable. If a considerable amount of the material eroded between the time it was spread and the time a protective cover was planted then additional material could have been obtained to replace the eroded material" (Decision at 3).

OSM appealed this decision to the Board and both parties filed briefs.

Discussion and Conclusions

[1] The decision below states that the material being respread in this case was not topsoil. Topsoil was defined for purposes of 30 CFR 715.16(a) in *Carbon Fuel Co., Inc.*, 1 IBSMA 253, 256-57, 86 I.D. 483, 485 (1979) as "all the A horizon

³ At this hearing, both parties stipulated that the transcript of the Mar. 28, 1980, hearing on Notice of Violation No. 80-II-84-20 contained the facts necessary to decide Notice of Violation No. 80-II-84-11.

where there is more than 6 inches of A horizon. Where there is less than 6 inches of A horizon, topsoil is either all the A horizon plus unconsolidated material down to a depth of 6 inches or all unconsolidated material if there is less than 6 inches of A horizon and unconsolidated material." Sec. 715.16(a) describes the soil material that must be removed before further disturbance of an area. Sec. 715.16(b), the section allegedly violated here, describes the requirements for redistributing the material that was previously removed as topsoil. Therefore, for purposes of 30 CFR 715.16(b), topsoil means at least the same material as was required to be removed under 30 CFR 715.16(a).

The evidence presented at the hearing was that A horizon was scarce at Drummond's mine and that the material being saved and respread was predominantly a mixture of B and C horizon material (Tr. 29). This material is topsoil for purposes of the redistribution regulations.

[2] The decision below also found that this material was not irreplaceable. Neither the Act nor the regulations make only "irreplaceable" topsoil subject to sec. 715.16. Instead, that section applies to all topsoil whether or not it is possible to replace that material from another source.

[3] Because the material being respread at Drummond's mine was topsoil, it was subject to the provisions of 30 CFR 715.16(b). The evidence presented at the hearing by

both OSM and Drummond shows that topsoil was redistributed down the slope rather than around the contour. Drummond alleged that redistribution was done in this manner because of equipment safety considerations. Such a practice would not necessarily constitute a violation if other measures were taken to protect the topsoil from erosion.⁴ The evidence shows, however, that nothing was done before the notice was issued to provide protection against erosion. There was, therefore, a violation of the topsoil redistribution provisions of 30 CFR 715.16(b).

The notice required Drummond to seed and/or mulch the redistributed topsoil. Drummond argues that seeding and mulching is not required under sec. 715.16(b) but rather is a revegetation requirement of sec. 715.20.⁵ Because a sec. 715.20 remedy is inappropriate to abate a sec. 715.16(b) violation, Drummond argues that the notice should be vacated. Drummond does not suggest that the remedial action required was illegal, but only that it was incompatible with the violation.

⁴ 30 CFR 715.14(k) states:

"All final grading, preparation of overburden before replacement of topsoil, and placement of topsoil, in accordance with § 715.16, shall be done along the contour to minimize subsequent erosion and instability. If such grading, preparation or placement along the contour would be hazardous to equipment operators then grading, preparation or placement in a direction other than generally parallel to the contour may be used. In all cases, grading, preparation or placement shall be conducted in a manner which minimizes erosion and provides a surface for replacement of topsoil which will minimize slippage.

⁵ We note, however, that seeding and mulching may be required to protect topsoil stockpiles from erosion under 30 CFR 715.16(c).

[4] It is not necessary to resolve that question, however, in deciding this case. OSM terminated this notice on the basis of remedial action different from that originally required. The termination notice recorded in writing the remedial action actually taken and the fact that OSM accepted that action as an alternative abatement. Although it would be preferable to have a separate modification document, as long as the modification is shown in writing in the document terminating the violation, it is an acceptable modification of the original notice.⁶ Therefore, the remedial action finally required for this notice was the construction of diversion ditches in the respread topsoil. Such remedial action is an appropriate abatement for a sec. 715.16(b) violation.

The Oct. 3, 1980, decision below vacating violation 1 of Notice of Violation No. 80-II-84-11 is reversed, the violation is reinstated, and it is upheld.

⁶ Sec. 521(a)(5) of the Act, 30 U.S.C. § 1271(a)(5) (Supp. II 1978), requires that notices and orders be in writing. Any modification must also, therefore, be in writing.

This conclusion should not be construed to encourage modifications to be recorded in this manner. Both OSM and a permittee have an interest in reducing modifications to writing as soon as possible in order to avoid perhaps costly misunderstandings.

ATOMIC FUEL COAL CO., INC.

3 IBSMA 107

Decided April 23, 1981

Appeal by Atomic Fuel Coal Co., Inc., from the Aug. 29, 1980, decision of Administrative Law Judge Tom M. Allen in Docket No. CH 0-255-R, which required the elimination of certain portions of a highwall as described in Notice of Violation No. 80-I-43-20.

Affirmed as modified.

1. Surface Mining Control and Reclamation Act of 1977: Backfilling and Grading Requirements: Highwall Elimination

Elimination of that portion of a highwall created before May 3, 1978, will not be required when OSM, after negotiations with the permittee, agrees that pre-May 3 highwalls need not be eliminated and does not dispute that part of the highwall was created before that date, and when there is no evidence that post-May 3 operations had any adverse physical impact on the pre-May 3 highwall.

APPEARANCES: Dennis E. Jones, Esq., Jones & Godfrey, Lebanon, Virginia, for Atomic Fuel Coal Co., Inc.; Harold Chambers, Esq., Office of the Field Solicitor, Charleston, West Virginia, Glenda Hudson, Esq., and Marcus P. McGraw, Esq., Assistant Solicitor for Enforcement, Office of the Solicitor, Washington, D.C., for the Office of Surface Mining Reclamation and Enforcement.

OPINION BY THE
INTERIOR BOARD OF
SURFACE MINING AND
RECLAMATION APPEALS

Atomic Fuel Coal Co., Inc. (Atomic Fuel), has sought review of the Aug. 29, 1980, decision of Administrative Law Judge Tom M. Allen in Docket No. CH 0-255-R. That decision required Atomic Fuel to eliminate certain portions of a highwall created at its minesite. For the reasons set forth below, we affirm that decision as modified in this opinion.

Background

Prior to May 3, 1978, the effective date of the initial regulatory program regulations promulgated under the Surface Mining Control and Reclamation Act of 1977,¹ Atomic Fuel began surface coal mining operations in Buchanan County, Virginia. When the Office of Surface Mining Reclamation and Enforcement (OSM) inspected the site on May 7, 1980, it issued Notice of Violation No. 80-I-43-20, alleging two violations of those regulations. Only violation 1, failure to eliminate highwalls in order to achieve approximate original contour, remains at issue. After receiving this notice, Atomic Fuel indicated to OSM that much of the disturbance had been done prior to May 3, 1978. OSM agreed that areas disturbed before May 3 would not have to be returned to approximate original contour, and modified the notice of violation accordingly on May 22, 1980.

Atomic Fuel applied for review of and temporary relief from the

notice on May 19, 1980. After the hearing the Administrative Law Judge requested that the parties survey the area so that exact points could be identified to separate the different phases of the mining operation. A survey was prepared and a decision was issued on Aug. 29, 1980. Atomic Fuel appealed from part of this decision, and both parties filed briefs.

Discussion and Conclusions

Atomic Fuel was mining two coal seams at this site: Blair (upper) and Glamorgan (lower). The disputed area involves the highwall located between points G to H and H to I, as identified in Additional Exhibits I and II and the decision below. In these areas Atomic Fuel stated that the Blair seam had been removed before May 3, 1978, but that the Glamorgan seam was removed after May 3. In addition, however, Atomic Fuel testified that some of the approximately 50 feet of overburden separating the two seams had also been removed before May 3. OSM did not dispute this testimony. The decision below, however, appears to require Atomic Fuel to eliminate the entire highwall up to the Blair seam in these areas.

[1] We do not believe that the Administrative Law Judge's decision intended to require elimination of highwall created before May 3, 1978, particularly in light of OSM's agreement that such measures would not be required and failure to dispute Atomic Fuel's testimony

¹ Act of Aug. 3, 1977, 91 Stat. 445, 30 U.S.C. §§ 1201-1328 (Supp. II 1978).

on what had been disturbed before May 3. Neither will we impose such a requirement in the absence of evidence in the record of any adverse physical impact on that highwall from operations conducted after May 3. *Cf. Miami Springs Properties*, 2 IBSMA 399, 87 I.D. 645 (1980); *Cedar Coal Co.*, 1 IBSMA 145, 86 I.D. 250 (1979). The decision below is modified to clarify that only so much of the highwall between points G and I as was created after May 3, 1978, must be eliminated.

Therefore, the Aug. 29, 1980, decision of the Hearings Division is affirmed as modified.

HOME PETROLEUM CORP. ET AL.

54 IBLA 194

Decided April 23, 1981

Appeal from decision of the Wyoming State Office, Bureau of Land Management, canceling oil and gas lease W 60414, rejecting and returning drawing entry cards drawn with second and third priorities in the July 1977 drawing of simultaneous offers for the leased parcel, and voiding overriding royalty interests retained in the lease.

Affirmed in part, reversed in part, and remanded.

1. Oil and Gas Leases: Applications: Generally—Oil and Gas Leases: Applications: Sole Party in Interest—Oil and Gas Leases: First-Qualified Applicant

When an individual files an oil and gas lease offer through a leasing service under an agreement whereby the leasing service is authorized to act as the sole and exclusive agent to negotiate for sublease, assignment, or sale of any rights obtained by the offeror; where the offeror is required to pay the leasing service according to a set schedule, even if the offeror negotiates the sale; and where such agency to negotiate is to be valid for 5 years, the leasing service has an enforceable right to share in the proceeds of any sale of the lease or any interest therein, and in any payments of overriding royalties retained. Such an agreement creates for the leasing service an "interest" in the lease as that term is defined in 43 CFR 3100.0-5 (b).

2. Oil and Gas Leases: Applications: Generally—Oil and Gas Leases: Applications: Sole Party in Interest—Oil and Gas Leases: First-Qualified Applicant

Where an individual files an oil and gas lease offer through a leasing service under an agreement with the service which has been determined to create an interest in the lease for the service, and the service files a "waiver" of that interest with the BLM prior to a simultaneous drawing, without communicating such "waiver" to the client, and without any contractual consideration running from the client to the leasing service, the "waiver" is without effect as a matter of law and both the successful drawee and the leasing service are required to make

a showing as to their respective interests under 43 CFR 3102.7.

3. Equitable Adjudication: Generally—Estoppel—Federal Employees and Officers: Authority to Bind Government—Oil and Gas Leases: Applications: Generally

The Department is not estopped from rejecting an oil and gas lease offer because the offeror allegedly relied on the acceptance by employees in a BLM state office of a plan designed by the offeror to remove a fatal defect in the offer, where the offeror had both constructive and actual knowledge that the BLM state office employees are subordinate personnel and that their decisions are subject to reversal on review at the Secretarial level.

4. Oil and Gas Leases: Applications: Drawings—Oil and Gas Leases: Assignments or Transfers—Oil and Gas Leases: Bona Fide Purchaser

A party which purchases a first-drawn simultaneous noncompetitive DEC lease offer is a bona fide purchaser of this interest where, at the time it agreed to purchase the offer, BLM's case records contained nothing to indicate that the DEC was defective or that a protest against the offer was ongoing; and where, at the time it consummated the agreement by payment of consideration for the offer, these records showed that BLM had proceeded to issue the lease, thus indicating that there was no defect in the DEC, provided that the purchaser had no actual knowledge of any defect in the DEC.

5. Oil and Gas Leases: Applications: Drawings—Oil and Gas Leases: First-Qualified Applicant

An undated DEC lease offer is defective and must be rejected.

6. Oil and Gas Leases: Bona Fide Purchaser—Oil and Gas Leases: Cancellation—Oil and Gas Leases: Overriding Royalties

tion—Oil and Gas Leases: Overriding Royalties

An overriding royalty interest retained by a lessee after he has assigned the lease to a bona fide purchaser is voidable and properly canceled where it is revealed that the lessee's original lease offer failed to disclose the existence of another party in interest in the offer. Any overriding royalties which the lessee assigned to the other party in interest are also properly canceled, as this party is not a bona fide purchaser thereof, having had actual knowledge of the defect in the lease. BLM should, on remand, sell these canceled overriding royalty interests as provided in 30 U.S.C. § 184(h) (1976) and 43 CFR 3102.1-2(b).

7. Oil and Gas Leases: Assignments or Transfers—Oil and Gas Leases: Bona Fide Purchaser

A "remote purchaser," that is, one who purchases an oil and gas lease interest from a bona fide purchaser, is protected just as is the latter, even where it is chargeable with knowledge that there may have been a legal discrepancy when the lease was initially issued.

APPEARANCES: Laura L. Payne, Esq., Denver, Colorado, for Home Petroleum Corp., and Enserch Petroleum, Inc.; Melvin E. Leslie, Esq., Salt Lake City, Utah, for M. T. McGregor and Geosearch, Inc.; David B. Kern, Esq., Milwaukee, Wisconsin, for Anthony C. Pagedas, Calvin J. Gillespie, Peter G. Sarantos, Tom Pagedas, Donald Albrecht, and Resource Service Co., Inc.; Harold J. Baer, Esq., Office of the Regional Solicitor, U.S. Department of the Interior, Denver, Colorado, for the Bureau of Land Management.

*OPINION BY
ADMINISTRATIVE JUDGE
STUEBING*

April 23, 1981

INTERIOR BOARD OF LAND APPEALS

This is the second time this matter has been before us. In *Geosearch, Inc.*, 41 IBLA 291 (1979), we vacated a decision by the Wyoming State Office, Bureau of Land Management (BLM), which dismissed the protest of Geosearch, Inc. (Geosearch), against the validity of several oil and gas leases, including W-60414 held by Enserch Petroleum, Inc. (Enserch). BLM originally issued this lease to Anthony C. Pagedas, *et al.*,¹ on Sept. 27, 1977, after his offer for this parcel of land was drawn with first priority in BLM's July 1977 drawing of simultaneous noncompetitive oil and gas lease offer drawing entry cards (DEC's).

On Nov. 9, 1977, Fred L. Engle, d.b.a. Resource Service Co., Inc. (RSC), filed an "Assignment of Royalty Payment" with BLM. This assignment, which Pagedas had executed, stated that he had assigned his interest in lease W-60414 to Enserch on Aug. 30, 1977,² and that he had retained the right "to receive certain overriding royalty payments," that is, the right to re-

ceive 5 percent of the total proceeds of any production from the lease. The assignment also stated that Pagedas had in turn assigned a percentage of this overriding royalty interest to Engle. Accordingly, Engle requested approval of this assignment of Pagedas' overriding royalty to him.

On Nov. 30, 1977, 2 days after the 90-day period prescribed by 43 CFR 3106.3-1, Enserch filed a copy of the Aug. 30, 1977, assignment from Pagedas to it for BLM's approval. As Engle had stated earlier, Pagedas assigned 100 percent of his record title to Enserch, but reserved a 5 percent overriding royalty interest in the lease. Enserch requested that BLM approve the assignment despite the untimeliness of its submission, and BLM did so, effective Dec. 1, 1977.

BLM apparently never approved the assignment of Pagedas' overriding royalty interest to Engle, as there is no notation so indicating on Engle's request for approval filed on Nov. 9, 1977. BLM explained subsequently that it does not approve assignments of overriding royalties, but merely places notice of such assignments in the case file for record purposes only.

On Oct. 3, 1978, Geosearch filed a protest against the continued validity of 14 leases, including W-60414. Geosearch asserted an interest in the matter based on an agreement with M. T. McGregor, whose DEC for this parcel had been drawn with second priority in the July 1977 drawing. McGregor ap-

¹ The offerors named on the DEC were Anthony C. Pagedas and Calvin J. Gillespie. Other parties in interest identified on the card were Tom Pagedas, Peter G. Sarantos, and Donald Albrecht. The statement of interests which accompanied the DEC indicated that each person held a 20 percent interest in the offer. For convenience, we shall refer to the DEC as though it were filed by Pagedas alone.

² On Nov. 9, 1977, the record contained no reference to an assignment to Enserch. However, the 90-day period for Enserch to file this assignment for BLM's approval had not expired at this time.

parently agreed to assign a percentage of whatever rights she still held in the lease offer to Geosearch.

Geosearch's protest asserted that BLM had issued this lease to Pagedas in violation of 43 CFR 3100.0-5(b), 3102.7, and 3112.5-2, in that Fred Engle had had an interest in Pagedas' offer at the time it was filed which was not disclosed and which effectively and illegally gave Engle an increased chance of success in the drawing. Geosearch sought a cancellation of all lease interests, including overriding royalty interests, remaining in the hands of persons who were not bona fide purchasers and requested that BLM issue such interests to it as the successor second drawee. BLM dismissed this protest on Oct. 5, 1978, noting that the lease had been assigned to Enserch effective Dec. 1, 1977, and stating that it believed that the second drawee had no interest left to assign to Geosearch.

On appeal to this Board, we vacated BLM's denial of Geosearch's protest, noting that the offer of McGregor, the second drawee, remained viable, as BLM had never rejected her offer. *Geosearch, Inc.*, *supra* at 293. We also remanded the matter to BLM to join Enserch to the protest proceeding in order to give it the opportunity to show that it held and acquired Pagedas' lease interest as a bona fide purchaser and to allow Geosearch to present prima facie evidence to the contrary, as provided in 43 CFR 3102.1-2(c). *Id.* at 294.

On remand, BLM inquired into the circumstances surrounding the filing of Pagedas' offer and requested a copy of any service agreement between Pagedas and Engle. On Aug. 29, 1979, a copy of this service agreement, dated Mar. 11, 1977, which apparently gave Engle a vested right for 5 years to a specific share in the proceeds of the sale of any lease won by Pagedas, was filed. Engle, through counsel, argued that he had disclaimed this interest by filing an amendment and disclaimer with BLM in January 1977 and requested that BLM suspend its proceedings until litigation on the efficacy of this waiver was completed.

On Oct. 18, 1979, BLM joined Enserch to the proceedings and directed it to present evidence of its status as a bona fide purchaser of Pagedas' lease, on pain of cancellation of the lease. On Nov. 13, 1979, Enserch responded, asserting that it acquired the lease as a bona fide purchaser without knowledge of any possible defect, and requesting accordingly that it be dismissed as a party to the proceedings. Enserch noted that it inquired into BLM's file, which revealed no defect in Pagedas' lease, as late as Oct. 11, 1977, just before it paid him consideration for the least interest as agreed on Aug. 30, 1977.

On Nov. 27, 1979, BLM afforded Geosearch 60 days in which to refute Enserch's assertion of bona fides by prima facie evidence. Geosearch responded with an affidavit from Melvin Leslie, Esq., its attor-

April 23, 1981

ney, asserting that Enserch should have been alerted to the possibility that Pagedas' lease was defective in view of this Board's holdings concerning other of Engle's clients on Aug. 19, 1977, in *Lola I. Doe*, 31 IBLA 394 (1977), and on Sept. 12, 1977, in *Sidney H. Schreter*, 32 IBLA 148 (1977), and should have examined Pagedas' service agreement with Engle. Geosearch asserted that Enserch is properly charged with constructive notice of the contents of this agreement, including the interest-creating provision, and so should have known that Pagedas had violated the regulations by not disclosing the existence of this interest when making his offer.

On Nov. 26, 1980, BLM, denying Engle's request for suspension, issued its decision in this matter. BLM held that Engle had held an interest in Pagedas' offer at the time he filed it in July 1977; that Engle's unilateral filing of an amendment and disclaimer did not alter this fact; that Pagedas' offer violated 43 CFR 3102.7 and 3112.5-2 (1979) because of Engle's interest; that Pagedas had assigned his interest in the lease to Enserch before the lease had issued, so that Enserch was not a bona fide purchaser; and that the lease should therefore be canceled. BLM declared the overriding royalty interests held by Pagedas and Engle null and void ab initio, due to their regulatory violation. BLM also questioned the good faith of Home Petroleum Corp., (Home) in its purchase of one-half of the rec-

ord title of Enserch,³ noting that Home had good reason to know of the defect in the underlying lease offer in 1978 when the assignment to it was executed. Finally, BLM held that Geosearch was not entitled to any interest in the lease.

On Nov. 26, 1980, BLM also rejected the DEC's of M. T. McGregor and James G. and Eugene J. D'Amico, which had been drawn with second and third priorities, respectively, in the July 1977 drawing, stating that the lease had been issued to the first qualified offeror.

Anthony Pagedas, *et al.*, RSC, Enserch, Home, M. T. McGregor, and Geosearch appealed BLM's decision. On Jan. 30, 1981, we granted a joint motion by appellants Enserch and Home to expedite our consideration of this matter, in order to limit possible drainage of the area by producing wells on adjacent private leases and to minimize any loss of Federal royalty oil and/or gas.

We have considered the question of the validity of offers filed by RSC clients in these circumstances many times in the past and have held consistently that they must be rejected. *Estate of Glenn F. Coy*, 52 IBLA 182, 88 I.D. 236 (1981); *D. R. Weedon, Jr.*, 51 IBLA 378 (1980); *Donald W. Coyer (On Judicial Remand)*, 50 IBLA 306 (1980); *Frederick W. Lowey*, 40

³ BLM alludes to "a pending assignment in the file which, if approved will transfer 50% of the record title from Enserch to Bridger Petroleum Corp., now Home Petroleum Corp. (Home)." We are unable to locate this document.

IBLA 381 (1979) (appeal pending); *Alfred L. Easterday*, 34 IBLA 195 (1978); *Sidney H. Schreter*, *supra*; *Lola I. Doe*, *supra* at 394.⁴ We have also affirmed BLM's rejection of offers in which other leasing services held similar undisclosed interests at the time their clients' offers were filed. *Gertrude Galauner*, 37 IBLA 266 (1978); *Marty E. Siot*, 36 IBLA 374 (1978). We adhere to these holdings.

[1, 2] The service agreement in effect at the time Engle filed Pagedas' offer gave Engle an "interest" in this offer.⁵ This interest was not abrogated by Engle's unilateral attempt to disclaim it, as Engle did not communicate this putative waiver to Pagedas or receive any consideration from him to bind the contract.⁶

We note additionally that this purported amendment and disclaimer, by its own terms, does not apply to the service agreement between Engle and Pagedas. This agreement was entered into on Mar. 11, 1977, well after Jan. 13, 1977, the date of the amendment and disclaimer, which clearly applies only to agreements extant on

Jan. 13. Thus, the purported disclaimer, even if legally effective would not apply to these offers. *D. R. Weedon, Jr.*, *supra* at 382; *Frederick W. Lowey*, *supra* at 385-86.

Pagedas failed to disclose Engle's interest at the time he made his offer as required by 43 CFR 3102.7, and the offer should therefore have been rejected because it violated this regulation.⁷

[3] The question of whether the Department is estopped from rejecting Engle's client's offers was fully considered in *Donald W. Coyer (On Judicial Remand)*, *supra* at 313-14. We adhere to our holding there that the Department is not estopped to reject these offers *in toto*.

Similarly, we adhere to our holding in *D. R. Weedon, Jr.*, *supra* at 383-84, wherein we considered and rejected the suggestion of Engle and his clients that it is unfair to give retroactive effect to our decision to reject offers such as Pagedas' in which Engle had an undisclosed interest.

[4] Even though Pagedas' offer was defective, the lease issued pursuant to this offer may not be canceled if it has been assigned to a bona fide purchaser. 30 U.S.C. § 184(h)(2) (1976); 43 CFR 3102.1-2. BLM held that Enserch, to which Pagedas assigned title to lease W 60414, was not a bona fide purchaser, citing *Winkler v. An-*

⁴ This appeal marks the fifth opportunity Engle has had to litigate the identical issues before this Board. See *Donald W. Coyer (On Judicial Remand)*, *supra* at 312 n.6; *D. R. Weedon*, *supra* at 381 n.2. However, we need not consider whether he is estopped from doing so here, as several additional issues are presented.

⁵ *Donald W. Coyer (On Judicial Remand)*, *supra* at 312; *Frederick W. Lowey*, *supra* at 383; *Alfred L. Easterday*, *supra* at 198; *Sidney H. Schreter*, *supra*; *Lola I. Doe*, *supra*.

⁶ *Donald W. Coyer (On Judicial Remand)*, *supra* at 313; *Frederick W. Lowey*, *supra* at 384-82; *Alfred L. Easterday*, *supra* at 199.

⁷ *Donald W. Coyer (On Judicial Remand)*, *supra*; *Gertrude Galauner*, *supra*; *Marty E. Siot*, *supra*; *Alfred L. Easterday*, *supra*; *Sidney H. Schreter*, *supra*; *Lola I. Doe*, *supra*.

drus, 494 F. Supp. 946 (D. Wyo. 1980), and it accordingly canceled this lease. We reverse BLM's holding and reinstate the lease.

In order to determine whether Enserch was a bona fide purchaser, it is necessary to examine the state of its knowledge, both actual and constructive, at the time of the assignment. *Winkler v. Andrus*, 614 F.2d 707, 712 (10th Cir. 1980); *Southwestern Petroleum Corp. v. Udall*, 361 F.2d 650, 656 (10th Cir. 1966). Assignees of Federal oil and gas leases who seek to qualify as bona fide purchasers are deemed to have constructive notice of all of the BLM records pertaining to the lease at the time of the assignment. *Winkler v. Andrus*, *supra* at 713; *Southwestern Petroleum Corp. v. Udall*, *supra* at 655-56. An assignee is not required to go outside those BLM records relating to the particular parcel of land assigned. *Ibid*.

We must first determine whether the conclusion is influenced by the date when the assignment occurred. The general rule is that the relevant date is the date that the consideration for the assignment was paid. *Winkler v. Andrus*, 614 F. 2d at 712, citing 77 Am. Jur. 2d, *Vendor & Purchaser* § 706 (1975).⁸ In *Wink-*

ler, the Tenth Circuit nevertheless stated that the critical time was instead when the agreement was formed. However, here, as in *Winkler*, it is immaterial whether the critical time is regarded as the date the parties agreed to the assignment or the date consideration was paid.

On Aug. 30, 1977, Enserch agreed to purchase Pagedas' offer to lease, and lease if issued. BLM's records showed the DEC to be entirely proper on its face with no indication of, nor means to discover, its actual infirmity at that time. Although the presence of the DEC's of the second and third drawees and the fact that BLM had not yet issued a lease to Pagedas might have given Enserch some reason to speculate that BLM might still reject Pagedas' offer, there was nothing in the record suggesting that it would have any basis to do so. The DEC was apparently completely and accurately filled out. Enserch had no way to tell from BLM's file that Engle actually had an undisclosed interest in the offer. On Aug. 30, 1977, the first decision issued by this Board which pointed out the

analogy. On May 1 "B" contracts to purchase an estate from "A" subject to A's ability to demonstrate that he has merchantable title. At that point B may not contend that any equitable interest held by him by reason of the contract enjoys the protection afforded to a bona fide purchaser, because the adequacy of the vendor's title is still the subject of B's inquiry and doubt. But when, on June 1, A produces satisfactory evidence that he indeed is invested with merchantable title, and nothing appears of record to refute or dispute A's showing, B may conclude the transaction by paying the consideration and assert thereafter that he acquired the title as a bona fide purchaser.

⁸ The parties in *Winkler v. Andrus*, 614 F.2d. 707, apparently disagreed on whether the relevant date was the date of the assignment agreement or the date of payment of consideration. The Court, while citing the general rule favoring the latter, announced its support for the former, but did not actually have to choose, as it found that the result was the same in either case. *Id.* at 712.

The question of what point in time must be the focus of the determination of a purchaser's bona fides may be resolved by hypothetical

illegal practice in which Engle and his clients had engaged, *Lola I. Doe*, *supra*, had not yet been distributed publicly, so that Enserch could not have been put on inquiry by familiarity with *Doe*.

Moreover, by the time Enserch completed its transaction with Pagedas by paying him for the lease on Oct. 28, 1977, it appeared even more certain that it was valid. BLM's records still revealed no flaw in the offer, and BLM had issued the lease, thereby investing Pagedas with a leasehold interest which was *prima facie* valid. Any small room for doubt which might have faced Enserch in August was erased, and there was no longer any reasonable basis to disbelieve that Pagedas had a legitimate oil and gas lease interest. We conclude that, at all times in question, the record gave Enserch a firm basis to conclude in good faith that it was buying valid title to an oil and gas lease from Pagedas.

In its decision and on appeal, BLM argues that Enserch was not a bona fide purchaser under the rule set out and applied in the *Winkler* cases. BLM's reliance on this rule here is misplaced, as in *Winkler* unlike the instant case, BLM's file gave the would-be bona fide purchaser very good reasons to question whether he was purchasing a valid lease, both at the time he agreed to purchase and at the time he paid for the interest. His assignor's DEC had been drawn only with *second* priority, and, while both BLM and this Board had concluded

that the *first* DEC was invalid (*Joseph A. Winkler*, 24 IBLA 380 (Apr. 29, 1976)), this question had not been finally resolved as of July 12, 1976 (the date of assignment), or July 26, 1976 (the date the assignee paid for the assignment), because the 90-day statutory time period for filing a petition for judicial review of our decision had not run. Thus, as the assignee was imputed to have had constructive knowledge both of the 90-day appeal period and of the contents of BLM's file, he knew that litigation about the validity of the first-drawn DEC was still in prospect, and that this first priority interest possibly could be revitalized by such proceedings. Accordingly, he could not have taken the second priority interest without some uncertainty as to its validity, and so did not qualify as a bona fide purchaser, either on the date of the agreement or when he paid the assignor. *Winkler v. Andrus*, 494 F. Supp. at 949. At all times during the assignment negotiations, BLM's records gave notice to the purchaser of a climate of adversity surrounding the interest he was purchasing. As discussed above, the present case is quite different.

BLM attempts to analogize *Winkler* to the present situation, stressing that here, as in *Winkler*, the validity of the assigned interest had not yet been finally established at the time of the assignment. It argues that a challenge to the validity of Pagedas' offer was still possible even after the lease issued, because the second and third drawees

could have protested the issuance of the lease to Pagedas or could have appealed the rejection of their offers.⁹ We do not think that the rule in *Winkler* extends so far as to dictate that one may not purchase an oil and gas lease interest in good faith simply because there is a possibility that the validity of the lease someday might be subject to challenge. As discussed above at n.9, one may never be entirely certain that a protest will not be filed against a lease, even long after it is issued. See, e.g., *Beard Oil Co.*, 1 IBLA 42, 77 I.D. 166 (1970), where the protest was filed 4 years after the lease issued. Accordingly, we hold that, in the absence of a climate of adversity surrounding the interest, which is evident from BLM's records, such as was present in *Winkler*, one may be a bona fide pur-

chaser even where the validity of the lease might be subject to some future attack. That is, if there is nothing in the record suggesting that an adverse claim may be asserted and prevail, such as a protest or apparent defect in the lease, the lease may be purchased in good faith. This is particularly true where, as here, the assignee's purchase of the offer was expressly contemplated by the Departmental regulations governing assignments. 43 CFR 3106.3-4; see *Barbara J. Niernberger* (concurring opinion), 53 IBLA 112, 119-21 (1981).

Therefore, in the absence of anything in the record showing that Enserch had actual knowledge of the defect in Pagedas' offer, we conclude that it was a bona fide purchaser, as there is no basis for imputing to it constructive knowledge of the defect.

⁹ We note two pertinent practical difficulties with this argument. First, there is no specific time period within which to protest. For instance, Geosearch waited over a year from the date of issuance of the lease to protest on behalf of the second drawee. Second, BLM did not routinely reject and return second and third DEC's in 1977, and did not start doing so until recently. For example, in this case, BLM did not reject the second and third offers until over 3 years after issuance of the lease. Moreover, we believe that there are hundreds of ongoing oil and gas leases issued under the DEC system in which BLM has never rejected these second and third DEC's. In these circumstances, the effect of adopting BLM's suggestion would be that no assignee of any of these hundreds of leases could be a bona fide purchaser, as BLM's records would have shown the assignee that it was still possible for the second or third drawee to protest the validity of the lease, because their offers were still extant despite the fact that the lease has long since issued. This result is clearly at odds with the congressional purpose in enacting the bona fide purchaser provision (cited *infra*), as it would virtually eliminate this protection and throw lease ownership into chaos.

We affirm BLM's decision of Nov. 26, 1980, to reject and return the DEC's of M. T. McGregor and James G. and Eugene J. D'Amico, which were drawn with second and third priority, respectively, in the July 1977 drawing. BLM draws DEC's with subordinate priority in order not to have to relist a parcel for offers if the first DEC is rejected. If BLM had not previously rejected them, the second- or third-priority DEC might be recognized as a valid offer in the event that a lease issued to a superior offeror was canceled. *Estate of Glenn F. Cou.*, 52 IBLA 182, 194-95, 88 I.D. 236, 242; *Geosearch, Inc.*, 51 IBLA 59, 61 (1980). In the instant case,

the lease has been issued to a superior offeror, and this lease may not now be canceled because of any defect in that superior offer, because the lease has been assigned to a bona fide purchaser. In these circumstances, the second- and third-priority DEC's are properly rejected, as there is no longer any interest at stake to which they apply. See *Geosearch, Inc.*, 41 IBLA at 293.

[5] Even disregarding the above, the DEC of McGregor was defective and must be rejected, as it was not dated. *Sorensen v. Andrus*, 456 F. Supp. 499 (D. Wyo. 1978); *Donald E. Monington*, 42 IBLA 380 (1979), *aff'd Monington v. Andrus*, Civ. No. C-79-366K (D. Wyo. Apr. 11, 1980).

[6] We disagree with BLM's holding that the retained overriding royalty interest now held by Pagedas and Engle were null and void ab initio. We regard these interests as merely *voidable* and subject to cancellation. Were such interests wholly void from their inception, they would be nonexistent, and no administrative action would be necessary to dispose of them. Moreover, if such interests never existed as a matter of law, it well might be argued that the entire leasehold estate passed to the bona fide purchaser without reservation, so that the interests retained by the assignor could not be recovered and returned to Federal control, and the purchaser would have received more than bargained for. Such a result clearly is not what is contemplated by the statute.

The retained overriding royalty

interests are voidable and must be canceled. Where an offeror has filed a DEC which violates 43 CFR 3102.7 because it does not contain the names of all parties in interest; where BLM, not knowing of this defect, has issued a lease to the offeror; and where the lessee has assigned the lease to a bona fide purchaser and retained an overriding royalty interest, BLM, upon discovering the defect in the offer, properly cancels the overriding royalty interest retained by the offeror. *Wayne E. DeBord*, 50 IBLA 216 n.1, 87 I.D. 465 n.1 (1980) (appeal pending). It is entirely proper to deny both Pagedas (*et al.*) and Engle (RSC) a share in any benefit which may result from production on this lease. Pagedas failed to comply with the sole party in interest requirement, and Engle took an assignment of a portion of the interest which Pagedas retained with full knowledge of the defect in Pagedas' DEC, as Engle himself held the objectionable interest.

Engle and Pagedas challenge the Department's authority to cancel their overriding royalty interests. The regulations *require* that any underlying interest in a lease be canceled or forfeited to the Government where the interest was acquired in violation of governing provisions, notwithstanding the fact that there may be other valid interests in the same lease which are not subject to cancellation. 43 CFR 3102.1-2(b). This provision is adopted directly from the governing section of the Mineral Leasing Act, *as amended*, 30 U.S.C. § 184

(h) (2) (1976), as part of the long-recognized Departmental authority to cancel leases administratively for violation of the Mineral Leasing Act. *Boesche v. Udall*, 373 U.S. 472 (1963). In *McKay v. Wahlenmaier*, 226 F.2d 35 (D.C. Cir. 1955), the Court held that the Secretary *must* cancel an oil and gas lease interest acquired in violation of a Departmental regulation.

Having canceled these overriding royalty interests, on remand, BLM should comply with the terms of 43 CFR 3102.1-2(b) and sell these interests as provided therein.

[7] Finally, we consider the status of the interest of Home to which Enserch apparently reassigned half of its interest on Nov. 3, 1978.¹⁰ In its decision, BLM questioned whether Home was a bona fide purchaser of this interest under *Winkler*, as by the time of assignment to Home in November 1978, BLM's records revealed that Geo-search had challenged the validity of Pagedas' offer. We conclude that it is irrelevant that Home may have known of the possibility of a defect in Pagedas' offer in November 1978. Home is a "remote purchaser" from Enserch, that is one entitled to protection as a bona fide purchaser and, as such, takes the same full title which Enserch had:

It is a general rule that a remote purchaser of real estate whose purchase does not fulfil all the requisites for protection due a bona fide purchaser may nevertheless be accorded protection be-

cause of his purchase from one who is entitled thereto. The purpose of this rule is to prevent a stagnation of property and to protect the first purchaser who, being entitled to hold and enjoy, must be equally entitled to sell. Otherwise, a bona fide purchaser might be prevented from selling his property for full value. In other words, the vendee of the bona fide purchaser is not favored on his own account, but for the sake of him from whom he purchased. It is wholly immaterial of what nature the outstanding interest is, whether it is a lien or encumbrance, or a trust, or any other claim. [Footnotes omitted.]

77 Am. Jur. 2d, *Vendor & Purchaser* § 718 (1975). It is appropriate to apply this rule to the Federal bona fide purchaser statutory provision as the announced intent of Congress in enacting these provisions was in part to encourage purchase of lease interests without hesitancy or reluctance. H.R. Rep. No. 1062, 86th Cong., 1st Sess. 2, reprinted in [1959] U.S. Code Cong. & Ad. News 2620, 2621.

Therefore, pursuant to the authority delegated to the Board of Land Appeals by the Secretary of the Interior, 43 CFR 4.1, the decision appealed from is affirmed in part, reversed in part, and remanded for further proceedings in accordance therewith.

RICHARD J. LEAUMONT

54 IBLA 242

Decided *April 27, 1981*

Appeal from decision of the Montana State Director, Bureau of Land Management, dismissing appellant's protest against the State Director's determination not to designate four units of land as wilderness study areas.

Affirmed.

1. Administrative Procedure: Adjudication—Administrative Procedure: Administrative Review—Appeals—Federal Land Policy and Management Act of 1976: Wilderness—Wilderness Act

Where an appellant disagrees with the decision below and seeks to have his judgment substituted for that of the decisionmaker, his appeal will be carefully considered, with due regard for the public interest. However, where the responsibility for making such judgments has been exercised by an officer duly delegated with the authority to do so, his action will ordinarily be affirmed in the absence of a showing of compelling reasons for modification or reversal.

APPEARANCES: Richard J. Leaumont, Slidell, Louisiana, pro se; Dale D. Gobel, Esq., Office of the Solicitor, Washington, D.C., for the Bureau of Land Management.

*OPINION BY
ADMINISTRATIVE JUDGE
STUEBING*

*INTERIOR BOARD OF
LAND APPEALS*

Pursuant to its responsibilities under sec. 603 of the Federal Land

Policy and Management Act of 1976, 43 U.S.C. § 1782 (1976), and the Wilderness Act of 1964, 16 U.S.C. § 1131 (1976), the Montana State Office of the Bureau of Land Management (BLM) has conducted an inventory of certain identified units of public land in Montana in order to ascertain whether such units should be classified as wilderness study areas. In consequence of this effort, four such inventoried units were found not to meet the criteria established to qualify them as wilderness study areas, same being identified as Blacktail Mountains West (MT-076-003), Lima Reservoir (MT-076-011), McCartney Mountain/Sandy Hollow (MT-076-025), and Missouri River Island (MT-075-123).

Richard J. Leaumont filed a written protest from BLM's decision not to recommend these units for designation as wilderness study areas, listing his reasons why each should be included, rather than excluded, from further study.

By his letter decision of June 9, 1980, the BLM's State Director, Montana, rejected Leaumont's protest. In the decision, he cited each of Leaumont's reasons for recommending each of the units as a wilderness study area, and listed BLM's specific response to each reason as his basis for finding the protest to be without merit.

Leaumont filed a timely appeal to this Board. In his statement of reasons for appeal, appellant has offered his own point-by-point analysis of the wilderness characteristics of each unit and attempts to

refute the reasons given by BLM for its findings.

We will not undertake here a recital of all of the detailed assertions and rebuttals made, respectively, by appellant and BLM regarding each unit. However, in order that the reader may comprehend the nature of the controversy, we will describe generally a few of the issues asserted.

BLM's findings were, variously, that certain of the units had less than 5,000 acres (the Missouri River Island Unit is only 22 acres),¹ and were lacking in the outstanding wilderness qualities, public support for inclusion, and sufficient size to make practical their preservation and use in an unimpaired condition. Appellant disagrees, alluding to various attributes in each of these units which he feels are outstanding he denies that the lack of public support for inclusion of a unit should be a factor influencing the decision.

BLM found that the presence of roads, fences, travel ways, private inholdings, mining activities, junk and litter, developed springs, abandoned cabins, a transmission line, etc., constitute detractions from the unit's wilderness qualities. Appellant asserts that these are less significant than the ecological, geological, historical, zoological, botanical, and ornithological values which these units afford.

BLM found that certain units do not offer the visitor a great opportunity for solitude in isolation from man and his world. Appellant disagrees, pointing out that in some instances solitude and isolation is provided by terrain features despite the proximity of cultural influences, and adding that he "is sure the flat topography of Unit 011 would make the degree of solitude less than outstanding to a Montana rancher, but on the other hand an urban dweller from our east coast would experience an outstanding degree of solitude."

These evaluations are necessarily subjective and judgmental. BLM's efforts are guided by established procedures and criteria, and are conducted by teams of experienced personnel who are often specialists in their respective areas of inquiry. Their findings are subjected to higher-level review before they are approved and adopted. Considerable deference must be accorded the conclusions reached by such a process, notwithstanding that such conclusions might reach a result over which reasonable men could differ. As we observed in *Rosita Trujillo*, 21 IBLA 289, 291 (1975):

Appellant's contentions are neither erroneous nor unreasonable. They represent only another point of view; a different side of the ongoing controversy over the identification and priority of concerns which comprise the public interest. However, where the responsibility for making such judgments has been exercised by an officer duly delegated with the authority to do so, his action will ordinarily be affirmed in the absence of

¹ Areas of less than 5,000 acres may be considered, as may roadless islands of any size. However, the size of an area can influence its potential for enjoyment of solitude, isolation, and other wilderness values.

a showing of compelling reasons for modification or reversal.

That holding was echoed in *California Association of Four-Wheel Drive Clubs*, 38 IBLA 361, 367-68 (1978), wherein we said:

Where conflicting uses of the public lands are at issue and the matter has been committed to the discretion of the BLM, the Board will uphold the decision of the BLM unless appellant has shown that the BLM did not adequately consider all of the factors involved, including whether less stringent alternatives would accomplish the result. *Of. Questa Petroleum Co.*, 33 IBLA 116 (1977); *Rosita Trujillo* [supra].

We do not find that the instant case presents sufficiently compelling reasons to warrant alteration of the decision below.

Therefore, pursuant to the authority delegated to the Board of Land Appeals by the Secretary of the Interior, 43 CFR 4.1, the decision appealed from is affirmed.

RAYLE COAL CO.

3 IB SMA 111

Decided April 27, 1981

Petition by Rayle Coal Co. for review of the Aug. 7, 1980, decision of Admin-

istrative Law Judge Sheldon L. Shepherd, Docket No. CH 0-95-P, upholding a violation of the standards for road construction in 30 CFR 715.17(1)(2), alleged by the Office of Surface Mining Reclamation and Enforcement in Notice of Violation No. 79-I-38-60 and challenged by petitioner on the primary ground that the subject road is not covered by the cited regulation.

Affirmed.

1. Surface Mining Control and Reclamation Act of 1977: Applicability: Generally—Surface Mining Control and Reclamation Act of 1977: Words and Phrases

"Roads maintained with public funds." Under an agreement with the West Virginia Department of Highways whereby the right-of-way for a secondary road has been reopened and maintained by a coal company for its use and that of the general public, the resulting road is not one "maintained with public funds" that is excluded from the definition of "roads" in 30 CFR 710.5 and, thus, the road is subject to the construction standards in 30 CFR 715.17 (1) (2).

2. Surface Mining Control and Reclamation Act of 1977: Initial Regulatory Program: Generally—Surface Mining Control and Reclamation Act of 1977: State Regulation: Generally

Because compliance with state mining permit conditions does not excuse non-compliance with the initial Federal performance requirements, a decision by a state regulatory authority not to include a haul road within the area under state permit does not preclude application of the Federal requirements to the road.

APPEARANCES: Neal S. Tostenson, Esq., Cambridge, Ohio, for Rayle Coal

April 27, 1981

Company; John R. Woodrum, Esq., Office of the Field Solicitor, Charleston, West Virginia, Marcus P. McGraw, Esq., Assistant Solicitor for Enforcement, Susan Shands, Esq., and Mark Squillace, Esq., Division of Surface Mining, Office of the Solicitor, Washington, D.C., for the Office of Surface Mining Reclamation and Enforcement.

*OPINION BY THE INTERIOR
BOARD OF SURFACE
MINING AND RECLAMATION
APPEALS*

Rayle Coal Co. (Rayle) has petitioned the Board to review a decision of the Hearings Division upholding a violation of the road construction standards in 30 CFR 715.17(l)(2) alleged by the Office of Surface Mining Reclamation and Enforcement (OSM) in Notice of Violation No. 79-I-38-60. Before the Hearings Division Rayle attempted to show that the subject road is excluded from the definition of "roads" in 30 CFR 710.5 and, therefore, is not covered by the construction standards for roads in 30 CFR 715.17(l)(2). The Administrative Law Judge held otherwise. In support of its petition to the Board Rayle has repeated its argument against OSM's asserted regulatory authority and further argued that, because the road is not part of its permit area, the company is in compliance with its state permit and, thus, not in violation of the Federal standards. For the reasons presented below, we reject both

arguments and affirm the decision under review.

*Factual and Procedural
Background*

Acting pursuant to the Surface Mining Control and Reclamation Act of 1977¹ OSM conducted inspections of Rayle's surface coal mining operation (State Permit No. 1-79) in Ohio County, West Virginia, and issued to Rayle Notice of Violation No. 79-I-38-60. In this notice OSM charged the company with a failure to construct a haul road in accordance with 30 CFR 715.17(l)(2). The haul road was identified in the notice as the section of West Virginia Secondary Route 4/1 between Rayle's access road and West Virginia State Route 2.

Rayle petitioned the Hearings Division for review of the notice on Feb. 22, 1980. The company did not allege that the haul road described in the notice was constructed in accordance with the cited regulation; rather, it challenged the notice on the ground that the haul road is a public road under the ultimate control of West Virginia. On Apr. 25, 1980, a hearing was conducted on Rayle's petition. The following statements of the Administrative Law Judge summarize the evidence adduced at the hearing.

There apparently was opposition from people living on the improved and maintained portion of Route 4/1 to the use of the road by the petitioner's coal hauling trucks. As a result, the petitioner entered

¹ Act of Aug. 3, 1977, 91 Stat. 445-532, 30 U.S.C. §§ 1201-1328 (Supp. II 1978).

into an agreement with the State of West Virginia (Respondent's Exhibit No. 4) whereby the petitioner obligated itself to reopen, grade and widen the unmaintained portion of Route 4/1 over the State-owned right of way to reconnect the same in a northerly direction with the State highway system. The petitioner was obligated to perform the necessary work on approximately 1.5 miles of County Route 4/1. The violations as to the haul road were described by Mr. Petitto beginning at page 25 of the transcript. The testimony of Mr. Petitto with the corroboration from Respondent's Exhibits Nos. 5a, 5c, 5d and 5f abundantly established that this subject road was not maintained as required by the interim regulations. Indeed, the petitioner put on no evidence to rebut the respondent's case (Tr. 91).

Further undisputed evidence was given by Mr. J. Darrell Bowen (Tr. 76) who was called by the respondent. Mr. Bowen is employed as a civil engineer for the West Virginia Department of Highways and testified that in 1933 at the time the State highway system came into existence that the portion of the road in question became part of the State highway system. Subsequently, between 1948 and 1950, the portion of the road in question apparently was dropped from the inventory log of the State of West Virginia (Tr. 81). Mr. Bowen further stated that his records did not indicate that any maintenance was performed since the time the subject road was dropped from the West Virginia highway map (Tr. 82). [Decision at 2.]

The Administrative Law Judge concluded on the basis of this evidence that Rayle's haul road "is not excluded from [OSM's] jurisdiction [under] the Act and that the notice of violation was properly issued." *Id.*²

² The Administrative Law Judge further assessed a civil penalty of \$2,000 (40 points) for the violation (Decision at 3). Because Rayle did not challenge the civil penalty amount in its petition to the Board, we do not review the penalty in our decision.

Discussion and Conclusion

[1] We agree that Rayle's haul road is not "maintained with public funds," so as to be excluded from the definition of "roads" at 30 CFR 710.5,³ and that the road is, therefore, subject to the construction standards at 30 CFR 715.17(7) (2).

The undisputed evidence shows that from approximately 1950 until 1978 the portion of Secondary Route 4/1 now used by Rayle as a haul road was not mentioned in West Virginia's road inventory log and was left in disrepair by the State (Tr. 80-84). In June 1978 Rayle entered into an agreement with the West Virginia Department of Highways giving Rayle temporary permission to reopen, grade and widen a 1.5-mile section of Route 4/1 for coal haulage (Exh. R-4). Rayle agreed to assume liability for any damage to persons or property from its work on the road, to maintain the road in a suitable condition for the traveling public who might use it, to restore the road at the completion of hauling to a condition better than that on the date of the agreement, and to post a bond securing the company's

³ This definition is:

"Roads means access and haul roads constructed, used, reconstructed, improved, or maintained for use in surface coal mining and reclamation operations, including use by coal-hauling vehicles leading to transfer, processing, or storage areas. The term includes any such road used and not graded to approximate original contour within 45 days of construction other than temporary roads used for topsoil removal and coal haulage roads within the pit area. *Roads maintained with public funds such as all Federal, State, county, or local roads are excluded.*" (Italics added.)

April 27, 1981

performance of the terms of the agreement (Exh. R-4).

No mention is made in the agreement of any financial responsibility on the part of West Virginia for maintenance of the road during its use by Rayle;⁴ rather, such responsibility clearly falls on Rayle under the agreement. The State merely has granted Rayle permission to develop and utilize a public right-of-way. Accordingly, we hold that the road is not excluded from the definition of "roads" at 30 CFR 710.5 and is subject to the construction standards of 30 CFR 715.17 (l) (2).

[2] The fact that Rayle's haul road may not be subject to the terms of the company's state mining permit (Tr. 61, 63, 76; Brief for Petitioner at 2) does not affect our holding. Compliance with the terms of its permit does not, per se, relieve Rayle of its obligations under the initial Federal performance standards. *Cedar Coal Co.*, 1 IBSMA 145, 86 I.D. 250 (1979). Correspondingly, the determination by the West Virginia Department of Natural Resources not to include the haul road within Rayle's permit area does not preclude application of the Federal performance standards to the road.

⁴ Rayle's propositions that the West Virginia Department of Highways has expended public funds in supervising and controlling the use of the haul road under its agreement with Rayle (Brief for Petitioner at 3), and that West Virginia's ownership of the road continues under the agreement (*id.*), do not show the kind of expenditures of public funds for maintenance of the road required under the exclusionary language of 30 CFR 710.5.

For the foregoing reasons, the decision below upholding violation 1 of Notice of Violation No. 79-I-38-60 is affirmed.

BOARD OF SURFACE
MINING AND RECLAMATION
APPEALS*

On Sept. 2, 1980, Ronald W. Johnson filed an appeal from a July 18, 1980, decision of Office of Surface Mining Reclamation and Enforcement (OSM) Regional Director Edgar A. Imhoff in Citizen's Complaint No. 3-IL-4-80.¹ This complaint had been filed under the provisions of the Surface Mining Control and Reclamation Act of 1977 (Act)² and its implementing regulations. The decision, based on a June 27, 1980, inspection of Peabody Coal Company's (Peabody) surface mining operation conducted under Illinois permit 980-82, issued on May 14, 1980, held that Peabody had valid existing rights under sec. 522(e) of the Act, 30 U.S.C. § 1272(e) (Supp. II 1978), to conduct surface coal mining operations within 300 feet of two occupied mobile homes on Mr. Johnson's property. For the reasons set forth below, we remand this case to OSM for further consideration.

Background

On Dec. 16, 1972, Mr. Johnson bought 4 acres and a residence from William Lamont. Mr. Lamont reserved the coal and other mineral rights in the 4 acres. On Dec. 29, 1975, Mr. Lamont and Peabody signed a "memorandum of agreement" under which Peabody was to purchase 406 acres adjoining Mr. Johnson's property and Mr. Lamont's reserved mineral rights in Mr. Johnson's property by July 1, 1977. Peabody received Illinois permit 560-79 sometime in 1976, covering this area. On July 14, 1977, Mr. Lamont deeded the property to Peabody.³ At that time, part of the property could not be mined because of a city ordinance prohibiting mining within certain areas.

On Feb. 27, 1978, the Sparta city council finalized action permitting mining within 1½ miles of the city limits, thus allowing Peabody to mine the entire property purchased from Mr. Lamont. Subsequently, Mr. Johnson filed an action in State court seeking invalidation of the new city ordinance. There is no indication in the record whether this case has been concluded.

On Jan. 2, 1980, Peabody applied for a new permit, which was issued on May 14, 1980. The permit prohibited mining within 300 feet of Mr. Johnson's house.

On May 9, 1980, Mr. Johnson moved a mobile home onto the

¹ Mr. Johnson was granted the right to appeal this decision on Aug. 12, 1980, by Acting Regional Director W. Russell Campbell.

² Act of Aug. 3, 1977, 91 Stat. 445, 30 U.S.C. §§ 1201-1328 (Supp. II 1978).

³ According to a notation in the margin, the deed from Mr. Lamont to Peabody was not filed in the county clerk's office until Jan. 29, 1980.

northwest corner of his lot. On May 12, 1980, he requested OSM to monitor his property for several possible violations of the Act and initial program regulations by Peabody, including mining within 300 feet of occupied dwellings.⁴ Some time in late May, Mr. Johnson moved a second mobile home onto the southwest corner of his lot.

On June 4, 1980, OSM informed Mr. Johnson that the State regulatory authority would need to make a determination of whether Peabody had valid existing rights to mine the areas around the mobile homes. OSM inspected the site on June 27, 1980, and issued an inspection report stating that Peabody "can (probably) demonstrate to the regulatory authority that the coal is both needed for and immediately adjacent to an ongoing surface coal mining operation for which all permits were obtained prior to August 3, 1977,"⁵ the effective date of the Act. No enforcement action was taken. On July 18, 1980, the OSM Regional Director affirmed the decision not to take action against Peabody. Subsequently, on Aug. 27, 1980, Illinois determined that Peabody had valid existing rights under OSM regulations.

⁴ Although it is not totally clear from the record, Mr. Johnson may not have informed Peabody that this mobile home was occupied until June 25, 1980. It is also not clear whether it was in fact occupied before that date.

⁵ This language is based on 30 CFR 761.5, a regulation written in terms of the permanent regulatory program under the Act, but made effective during the initial program by 44 FR 77446 (Dec. 31, 1979).

On Sept. 2, 1980, Mr. Johnson appealed the Regional Director's decision to the Board. After initial submissions concerning whether or not the appeal should be granted, the Board issued an order on Nov. 4, 1980, seeking briefs on whether OSM had authority to review a decision of a state regulatory authority on valid existing rights, and, if there were such authority, what procedures should be followed in conducting that review. Briefs were received from Mr. Johnson, OSM, and Peabody.

Discussion and Conclusions

[1] During the initial regulatory program sec. 522(e) of the Act, 30 U.S.C. § 1272(e) (Supp. II 1978), and 30 CFR 710.4 place the primary responsibility for determining whether a permittee has valid existing rights with the state regulatory authority for those areas over which the state has control. That responsibility, however, is not exercised totally independently of Federal oversight, because during the initial program, the Federal Government is an independent regulatory body. *Dayton Mining Co., Inc.*, 1 IBSMA 125, 86 I.D. 241 (1979); S. Rep. No. 95-128, 95th Cong., 1st Sess. 57 (1977). Part of the purpose of this oversight role is to ensure that the states understand and properly apply the Federal regulations which serve as the basis for many state regulations. In this context we have held that compliance with state permit requirements does not excuse noncompliance with the Federal regulations. *Cedar Coal Co.*,

1 IBSMA 145, 86 I.D. 250 (1979). Thus, although OSM may defer to the state for an initial determination on valid existing rights, when that determination is properly questioned, OSM has an independent responsibility to review it to ensure that it was made in compliance with the initial program regulations.

In this case, OSM's decision was issued on the basis of an inspection report stating that Peabody could *probably* demonstrate that it had valid existing rights. It was also issued before Illinois had made a determination. OSM has not reviewed the State's determination in order to decide whether the regulations were properly applied.

Therefore, this case is remanded to OSM for further consideration consistent with this decision. The decision made following this consideration should clearly apprise both Mr. Johnson and Peabody of the reasons and basis for the decision.

Decided *April 27, 1981*

Notice of appeal/petition for discretionary review filed by the Office of

Surface Mining Reclamation and Enforcement from the Aug. 21, 1980, decision of Administrative Law Judge Tom M. Allen in Docket Nos. CH 0-239-R, CH 0-182-P, and CH 0-200-P, dismissing the cases for failure to show authority to regulate the site.

Reversed and remanded.

1. Surface Mining Control and Reclamation Act of 1977: Applicability: Generally

Proof of the intention to mine coal and of a disturbance is sufficient to establish OSM's authority to regulate a site.

APPEARANCES: Harold Chambers, Esq., Office of the Field Solicitor, Charleston, West Virginia, James M. McElfish, Esq., and Marcus P. McGraw, Esq., Assistant Solicitor for Enforcement, Office of the Solicitor, Washington, D.C., for the Office of Surface Mining Reclamation and Enforcement; David J. Hutton, Esq., Jones & Godfrey, Lebanon, Virginia, for Russell Prater Land Co., Inc.

OPINION BY THE INTERIOR BOARD OF SURFACE MINING AND RECLAMATION APPEALS

The Office of Surface Mining Reclamation and Enforcement (OSM) has sought review of the Aug. 21, 1980, decision of Administrative Law Judge Tom M. Allen in Docket Nos. CH 0-239-R, CH 0-182-P, and CH 0-200-P. That decision dismissed the cases on the grounds that OSM had failed to show that it had authority to regu-

April 27, 1981

late Russell Prater Land Co., Inc.'s (Russell Prater), operations at the site in question. We reverse that decision and remand the case for further proceedings.

Background

OSM inspected Russell Prater's Mine #2 in Buchanan County, Virginia, on Jan. 16 and 24, 1980, pursuant to the Surface Mining Control and Reclamation Act of 1977 (Act).¹ As a result of that inspection OSM issued Notice of Violation No. 80-I-83-2, alleging seven violations of the Act and regulations. A followup inspection on Apr. 3, 1980, resulted in the termination of violations 5 through 7 and the issuance of Cessation Order No. 80-I-83-1 for failure to abate violations 1 through 3.²

Russell Prater applied for review of the notice and order and prepaid the proposed civil penalty assessments. At the hearing on July 10, 1980, Russell Prater moved for summary decision at the conclusion of OSM's evidence on the grounds that OSM had failed to prove its authority to regulate the site because it had not shown that any coal had been removed. The Administrative Law Judge granted the motion. This decision was confirmed in a written decision issued on Aug. 21, 1980. OSM appealed from this decision and both parties filed briefs.

Discussion and Conclusions

[1] At the hearing the OSM inspector testified that two Russell Prater officials told him that they had intended to open a deep mine at this site.³ There was also evidence that the site had been disturbed by Russell Prater (Tr. 19-21). Proof of the intention to mine coal and of a disturbance is sufficient to establish OSM's authority to regulate the site. *Cf. Squire Baker*, 1 IBSMA 279, 86 I.D. 550 (1979). Neither the Act nor the regulations requires OSM to wait until coal has actually been removed from a site otherwise subject to regulation before it has authority to regulate that site.⁴ This is not to say that Russell Prater might not be able to adduce facts that would cause OSM to lose its authority or that it might not have valid defenses to the charges. It is to say that, at the stage the proceedings had reached below, OSM had established authority over this site, and the motion for sum-

³ For the use of statements by company officials in establishing OSM's prima facie case, see *Island Creek Coal Co.*, 1 IBSMA 316, 86 I.D. 724 (1979); *Burgess Mining and Construction Corp.*, 1 IBSMA 293, 86 I.D. 656 (1979).

⁴ OSM also showed that there was black material spilled along the access road that was, in the inspector's opinion, part slag and part coal (Tr. 59). This evidence was intended to show that coal had been removed from the site. The OSM inspector attempted to relate what a landowner in the area had told him about coal removal, but this testimony was excluded, apparently on the grounds that it was hearsay (Tr. 92-93). We note that the rules of evidence are less restrictive in an administrative setting than in the courts. Hearsay testimony is especially subject to more lenient treatment and should not be excluded solely on the grounds that it is hearsay. See *Roberts Brothers Coal Co., Inc.*, 2 IBSMA 284, 285 n.8, 87 I.D. 439, 445 n.3 (1980).

¹ Act of Aug. 3, 1977, 91 Stat. 445, 30 U.S.C. §§ 1201-1328 (Supp. II 1978).

² Violation 4 involved a topsoil removal problem. No remedial action was required because the topsoil could not be salvaged.

mary decision should not have been granted.

The Aug. 21, 1980, decision is reversed and the case is remanded to the Hearings Division for further proceedings not inconsistent with this decision.

MARCO, INC.

3 IBSMA 128

Decided April 27, 1981

Appeal by the Office of Surface Mining Reclamation and Enforcement from the Sept. 16, 1980, decision of Administrative Law Judge David Torbett in Docket No. CH 0-200-R, vacating Notice of Violation No. 80-I-57-5 issued to Marco, Inc., on the grounds that the disturbance cited was caused by an independent third person.

Affirmed as modified.

1. Surface Mining Control and Reclamation Act of 1977: Notices of Violation: Permittees

OSM may rely on state records to determine the permittee of an area.

2. Surface Mining Control and Reclamation Act of 1977: Evidence: Generally—Surface Mining Control and

Reclamation Act of 1977: Notices of Violation: Permittees

Competent evidence that the person listed in state records as permittee over an area had no legal right under state law to mine or reclaim that area and that the person was not conducting mining or reclamation operations there as contemplated in 30 CFR 700.5 (1978) is sufficient to rebut a prima facie showing that the person is the permittee.

APPEARANCES: Kevin M. O'Brien, Esq., and Marcus P. McGraw, Esq., Assistant Solicitor for Enforcement, Office of the Solicitor, Washington, D.C., for the Office of Surface Mining Reclamation and Enforcement; James P. Jones, Esq., Penn, Stuart, Eskridge & Jones, Bristol, Virginia, for Marco, Inc.

OPINION BY THE INTERIOR BOARD OF SURFACE MINING AND RECLAMATION APPEALS

This appeal was brought by the Office of Surface Mining Reclamation and Enforcement (OSM) from the Sept. 16, 1980, decision of Administrative Law Judge David Torbett in Docket No. CH 0-200-R. That decision vacated Notice of Violation No. 80-I-57-5, originally alleging three violations, on the grounds that Marco, Inc. (Marco), was not responsible for the mining in question. For the reasons set forth below, we affirm that decision as modified in this opinion.

Background

Sometime in 1974, Marco obtained Virginia permit 1356 cover-

ing 333 acres in Wise County. On July 25, 1975, Marco leased the mineral rights in that property from Virginia Iron, Coal and Coke Co. (Virginia Iron) and began mining operations.

In 1979 Marco officials were approached by S.R.M. Excavating, Inc. (S.R.M.), who tried to lease from them 4.8 acres that Marco had leased from Virginia Iron. Because Marco had decided not to mine the area S.R.M. sought to mine, it agreed to surrender that tract back to Virginia Iron, and on Sept. 5, 1979, it executed a "surrender" of that part of its lease to Virginia Iron.

S.R.M. submitted a permit application to the State on Sept. 6, 1979. After being informed that Marco would have to relinquish its permit on that area before a new permit could be issued, S.R.M. requested Marco to relinquish its permit. Marco executed a relinquishment on a form provided by the State on Oct. 8, 1979.

Although S.R.M. was not issued a permit until Mar. 7, 1980, it apparently entered the area and began mining sometime in late 1979 or early 1980. When OSM inspected the site on Feb. 11, 1980, the inspector found what he considered to be three violations of the Surface Mining Control and Reclamation Act of 1977 (Act).¹ Because his records showed Marco as the permittee, he issued Notice of Violation No. 80-I-57-5 to Marco as permittee,

and listed S.R.M. as the operator. Service was accepted by Steven R. Mullins, President of S.R.M.

Marco applied for review of the notice² and a hearing was held on July 16, 1980. At the conclusion of that hearing and in the Sept. 16, 1980, written confirmation of the decision issued from the bench, the Administrative Law Judge found that S.R.M. was a separate entity from Marco; had mined the area without Marco's knowledge, permission, or participation; and was nothing more than a wildcat miner. He further found that OSM had not established a prima facie case against Marco and that Marco had shown by a preponderance of the evidence that it was not responsible for the alleged violations.

OSM appealed from this decision and both parties filed briefs.

Discussion and Conclusions

Under sec. 521(a)(3) of the Act, 30 U.S.C. § 1271(a)(3) (Supp. II 1978), a notice of violation may be issued "to the permittee or his agent." Permittee is defined in 30 CFR 700.5 (1978)³ to be

² The record does not show how the notice got from the president of S.R.M. to Marco. The notice did, however, list Marco as permittee and would have been counted against Marco as a history of previous violations. Marco, therefore, could seek review of the notice.

³ When final regulations for the permanent regulatory program were published in 44 FR 15311 (Mar. 13, 1979) and in the 1979 edition of CFR, the definition of permittee during the initial regulatory program was dropped without explanation, and a definition of permittee under the permanent regulatory program was added in 30 CFR 701.5. The Board sees no reason to assume that the definition

¹ Act of Aug. 3, 1977, 91 Stat. 445, 30 U.S.C. §§ 1201-1328 (Supp. II 1978).

any individual, partnership, association, society, joint stock company, firm, company, corporation, or other business organization holding a permit to conduct surface coal mining and reclamation operations issued by a State regulatory authority pursuant to a State program or by the Secretary pursuant to a Federal program or a Federal lands program. During the initial regulatory program the term includes persons conducting surface coal mining and reclamation operations regulated by a State under State law or conducting such operations under a mining plan approved pursuant to Part 211 of this title. [Italics added.]

Thus, during the initial regulatory program, a person who either has been granted the right to mine or reclaim an area or who is mining or reclaiming an area that would otherwise be subject to regulation is a permittee. See *Delight Coal Corp.*, 1 IBSMA 186, 86 I.D. 321 (1979).

At the hearing in this case, the Virginia State inspector who was assigned to the Marco permit testified that once Marco had executed the form relinquishing part of its permit, it had no further rights under its permit to take any action in that area (Tr. 33). The State, however, would not send Marco any notice that the relinquishment had been approved (Tr. 33), and Marco would remain the permittee on State records until a new permit was issued (Tr. 36, 39). Despite

of permittee should be changed during the initial regulatory program. We reach this conclusion without regard to whether the lack of a definition in 30 CFR 700.5 is the result of editorial oversight or intentional deletion. See *Claypool Construction Co., Inc.*, 2 IBSMA 81, 86 n.9, 87 I.D. 168, 170 n.9 (1980).

Marco's apparent status as permittee, however, the inspector stated that he would have cited it for mining without a permit had it disturbed any part of the area covered by the relinquishment (Tr. 37-38).⁴

[1] In issuing the notice of violation to Marco, OSM relied on the records it had received from the State that listed Marco as permittee of this area. This reliance was entirely justified. The State records established a prima facie case that Marco was the permittee.⁵ We held in *Wilson Farms Coal Co.*, 2 IBSMA 118, 87 I.D. 245 (1980), that a permittee is a proper party to be issued a notice of violation. Therefore, OSM could properly issue the notice to Marco.

[2] Marco, however, presented competent evidence showing that, although it was nominally the permittee over this area, under State law it had no legal rights in this area.⁶ It furthermore showed that it had not disturbed the area, nor was it in any way associated with the person who had disturbed it. This evidence was sufficient to show that Marco neither held a permit

⁴ The State inspector indicated that he had not personally been aware of the relinquishment because it came into the office as part of S.R.M.'s application for a permit. That application was assigned to another inspector.

⁵ OSM's justified reliance on state records emphasizes the necessity for those records to be accurately maintained and for any changes to be recorded as soon as possible. Cf. *Grafton Coal Co., Inc.*, 2 IBSMA 316, 323 n.3, 87 I.D. 521, 525 n.3 (1980).

⁶ Marco's lack of legal right in this area is emphasized by the fact that it would also have had no right to take the action required to abate the alleged violation.

allowing it to conduct surface coal mining and reclamation operations in this area nor that it was conducting such operations. Therefore, Marco was not a permittee over this area as that term is defined in 30 CFR 700.5 (1978). Marco rebutted OSM's prima facie case that it was the proper party to be served with the notice.⁷

The Sept. 16, 1980, decision of the Hearings Division is affirmed as modified by this opinion.⁸

Administrative Judge

WILL A. IRWIN

Chief Administrative Judge

MELVIN J. MIRKIN

Administrative Judge

LITTLE BYRD COAL CO., INC.

3 IBSMA 136

Decided April 30, 1981

Appeal by the Office of Surface Mining Reclamation and Enforcement from the Aug. 20, 1980, decision of Administrative Law Judge Tom M. Allen in Docket Nos. CH 0-181-P and CH 0-238-R. The decision vacated one violation listed in Cessation Order No. 80-I-43-2 based on Little Byrd's fail-

ure to abate a sedimentation pond violation cited in Notice of Violation No. 79-I-43-4, affirmed a second violation for failure to abate a haul road maintenance violation alleged in Notice of Violation No. 80-I-43-2, and reduced the civil penalty assessments for Notice of Violation No. 80-I-43-2 and the cessation order.

Affirmed as modified in part, reversed in part.

1. Surface Mining Control and Reclamation Act of 1977: Abatement: Remedial Actions

A notice of violation requiring a permittee to submit a drainage design for regulatory authority approval is proper even when such a design might include disturbance of an area within 100 feet of an intermittent or perennial stream because the regulatory authority could grant an exemption for that area under either 30 CFR 717.17(a) or 715.17(d) (3).

2. Surface Mining Control and Reclamation Act of 1977: Abatement: Remedial Actions

Under the circumstances of this case, the Board declines to uphold a cessation order that forces a permittee to take an illegal action.

3. Surface Mining Control and Reclamation Act of 1977: Civil Penalties: Generally

A civil penalty will not be disturbed when the person assessed does not seek review of the penalty amount, and the underlying violation is not vacated.

4. Surface Mining Control and Reclamation Act of 1977: Civil Penalties: Amount

A civil penalty assessment based on a part of a cessation order that is vacated

⁷ On the facts of record, it would appear that S.R.M. was the permittee over this area because it was "conducting surface coal mining and reclamation operations regulated by a State under State law." 30 CFR 700.5 (1978). See *Delight Coal Corp.*, *supra*.

⁸ This opinion should not be construed to relieve a person who is in fact a permittee of any responsibilities imposed by the Act and regulations.

after administrative review cannot be upheld whether or not review was sought of the penalty amount.

APPEARANCES: Harold Chambers, Esq., Office of the Field Solicitor, Charleston, West Virginia, John Pendergrass, Esq., and Marcus P. Hutton, Esq., Jones & Godfrey, Lebanon, Virginia, for Little Byrd Coal Co., Inc.

*OPINION BY THE INTERIOR
BOARD OF SURFACE
MINING AND RECLAMATION
APPEALS*

The Office of Surface Mining Reclamation and Enforcement (OSM) has sought review of the Aug. 20, 1980, decision of Administrative Law Judge Tom M. Allen in this case. That decision affirmed one violation listed in Cessation Order No. 80-I-43-2, vacated a second violation in that order, and imposed a total of \$1,250 in civil penalties.

Background

Pursuant to the Surface Mining Control and Reclamation Act of 1977 (Act),¹ on Feb. 12 and 13, 1979, OSM inspected Little Byrd Coal Co., Inc.'s (Little Byrd) underground mining operation in Buchanan County, Virginia, conducted under Virginia mining per-

mit 2655-U. As a result of that inspection, OSM issued Notice of Violation (NOV) No. 79-I-43-4 to Little Byrd. Only one of the three violations alleged in that notice remains at issue. Violation 1 charged that, because Little Byrd had failed to install sedimentation ponds as required by 30 CFR 717.17(a), surface drainage from the entire disturbed area was not passing through sedimentation ponds before leaving the permit area. The notice required Little Byrd to "submit a design and obtain written approval from the regulatory authority for construction of a sedimentation pond or a series of sedimentation ponds."

OSM next inspected Little Byrd's operation on Aug. 23, 1979,² but took no enforcement action. During that inspection the inspector found that three sedimentation ponds had been installed, but that one area, which contained a spoil pile and was located within approximately 20 feet of a stream, had been surrounded with a straw bale barrier and that its drainage did not pass through a pond. Company officials informed the inspector that they were seeking a variance from the regulatory authority for that area under the small-area exemption provisions of 30 CFR 717.17(a)(3).

After a Feb. 1, 1980, inspection, OSM issued NOV No. 80-I-43-2 to Little Byrd. That notice alleged three violations, two of which re-

¹ Act of Aug. 3, 1977, 91 Stat. 445, 30 U.S.C. §§ 1201-1328 (Supp. II 1978).

² From Feb. 14 through Aug. 10, 1979, OSM was prevented from enforcing the Act in Virginia because of an injunction issued in *Virginia Surface Mining and Reclamation Assoc., Inc. v. Andrus*, Civ. No. 78-0244-B (W.D. Va. Feb. 14, 1979).

main at issue: violation 1 charged failure to properly maintain a haul road as required by 30 CFR 717.17 (j)(3), and violation 3 alleged failure to monitor ground water under 30 CFR 717.17(h).

OSM inspected the site again on Apr. 9, 1980. No additional sedimentation ponds had been constructed since Aug. 23, 1979, and Little Byrd had not received a variance from the State for the spoil pile area. The inspector modified the remedial action required by NOV No. 79-I-43-4 to read: "Install sedimentation ponds, diversion channels, and other structures for sediment control in order to insure all surface runoff from the disturbed area is passed through a sedimentation pond or a series of sedimentation ponds." After the completion of the inspection, OSM issued Cessation Order No. 80-I-43-2, charging Little Byrd with failure to abate the sedimentation pond violation of the 1979 notice and failure to abate the haul road violation of the 1980 notice.

On May 5, 1980, Little Byrd filed for review of the cessation order and of the civil penalty assessment proposed for the 1980 notice of violation. A hearing was held and a decision was subsequently issued on Aug. 20, 1980. That decision vacated both the sedimentation pond violation in the 1979 notice and the cessation order as it related to failure to abate the sedimentation pond violation; vacated the ground water monitoring violation

of the 1980 notice; and upheld the haul road violation, although reducing the civil penalty for that violation to \$500. In addition, the decision found that the mandatory civil penalty for the cessation order³ should have been imposed for only 1 day⁴ and assessed a total of \$750. OSM appealed from this decision and both parties filed briefs.

Discussion and Conclusions

OSM argues that the ground water monitoring violation was improperly vacated on the basis of the decision in *In re: Permanent Surface Mining Regulation Litigation*, Civ. No. 79-1144 (D.D.C. May 16, 1980). We agree. That decision concerns 30 CFR 817.52(a), part of the permanent regulatory program. The violation alleged in this case was of 30 CFR 717.17(h), a completely separate regulation not before the court. Furthermore, Little Byrd had not challenged this violation and it was, therefore, not properly before the Administrative Law Judge. The decision below vacating violation 3 of NOV No. 80-I-43-2 is reversed and the violation is reinstated.⁵

OSM also argues that the sedimentation pond violation should

³ See sec. 518(h), 30 U.S.C. § 1268(h) (Supp. II 1978), and 30 CFR 723.15. (45 FR 58784 (Sept. 4, 1980)).

⁴ OSM had assessed \$750 for the 5 days that the cessation order was in effect for each of the two violations; i.e., \$3,750 for each violation, for a total of \$7,500. OSM response to Board order of Mar. 18, 1981.

⁵ No civil penalty was assessed for this violation.

not have been vacated. The portion of the permit area finally at issue was a spoil pile located near a stream at the edge of the permit area. The construction of a sedimentation pond to control surface drainage from this pile would disturb the area within 100 feet of the stream. The decision below vacated both the cessation order and notice of violation on the grounds that such disturbance would violate 30 CFR 715.17(d)(3), incorporated through 30 CFR 717.17(d), and that "an inspector may not require an operator to do an act which in itself is a violation of the regulations" (Decision at 5).

[1] 30 CFR 715.17(d)(3) states in pertinent part: "No land within 100 feet of an intermittent or perennial stream shall be disturbed by surface coal mining and reclamation operations unless the regulatory authority specifically authorizes surface coal mining and reclamation operations through such a stream." The initial notice of violation, which required Little Byrd to submit a drainage design to the State regulatory authority, was proper because the State could either have granted a variance for the spoil pile area under sec. 717.17(a)(3) or have permitted the construction of a pond within the 100-foot buffer zone under sec. 715.17(d)(3). The decision below vacating violation 2 of NOV No. 79-I-43-4 is, therefore, reversed and the violation is reinstated.

[2] That notice, however, was modified on the same day that the cessation order was issued so that

the order required Little Byrd to cease operations until the violation was abated by constructing a sedimentation pond, without first obtaining regulatory authority approval. Thus, the cessation order could be terminated only by Little Byrd's violating another regulation. Under the circumstances of this case, we decline to uphold a cessation order that forces the permittee to take an illegal action.⁶ Therefore, the decision below vacating violation 1 of Cessation Order No. 80-I-43-2 is affirmed as modified by this decision.

Finally, OSM argues that the Administrative Law Judge had no authority to reduce the amount of the civil penalty imposed for the cessation order because that amount was not contested. There was apparently some confusion below over what money Little Byrd had paid to the OSM Assessment Office. By letter dated Mar. 31, 1980, the OSM Division of Enforcement informed Little Byrd that \$1,400 had been assessed against it for the haul road violation of NOV No. 80-I-43-2.⁷ On May 5, 1980, Little Byrd paid that amount into escrow as required by 43 CFR 4.1152(b). By letter dated May 6, 1980, OSM informed Little Byrd that \$3,750 had been assessed for each of the two failures

⁶ There is no suggestion in this case that no alternative abatement could have remedied the cited violation without causing the permittee to violate another regulation and we expressly decline to state an opinion as to a notice or order in which such an allegation is made.

⁷ OSM response to Board order of Mar. 18, 1981.

April 30, 1981

to abate violations listed in Cessation Order No. 80-I-43-2.⁸ There is no indication in the record whether or not the total amount of \$7,500 for the cessation order, or any part of that amount, was paid.

The decision below reduced the haul road assessment from \$1,400 to \$500. This reduction was clearly within the authority of the Administrative Law Judge. OSM contested this reduction in its petition for discretionary review, but did not address it in its brief. Since we see no reason to alter the findings below, the assessment of \$500 for violation 1 of NOV No. 80-I-43-2 is affirmed, and \$900 must be returned to Little Byrd in accordance with the requirements of sec. 518(c) of the Act, 30 U.S.C. § 1268(c) (Supp. II 1978).

Even though Little Byrd did not seek administrative review of the civil penalty associated with the cessation order, the Administrative Law Judge established it at \$750 because he found that the inspector was dilatory in returning to the mine to terminate the order after he was notified that abatement had been completed.⁹ Although this finding was based on contradictory evidence, we need not examine it because of our disposition of this issue.

[3] OSM assessed \$3,750 under the cessation order for failure to abate the haul road violation. Little

Byrd did not seek review of this assessment, and the violation was not vacated. Since this penalty was not before the Administrative Law Judge, there was no basis for him to disturb it, and it remains as assessed.

[4] Another \$3,750 was assessed for failure to abate the sedimentation pond violation. Since the portion of the cessation order upon which this assessment was based was vacated after administrative review, a civil penalty assessment for that part of the order cannot be upheld. Therefore, even though the amount of the civil penalty assessed for Cessation Order No. 80-I-43-2 was not under review, we will reduce the penalty by the \$3,750 assessed for the sedimentation pond violation.

In summary, as to Notice of Violation No. 79-I-43-4, violation 2 is reinstated and upheld; as to Notice of Violation No. 80-I-43-2, violation 3 is reinstated and upheld, and the \$500 civil penalty found by the Administrative Law Judge for violation 1 is affirmed; and as to Cessation Order No. 80-I-43-2, violation 1 and its associated civil penalty are vacated, and the \$3,750 civil penalty assessed by OSM for violation 2 is upheld.

⁸ *Ibid.*

⁹ At that time the record did not indicate the amount of this proposed civil penalty. That information was introduced in response to the Board's Mar. 18, 1981, order. See text at n.8 *supra*.

**TENNESSEE CONSOLIDATED COAL
CO., INC.**

3 IBSMA 145

Decided *April 30, 1981*

Appeal by the Office of Surface Mining Reclamation and Enforcement from the July 28, 1980, decision of Administrative Law Judge David Torbett, Docket No. NX 0-190-R, vacating Notice of Violation Nos. 80-2-75-26 and 80-2-75-27, issued to Tennessee Consolidated Coal Co., Inc., for its failure to place excess rock and earth materials from an underground mine in surface disposal areas in accordance with 30 CFR 717.15.

Affirmed as modified.

1. Surface Mining Control and Reclamation Act of 1977: Spoil and Mine Wastes: Generally—Surface Mining Control and Reclamation Act of 1977: Words and Phrases

"Excess." When evidence does not support a finding that material removed from an underground mine is in excess of that which will be necessary to achieve approximately original contour, a violation of 30 CFR 717.15 cannot be upheld.

APPEARANCES: Michael W. Boehm, Esq., Gentry & Boehm, Chattanooga, Tennessee, for Tennessee Consolidated Coal Co., Inc.; John Philip Williams, Esq., Office of the Field Solicitor, Knoxville, Tennessee, and Marcus P. McGraw, Esq., Assistant Solicitor for Enforcement, Office of the Solicitor, Washington, D.C., for the Office of Surface Mining Reclamation and Enforcement.

**OPINION BY THE INTERIOR
BOARD OF SURFACE
MINING AND RECLAMATION
APPEALS**

The Office of Surface Mining Reclamation and Enforcement (OSM) has sought review of a decision of Administrative Law Judge David Torbett vacating Notice of Violation (NOV) Nos. 80-2-75-26 and 80-2-75-27, issued to Tennessee Consolidated Coal Co., Inc. (TCC), pursuant to sec. 521(a)(3) of the Surface Mining Control and Reclamation Act of 1977 (Act),¹ and citing two violations of the initial program regulations. For the reasons discussed below, we affirm that decision as modified by this opinion.

*Factual and Procedural
Background*

On Mar. 26 and Apr. 22, 1980, OSM inspected two underground coal mines (Nos. 24 and 28) owned by TCC and located in Sequatchie County, Tennessee. Subsequently, on Apr. 22, 1980, TCC received virtually identical NOV's for each mine. The NOV's charged TCC with "failure to place excess rock and earth materials from an underground mine in surface disposal areas in accordance with section 715.15."²

¹ Act of Aug. 3, 1977. 91 Stat. 445, 30 U.S.C. § 1271(a)(3) (Supp. II 1978).

² The remedial actions required were (1) cease use of disposal area; (2) remove all organic material (trees in fill); (3) remove all waste earth materials from the area, or remove enough material and reconstruct to assure a static safety factor of 1.5, and have a static safety factor certified by a registered professional engineer; and (4) cover area with nontoxic/noncombustible material, seed, and mulch area.

April 30, 1981

On May 23, 1980, TCC filed applications for review of the notices and for temporary relief (Docket No. NX 0-190-R), pursuant to sec. 525 of the Act, 30 U.S.C. § 1275 (Supp. II 1978), 43 CFR 4.1162, and 43 CFR 4.1261. On July 14, 1980, a hearing was held and the Administrative Law Judge orally vacated the notices of violation on the basis that 30 CFR 715.15 did not apply because the regulation was meant to control the permanent disposal of excess rock and earth materials, and the materials described in the NOV's to TCC were not shown to be excess materials. He further concluded that the regulations were not specific enough to allow enforcement in that any decision by an inspector as to when an operator would have to permanently store excess material would be arbitrary and capricious as an operator would not be given sufficient notice of what he was required to do to comply with the regulations. On July 28, 1980, he issued a written confirmation of his oral decision. On Aug. 25, 1980, OSM filed a timely notice of appeal.

The disturbances at each mine-site inspected by OSM include three bench areas: The first is an operational bench on which are located the mine opening, shops and ventilation fans; the second is the product bench on which are located the coal pile and the material piles which are the subject of these violations; and the third is the loading bench on which is a haul road. Below the

third bench at each minesite are sediment basins which receive surface drainage (Tr. 14-18, 98, 103). The coal and other material are brought to the surface by means of a conveyor belt (Tr. 15, 16, 99). The coal proceeds to the end of the belt and falls into a stockpile on the product bench. The noncoal material is pushed by a bulldozer to the side of the beltline where it falls by gravity and comes to rest at its angle of repose (Tr. 15, 16).

Testimony by TCC's vice president indicates that TCC has no definite plans to use the materials in question to achieve approximate original contour (Tr. 113).³ He testified that TCC did not place the material in the fill in lifts, did not revegetate the slopes of the fill, did not install a rock toe buttress, but did dump material over standing trees (Tr. 120, 121). Nevertheless, TCC contends that the material piles in question are not permanent storage (Tr. 100, 104), are stable, have never been subject to slides (Tr. 42, 43, 104), and that there is insufficient material in the piles to achieve approximate original contour of the disturbed areas of the two mines, a contention supported by an outside engineering firm retained by OSM (Tr. 76-78, 122; Exh. R-6), and accepted by the Administrative Law Judge in his oral decision (Tr. 136, 139).

³ Applicant's exhibit A-3 reveals that TCC is in the process of negotiating a possible agreement for the sale of such materials, which if consummated would require TCC to use other materials to achieve approximate original contour of the mines in question.

Discussion

TCC is charged with violating 30 CFR 717.15, which provides that "*excess rock and earth materials produced from an underground mine and not disposed in underground workings or used in back-filling and grading operations shall be placed in surface disposal areas in accordance with requirements of § 715.15.*" (Italics supplied.) By alleging a violation of sec. 717.15 OSM implies that there is an excess of rock and earth materials. "Excess," however, is not expressly defined in the initial regulations. Reference to sec. 715.15 is therefore necessary to determine the intended meaning of this term.

Sec. 715.15 is concerned with "spoil." "Spoil" is defined in 30 CFR 710.5 as "overburden that has been removed during surface mining." Sec. 715.15 specifies that "[s]poil not required to achieve approximate original contour" must be handled in certain approved ways. From reading secs. 715.15 and 717.15 together, it appears that "excess" material from an underground mine is that which is not necessary to achieve the approxi-

mate original contour of disturbed surface areas. *See also* 30 CFR 717.14(a).

[1] When, as in this case, the evidence (Tr. 76-78, 122; Exh. R-6) does not support a finding that material removed from an underground mine is in excess of that which will be necessary to achieve approximate original contour, sec. 717.15 is not yet an applicable performance requirement. The notices of violation were therefore improperly issued to TCC.⁴

For the foregoing reasons, the July 28, 1980, decision of the Hearings Division vacating Notice of Violation Nos. 80-2-75-26 and 80-2-75-27 is affirmed.

MELVIN J. MIRKIN
Administrative Judge

NEWTON FRISHBERG
Administrative Judge

WILL A. IRWIN
Chief Administrative Judge

⁴ Although TCC is held not to be subject yet to the requirements of sec. 717.15, this decision does not exempt TCC from compliance with any other environmental standards regarding the storage or disposal of such materials.

April 24, 1981

ALASKA PLACER CO.***5 ANCAB 260**Decided *April 24, 1981*

Appeal of Alaska Placer Company from the Decision of the Alaska State Director, Bureau of Land Management F-14955-A and F-14955-B.

Dismissed.

1. Alaska Native Claims Settlement Act: Alaska Native Claims Appeal Board: Appeals: Dismissal

An appeal will be dismissed when an appellant has failed to file additional pleadings ordered by the Board pursuant to 43 CFR Part 4, Subpart J, 4.907, and further fails to comply with an order of the Board requiring a showing of cause.

APPEARANCES: George Trefry, Esq., Holland and Trefry, for Alaska Placer Company; Robert Charles Babson, Esq., Office of the Regional Solicitor, for the Bureau of Land Management.

**OPINION OF THE ALASKA
NATIVE CLAIMS APPEAL
BOARD**

The Alaska Native Claims Appeal Board, pursuant to delegation of authority to administer the Alaska Native Claims Settlement Act, 85 Stat. 688, *as amended*, 43 U.S.C. §§ 1601-1628 (1976 and Supp. I 1977), and the implementing regulations in 43 CFR Part 2650 and 43 CFR Part 4, Subpart

J, hereby makes the following findings, conclusions and order dismissing the appeal of Alaska Placer Company from the above-designated decision of the Bureau of Land Management.

On Oct. 3, 1980, George Trefry, Esq., Holland and Trefry, on behalf of Appellant, Alaska Placer Company (Alaska Placer), filed a Notice of Appeal from a Bureau of Land Management (BLM) decision dated Sept. 5, 1980, approving lands included in selection applications F-14955-A and F-14955-B for conveyance to Wales Native Corporation.

On Nov. 3, 1980, George Trefry, Esq., Holland and Trefry, on behalf of Appellant, Alaska Placer Company, filed a Statement of Lands in Dispute on Appeal and a Statement of Points on Appeal. The Board accepted said filings as framing issues being appealed by appellant pursuant to provisions of 43 CFR Part 4, Subpart J, 4.903(b).

On Dec. 4, 1980, Robert Charles Babson, Esq., Office of the Regional Solicitor, on behalf of the BLM, filed an Answer responding to appellant's brief on the merits as though the issue being raised questioned the effect of ANCSA on its prefected unpatented mining claims.

By order of the Board dated Dec. 17, 1980, additional information and clarification was sought from appellant to enable the Board

*Not in chronological order.

to make a determination of lands disputed in this appeal for segregation purposes and thus allow conveyance by BLM of lands unaffected by the appeal.

On Jan. 2, 1981, Alaska Placer moved the Board for a 30-day extension of time within which to file its brief in the appeal based on circumstances described in the Affidavit of George Trefry dated Jan. 2, 1981.

On Jan. 12, 1981, the Board granted appellant's motion to file a reply brief to BLM's answer within 30 days and also extended the filing date under order dated Dec. 17, 1980, for the same period. The Board found that although appellant's filing on Nov. 3, 1980 had been accepted pursuant to 43 CFR Part 4, Subpart J, 4.903(b), that additional briefing would be necessary to determine issues appealed to the Board for disposition and also to provide a description of disputed lands.

Order of the Board dated Mar. 10, 1981 informed the parties, *inter alia*, that "[o]n Feb. 13, 1981, the Board received a copy of a letter signed by George Trefry to Ms. Kay Kletka at BLM advising that an application for patent of certain lands within Mineral Survey No. 2199 had been placed in the U.S. Postal Service on Feb. 11, 1981."

The Board also stated that

[t]he copy of a letter addressed to Ms. Kay Kletka of BLM, noted above, does not meet requirements of a filing in this appeal pursuant to provisions of 43 CFR

4.903, et seq., and cannot constitute a filing in response to orders of the Board.

This Board therefore Orders Appellant, Alaska Placer Company, to show cause within fifteen (15) days from the date of this Order why this appeal should not be dismissed on the grounds that appellant has failed to file and to serve upon all persons required to be served pursuant to order of the Board for additional briefing under provisions of 43 CFR 4.907.

There has been no additional filing by Alaska Placer pursuant to order of the Board dated Dec. 17, 1980, or of order dated Jan. 12, 1981, nor has any request been made for further extension of time within which to make a filing.

Appellant has made no filed response to the above order to show cause why this appeal should not be dismissed for failure to comply with order of the Board pursuant to § 4.907 for filing of additional pleadings necessary for this appeal.

Based upon the above file record the Board finds that:

[1] An appeal will be dismissed when an appellant has failed to file additional pleadings ordered by the Board pursuant to 43 CFR Part 4, Subpart J, 4.907, and further fails to comply with an order of the Board requiring a showing of cause.

Therefore the appeal of Alaska Placer Company from decision of the BLM of Sept. 5, 1980, which approved lands included in selection applications F-14955-A and F-14955-B for conveyance to Wales Native Corporation is hereby dismissed.

April 28, 1981

This represents a unanimous decision of the Board.

(WOLVERINE GRAZING
ASSOCIATION)***

5 ANCAB 265

Decided April 28, 1981

Appeal from the Decision of the Alaska State Director, Bureau of Land Management AA-8489-A and AA-8489-EE.

Partial dismissal.

1. Alaska Native Claims Settlement Act: Alaska Native Claims Appeal Board: Appeals: Standing

The appropriate test for determining standing to appeal a decision made pursuant to ANCSA is whether a party "claims a property interest in land affected by a determination" appealable to this Board.

2. Alaska Native Claims Settlement Act: Alaska Native Claims Appeal Board: Appeals: Standing

Where an assertion that a property interest is affected by a decision to convey is based on the effect of a possible future waiver of administration by the agency presently administering a lease, and such

waiver is discretionary with the agency under § 14(g) of ANCSA, the alleged effect on the property interest is too speculative to meet the requirement of 43 CFR 4.902.

3. Alaska Native Claims Settlement Act: Conveyances: Valid Existing Rights: Generally

When a lease is identified in a Decision to Issue Conveyance as a § 14(g) interest, and the conveyance is made subject to such interest, then all rights the lessee holds under the terms of the lease, if valid, are protected and there remains no issue which the lessee may appeal as to the effect of the conveyance on the lease.

APPEARANCES: Ray DeVilbiss, pro se; Elizabeth J. Barry, Esq., Office of the Regional Solicitor, for Bureau of Land Management.

*OPINION BY
ALASKA NATIVE CLAIMS
APPEAL BOARD*

Summary of Appeal

The main issue before the Board is whether an appellant has standing to appeal the effect of a possible decision to waive administration of the lessor's interest after conveyance pursuant to § 14(g).

Appellant is holder of a grazing lease covering a portion of selected lands which is identified in the Decision to Issue Conveyance as a valid existing right under § 14(g) to which the conveyance of lands is subject.

The Board holds that, because the decision to waive administration of the lessor's interest is a discretionary decision which cannot be made

*Not in chronological order.

until after conveyance of lands to the selecting Native corporation, any assertion by appellant that his interest in the lease may be affected is too speculative to give standing to appeal the Bureau of Land Management's decision under terms of 43 CFR 4.902.

Jurisdiction

The Alaska Native Claims Appeal Board, pursuant to delegation of authority to administer the Alaska Native Claims Settlement Act, 85 Stat. 688, *as amended*, 43 U.S.C. §§ 1601-1628 (1976 and Supp. I 1977), and the implementing regulations in 43 CFR Part 2650 and 43 CFR Part 4, Subpart J, hereby makes the following findings, conclusions and decision.

Procedural Background

On Sept. 30, 1980, the Bureau of Land Management (BLM) issued a Decision to Issue Conveyance (DIC) which approved conveyance of lands selected by Chickaloon Moose Creek Native Association, Inc. (Chickaloon) (Application AA-8489-A) pursuant to §§ 11(a) (1) and 11(a) (2) of ANCSA including those described as follows:

T. 18 N., R. 3 E., S.M.

Sec. 17

Sec. 18, excluding lot 1

and which provided:

The grant of the above-described lands shall be subject to:

* * * * *

3. The following third-party interests, if valid, created and identified by the State of Alaska, as provided by Sec. 14(g) of ANCSA:

a. Grazing Leases

ADL 36587 located in Secs. 17 and 18, T. 18 N., R. 3 E., Seward Meridian, Alaska.

On Oct. 28, 1980, Appellant, Ray DeVilbiss, appearing *pro se*, and also on behalf of Wolverine Grazing Association, filed a statement accepted by the Board as a Notice of Appeal and gave reasons for appealing BLM's decision as it "affects my grazing lease," as follows:

1/This Decision represents a massive land classification without any public input from those private owners adjoining these lands.

2/This Decision would be a major setback to any longer-term development plans of agriculture which we might pursue.

3/This Decision of putting this land in private ownership would work contrary to the State of Alaska's goal of developing our renewable resources.

4/This Decision would jeopardize this lands' proven history of agricultural production and potential.

On Nov. 25, 1980, Elizabeth J. Barry, Esq., Office of the Regional Solicitor, on behalf of BLM, filed a Motion to Dismiss. Said motion asserts that the DIC "is made specifically subject to the lease. Therefore, appellant lacks standing to bring this appeal." BLM further states that the appealed issue as described by appellant is not within the jurisdiction of this Board.

On Nov. 28, 1980, appellant filed a reply to BLM's motion and stated that although the issued DIC provides that the conveyance of lands to Chickaloon was subject to appellant's grazing lease referred to as ADL 36587, the impact of change

of ownership under provisions of ANCSA can make said lease worthless or invalid.

On Dec. 23, 1980, based upon the file record and motion of BLM, the Board by order required:

[A]ppellant to show cause within thirty (30) days from the date of this Order, why this appeal should not be dismissed on the grounds and for the reason that the appellant has not asserted, and has no basis to assert, a claim of property interest sufficient to confer standing under 43 CFR 4.902.

On Dec. 23, 1980, BLM filed a response to appellant's reply which reiterated previous assertions that inasmuch as appellant's grazing lease was included in the DIC as a valid existing right under § 14(g) of ANCSA, there is no property interest "affected" which can confer standing under § 4.902.

In response to the Board's order to show cause, the appellant on Feb. 5, 1981, filed a brief which repeated the previously stated reasons for bringing this appeal that his interest was affected because of the uncertainty of administrative responsibilities of the lessor's interest after conveyance and that other lands which were unencumbered by this grazing lease were available for selection by Chickaloon.

The Board by order on Feb. 18, 1981, scheduled final briefing on issue of appellant's standing to bring this appeal under 43 CFR 4.902, pursuant to Order to Show Cause dated Dec. 23, 1980.

BLM filed a final brief on Mar. 9, 1981 contending that appellant's ex-

pressed concern regarding the administration of his grazing lease after conveyance cannot provide a basis for standing to appeal because any issue arising after conveyance is beyond the jurisdiction of the Board.

Authority of the Board to hear disputes from implementation of ANCSA is governed by regulations set forth in 43 CFR (Subpart J) 4.900, *et seq.*, which describes jurisdictional and procedural requirements which must be met in all appeals made to this Board.

Decision

The single issue raised by the Board's order to show cause is whether the appellant has satisfied the requirements of provisions of 43 CFR 4.902 to establish standing to bring an appeal of BLM's decision issued in the DIC.

Section 4.902 provides:

Any party who claims a property interest in land affected by a determination from which an appeal to the Alaska Native Claims Appeal Board is allowed, or an agency of the Federal Government, may appeal as provided in this subpart. However, a regional corporation shall have the right of appeal in any case involving land selections.

[1] The appropriate test for determining standing before this Board is whether a party "claims a property interest in land affected by a determination" appealable to this Board. *Appeal of Sam E. McDowell*, 2 ANCAB 350 (1978) [VLS 78-2].

Throughout this appeal the

Board has accepted filings of briefs regarding the lessee's interest in grazing lease (ADL 36587) made variously by Ray DeVilbiss as owner and as an appropriate representative of the Wolverine Grazing Association. Ray DeVilbiss has appeared *pro se* and no issue has been raised regarding any failure of compliance with provisions of 43 CFR Part 1, Subtitle A, 1.3.

The file record of this appeal discloses that a livestock grazing lease was entered into Jan. 1, 1964 with BLM on behalf of the United States as lessor and Ralph DeVilbiss as lessee (A-061296) of property described as follows:

Unsurveyed lands which when surveyed will be:

Township 18 North, Range 3 East, Seward Meridian

Section 17—That portion of the W½ north of Wolverine Creek

Section 18—That portion north of Wolverine Creek

The lessee and others, including Ray DeVilbiss, formed the Wolverine Grazing Association, to which the lease was assigned on Mar. 5, 1965. The lessor's interest in the lease is stated to have been transferred to the State of Alaska as of Apr. 30, 1969 and is thereafter referred to as ADL-36587—Grazing Lease.

As noted above, the issued DIC was made "subject to" various described interests "as provided in Sec. 14(g) of ANCSA." Under heading of "Grazing Leases" is listed the lease described as ADL 36587. The pertinent portion of § 14(g) is as follows:

All conveyances made pursuant to this Act shall be subject to valid existing rights. Where, prior to patent of any land or minerals under this Act, a lease, contract, permit, right-of-way, or easement (including a lease issued under section 6(g) of the Alaska Statehood Act) has been issued for the surface or minerals covered under such patent, the patent shall contain provisions making it subject to the lease, contract, permit, right-of-way, or easement, and the right of the lessee, contractee, permittee, or grantee to the complete enjoyment of all rights, privileges, and benefits thereby granted to him.

Appellant acknowledges that, because the interest of the grazing lease was included in the DIC, the conveyance of lands to Chickaloon is subject to the terms of the lease itself. BLM contends that since the grazing lease (ADL 36587) is included in the DIC as a third-party interest within § 14(g) of ANCSA, all rights of appellant under terms of the lease are fully protected.

Appellant contends that even though the grazing lease is included in the DIC as an interest to which the conveyance to Chickaloon is subject, a valid basis of appeal exists because of language in § 14 (g) providing for a transfer of administrative responsibilities after conveyance. BLM's response to appellant's contention is that any controversy which may arise between parties to the grazing lease after conveyance is beyond the Board's jurisdiction.

Appellant's contention alludes to the portion of § 14(g) of ANCSA which contains the following provision:

April 28, 1981

Upon issuance of the patent, the patentee shall succeed and become entitled to any and all interests of the State or the United States as lessor, contractor, permitter, or grantor, in any such leases, contracts, permits, rights-of-way, or easements covering the estate patented, and a lease issued under section 6(g) of the Alaska Statehood Act shall be treated for all purposes as though the patent had been issued to the State.

The plain language of § 14(g) permits no question as to whether or not, upon conveyance, the patentee Native corporation "shall succeed and become entitled to any and all interests of the State or the United States" as lessor in any leases covered by land conveyed. The language is mandatory.

Conversely, the following language of § 14(g) referencing the administration of a lease or other valid existing right after conveyance to a patentee Native corporation is discretionary: "The administration of such lease, contract, permit, right-of-way, or easement shall continue to be by the State or the United States, unless the agency responsible for administration waives administration."

The question presented is whether or not the appellant's lease is affected by conveyance of the underlying land, when the conveyance is specifically made subject to the lease under § 14(g) of ANCSA.

Appellant cannot assert that the act of conveyance will trigger a change in the administration of his lease which would adversely affect it. There is no requirement in ANCSA that a State or Federal

agency charged with administration of a lease or other § 14(g) interest must waive administration of the interest upon conveyance of the land to a Native corporation; there is simply the option to do so. Mr. DeVilbiss seeks to appeal an action that has not yet occurred, and which may never occur.

[2] Where an assertion that a property interest is affected by a decision to convey is based on the effect of a possible future waiver of administration by the agency presently administering a lease, and such waiver is discretionary with the agency under § 14(g) of ANCSA, the alleged effect on the property interest is too speculative to meet the requirement of 43 CFR 4.902.

The Board notes that appellant's lease is identified in the DIC as a State interest and aside from the standing question, the Board would lack jurisdiction to decide an issue related to the administration of a State-held lease after conveyance.

Appellant's interest in the lands described in the DIC and approved for conveyance to Chickaloon is limited by the terms of the grazing lease, and any appeal from BLM's decision must assert that the issued DIC affects that interest in such a manner that the Board has jurisdiction.

The Board agrees with BLM that all rights of the appellant in regard to his lease are protected. The corollary to this result is that since there remains no outstanding interest in

the grazing lease which is not protected as a valid existing right under § 14(g), there is no interest in lands which could be affected by the BLM decision. (*Stratman v. Andrus*, No. A76-132, U.S.D.C., D. Alaska.) (See Memorandum and Order, July 3, 1979.)

[3] The Board finds that when a lease is identified in a DIC as a § 14(g) interest, and the conveyance is made subject to such interest, then all rights the lessee holds under the terms of the lease, if valid, are protected and there remains no appealable issue which the lessee may appeal as to the effect of the conveyance on the lease.

In addition to his arguments concerning future administration of his lease, appellant makes a statement that BLM has erred in the DIC in that the easement identified as EIN 1a D9 is not in a location which possibly can serve the public in the manner intended as it would if placed in the appropriate location. While it is not certain from appellant's statement that an appeal of this easement decision is intended, assuming *arguendo* that it is, the Board notes that on Oct. 13, 1980 Chickaloon Moose Creek Native Association, Inc. filed a Notice of Appeal from BLM Decision AA-8489-A asserting that BLM erred by reserving various public easements in the DIC, including EIN 1a D9 (VLS 80-53). BLM has requested the Board to remand for possible relocation that portion of easement EIN 1a D9 within Secs. 18 and 19, T. 18 N., R. 3 E. Because

BLM may relocate portions of public easement EIN 1a D9 as reserved in the DIC, the Board will not address standing of appellant to bring an appeal of this issue at this time. Any decision by BLM which modifies the route of EIN 1a D9 will require publication and an appropriate appeal period. Such publication of a modified route would moot the issue in this appeal, while giving Mr. DeVilbiss an opportunity to appeal the new location, if necessary.

This represents a unanimous decision of the Board.

APPEAL OF VALLEY STEEL BUILDERS, INC.*

IBCA-1275-6-79

Decided April 29, 1981

Contract No. YA-511-CT8-92, Bureau of Land Management.

Appeal denied.

Contracts: Construction and Operation: Allowable Costs

Where the invitation for bids instructs potential bidders to submit bids on each of three schedules independent of the other, and the bidder to whom the con-

*Not in chronological order.

April 29, 1981

tract was ultimately awarded incurs additional cost as a result of anticipation of award of one of the schedules not included in the contract awarded, the Board holds that such cost must be borne by the contractor.

APPEARANCES: Mr. Martin J. Durada, President, Valley Steel Builders, Inc., Boise, Idaho, for Appellant; Mr. William A. Perry, Department Counsel, Denver, Colorado, for the Government.

*OPINION BY
ADMINISTRATIVE
JUDGE DOANE*

*INTERIOR BOARD OF
CONTRACT APPEALS*

Background

On Sept. 29, 1978, appellant was awarded a small business set aside contract by the Bureau of Land Management to construct two prefabricated metal buildings for warehousing and fire suppression and operations and shop facilities. The contract required the contractor to do all work and furnish all labor, supervision, equipment, supplies, and materials. The contract price was \$602,121.

The Invitation for Bid, dated Aug. 10, 1978, contained the following paragraph:

BASIS FOR AWARD: Only one award will be made. Bids will be received on Schedules A, B, and C. No bids will be considered for only part of a Schedule. Award will be made to the lowest qualified bidder based upon the total amount bid for either Schedule A, Schedule B, or Schedule C, depending upon availabil-

ity of funds. Bidders must bid on all Schedules. Bidders are cautioned to be sure that a price is shown for each item of each schedule. Failure to show a price for each item may result in rejection of the bid as non-responsive.

The contract award was made on the basis of appellant's bid for Schedule B which totaled \$602,121 and included the warehouse building under Schedule A. A duly executed contract modification increased the cost by \$11,389 and the completion time by 10 calendar days.

On Jan. 5, 1979, appellant apparently claimed an additional increase of \$5,801 as compensation for fill material in the dock area of the warehouse building which appellant alleged was included in the site grading portion of Schedule C. This claim was denied by the contracting officer on May 8, 1979, in his finding of fact and decision. The ground for denial was that the work required by Schedule B included a warehouse complete to a point 5 feet outside foundation lines and consisted of all fill material necessary for a complete warehouse including the loading dock.

In its complaint on appeal to the Board, appellant included among its allegations the following key paragraphs:

While it is apparent at this date that BLM intended to include the fill material in question in Schedule A of the bid, we contend that this requirement was never clearly stated in the bid documents. The lack of clarity and the way in which we estimated the project resulted in fill material for dock area being included in Schedule C-3, "Site grading."

We normally perform site grading on a project like this with one subcontractor who provides all the fill, excavation, compaction and paving. In this case, had Schedule C been used, we would have utilized fill material from the site (See 02221-1, para. A-2) to form a mound in the dock area which would then have been excavated as necessary for foundations. This system provides a simple method to fill and compact a relatively small area with large earth-moving equipment. It also means that all earth-fill operations can be completed early in the project and, in this case particularly, avoid inclement weather.

By its answer, the Government denied the material allegations of the complaint. Neither party requested a hearing. The appeal was submitted to the Board on the record without supplementation of the appeal file. Although the Board's order settling the record allowed the submission of briefs, only the Government submitted a brief.

Discussion

Government counsel, in his brief, argues in substance that appellant admitted in his complaint that appellant's claim was based solely on his failure to bid Schedules A and B independently from Schedule C, and that appellant's problem was that he bid on the subject project as though Schedule C was going to be awarded despite the warnings contained in the invitation for bids.

A pertinent section of the Specification, 02220, is headed, "Excavating and Backfilling (Building Only)" (App. File, Exhibit 2, Sec. 02220). Subparagraph b of that section states:

b—Do all backfilling and rough grading necessary to bring entire area outside of buildings to underside of respective surfacing.

(1)—Provide and place additional earth fill needed to bring existing grades to new grades indicated on the drawings.

Schedule A involved the construction of a warehouse complete to a point 5 feet outside foundation lines, including connections to utilities and site utilities (water, sewer, gas, electrical, and telephone). Schedule B included all of Schedule A together with a shop building complete to a point 5 feet outside foundation lines and including a vehicle wash rack and connections to utilities. Schedule C included all of Schedule B together with a gas and fuel oil facility and tanker loading facility plus site grading, paving, curbing, and fencing.

It is clear from the record that appellant contemplated using the fill material from the site grading for fill in the dock area of the warehouse building had the Schedule C bid, which included site grading, been awarded. However, as Government counsel pointed out, the site grading work was *not* included in the contract awarded, but the contract specifications, nevertheless, required appellant to provide the necessary fill in the dock area of the warehouse building. The cost of providing this fill should have been taken into account by appellant when submitting the bids for Schedule A and B in anticipation of Schedule C not being included in the contract award.

April 30, 1981

The cost of such bidding error must be borne by appellant—not the Government.

Decision

Appellant having failed to sustain its burden of proof, the appeal is denied.

APPEAL OF SYSTEMS TECHNOLOGY ASSOCIATES, INC.*

IBCA-1108-4-76

Decided April 30, 1981

Contract No. 68-01-2782, Environmental Protection Agency.

Reconsideration denied.

1. Rules of Practice: Appeals: Reconsideration

Upon a motion for reconsideration, the Board finds that the contentions of appellant challenging the principal decision are based on misstatements or misinterpretations of the principal decision or ask that the Board consider the merits of a claim deemed to have been properly dismissed for lack of proof of coercion or duress.

APPEARANCES: Edward F. Canfield, Attorney at Law, Casey, Scott & Canfield, Washington, D.C., for Appellant; Donnell L. Nantkes, Government Coun-

sel, Washington, D.C., for the Government.

OPINION BY ADMINISTRATIVE JUDGE LYNCH

INTERIOR BOARD OF CONTRACT APPEALS

Appellant requests reconsideration of the Board's decision of Feb. 19, 1981, dismissing its appeal. The appeal sought to have a termination settlement agreement between the parties set aside on the grounds that appellant was compelled to enter the agreement by the Government's acts of coercion and duress. The Board found that appellant had failed to show that it entered the agreement because of duress.

In the reconsideration request, appellant asserts:

1. The Board erroneously concluded that STA caused a delay for 1 year and based its decision primarily on that finding;

2. The Board ignored the significance of appellant's precarious financial condition of which respondent obviously took advantage;

3. The Board attributed all symptoms of duress to STA's alleged "one year delay" in complying with the EPA request for job cost ledgers;

4. STA's reluctance to have job cost ledgers used as the basis of settlement was well founded;

5. The Board supported total cost basis for settlement but failed to

*Not in chronological order.

consider evidence that there was no negotiation;

6. The Board misstated the law of duress and misapplied the law to the facts of this case; and

7. The Board overlooked legitimate modifications in the contract and condoned EPA's failure to pay for work performed.

In support of the first assertion, appellant points to the Board's decision (15 IBCA 19, 88 I.D. 304 (1981)) as stating "1 year in refusing access to the contract records for audit," and contends that the records were actually denied the Government auditors only from June to October 1978. The Board's statement (15 IBCA 19, 88 I.D. 303, 304 (1981)) taken in context is as follows:

Appellant raised numerous other questions in the attempt to have the agreement set aside on grounds of duress, however, in view of our finding that appellant was *responsible for the delay of negotiations* for 1 year in refusing access to the contract records for audit, consideration of all the actions complained of during this period would serve no useful purpose. [Italics added.]

The record disclosed that the Government attempted to perform the audit on several occasions, but were prevented from doing so by the refusal of appellant to allow the review of the job cost ledgers. It is true that appellant finally acceded to the review of the ledgers in October of 1978. However, after such agreement to have the records available, time to perform the audit was required. The audit report by DCAA was provided to respondent

sometime after Jan. 15, 1979 (GE-J). Our finding was that appellant's refusal to allow access to the ledgers delayed negotiations, not that the refusal continued for 1 year.

Appellant contends the Board ignored the significance of STA's precarious financial condition of which respondent obviously took advantage. Appellant cites the testimony of D. Christensen, a small business financial expert, whose company had advanced \$560,000 to STA over the years, but had written the investment down to \$1 in December 1978. In our principal decision, the precarious financial condition of appellant and the knowledge of the Government of these difficulties were recognized. However, appellant failed to prove that the Government was responsible for its financial difficulties or that the Government used this knowledge to coerce agreement by wrongful actions. Had appellant not refused access to the job cost ledgers, the initial effort of the Government to audit should have produced a report which would have advanced the state of negotiations by December 1978, when the investment in STA was written off. Appellant contends its plight would have been alleviated had the Government settled partial claims or the Xerox claim for \$554,526. It is clear that the Government would have insisted, as it did, upon payment of the settlement amounts to the subcontractors. The money would not have been available to STA for

April 30, 1981

payment of its expenses, and other than to resolve an uncertain obligation, the financial status of STA would have remained precarious. The Board did not overlook the significance of appellant's precarious financial condition, but rather found that appellant was responsible for increasing pressures of such condition by refusing access to its job cost records.

Appellant contends that the Board failed to consider any other actions claimed to have established a pattern of coercion based solely on our finding of appellant having delayed the negotiations. The principal decision lists the five central arguments made by appellant and considered each of them in detail. The other actions appellant would have us consider in the reconsideration request are a series of events said to have occurred during the contract performance period. After the Government had acted to terminate appellant's contract, an appeal to this Board resulted in our decision dated Jan. 19, 1978, IBCA-1108-4-76, 78-1 BCA 12,969, sustaining the appeal and remanding the case for an equitable adjustment. Appellant alleges that the actions complained of that resulted in overturning the termination decision continued in a pattern of coercion and duress during the time that it sought to negotiate an equitable adjustment with the same Government officials. In considering the specific Government actions occurring after the decision of Jan. 19, 1978, the Board found them to be

legal actions the Government was empowered to take, and that appellant had failed to prove that any of the actions amounted to duress or wrongful coercion. The record before us in the instant appeal does not show a pattern of coercion and duress as appellant urges. That record is recited in great detail in the principal decision because it reflects the normal exchanges of meetings and correspondence between the parties seeking to resolve the question of an equitable adjustment. The record does not reveal untimely and unreasonable responses to appellant's requests, but rather the insistence of appellant upon denying access to the job cost ledgers and on a settlement other than one based on total costs. Any actions of the Government that harmed appellant during contract performance were considered in the appeal that resulted in overturning the termination decision. A recitation of those actions is not relevant in this appeal, and absent proof that subsequent actions by the Government were wrongful, no inference of bias or antipathy to appellant is warranted.

Appellant claims that its reluctance to have the job cost ledgers used as the basis of settlement was well founded. Counsel argues that STA's records were calculated on a percentage of completion basis as appropriate for progress payments, that only such costs as were necessary to support vouchers, progress payments and similar claims were kept on this fixed price contract, and

that the job cost records did not contain many of the cost items not related to direct labor and material. The reconsideration request states that "(cost) explanations were provided to EPA but were rejected as unsatisfactory." No citations to the record are provided to support this statement. It is this argument by appellant that appears to be the focal point of disagreement with the Board's decision.

Appellant is a contractor with many Federal Government contracts, and counsel states that an audit was conducted almost continuously by DCAA for this reason. The books and records of the appellant were therefore the basis for recoupment of costs on other Government contracts. As a corporate entity, the books and records should reflect the actual costs of each major endeavor in order to distinguish profitable projects from loss projects, and to enable an accurate report to the stockholders. The Internal Revenue Service would be unlikely to accept costs of operation that are not recorded in appellant's own job cost ledgers. Our decision was limited to the question of whether appellant's agreement was prompted by coercion and duress of the Government. We did not reach the question of whether substantial unrecorded costs should have been allowed in the settlement agreement.

In contending that the Board supported the total cost basis for settlement, but failed to consider evidence that there was no negotia-

tion, the Board's reasoning is labeled circuitous and begging the question. Appellant may fail to see the distinction between the reluctance of Boards to accept the total cost method in determining an equitable adjustment caused by a contract change, and the propriety of the use of the total cost method in a termination settlement, but it should recognize that under any settlement method, there are limits to the Government's obligations to pay the contractor.

Appellant's exhibit 59 is the DCAA audit report dated Jan. 12, 1979. The auditors found no supporting documentation for amounts totalling over \$2,000,000 claimed by appellant, but not recorded as costs in the job cost ledgers. These amounts were estimates by the appellant. In the event of advance pricing of changes or of the entire contract performance costs, the use of estimated costs are necessary and proper. However, after performance has ceased and all costs are recorded, the use of estimates rather than recorded costs becomes difficult to justify. Had the Board found evidence of duress, the use of estimates over recorded costs would have been appellant's burden to prove in the consideration of the merits of the amount appellant should have recovered. We did not reach this question. No doubt appellant is disappointed that the Board could find no explanation in appellant's evidence of the disadvantages of the total cost method in the resultant impact on the settlement. The re-

April 30, 1981

consideration request cites AX-25 as an example of the resultant impacts. This exhibit is STA's voucher of Sept. 29, 1978, for the proposed settlement with Xerox of \$554,526 and sheds no light on the desired explanation. The alleged failure of the Board to consider evidence that there was no negotiation is unpersuasive. Appellant's president did accept the proffered settlement pursuant to an authorization by the board of directors. Counsel argues that such approval is not material because it was required by the Government. However, the authorization was not an order to accept the settlement offered by the Government, and did not prohibit a refusal. The record does not show that appellant would have been in worse condition following a refusal to accept the settlement offer than it was on the day it was accepted. It is true that appellant may have been harder pressed by its creditors, and that the principal subcontractor, Xerox, would have insisted on a greater sum to settle its claim. However, the Government continued to be obliged to settle with appellant and the amounts of subcontractor claims and the costs of extended negotiations may well have increased the ultimate cost of the settlement to the Government.

Appellant contends that the principal decision misstated the law of duress and misapplied the law to the facts of this case. In appellant's reply brief (page 2), the Government position was challenged "be-

cause EPA has equated *illegal* acts with acts which are wrongful." Our reading of the Government brief disclosed that this was a distortion of the Government's position that acts it was legally empowered to take were not duress. Our decision addressed this misperception (page 17) and appellant now asserts we erred in failing to recognize its position that a coercive act need not be illegal to constitute duress. We recommend that appellant read more carefully the briefs and opinion for an understanding that our discussion dealt with appellant's misstatement of the Government's position, and not a disagreement with appellant's statement "that a coercive act need not be illegal to constitute duress." Appellant also contends that reference to the 1977 edition of Nash and Cibinic, *Federal Procurement Law* rather than the 1969 edition would have shown greater support for appellants claim of duress. We have consulted the later edition, which cites numerous cases to support the current rule that "a Government act or threat is wrongful if it involves something the Government has no right to do" (page 159). It is true that *Allied Materials & Equipment Co.*, ASBCA 17318, 75-1 BCA 11,150 (1975), is cited where a finding of a contracting officer's bad faith in insisting on a loss contract did establish duress, together with a projection that this decision could indicate that the motivation for an act or threat might become more important to a finding of duress than the legality

of the act. However, the evidence in the instant case does not support a finding of bad faith or malicious or unconscionable motives.

Appellant contends that the Board committed an error of law, rejecting equity and fair play, by eliminating all consideration of duress other than the right of the Government to perform the alleged coercive acts. Also appellant argues that appellant's agreement is presumed to be involuntary if it is found that he had no reasonable alternatives, and was vulnerable to the Government's pressure, citing *Aircraft Associates Manufacturing Co. v. United States*, 174 Ct. Cl. 886, 357 F. 2d 373 (1966). The principal decision found that appellant had failed to prove that any of the Government actions were coercive or constituted duress. We did not refer to the obvious alternative available to appellant of appealing to the Board in the event of undue delay or refusal of the contracting officer to make a decision. Appellant argues that the Boards have been reluctant to accept such appeals prior to the effective date of the Contract Disputes Act. However, appellant was aware of this alternative and did consider an appeal prior to the contracting officer's decision. By affidavit dated July 23, 1979, the Board Chairman, Chief Judge William F. McGraw relates the substance of a conversation with appellant's counsel in the late fall or early winter of 1978, in which he advised that an appeal could be taken to this Board should the con-

tracting officer refuse to issue a finding or undue delay making the findings. In view of the fact that the negotiations for an equitable adjustment were being conducted pursuant to a prior decision of this Board, and the fact that the Chairman so advised the appellant's counsel, there existed a stronger basis for the Board to accept an appeal without the findings of the contracting officer. The appellant chose not to appeal to the Board until after an agreement had been executed by both parties. Our findings in the principal decision that the delay in negotiations was caused by appellant's failure to disclose the job cost ledgers indicates a more logical reason for not seeking relief from the Board for the delay or failure of the contracting officer to render a decision. Appellant was aware of its own actions to delay the audit and can be presumed to be aware that an appeal to the Board would not have been accepted unless the delay could be shown to be the responsibility of the Government. This appellant could not do.

The final argument is that the Board overlooked legitimate modifications in the contract and condoned the Government's failure to pay for work performed. This argument presumes a consideration by the Board of the merits of the amounts claimed by appellant. We did not reach the merits of the claim, because of our finding that appellant did not enter into the settlement agreement because of coercion or duress on behalf of the Gov-

May 6, 1981

ernment. If any items for which appellant should have been paid were overlooked, they were overlooked or conceded by appellant's president when he signed the settlement agreement. The equity and fairness asked of the Board appears to ask that we consider the merits of claims for unrecorded costs that were the subject of a binding agreement between the parties.

We find nothing in the motion for reconsideration to warrant a change in our finding that the appeal should be dismissed for lack of proof of acts of coercion or duress to compel appellant's execution of the settlement agreement.

APPEAL OF S & W CONTRACTING CO., INC.

IBCA-1307-10-79

Decided *May 6, 1981*

Contract No. H50C14200734, Bureau of Indian Affairs.

Sustained in part.

1. Contracts: Construction and Operation: Changes and Extras—Contracts: Construction and Operation: Construction Against Drafter

Where at least four of seven bidders shared the same interpretation of the method of construction required by a contract for the construction of a bridge and none of the bidders were shown to have a different interpretation, the Board finds the contractor's interpretation to be reasonable and further finds that the Government's insistence on a different and more costly method of construction was a constructive change for which the contractor is entitled to an equitable adjustment.

APPEARANCES: Edgar O. Willis, President, S & W Contracting Co., Inc., Phoenix, Arizona, for Appellant; Fritz L. Goreham, Department Counsel, Phoenix, Arizona, for the Government.

*OPINION BY CHIEF
ADMINISTRATIVE JUDGE
McGRAW*

INTERIOR BOARD OF CONTRACT APPEALS

The contractor has timely appealed the contracting officer's decision denying its defective specifications claim under the Changes Clause in the amount of \$43,672.27 and it claims for time extensions aggregating 91 days predicated upon (i) changes in the falsework plans, (ii) delays due to a cement shortage, and (iii) delays caused by weather.

Prepared on the standard forms for construction contracts,¹ Contract No. H50C14200734, in the amount of \$388,888 was awarded to

¹ Including the General Provisions set forth in Standard Form 23-A (Oct. 1969 ed.). The contractor's request for additional compensation and for time extensions are asserted under General Provision No. 3, "Changes" and General Provision No. 5, "Termination For Default—Damages For Delay—Time Extensions."

the contractor under date of Mar. 3, 1978.² The contract called for the construction of a reinforced concrete bridge and approaches on Route 3, Fort Apache Indian Reservation, Navajo County, Arizona. The bridge to be constructed traverses the Cibecue Creek and is sometimes referred to in the record as the Cibecue Creek Bridge. A preconstruction conference was held on Mar. 16, 1978, at which a number of matters of mutual interest to the parties³ were discussed.⁴

Notice to proceed with the work was received by the contractor on May 12, 1978, thereby establishing Sept. 9, 1978, as the scheduled date for completion of the contract work (AF 2, 3). The work was determined to be substantially complete as of Nov. 21, 1978, resulting in the assessment of liquidated damages⁵ for 73 days of delayed performance (AF 5-1).

² Appeal File 1. All references to exhibits are to those contained in the appeal file. Hereinafter appeal file exhibits will be referred to by AF followed by reference to the particular number or letter given to the exhibit in the appeal file.

³ Attending the conference as contractor representatives were Edgar O. Willis and Jack A. Willis. Government representatives at the preconstruction conference included H. E. McCutcheon (contracting officer), Charley E. Johnson (construction engineer), and Jack Lee (project engineer).

⁴ The minutes of the preconstruction conference record that when the contractor had no more technical questions, Mr. Charley Johnson (construction engineer) left the meeting. Thereafter, Mr. Edgar Willis is reported to have stated: "[R]ight now we are just figuring on bypassing all the water on one side while we work on the piers and abutment and turn it the other way and use the one expansion joint in the girders and scaffolding" (AF 7-12).

⁵ The contract provides for liquidated damages to be assessed at the rate of \$400 per day for each calendar day of delay in performance (AF A, the Contract, Special Provisions, Article 5).

As early as Apr. 26, 1978, the contractor anticipated difficulty in obtaining the cement required for the project on a timely basis, as is evidenced by the contractor's letter of that date to the contracting officer requesting a delay in the issuance of the notice to proceed by reason of its cement supplier Showlow Ready Mix having been notified that its cement allocation had been cut.⁶ In a letter to the contractor on the same date⁷ the contracting officer agreed to delay the issuance of the notice to proceed but only until May 11, 1978, noting that delay in starting the project beyond that date would jeopardize its successful completion during the summer months and would therefore not be in the best interest of the Government.

In mid-July of 1978, the contractor orally requested permission to use additional construction joints in the girders between the abutments and piers because of the length and number of girders in-

⁶ The contractor's letter was accompanied by a "To Whom It May Concern" statement dated Apr. 24, 1978, on the stationery of Phoenix Cement Company reading as follows:

"Due to increased levels of demand for Portland cement in the Southwest United States, a shortage of supply has developed in this area. This shortage has occasioned the need for Phoenix Cement Company to allocate cement to its customers on a reduced volume basis. This allocation program has resulted in reduced shipments of Portland cement to Show Low Ready Mix." (AF 8, 9).

⁷ With respect to the anticipated cement shortage, the contracting officer noted that in order for him to grant a time extension under Clause 5 of Standard Form 23-A, the delay in the completion of the work must arise from unforeseeable causes beyond the control and without the fault or negligence of the contractor, after which he stated: "[T]he cement shortage does not qualify as a justifiable delay under Clause 5 unless it is a direct result of Government imposed sanctions" (AF 10).

May 6, 1981

volved in placing concrete and in order to avoid having cold joints when placing concrete (AF 14; Ia-2). The contractor's verbal request to place an additional girder construction joint in the end spans of the Cibecue Creek Bridge was approved by George S. Overby, Area Road Engineer, in a memorandum dated July 24, 1978,⁸ subject, however, to the following stated conditions:

1. The end span construction joint is placed 16'4" and 16'8" from the centerline of the hammerhead pier for girders B, C, D, E, and girder A, respectively.
2. The section of the girders over the two piers shall be poured first.
3. The period between the girder pours over to piers and end spans shall be at least 24 hours.

The memorandum which was addressed to the attention of Jack Lee (project engineer) concludes by stating: "This will confirm our telephone conversation where you were advised to instruct the contractor that the falsework must remain in place 14 days after the deck is poured" (AF III b).

In a discussion on the afternoon of Aug. 10, 1978, in which Messrs. Jack Lee, George Overby, Ed Willis, and Jack Willis participated, it was decided that Cibecue Creek would have to be rechanneled to accommodate the type of construc-

tion required by the Government (AF Ia-3).

By letter dated Aug. 12, 1978, the contractor advised the contracting officer that proceeding in the manner required by the Government would involve an extension of time and reimbursement for additional expenses. The contractor also stated that when the project was bid upon it was believed to be a standard girder type bridge construction permitting the contract operations to be performed in the following sequence: (i) Form and place concrete in certain sections of the girders; (ii) wait for the concrete to cure before removing scaffolding; (iii) rechannel the river flow; (iv) complete construction of the girders; and (v) then place the deck portion of the bridge (AF 16).

According to the contractor, its scaffolding supplier (Symons Corporation)⁹ and its reinforcing steel subcontractor (Reppel Steel & Supply Company, Inc.) had the same interpretation because there was nothing shown on the plans or in the specifications for a concrete

⁸ The Findings of Fact dated Aug. 13, 1979, states at page 5 that the Symons Corporation had advised a representative of the contracting officer that it had made no interpretation but had simply designed the falsework for the girders as instructed by the contractor.

After acknowledging that it had instructed Symons Corporation as to how the girders were to be formed and poured, the notice of appeal states at page 10:

"The Contractor's point is, if the plans were adequate for anyone knowledgeable in bridge construction to immediately recognize that the girders and deck would have to be poured and cured prior to falsework removal, then why didn't Symons Corp. call this to my attention. They are in business to rent scaffolding and have the knowledge to know how and where it should be used."

⁹ In a letter to the contracting officer dated Jan. 22, 1979, the contractor states:

"The false work plans and construction progress schedule (schedule submitted May 3, 1978), were submitted through Jack Lee to the contracting officer and were not disapproved until the contractor was directed, orally, on July 24, 1978 to revise false work plans and construction schedule. The letter to the contractor confirming this disapproval is dated September 22, 1978." (AF Ia-2).

placing sequence.¹⁰ The contractor notes that proceeding as the Government required would entail placing certain sections of the girders in sequence, leaving scaffolding under all the girders until the deck is placed and taking additional time for curing the deck. It was said that adhering to such a sequence would necessitate the following: (1) Re-channeling the river from under the bridge because of excessive runoff; (2) reinforcing the scaffolding under the girders already formed to support the additional weight of the deck; and (3) supplying enough scaffolding and materials to form the complete bridge (AF 16).

In a memorandum to the contracting officer under date of Sept. 7, 1978, Mr. George S. Overby (area road engineer) states:

The contractor stated that he believed this to be a standard girder type bridge construction.^[11] There are two types of

standard T girder cast-in-place design methods which may require different construction techniques. The Cibecue Bridge was designed continuous for live load which requires that the falsework remain under the structure until concrete for the deck is placed and allowed to cure. Removal of the falsework beneath the girders prior to placing the deck concrete would cause the girders to collapse.^[12] The other features which differentiates this type from the second type is the lack of an expansion and contraction joint or dam at the pier.^[13]

(AF 17-1).

In especially pertinent part a memorandum from the project engineer to the contracting officer under date of Sept. 22, 1978, states:

This bridge is designed with girders and deck as [an] integral unit, forming a T or a series of TTTT's for its strength. The girders must have support under them until after the deck is poured and cured out.

The contractor did not advise of his intention of pouring and stripping half the girders, pouring and stripping the other half and then forming and pouring the

¹⁰ Addressing this question in a memorandum to the contracting officer dated Sept. 7, 1978, Mr. George S. Overby (area road engineer) states: "The plans did not show a concrete placing diagram because of two optional girder construction joints shown" (AF 17-1). The contractor offers the following comment: "Because of the two optional construction joints shown, the more reason for a concrete placing diagram. Question: What if the Contractor elected to pour the girders from abutment No. 1 to the first construction joint? [T]he next pour would be from construction joint to construction joint" (Notice of Appeal at 11).

¹¹ "The second type of the cast-in-place T girder design is that of a simply supported structure. This is the type of structure which Mr. Willis is referring to as 'standard bridge type construction' and some of these can be constructed as he originally planned. In this type construction, some girders are able to support themselves without the deck while the first method required the deck as part of the structural section for support" (AF 17-1).

¹² "The falsework required reinforcing for the deck because the scaffolding supplier originally designed it to support only the girders. The additional scaffolding is required to adequately support the girders and deck" (AF 17-1).

¹³ The findings from which the instant appeal was taken states: "(6) the lack of an expansion or contraction dam or joint over the piers should have alerted the Contractor that his original falsework plan would not be acceptable" (Findings of Fact (8-13-79) at 6). By way of response the contractor states: "This assumption credits the Contractor with more engineering knowledge than the Project Engineer had. Falsework plans were submitted to Mr. Jack Lee and he was not aware of them being inadequate. He was aware of the Contractor's method of construction, but did not offer any corrective advice" (Notice of Appeal at 12).

deck at the preconstruction conference.^[14] His method was not discussed until Charlie Johnson visited the job site on July 17.^[15] He realized the contractor in error in his procedure, and the contractor was then informed that he must support the girders throughout their entire length until the deck was poured and cured.

It was not until some time after this date that the contractor supplied plans for the false work. These were forwarded to PAO where they were checked and found to be too weak to support both girders and deck, and additional bracing was needed to keep the scaffolding from deflecting and giving way. The contractor was informed of this August 17.^[16]

* * * * *

The re-channeling of the river around the bridge site was not a pay item and would be a legitimate claim for additional expenses.^[17] With this in mind, a

¹⁴ The contractor disagrees with appraisal, stating: "The conversation was not recorded but the plan was discussed between Jack Lee, Jack Willis (contractor's superintendent), Walt Wilson (corporate officer), and Edgar Willis (corporate officer)" (Notice of Appeal at 7).

¹⁵ Appropos of this comment, the contractor states:

"It seems incredible to assume that Mr. Lee, Project Engineer, could be on the project from May 13, 1978, until July 17, 1978, and not have any conversation with the Contractor as to his plans and phases of constructing the project. The feasibility was discussed, at one time, of placing part of the rock in the gabions between the girders before forming the ends of the deck. To accomplish this, all the falsework would need to be removed after the girders were cured." (Notice of Appeal at 7).

¹⁶ Immediately thereafter the project engineer states: "[T]hus on two different occasions, the contractor had to procure additional scaffolding and lumber, but it was his interpretation of the plans which caused the delays and additional costs" (AF 18; memorandum to contracting officer dated Sept. 22, 1978).

¹⁷ In recommending denial of the claims for time extension and for additional reimbursement, the area road engineer states:

"The weather has been typical for the summer and the run-off was normal for this time of year. Channelling and/or bridging the water would be anticipated when constructing the

BIA tractor and operator in the area was pressed into service and the by-pass was constructed at no expense to the contractor.

(AF 18).

Apparently, in anticipation of the contractor asserting a claim for having to leave the falsework in place until the deck slab was cured, Mr. Richard A. Lawrie, Director, Office of Western Bridge, Federal Highway Administration,¹⁸ wrote a letter to Mr. George Overby under date of Feb. 2, 1979, in which he stated:

In our opinion this is a highly unreasonable claim. Our office has been designing that type of bridge since the early 1930's. I am not aware of any claims or problems wherein the contractor was not aware that he would have to support the girders and slab on falsework until the tee-beam^[19] was cured sufficiently to support itself.

It should be pointed out that the main negative moment reinforcing is detailed

falsework. A qualified bidder should have recognized from the design the methods and type of falsework required to construct the bridge." (AF 17-1, 2).

¹⁸ Mr. Lawrie is shown to have approved the design of the Clbecue Bridge in his capacity of Director (see AF B, Sheet 5 of Contract Drawings).

¹⁹ At page 6, the findings state: "(2) [C]ast in place reinforced concrete tee-beams are not designated as 'T-girders' on bridge plans because anyone knowledgeable about bridge or bridge construction would recognize them." Addressing this finding, the contractor notes that three competent contractors who had bid on the project had basically the same interpretations of the plans and specifications after which the contractor states: "Also, the fact [is] that Mr. Lee (the Project Engineer) with two months on the project did not recognize the Contractor was wrong until Mr. Charley Johnson (a structural engineer) called it to his and the Contractor's attention" (Notice of Appeal at 11).

on the plans *in the deck*.^[20] This should provide anyone who is knowledgeable about bridges and bridge construction with the understanding that the main supporting members for this structure are reinforced concrete tee-beams and that the entire top flange of this tee-beam^[21] must be in place and bonded to the negative moment reinforcing before this bridge is able to stand under its own weight.

(AF 25-1).

Claim "A"—Claim for Additional Scaffolding (Falsework)—
\$43,672.27

The claim as presented in a letter to the contracting officer under date Jan. 22, 1979, is in the amount of \$43,672.27.²² The basis for the claim, as set forth therein, is as follows:

[T]he Construction Contract General Provisions, Standard Form 23-A, paragraph 3, Changes, authorizes this claim for reimbursement of costs as a result of

²⁰ Commenting on reference to this aspect in the findings, the contractor states: "A note on the plans would have alerted one to investigate further. Otherwise, only the structural designer knows, and certainly a structural engineer would have to make the necessary computations to arrive at the conclusion that the girders were, or were not, self-supporting" (Notice of Appeal at 13).

²¹ "Reimbursement for additional expenses is requested in the amount of \$43,672.27 as documented in Exhibit V. The extra work, represented by the recorded costs of materials, rentals, owned equipment, labor, and overhead, is described above, in the log of extra working time resulting from the changes required by direction of the contracting officer" (AF Ia-4).

²² "The Contractor * * * in preparing a bid for this project did take into consideration methods of construction, and other factors that are necessary to do a project of this type, i.e., weather conditions, traffic control, control of water, excavation, forming, reinforcing steel, concrete placement, grading, borrow materials, bank protection, (gabions), guard rails, bridge rails, asphaltic materials, etc. With the aforementioned items, and the ever changing costs of same, the Contractor did get quotations from suppliers to compile his bid for the project" (Notice of Appeal at 3).

the special provisions added to complete the specifications which were defective by reason of omission of specific designation of the type of girder designed, and the dependent concrete pouring sequence required.

(AF Ia-4).

Among the principal arguments advanced in support of the appeal are the following:

[T]he method of construction required by direction of the Government, in the field, was not contained in the Contract Documents; was not foreseen by the Contractor;^[23] and did result in additional cost to the Contractor in the amount claimed. * * *

* * * * *

* * * [O]ne of the suppliers was the Symons Corporation who supplied the scaffolding (falsework) for the girders. The Contractor did instruct Symons as to how he intended to form and pour the girders. Working from the plans Symons Corporation did detail the scaffolding, and submitted them to the Contractor, April 11, 1978, as noted on their detail sheets. I am sure this firm, which is expert in their field, would have recognized that the scaffolding would have to support the girders and the deck, if it was obvious on the plans.

* * * [T]he Contractor's method of construction, i.e. to form and pour girders to a construction joint, then strip and use the same material for the next phase. This method was determined by notes on the plans which would indicate his method was not only permissible, but perhaps anticipated. Example: Sheet 5 of 20 center left, note A; Optional girder construction joint (either or both may be used). Sheet 9 of 20 lower right, De-

²³ The "To Whom It May Concern" statements submitted by three other bidders that had bid on the project were included as enclosures to the Contractor's claim letter of Jan. 22, 1979 (see AF Ib, Ic, and Id).

May 6, 1981

deflection. Ordinate=Immediate deflection and long term deflection. This note would have no Justification for use by anyone in the field unless the girders had been poured and cured, and scaffolding removed, prior to setting and pouring the deck.

* * * [B]ased on the Contractor's knowledge, his proposed method of construction was acceptable. This is supported by letters from three other competent contractors who submitted bids on the project. They stated that their method of construction was basically the same. This would bring one to the conclusion that the information in the plans and specifications was inadequate, or that none of the contractors that bid the project were knowledgeable bridge people. This refers to a statement by Mr. Richard A. Lawrie, paragraph 3, in his letter dated February 2, 1979, Exhibit No. 25.

(Notice of Appeal at 1, 3-4).

The Government's principal defenses against the claims asserted are: (i) Cast-in-place reinforced concrete tee-beams are not designated as "T-girders" on bridge plans because anyone knowledgeable about bridge construction would recognize them; (ii) the plans did not show a concrete placing diagram because two *optional* girder construction joints were shown; (iii) the contractor was advised verbally in the initial stage of placing the falsework that it was structurally inadequate; (iv) the lack of an expansion or contraction dam or joint over the piers should have alerted the contractor to the fact that his original falsework plans would not be acceptable; (v) the main negative moment reinforcement is detailed on the plans

in the deck; and (vi) the tee-beam has been designed by the Federal Highway Administration since the early 1930's and they are not aware of any claims or problems developing as a result of a contractor not being aware that he would have to support the girders and slab on falsework until the tee-beam was cured sufficiently to support itself (Findings of Fact and Decision by the contracting officer dated Aug. 13, 1979, at 6).

The Board has examined the foregoing contentions in the light of the evidence of record. As to item (i) it notes that the Government has not denied that three other bidders on the project apparently interpreted the plans and specifications in essentially the same manner as did the contractor.²⁴ Also noted is the fact that there were only seven contractors responding to the invitation for bids and that, consequently, at least over half of them viewed the requirements for the project in the same light as did the contractor.²⁵ While with respect to item (ii) the Government has stated that its failure to show a concrete placing diagram was because two optional-

²⁴ The record is devoid of any evidence as to what construction was placed upon the plans and specifications by the remaining three bidders.

²⁵ Notice of Appeal at 10. Although the contracting officer indicates that only 15 percent of the falsework had been completed by the end of July of 1978 (Findings at 5), the progress report of July 31, 1978 (AF 15), to which the findings refer does not show a percentage of completion figure for the falsework at the end of the reporting period; nor is the source of the 15 percent figure used by the contracting officer disclosed elsewhere in the record.

girder construction joints were shown, it has not even addressed the appellant's argument that the showing of the two optional-girder construction joints made the inclusion of a concrete placing diagram in the plans of even greater importance (n.10, *supra*, and accompanying text).

With respect to item (iii) the contractor flatly denies that in the initial stage of placing the falsework it had been advised verbally that it was structurally inadequate. According to the contractor, at the time such advice was given approximately 65 percent of the falsework had been completed as shown by photos. As to item (iv) (the lack of an expansion on contraction dam or joint over the piers) and item (v) (the main negative moment reinforcement being detailed on the plans), the appellant asserts that while these items would be significant to a structural engineer, they would not alert contractors to the type of bridge construction desired by the Government (nn.13 & 20, *supra*, and accompanying text).

Concerning item (vi) (the use of the tee-beam in design since the early 1930's and the absence of any evidence that the contractors concerned were not aware of the necessity of supporting the girders and slab on falsework until the tee-beam was cured sufficiently to support itself), the appellant notes the absence of any statement as to whether the contract documents, plans, and specifications involved in such contracts are comparable to

the plans and specifications for the instant project. This question was not addressed by Richard A. Lawrie, Director, Office of Western Bridge, Federal Highway Administration (*see* text accompanying n.18, *supra*); nor has it been addressed by either the contracting officer or other Government personnel.

In an apparent effort to bolster the Government's position, the Department counsel quotes passages from FP-74²⁶ (Government Brief at 3-4). While FP-74 was incorporated in the contract by reference, the passages in question were not adverted to by the Government engineers who expressed an opinion concerning the merits of claim A; nor were they referred to by the contracting officer in the findings from which the instant appeal was taken. Absent any references by the Government personnel concerned with drafting the plans or administering the contract to the quoted passages from FP-74, it does not appear that any of them thought the provisions of those paragraphs would materially assist in the resolution of the disputed questions; nor do we.

Decision

The principal question raised by this record is whether the plans and specifications with which we are

²⁶ "Standard Specifications for Construction of Roads and Bridges on Federal Highway Projects." FP-74 was not submitted by the contracting officer as part of the appeal file; nor was it submitted as a supplement to the appeal file at the time the Order Settling Record was issued on Apr. 21, 1980.

here concerned can be said to be ambiguous. A related question is whether the contractor's interpretation of the plans and specifications can be said to be reasonable. Addressing these questions in the case of *Brezina Construction Co., Inc. v. United States*, 196 Ct. Cl. 29 (1971), the Court of Claims stated at page 33: "The rule, often repeated by this court, is that if a Government contract is ambiguous and if the construction placed upon it by the contractor is reasonable, the contractor's construction will be adopted, unless the parties' intention is otherwise affirmatively revealed." [Citing cases.]

In the case at hand the appellant appears to concede that a structural engineer reading the plans and specifications for the instant project would be likely to conclude that the bridge called for by the contract should be constructed by employing techniques designed continuous for live load which requires that the falsework remain under the structure until concrete for the deck is placed and allowed to cure. The heart of the appellant's case, however, is that neither it nor three other concerns who bid on the project construed the invitation to require that the bridge be constructed in that manner. Referring to various portions of the contract plans and emphasizing the absence of a concrete placing diagram, the contractor asserts that the method of construction it contemplated was to

form and pour the girders to a construction joint, then strip and use the same material for the next phase.

The strongest evidence for proof of the ambiguity of the terms of the contract, as well as the reasonableness of the contractor's construction of them, is the undisputed fact that three other concerns who bid on the project apparently construed the terms of the invitation in essentially the same manner as did the contractor. The reasonableness of the contractor's interpretation is also supported to some extent at least by the fact that the scaffolding supplier who had access to the plans raised no question with the contractor as to the propriety of the contractor proceeding in the manner he did. While the contractor has also asserted that it notified the project engineer of its plans, we do not consider that there is sufficient evidence in the record to make a finding on this question. We note, however, that for over 2 months (from May 13 to July 17, 1978), the contractor apparently proceeded with bridge construction in the manner it had contemplated and that on one occasion during that period the contractor discussed with the project engineer the feasibility of placing part of the rock in the gabions between the girders before forming the ends of the deck and that this would entail removing all of the falsework after the girders were cured (n.15, *supra*).

For the reason stated and under the authority cited, the Board finds that the contract terms were ambiguous, insofar as the construction methods and sequences to be employed in constructing the Cibecue Bridge was concerned; that the contractor's interpretation of the ambiguous contract terms was reasonable; that the Government's action in requiring the contractor to construct the bridge in accordance with its interpretation of the contract constituted a constructive change; and that by reason of the constructive change order the contractor incurred costs for which it has made claim in the amount of \$43,672.27. The Government having neither submitted evidence to show that the costs claimed for are unreasonable nor having otherwise questioned them, the Board finds that the equitable adjustment to which the appellant is entitled for Claim A is in the amount of \$43,672.27.

*Claim B—Time Extension
Requests—91 days*

The contractor has requested that the time for performing the contract be extended by 91 days by reason of what it terms excusable delays. The time extension request is comprised of (a) delays due to the additional scaffolding (falsework) required; (b) delays due to a cement shortage and (c) delays caused by weather. Each of these causes of delay are considered separately below.

(1) Delay due to additional scaffolding (falsework) required

The contractor has requested a time extension of 50 days by reason of the additional scaffolding (falsework) required as a result of the Government interpreting the specifications in the manner it did. Since the contracting officer denied the claim for additional compensation with respect to this item (Claim A, *supra*) on the ground that the contractor was simply being required to perform the contract in accordance with its terms, there was no basis for him granting a time extension for this work. As we have found that the instructions the Government gave to the contractor with respect to Claim A constituted a constructive change, we must now determine the extent to which the issuance of the constructive change order delayed the completion of the contract work.

The contracting officer appears to have questioned, however, whether the contractor was, in fact, delayed by the change in the falsework plans in any event. In this connection he emphasizes the extent of the work performed by Bureau of Indian Affairs personnel and asserts that the deletion of a number of contract items reduced the contractor's schedule by a total of 35 days. He also finds that the falsework construction did not delay the overall progress of constructing the approaches (Findings at 9). The contractor vigorously contests this analysis, asserting that it is point-

May 6, 1981

less to accumulate four concurrent 7-day schedules, plus 1 week on another schedule to a total of 35 days. Commenting further on this point the contractor states: "[T]he deletion of these items are fact. But the deletion of these items did not reduce the Contractor's schedule 35 days. As here-to-fore stated, using the same formula the figure would be 7 days" (Notice of Appeal at 19-21).

The Board has previously noted that although the contracting officer indicates that only 15 percent of the falsework was completed when the instruction to change the falsework plan was issued, the progress report apparently cited as authority for the statement does not support the use of that figure. We have also noted the contractor's estimate that as of that time approximately 65 percent of the falsework had been completed. Since this very substantial difference in the estimate of the amount of the falsework done at the time the change in the plan occurred may account for much of the difference in the appraisal of the parties respecting the extent to which the change in the plan for the falsework delayed the completion of that work, since the 15 percent figure used by the contracting officer is not supported by the record before us and since the contractor apparently concedes that deletion of certain items reduced its performance time by 7 days, the Board finds that by reason of the change

in the falsework plans ordered by the Government, the contractor was delayed by 43 days for which it is entitled to a time extension.

(2) *Time extension for cement shortage*

The 21-day time extension requested by the contractor for a cement shortage which developed during the course of contract performance covers the period from Aug. 11 to Aug. 31, 1978, when the contractor was without cement for concrete. Although the contractor makes a considerable effort to show that the cement shortage was due to Government imposed sanctions, it has made no effort and offered no evidence to show what effort it made to get cement from other sources either immediately prior to or during the period of the cement shortage.

An appellant seeking to prove an excusable cause of delay must show, however, that it was not reasonably possible to secure the needed material from any source. *Aerosonic Corp.*, ASBCA No. 9332 (May 14, 1964), 1964 BCA par. 4,243. As no such showing has been made in this case, the contractor's request for a 21-day time extension for a cement shortage is hereby denied.

(3) *Time extension for weather*

The contractor has requested a 20-day time extension due to weather. The contracting officer found the contractor was entitled to a time extension of 12 days. The difference in their respective apprais-

als may be due to the fact that the contractor's request for time extension is based on weather which either stopped work or seriously interfered with it proceeding while the contracting officer appears to have applied the standard for unusually severe weather cases.

Clause 5, Termination For Default—Damages For Delay—Time Extensions (Standard Form 23-A) only entitles a contractor to a time extension for bad weather if it is shown to be unusually severe. The contractor has made no effort to show that the weather for which it is claiming relief was unusually severe within the meaning of Clause 5, *supra*. The claim for time extension for weather (over and above that allowed by the contracting officer) is therefore denied.

Summary

1. Claim A is allowed in the amount claimed of \$43,672.27.

2. Claim B is granted to the extent the contractor is found to be entitled to a time extension of 55 days comprised of time extension for falsework (43 days) and a time extension for unusually severe weather as allowed by the contracting officer (12 days).

Administrative Judge

OWNERSHIP OF AND RIGHT TO EXTRACT COALBED GAS IN FEDERAL COAL DEPOSITS

M-36935

May 12, 1981

Act of March 3, 1909—Act of June 22, 1910—Patents of Public Lands: Reservations

Patents issued pursuant to the Act of Mar. 3, 1909, or the Act of June 22, 1910, 30 U.S.C. §§ 81, 83-85 (1976) reserved to the United States "all coal" and the right to prospect for, mine and remove the "coal deposits" underlying the patented lands. Congress in the 1909 and 1910 Acts intended to, and did, reserve only the coal and not other minerals found in association with coal. Accordingly, all minerals other than coal, including coalbed gas, passed to the surface owner at the time a patent was issued pursuant to the 1909 or 1910 Acts.

Act of July 17, 1914—Patents of Public Lands: Reservations

Should coalbed gas occur in lands in which "oil and gas" were reserved to the United States in agricultural patents issued under the Act of July 17, 1914, 30 U.S.C. § 121 (1976), that coalbed gas is reserved to the United States.

Mineral Leasing Act: Methods of Development—Oil and Gas Leases: Generally

The MLA refers only to "gas" or "natural gas" without any qualifying adjectives, thus supporting a nonrestrictive reading of those terms to include coalbed gas. Coalbed gas is leasable under the oil and gas leasing provision of the MLA, 30 U.S.C. § 226 (1976).

Coal Leases and Permits: Leases—Mineral Leasing Act: Methods of Development

Coalbed gas is not included in a coal lease under the MLA. In the coal leasing

GAS IN FEDERAL COAL DEPOSITS

May 12, 1981

provision of the MLA, Congress did not provide for a coal lessee's extraction of minerals related to or associated with coal. 30 U.S.C. § 201 (Supp. II 1978). This provision does not authorize a coal lessee's extraction of coalbed gas, other than the venting of the gas required by mine health and safety laws and regulations.

TO: SECRETARY

FROM: SOLICITOR

SUBJECT: OWNERSHIP OF AND RIGHT
TO EXTRACT COALBED GAS IN
FEDERAL COAL DEPOSITS

Federal coal deposits may contain large quantities of recoverable coalbed gas. Due to its flammability and to the danger it poses to underground mining, this gas,¹ often referred to as methane,² has long been feared by the coal mining industry.³

¹ Coalbed gas is a byproduct of coalification, the process through which plant material buried in sediments is successively transformed from peat into lignite, subbituminous coal, bituminous coal and finally anthracite. E. Craig and M. Myers, *Ownership of Methane Gas in Coalbeds*, 24 Rocky Mtn. Mineral Law Institute 767-68 (1978) (hereinafter cited as "Craig and Myers").

² Methane (CH₄), a colorless, odorless, flammable gas, is the primary component of coalbed gas. A. Kim, *Estimating Methane Content of Bituminous Coalbeds from Adsorption Data*, U.S. Department of the Interior, Bureau of Mines, Report of Investigations (USBM RI) 8245 L (1977). "During the biogenic stage of coal formation, methane is the predominant gas produced. * * * During the diagenetic stage of coalification, methane and other hydrocarbons are produced." A. Kim, *Experimental Studies on the Origin and Accumulation of Coalbed Gas*, USBM RI 8317, at 16 (1978).

³ See U.S. Bureau of Mines Information Circular No. 7900 (1963); M. Irani, C. Timmons, T. Bobbick, M. Deul and M. Zabetakis, *Methane Emission from United States Coal Mines, A Survey*, Bureau of Mines Information Circular No. 8558 (1972); M. Zabetakis, M. Deul and

Although traditionally coal mining practices have wasted the gas by venting it into the atmosphere, there is currently a great deal of interest in developing coalbed gas as an energy source in its own right.⁴

Deep coalbeds in the Appalachian region are the most likely source of commercially marketable gas, but preliminary studies show that deep coalbeds in the West may also contain recoverable gas.⁵ A number of studies, including research by the Department of Energy, have concluded that recovery of coalbed gas is commercially and technically feasible.⁶ However, the unresolved legal status of coalbed gas on federal lands and in federal coal has hindered any decision on how, and under what right of extraction, it can be developed. In order to expedite development of this energy source, the Department must resolve two issues: (1) who owns the coalbed gas in land where the coal or oil and gas was reserved to the United States; and (2) whether the coal or the oil and gas leasing provisions of the Mineral Lands Leasing Act of 1920, *as amended*, 30 U.S.C. § 181 *et seq.* (1976) (Mineral Leasing Act or MLA) apply to

M. Skow, *Methane Control in United States Mines*, Bureau of Mines, Circular No. 8600 (1973).

⁴ See Office of the White House Press Secretary, "Fact Sheet on the President's Import Reduction Program II" (July 16, 1979).

⁵ P. McGinley, *Legal Problems Relating to Ownership of Gas Found in Coal Deposits*, 80 W. Va. L. Rev. 369, 372-73 (1978) (hereinafter referred to as "McGinley").

⁶ See McGinley, *supra* note 5, at 375-77.

the leasing of coalbed gas for commercial development.

For the reasons set forth below, I conclude that: (1) the reservation of coal to the United States in the Act of Mar. 3, 1909 and the Act of June 22, 1910, 30 U.S.C. §§ 81, 83-85 (1976), did not include the coalbed gas found in the reserved coal; (2) the reservation of oil and gas to the United States in the Act of July 17, 1914, 30 U.S.C. §§ 121-123 (1976) included coalbed gas found in the lands patented subject to such a reservation; and (3) coalbed gas is disposable under sec. 17 of the Mineral Leasing Act, 30 U.S.C. § 226 (1976), the oil and gas leasing provision.

I. Ownership of Coalbed Gas

Coalbed methane is both scientifically defined⁷ and legally regarded⁸ as a gas.⁹ The relationship of

coalbed methane to coal is described in a Bureau of Mines Report:

Methane is always present in coal * * *. It occurs admixed with other hydrocarbons, CO₂ N₂ O₂, H₂ and He. It is a normal byproduct of the coal-forming process. Although much of the gas formed during coalification migrates away from the coal, a significant portion is retained in the coal and adjacent rocks. Some free gas is present in cracks and fractures, but most is adsorbed on the internal surface of micropores within the coal. The amount of gas that the coal contains depends primarily upon pressure, temperature, adsorptive capacity, and moisture content of the coal.^[10]

Thus, although coalbed gas exists in coal deposits,¹¹ the two resources are distinct, and are potentially severable. In order to determine the ownership of coalbed gas in federal mineral deposits, it is necessary first to examine the various statutes in which rights to mineral deposits have been reserved to the Federal Government.

A. Coal Land Withdrawals and Coal Reservations

Beginning in 1906, President Roosevelt withdrew over 75 million acres of western land containing known "workable coal" from all

⁷ A. Kim, *Estimating Methane Content of Bituminous Coalbeds*, *supra* note 2.

⁸ Several courts, addressing the question of what constitutes "gas" or "natural gas," have defined those terms to comprehend coalbed methane. See, e.g., *McCoy v. United Gas Public Service Co.*, 57 F. Supp. 444, 445 (W.D. La. 1932) (gas "consists of invisible vapors which are produced from the earth, containing varying amounts of hydrocarbon"). See also *Northern Natural Gas Co. v. Grounds*, 441 F.2d 704, 715 (10th Cir. 1971), *aff'd* 292 F. Supp. 619 D. Kan. 1968), where the court held that a grant of "oil and gas" included not only the hydrocarbon gases (such as methane) but also the helium extracted with them. The court approved the trial court's definition of gas as "any naturally-formed aeriform substance indigenous in the underlying reservoir * * * ." 441 F.2d at 711, *citing* 292 F. Supp. at 686.

⁹ By contrast coal is defined as: "[a] solid, brittle, more or less distinctly stratified, combustible carbonaceous rock, formed by partial to complete decomposition of vegetation; not fusible without decomposition and very insoluble. The boundary line between peat and coal is hazy * * * as is the boundary line

between coal and graphite and the boundary line between carbonaceous rock and coal." U.S. Bureau of Mines, *A Dictionary of Mining, Mineral and Related Terms* 222 (1968).

¹⁰ A. Kim, *Estimating Methane Content of Bituminous Coalbeds*, *supra* note 2.

¹¹ See Deul, *Methane Drainage from Coal Beds, A Program of Applied Research*, 60 Rocky Mtn. Coal Mining Inst. 13 (1964), describing coal as a "porous * * * solid with two distinct pore systems * * * [in which] gas can exist as free gas in cracks and fractures (macropores) or be adsorbed on the internal surface of the micropores."

GAS IN FEDERAL COAL DEPOSITS

May 12, 1981

forms of entry (i.e. homestead, agriculture). The purpose of these withdrawals was to prevent the continued loss, by the United States, of lands valuable for coal. However, by February of 1909, there were 11,688 original homestead and desert land entries of record in lands which had been withdrawn as valuable for coal, and the issuance of final certificates on 2,771 homestead and desert land entries had been suspended pending classification of the lands for coal. H.R. Rep. No. 2019, 60th Cong., 2d Sess. 2, 5-7 (Feb. 2, 1909).

Congress, spurred by the desire to re-open these lands to entry, passed the Act of Mar. 3, 1909, 30 U.S.C. § 81 (1976), and the Act of June 22, 1910, 30 U.S.C. §§ 83-85 (1976). The Act of 1909 provided relief for entrymen who in good faith had occupied lands for agricultural purposes and then, before patent, suffered withdrawal of that land from entry on the basis that it was coal land. The 1909 Act allowed the entryman to perfect his entry, but he received a patent reserving to the United States "all coal * * * and the right to prospect for, mine, and remove the * * * coal deposits." 30 U.S.C. § 81 (1976).

The 1910 Act provided alternate relief by opening withdrawn coal lands to agricultural entry subject to a reservation to the United States of "all the coal in the lands so patented, together with the right to prospect for, mine, and remove the

* * * coal deposits." 30 U.S.C. § 85 (1976).¹²

It is a well-established principle that nothing passes in a public land grant by implication and that such grants should be interpreted in favor of the government. *Andrus v. Charlestone Stone Products Co.*, 436 U.S. 604, 617 (1978). However, public land grants "are not to be so construed as to defeat the intent of the legislature, or to withhold what is given either expressly or by necessary or fair implication * * *." *Leo Sheep Co. v. United States*, 440 U.S. 668, 682-83 (1979), quoting *United States v. Denver & Rio Grande R. Co.*, 150 U.S. 1, 14 (1893). When coal was reserved by the United States under the 1909 and 1910 Acts, coalbed gas was viewed not as a valuable resource, but as a nuisance, and an acknowledgement of its hazardous qualities is found in the legislative history of the Act of June 22, 1910. 45 Cong. Rec. Appendix 156 (Speech of Rep. John K. Tenner (May 10, 1910)). Although there was no affirmative Congressional policy enunciated toward the disposition or ownership of coalbed gas, it is apparent from the legislative history of both the 1909 and 1910 Acts that Congress was aware of the narrow scope of

¹² By the Act of Apr. 23, 1912, 30 U.S.C. § 77 (1976), Congress allowed entry under the homestead laws on unreserved public lands in Alabama containing coal deposits, subject to the provisions of the 1910 Act, 30 U.S.C. §§ 83-85 (1976). The 1912 Act incorporates sec. 3 of the 1910 Act by reference. See 1 American Law of Mining §§ 2.17 and 3.24B (1960).

the proposed reservation of "coal." Explaining the effect of H.R. 24834,¹³ Honorable F. W. Mondell, Chairman of the House Committee on Public Lands, engaged in the following colloquy:

Mr. STEPHENS of Texas. Is it not a fact that valuable minerals are reserved now to the Government?

Mr. MONDELL. No; that is not true. The patent having issued, the patent carries everything in the land with it. * * *

Mr. STEPHENS of Texas. That applies also to oil and coal?

Mr. MONDELL. It applies to all kinds of minerals. In other words, the patents issued by the Government of the United States heretofore have been patents in fee.

Mr. STEPHENS of Texas. *Could the gentleman better arrive at what he desires by only patenting the surface of the land and reserving all minerals, precious and otherwise?*

Mr. MONDELL. That has been discussed at some length, and the Committee on Public Lands is not of the opinion that that ought to be done. *We believe this is quite a sufficient departure from the past practice of the Government. The lands which this legislation will affect are lands which the department has claimed contain some coals of value.*

Mr. STEPHENS of Texas. Is not this a step in that direction of issuing limited patents?

Mr. MONDELL. It is; and I trust it is as far as we will go in that direction.

43 Cong. Rec. 2504 (1909) (italics added).

Similarly, during debate on the 1910 legislation, Representative Mondell emphasized that the proposed legislation reserved to the Federal Government only the coal,

and not other minerals, such as gas and oil.¹⁴

See 45 Cong. Rec. 6044 (1910). The statutory language and the legislative history belie the argument that Congress intended to reserve any mineral other than coal in the 1909 and 1910 Acts.

The conclusion that Congress in the 1909 and 1910 Acts reserved only coal, and not other minerals found in association with coal, is supported by the Act of Aug. 11, 1955, 30 U.S.C. § 541 (1976). This Act, known as the Uraniferous Lignite Act, authorized the location of mining claims and the removal of uranium-bearing lignite from the public lands classified as coal lands, and from entered, granted, or patented lands in which the coal deposits were reserved to the United States.¹⁵

The intent of the law was to permit development of newly-discovered uranium-bearing lignite seams in federally-owned coal deposits, including coal reserved under the 1909 and 1910 Acts.¹⁶ The

¹⁴ Secretary of the Interior Ballinger, commenting on the proposed 1910 legislation, observed that it "relate[s] only to lands which have been classified as, or are known to be, valuable for coal. In my judgment it would be well to extend its provisions to lands containing oil and natural gas." H. R. Rep. No. 377, 61st Cong., 2nd Sess. 4 (1910).

¹⁵ The Multiple Mineral Development Act of 1954, 30 U.S.C. § 521 *et seq.* (1976), opened public lands known to be valuable for leasable minerals (*e.g.* coal) to location and patent of mining claims for locatable minerals (*e.g.* uranium). However, the 1954 Act did not provide for the location and extraction of a locatable mineral (uranium) occurring within a deposit of a Leasing Act Mineral (coal).

¹⁶ See 101 Cong. Rec. 12300, 84th Cong., 1st Sess. (1955).

¹³ H.R. 24834, with amendments not relevant to this discussion, was enacted as the Act of Mar. 3, 1909, 30 U.S.C. § 81 (1976).

GAS IN FEDERAL COAL DEPOSITS

May 12, 1981

uranium contained in the coal was a locatable mineral under the mining laws, and the locator of a uranium claim had "an absolute right to mine and remove [it]." H.R. Rep. No. 1478, 84th Cong., 1st Sess. 4 (1955). However, it was impossible to remove the uranium without removing the federally-owned lignite. Congress acknowledged that the entryman of land in which coal deposits were reserved to the United States has "*fee simple title to all other minerals in the land, including valuable source materials [uranium], regardless of the host material or the mode of occurrence.*" *Id.* at 5. (italics added). Accordingly, sec. 4 of the Act provides the entryman of such lands with the right to "mine, remove, and dispose of lignite containing [uranium] and lignite necessary to be stripped or mined in the recovery of [the uranium] * * *." 30 U.S.C. § 541c (1976).

To Congress in 1955, then, the title of an entryman under the 1909 and 1910 Acts to all minerals in his land other than federally reserved lignite was not in dispute. The Uraniferous Lignite Act was both a recognition of this ownership, and a partial solution¹⁷ to the prob-

lems of extracting and disposing of uranium occurring in direct association with federal lignite.

Our conclusion is further supported by the background to and enactment of the Act of Mar. 4, 1933, 30 U.S.C. § 124 (1976), in which Congress confronted the related problem of commingled deposits of potash and sodium. The Act of July 17, 1914, 30 U.S.C. § 121-123 (1976) (discussed further in part IB *infra*), authorized agricultural entries on lands withdrawn for potash, reserving to the United States the potash deposits. However, in New Mexico, valuable deposits of potash occurred in association with valuable sodium, a leasable mineral under the Mineral Leasing Act. Despite the Mineral Leasing Act's authorization of leases for sodium "and other related products," 30 U.S.C. § 262 (1976), and for potash "and other related products," 30 U.S.C. § 282 (1976), the Department took the position that the reserved potash in New Mexico and the sodium associated with it were not disposable under a single lease. Where patents had been issued under the 1914 Act reserving the potash, the surface owner had title to the sodium, "thus creating a *dual ownership* of

¹⁷ Congress chose not to resolve such conflicts between surface entrymen and their grantees or lessees and federal coal lessees:

"Secs. 4 and 5 of the bill take cognizance of conflicting interests between the *entryman or owner [of entered, granted, or patented lands] who has title to any valuable source material contained in lignite* occurring in his lands and the lessee who has acquired the right to mine and dispose of such lignite through a lease

agreement with the United States which reserved the coal in such lands at the time the lands were entered, granted, or patented.

"The committee feels that such conflict of interests should be resolved by the parties concerned or, failing that, by the local courts and not through legislation." H.R. Rep. No. 1478, 84th Cong., 1st Sess. 5 (1955). (italics added.)

the same deposit made up of both potash and sodium." H.R. Rep. No. 1938, 72nd Cong., 2d Sess. 2 (1933) (views of the Department of the Interior) (*italics added*). In response to this situation, Congress provide for agricultural entry on lands withdrawn or classified as valuable for sodium and/or sulphur, thereby consolidating in the United States for all future entries the mineral ownership for such commingled leasable deposits, 30 U.S.C. § 124 (1976).

A recent trial court decision,¹⁸ based on common law principles, concluded that coalbed gas was not conveyed in a grant of "coal," and that the seller retained control over the gas, except for the right of the coal owner to vent it in the course of mining. The court cautioned, however, that the coalbed gas could not be extracted in any manner which would violate or diminish the property value of the coal. While the case is not controlling on the issue of ownership of coalbed gas in coal deposits reserved to the Federal Government in a federal land grant, the discussion of common law principles applicable to those private transactions lends further support to the conclusion that coalbed gas was not reserved with federal coal in nonmineral patents issued subject to the 1909 and 1910 Acts.

B. Reservation of Oil and Gas

Aside from coal lands, Congress continued the general policy of

unity of surface and mineral estates in the disposition of public lands until 1914. By the Act of July 17, 1914, 30 U.S.C. §§ 121-123 (1976), Congress permitted nonmineral entry of lands withdrawn or classified as valuable for certain minerals including phosphate, nitrate, potash, oil and gas, reserving to the United States any and all of those minerals for which the lands were withdrawn or classified as valuable. As it had done in the 1910 Act for coal, Congress provided that patents issued under the 1914 Act "*contain a reservation to the United States of the deposits on account of which the lands so patented were withdrawn or classified or reported as valuable, together with the right to prospect for, mine, and remove the same.*" (*italics added.*) 30 U.S.C. § 121 (1976).

As it had done in the 1909 and 1910 statutes, Congress reserved *only* the minerals identified in the 1914 Act, allowing all other minerals in the affected lands to pass with the surface. Again, the legislative history is instructive of Congress' view of the scope of the reservation:

MR. MANN. [*w*]hy should not the Government reserve all of the minerals under the surface? * * *

MR. MONDELL. [*t*he gentleman's suggestion relates to a general mineral reservation. Of course that is not what this bill provides. * * * The moment you depart from the kind of reservation that we have heretofore provided for in the case of coal, and which we are now extending to these other minerals * * * you must logically go to the extreme of withholding all minerals. * * * Of

¹⁸ *United States Steel Corp. v. Hoge*, No. 78-682 (Pa. Ct. C. P., Greene County, Mar. 24, 1980), *appeal filed*, Oct. 22, 1980.

GAS IN FEDERAL COAL DEPOSITS

May 12, 1981

course it is barely possible that *some other minerals might some time be found* than those for which the land is withdrawn, but it is not at all likely, and if in the far distant future some minerals should be found in the possession of farmers and others, I do not believe any public interest would be injured thereby.

51 Cong. Rec. 10493-94, 63rd Cong., 2nd Sess. (1914) (*italics added*).

Thus, Rep. Mondell, the Chairman of the House Committee on Public Lands, expressly acknowledged that the 1914 Act's mineral reservations, like the prior coal reservations, were specific, and were limited to the named minerals.

If any coal rights passed into private ownership under an agricultural entry subject to the 1914 Act with a reservation to the United States of "gas," then the gas and the right "to prospect for, mine, and remove the same," including coalbed gas, is reserved to the United States where the lands were withdrawn or classified as oil and gas lands, or were reported as valuable for oil and gas deposits. *Cf. Brennan v. Udall*, 251 F. Supp. 12, 25 (D. Colo. 1966), *aff'd*, 379 F.2d 803 (10th Cir.), *cert. denied*, 389 U.S. 975 (1967) ("oil" reservation in the 1914 Act is generic and includes oil shale).

Like "oil," "gas" is a term of art, and the courts have interpreted gas broadly to include both fuel and non-fuel gases. *See cases cited at note 8, supra*. Therefore, should coalbed gas occur in the lands in which "oil and gas" were reserved to the United States under the 1914

Act, that coalbed gas would be retained under the Act.

II. Coalbed Gas is Leasable Under the Gas Leasing Provisions of the Mineral Leasing Act.

A. Coalbed Gas is a "Gas" within the Meaning of the MLA and Applicable Regulations

Sec. 1 of the MLA, *as amended*, 30 U.S.C. § 181 (1976), provides that:

Deposits of coal, phosphate, sodium, potassium, oil, oil shale, native asphalt, solid and semisolid bitumen, and bituminous rock * * * or gas, and lands containing such deposits owned by the United States * * * shall be subject to disposition in the form and manner provided by this chapter * * *.

The MLA neither distinguishes coalbed gas nor provides any definition of "gas" or "natural gas."¹⁹ Thus, there is a definitional question raised by the MLA relating to the treatment of coalbed gas, similar to the question raised in the statutory reservations of 1909, 1910, and 1914.²⁰ The Mineral Leasing

¹⁹ Since the MLA uses "gas" in conjunction with "oil" and other fuels, the doctrine of *ejusdem generis* could arguably lead to a reading of the term restricted to hydrocarbon gas suitable for fuel. Since methane, the major component of coalbed gas, is a hydrocarbon gas suitable for fuel, even this restrictive interpretation would include coalbed gas.

²⁰ Based on a broad definition of "gas," and on the general intent of Congress to retain named mineral resources, this office has expressed the opinion that carbon dioxide gas is included in the reservation of oil and gas in a land patent under the Act of July 17, 1914, 30 U.S.C. § 121 (1976). "Reservation of Carbon Dioxide Gas in Land Patent," Memorandum to the Colorado State Director, BLM, from the Regional Solicitor, Denver (July 12, 1979).

Act refers only to "gas" or "natural gas" without any qualifying adjectives, thus supporting a nonrestrictive reading of both terms.²¹

The legislative history of the MLA sheds little light on this subject. However, the regulations implementing the oil and gas leasing provisions of the MLA refer, and have uniformly over the life of the MLA referred to gas in general terms, leaving little doubt that coalbed gas is included in the meaning of the term "gas." Even where certain differences appear between coalbed gas and other mixtures or forms of hydrocarbon gas, the regulations, like the statute, do not distinguish them.

In Part 221 of the oil and gas operating regulations, gas is defined as "[a]ny fluid, either combustible or noncombustible, which is produced in a natural state from the

earth and which maintains a gaseous or rarified state at ordinary temperature and pressure conditions."²² 30 C.F.R. § 221.2(o).

While the regulations acknowledge that gas comes from various fields and deposits at varying pressures, they do not distinguish between types of gases based on pressure or formations. Coalbed gas often comes from the wellhead at pressures below those of gas found in oil-bearing formations, but variances in pressure make no difference in the legal and regulatory treatment of the disposition of the gas. 30 CFR 221.44 provides that:

*Gas of all kinds * * ** is subject to royalty, and all gas shall be measured by meter * * *. For computing the volume of all gas produced * * * the standard of pressure shall be ten ounces above an atmospheric pressure of 14.4 pounds * * *. All measurements of gas shall be adjusted by computation to these standards regardless of the pressure * * * at which the gas was actually measured. (italics added.)

Under this regulation, therefore, the volume of gas sold or produced is determined by a standard which disregards differences in wellhead pressure.

The only type of gas specifically mentioned in the MLA—helium—is also the only wellhead constituent of gas that Congress has deemed separable and reserved for specific

²¹ The only apparent restrictive definition of gas appears in the Geothermal Steam Act of 1970, 30 U.S.C. § 1001 *et seq.* (1976). Sec. 27 of the Geothermal Steam Act, 30 U.S.C. § 1025 (1976) provides that in the leasing of geothermal resources, "[t]he United States reserves the ownership of and the right to extract * * * oil, hydrocarbon gas, and helium from all geothermal steam and associated geothermal resources produced from lands leased under this chapter in accordance with presently applicable laws * * *." (italics added.)

Even if a limited definition of gas was intended, coalbed gas would still qualify as a reservable gas under the Geothermal Steam Act. Since steam is commonly referred to as a gas, Congress probably limited the definition in this statute only to avoid confusion about which substances found in association with geothermal resources are properly extracted and exploited under a geothermal resource lease. In any event, this usage does not alter the use of the term "gas" in the Mineral Leasing Act, in the instant context.

²² This definition is unchanged since its adoption in 1942, 7 Fed. Reg. 4133 (1942). As noted at note 20, *supra*, this office has read this definition to encompass carbon dioxide gas.

May 12, 1981

governmental purposes.²³ Even helium, a nonhydrocarbon, is within the meaning of "gas" as used in the MLA, or else it would not have been necessary expressly to exclude the right to extract helium under federal oil and gas leases.²⁴

The meaning of gas in the MLA, therefore, has the same scope as that established for oil in *Brennan v. Udall*, *supra* and for gas under private lease in *Northern Natural Gas Co. v. Grounds*, *supra*—gas is to be defined broadly.

B. Coalbed Gas is not Included in a Coal Lease under the MLA

The Mineral Leasing Act provides distinct leasing requirements for coal and for gas. Gas deposits are leasable under sec. 17 of the MLA, 30 U.S.C. § 226 (1976), while coal leasing is covered in sec. 2, *as amended*, 30 U.S.C. § 201 (Supp. II 1978.) Departmental regulations likewise contain distinct provisions for leasing and mining

the two resources. Coal is governed by regulations at 43 CFR Part 3400 and CFR Part 211, while gas is covered by regulations at 43 CFR Part 3100 and 30 CFR Part 221.

From a resource recovery standpoint, coalbed gas is extractable during or in advance of the mining of underground coal by techniques very similar to those for recovering other commercial gases. Currently, coalbed gas may be drained from coalbeds in either of two ways, both involving vertical wells connected to horizontal holes or cracks in the coal that encourage passage of the gas to the well.²⁵ Because it is recoverable by gas recovery methods, coalbed gas is easily regulable as a gas.

Moreover, the coal leasing provisions of the MLA do not appear to provide for recovery of anything other than coal.²⁶ Nothing in existing coal leases or in the current coal

²³ Sec. 1 of the MLA, 30 U.S.C. § 181 (1976), provides: "[t]he United States reserves the ownership of and the right to extract helium from all gas produced from lands leased or otherwise granted under the provisions of this chapter."

²⁴ The Department has interpreted the helium reservation consistently with this conclusion. Sec. 1 of the current federal oil and gas lease form, Form 3110-2 (1977), gives the oil and gas lessee the "exclusive right and privilege to drill for, mine, extract, remove, and dispose of all the oil and gas deposits, except helium gas, in the lands leased. * * *" The form thus includes all types of gas—even nonhydrocarbon gases such as helium—within the meaning of "gas deposits." Except for the language excluding helium, this section of the lease form has remained essentially unchanged since its adoption in 1920. 47 L.D. 437, 447 (1920).

²⁵ According to one study, a single coalbed well can drain between 20 and 30 acres. M. Deul, A. Kim, *Coal Beds: A Source of Natural Gas*, *The Oil and Gas Journal* 49 (June 16, 1979). However, one method of extraction, hydraulic stimulation, reportedly has the potential of creating a safety hazard to coal mining by causing harm to the coal seam and the roof strata overlying the coal. See *United States Steel Corp. v. Hoge*, *supra*, slip op. at 7-12.

²⁶ Sec. 2 of the MLA, 30 U.S.C. § 201 (Supp. II 1978), authorizes leases granting the right to extract coal, and in 1920 required royalty payments on a per ton basis. Such a lease scheme was clearly not designed by Congress to encompass beneficial extraction of coalbed gas. Sec. 8A, 30 U.S.C. § 203-1(a), authorizes government exploration for "coal resources" recoverable by deep or surface mining methods. Other references to "deposits of coal" and "coal-field[s]" indicate that the statute's coal provisions do not contemplate gas extraction. 30 U.S.C. §§ 201(a), 208-1 (Supp. II 1978).

lease form authorizes commercial extraction of coalbed gas or provides for the assessment of a royalty for its recovery. The fact that the Mineral Leasing Act includes rights to related minerals in the grant of rights under certain specific leases (other than coal) indicates an intention *not* to lease related minerals along with coal. The sodium, phosphate, and oil shale leasing sections of the MLA allow or require a lessee to extract certain minerals related to, or co-existing with, the principal leased mineral. The sodium leasing provisions in secs. 23 and 24 of the MLA, 30 U.S.C. §§ 261-262 (1976), authorize the Secretary to lease "chlorides, [etc.] of sodium," and require him to collect royalties on "sodium compounds and other related products." Similarly, 30 U.S.C. §§ 281-82 (1976) authorize the leasing of potassium, and require royalty collection on "potassium compounds and other related products." Sec. 9 of the MLA, 30 U.S.C. § 211 (1976), authorizes the Secretary to lease and collect royalty on phosphate deposits "including associated and related minerals." The oil shale leasing provisions in sec. 21(a) of the MLA, 30 U.S.C. § 241(a) (1976), provide that "deposits" of oil shale are subject to lease, and that royalties are required "[f]or the privilege of mining, extracting, and disposing of oil or other minerals covered by a lease under this section. * * *" (*italics added*).

Congress inclusion of associated and related mineral products in

these sections of the MLA stands in clear contrast to the absence of such language in the coal leasing provisions.²⁷ Indeed, the present coal leasing system appears only to grant the federal coal lessee the right to vent the gas for safety purposes.²⁸ Federal Coal Mine Health and Safety Act of 1977, 30 U.S.C. §§ 863, 877(h) (Supp. II 1978). *Cf. United States Steel Corp. v. Hoge, supra*. Analysis of the Mineral Leasing Act's provisions for leasing coal and oil and gas shows that a lease for "coal" does not include the right to extract gas, including methane,²⁹ and that coalbed gas is subject to disposition as a gas under

²⁷ As discussed in part IA, *supra*, even though the leasing provisions for both potash and sodium authorized leasing "other related products," 30 U.S.C. §§ 262, 282 (1976), when those two minerals had not been reserved together, the Department took the position that potash and associated sodium were not disposable under a single lease for potash. It is clear, then, that the coal leasing provision of the MLA, 30 U.S.C. § 201 (Supp. II 1978), which does not encompass "related" or "associated" minerals, does not authorize extraction of coalbed gas under a coal lease.

²⁸ The coal miner's expulsion of coalbed gas from mine tunnels is an exercise of an obligation distinct from the right of capture or ownership. The obligation to remove methane through ventilation or drainage is a safety precaution without which coal would not be mineable. See *Op. Att'y Gen.* No. 53, at 3-4 (Pa. 1974).

²⁹ While courts have held in cases involving private leases that a lease of "coal and other minerals" may include the right to extract oil and gas deposits, where only coal is granted (*i.e.*, not "coal and other minerals") the courts do not strain definitions to include other minerals. *E.g. Chartiers Block Coal Co. v. Mellon*, 152 Pa. 286, 25 A. 597 (1893). The court discussed the extent of the coal lease, concluding that "the grantee of the coal owns the coal but nothing else, save the right of access to it and the right to take it away." *Id.* at 296, 25 A. at 598-99. See also, *Op. Att'y Gen.* No. 53 *supra*, note 28, concluding that a coal lease does not convey the coalbed gas in the deposit.

GAS IN FEDERAL COAL DEPOSITS

May 12, 1981

Sec. 17 of the MLA, 30 U.S.C. § 226 (1976).

Several companies holding federal oil and gas leases have inquired whether coalbed gas is covered by their leases, and have filed applications to drill for coalbed gas. Since existing oil and gas leases do not specifically reserve coalbed gas from the granting clause, it must be considered as leased. *See, e.g.,* Non-competitive Oil and Gas Lease Form 3110-1 (March 1977). Sec. 2(d) of this form authorizes the Secretary to set minimum values for royalty computation purposes "on *any or all* oil, *gas*, natural gasoline, and other products obtained from gas," (italics added) and sec. 2(j) requires the lessee "[t]o exercise reasonable diligence in drilling and producing, * * * having due regard for the prevention of waste of oil or gas. * * *"

It must be noted that an oil and gas lessee does not have a license to develop the coalbed gas resource in any manner. The lease and Departmental regulations prohibit damage to coal or other mineral deposits. *See* Noncompetitive Oil and Gas Lease Form 3110-1, § 2j; Coal Lease Form 3130-1, § 3(e); and 30 CFR § 221.9. Should the lessee propose any drilling which would in the judgment of the Geological Survey cause damage to the coal deposit or create a safety hazard for subsequent coal mining, the application to drill may be denied. If there is an outstanding coal lease,

the Department's authority to grant the gas drilling permit is restricted by the rights previously granted to the coal lessee. *Cf. United States Steel Corp. v. Hoge, supra*, (surface owner with gas reservation may not infringe upon coal owner's estate to recover coalbed gas beyond normal oil and gas recovery techniques).

III. Conclusion

Since Congress has never specifically addressed the question of whether the right to extract coalbed gas is part of a coal lease or part of an oil and gas lease, the question of coalbed gas ownership must be resolved by construction of the statutes which provide for the reservation of resources to the United States, and which authorize the leasing of those resources. This analysis leads to the conclusions: (1) that a reservation of "coal" does not include coalbed gas; and (2) that a reservation of "gas" encompasses coalbed gas. Furthermore, in our opinion, coalbed gas is disposable as a gas under sec. 17 of the Mineral Leasing Act, 30 U.S.C. § 226 (1976). However, nothing in this opinion warrants title to any oil and gas deposit nor detracts from any coal lessee's obligation to comply with the coalbed gas ventilation provisions of the Mine Health and Safety laws.

We are prepared to render any further advice you may deem appropriate regarding legal issues raised by the potential conflict between an oil and gas lessee and a

coal lessee or by the possibility that coalbed gas development could harm or preclude subsequent recovery of the coal.

JACK J. BENDER

54 IBLA 375

Decided *May 19, 1981*

Appeal from decision of the New Mexico State Office, Bureau of Land Management, rejecting noncompetitive oil and gas lease offer. NM 30069. Exceptions filed to the recommended decision of Administrative Law Judge Robert W. Mesch.

Affirmed.

1. Oil and Gas Leases: Generally—Oil and Gas Leases: Discovery—Oil and Gas Leases: Known Geologic Structure

A determination by the Geological Survey of the known geologic structure of a producing oil and gas field will not be disturbed in the absence of a clear and definite showing that the determination was improperly made.

APPEARANCES: John F. Welborn, Esq., and Phillip Barber, Esq., Denver, Colorado, for appellant.

*OPINION BY
ADMINISTRATIVE
JUDGE HARRIS*

INTERIOR BOARD OF LAND APPEALS

Jack J. Bender has appealed from a decision of the New Mexico State

Office, Bureau of Land Management (BLM), dated July 13, 1977, rejecting his noncompetitive oil and gas lease offer, NM 30069, because the land was determined to be within an undefined known geologic structure (KGS) of a producing oil or gas field, based on a determination by the Geological Survey (Survey).¹

Under 30 U.S.C. § 226(b) (1976), land within the KGS of a producing oil or gas field may only be leased by competitive bidding. When land is determined to be within a KGS either before a noncompetitive offer was filed or while such an offer is pending, the noncompetitive offer must be rejected. *Richard J. DiMarco*, 53 IBLA 130 (1981), and cases cited therein.

In his statement of reasons for appeal, appellant challenged Survey's determination that the land was within an undefined KGS. He also presented data from which we concluded in *Jack J. Bender*, 40 IBLA 26, 29 (1979), that "it is not clear whether the land herein should be classified KGS." Accordingly, we granted appellant's request for a hearing in order "to resolve the issue as to whether this land was properly included within a known geologic structure." *Jack J. Bender*, *supra* at 29. The case was referred to the Hearings Division, Office of

¹ "Known geologic structure" is defined in Departmental regulation 43 CFR 3100.0-5(a): "A known geologic structure is technically the trap in which an accumulation of oil or gas has been discovered by drilling and determined to be productive, the limits of which include all acreage that is *presumptively productive*." (Italics added.)

Hearings and Appeals, for a hearing and recommended decision.

On Aug. 15, 1979, Administrative Law Judge Robert W. Mesch held a hearing. On Dec. 3, 1979, he transmitted his recommended decision to the Board. In the decision he held that appellant had failed to make a clear and definite showing of error in Survey's determination that the land was within an undefined KGS and, accordingly, dismissed the appeal. By order dated Jan. 15, 1980, the Board transmitted the recommended decision to the parties and established time periods for submission of exceptions to it.

[1] An applicant for an oil and gas lease who challenges a determination by Survey that land is situated within the KGS of a producing oil or gas field has the burden of showing that the determination is in error. The determination will not be disturbed in the absence of a clear and definite showing of error. *Donnie R. Clouse*, 51 IBLA 221 (1980); *United States v. Alexander*, 41 IBLA 1, 11 (1979).

Judge Mesch described the basis for Survey's determination as follows:

The land in question is lots 1 and 2 or the west half of the northwest quarter of section 30, Township 20 South, Range 29 East, New Mexico Principal Meridian, Eddy County, New Mexico. This land, together with other land, was determined to be within an undefined KGS addition to what has been designated as the Scanlon KGS. The determination was effective January 24, 1977, and was triggered when a producing gas well was completed

on that date in the northeast quarter of section 20. The well produced gas from the Pennsylvania Morrow formation. When production was established, at least some of the lands surrounding the well had to be included in a KGS. Accordingly, geologists in the Office of the Area Geologist of the Conservation Division of the GS studied the logs of all wells in the immediate area that had penetrated the Morrow formation in order to determine what, in their opinion, would be a reasonable area that could be considered presumptively productive. As a result of their interpretation of the logs and based on other information relating to the Morrow wells, the approximately 80 acres in question, together with an additional approximately 1440 acres, were included within the undefined KGS addition to the Scanlon KGS.

(Recommended Decision at 3-4).

At the hearing the Government offered the testimony of Donald M. Van Sickel, area geologist for the Conservation Division, Survey, who testified that Survey's determination was based on the fact that "all [seven] wells that have tested the Morrow in this area and within a two-mile radius of these lands tested some gas" (Tr. 25). Van Sickel presented a "cross-section" of the area and attempted to "correlate potential reservoirs" within each of three wells by placing the results of vertical logs taken in each of the three drilling holes side by side (Tr. 18-20; Exh. 2 and 3).²

² From north to south the three wells used by Survey were the Yates Federal No. 2 located in sec. 18, the Stebbins Federal Deep No. 1 located in sec. 30, and the Fannie Lou Federal No. 1 in sec. 31. All three wells are located in T. 20 S., R. 29 E., New Mexico principal meridian, Eddy County, New Mexico (Tr. 18-19).

By placing the logs side by side, Survey determined that potentially productive intervals continued stratigraphically between the three wells, along the line of the "cross-section." Survey concluded that there were "three possible productive intervals across the area" (Tr. 38). The line of Survey's "cross-section goes within less than a quarter of a mile from the lots in question" (Tr. 38). With reference to the cross section, he explained:

When we looked at all these—well, after this well was completed and we studied this area to see which would be the lands which would be properly brought into the KGS, we naturally looked at all of the wells in this area that penetrated the Morrow formation and drew some, well, we put them on up on the wall and looked to see if we could correlate potential reservoirs or reservoirs where the wells were perforated. You will notice we have limited our cross-section to just two, Line A-A prime. Yet the well we based our undefined addition is way over in Section 20. The only reason we limited it to this was because the two lots that were under question are more nearly related to these three wells (indicating) than the wells over in this area (indicating). If the contest had been over in this (indicating) area, we would have naturally used a different cross-section showing well closer to the land under appeal.

The basis of our correlations, on the basis of the fact that all the Pennsylvanian test drills in this area had gas shows, all but one was completed as a gas well, our cross-section shows that we can correlate three sands across there or three possible productive intervals across this area. It became clear to us that this acreage in Section 19, 20, 29 and 30 should be included in the KGS because of the overwhelming evidence of produc-

tive sands or productive reservoirs in the Morrow.

(Tr. 37-38).
